"It would be folly to permit a zeal for preserving an abstract 'meeting competition' concept to overshadow the main purpose of the Clayton Act, which was to outlaw practices leading to unlawful trade restraints or nurturing monopoly. That legislation of this kind should contain an exemption which, in the name of 'meeting competition in good faith,' actually lessens competition on the small-business level is an inexcusable anomaly calling for the correction offered by S. 11, which would permit the absolute defense except where the effect may be substantially to lessen competition or tend to create a monopoly in any line of commerce. In my opinion, a complete defense should not be granted to discriminatory practices that will suppress competition or foster monopoly."

However, I would be less than frank if I did not tell you that a well-organized opposition to this bill has made it so controversial that in my judgment its chance of favorable consideration by the Congress is not very bright.

Meanwhile, the Commission continues its efforts to halt illegal pricing practices in the petroleum industry.

The Sun Oil[2] case, which we decided this year, involved two charges arising out of a price war in Jacksonville, Fla. Without lowering prices to its other dealers in the vicinity, Sun cut one dealer's price by 1.7 cents a gallon to assist him in reducing the gap between his price and that of a neighboring off-brand station. From all the evidence and the circumstances surrounding the transaction, the Commission concluded that the dealer in return agreed to reduce his price by 3 cents. On these facts, the Commission found that Sun's price discrimination violated the Robinson-Patman Act. We held that the defense of "good faith meeting" of a competitor's price was not available to a supplier who discriminated to permit its customer to meet the price of the customer's competitor. We also held that the agreement between Sun and its dealer to fix and maintain the 3 cents lower price was a price fixing conspiracy in violation of the Federal Trade Commission Act.

The Sun case presented some of the typical problems of the price war. I think that it is a significant decision. It is particularly important because it limits the "good faith meeting" defense to the strict boundaries of the act.

Several other gasoline price cases are pending before the Commission. Generally they arise out of price wars. In addition to charges of price discrimination between competitors, some of them also involve such charges as territorial price discrimination, the use of temporary consignment contracts to coerce uniform prices and various kinds of pressure by suppliers to control retail prices. You will understand that it would be improper for me to discuss the merits of cases such as these while they are still under consideration. I mention them only to indicate that gasoline pricing problems continue to be among the Commission's major concerns.

Entirely aside from the pricing matters I have been discussing, another type of antitrust problem is common in your industry. This problem is caused essentially by the vast contrast in the economic power and trading positions of the oil companies and their service-station customers. One aspect involves the use by the supplier of its economic leverage in one commodity, or as a landlord, to influence or coerce the business choices of its customers or lessees in another field which the supplier does not dominate. The famous Standards Stations[3] case decided that an express contract between the supplier and dealers for the purchase of their "full requirements" of gasoline and TBA items violated section 3 of the Clayton Act when the effect was to foreclose a substantial part of the market to competitors. Following that case, the Federal Trade Commission became very active in preventing such contractual arrangements and I, as a trial attorney, tried a number of the more important cases in this field. As a result of this litigation, suppliers are no longer very apt to put full requirements, exclusive dealing, or tying arrangements into written contracts.

Evidence is now being taken by Commission examiners in three important matters known as the TBA cases. The complaints allege that oil companies supplying certain service stations and distributors exercise their influence and control over those stations and distributors to persuade them to purchase their TBA supplies from certain tire manufacturers. In return for this service, the complaints allege that the tire manufacturers pay the oil companies "override" commissions of varying amounts up to 10 percent on TBA items sold to stations and distributors dealing in the products of those oil companies. Once again, you will understand that I am unable to comment on the merits of these cases before they have been decided by the Commission.

In addition to economic problems of the kind I have been discussing, the Commission also protects the consuming public from the false and misleading advertising and labeling of products sold in commerce. Such phony or exaggerated claims by overzealous sellers are deceptive practices within the meaning of the Federal Trade Commission Act and may be prevented by cease-and-desist orders.

The reprocessed oil cases are typical examples of such practices touching on your business. There respondents distributed reclaimed and reprocessed oil in containers just like those in which new oil is marketed. They either did not disclose at all or disclosed inadequately that the contents of the cans had been previously used in automobile crankcases. The respondents argued that their product was just as good as new oil and, therefore, that the public was not injured by the practice. The Commission did not agree. We held that the consumer is entitled to know what he is buying and issued orders requiring clear and conspicuous dis-

Footnotes at end of speech.

closure, both on the oil companies and in advertising.

There is a constant procession of such cases from your line of business. Some deceptions that the Commission has proceeded against recently include:

A seller who advertised as "new" tires that had been previously used and then cleaned and painted to look new.

A manufacturer that falsely represented that its gasoline and oil additives are approved or recommended by the U.S. Government.

A dealer who represented as "top quality snow tires" ordinary tires that merely had a few additional grooves cut in them.

I could add many more examples. The Commission is constantly vigilant against such practices and the volume of our work in this field is steadily increasing. While we will never be able to put a halt to all false and misleading advertising, our persistent campaign against deception will restrain the more blatant offenders.

I hope I have not bored you with too much lawyer's talk. My point is that the Federal Trade Commission is acutely aware of the serious problems in the petroleum distribution industry. In fact we have an unprecedented number of pending cases involving your industry.

At the same time, we are experimenting with new means of securing voluntary compliance with fair advertising standards in your field of activity. The Tire Advertising Guides are an example. The public has been very much confused by the flamboyant advertising claims of tire makers and dealers. Last year the Commission attempted to relieve this confusion by issuing 12 specific guides to give the industry detailed notice of what the Commission considers to be deceptive about tire labeling and advertising. We hope that they will eliminate much of the deception caused by these claims. For those who persist in deceptive advertising, of course, the Commission's mandatory procedures will still be available.

Now let us leave your own industry problems and consider the vastness of our overall responsibilities. At present these include the Federal Trade Commission Act of 1914, as amended by the Wheeler-Lea Act of 1938 and the Oleomargarine Act of 1950; section 2 of the Clayton Act, as amended by the Robinson-Patman Act of 1936; sections 3 and 8 of the Clayton Act; section 7 of the Clayton Act as amended; the Export Trade Act known as the Webb-Pomerene Act; the Wool Products Labeling Act of 1939; the Lanham Trade-Mark Act of 1946; the Fur Products Labeling Act of 1951; the Flammable Fabrics Act of 1953; and most recently the Textile Fiber Products Identification Act passed by the last Congress.

The sum and substance of all this legislation is a congressional mandate to the Commission to prevent unfair methods of competition and other unfair trade practices, to correct and prevent commercial deception of the American public, and to keep the channels of commerce free from the types of undue restraints and tendencies of monopoly condemned by these various statutes: a broad mandate indeed.

To accomplish this mandate we have an annual appropriation of some $6 million which enables us to hire a small staff of some seven hundred employees. Yet the economy we are expected to police has increased its national product from approximately $100 billion in 1940 to $483 billion in 1959. But lest you think that I am a typical bureaucrat seeking additional appropriations to augment an already swollen bureaucracy, let me state that I would gladly accept even a cut in our meager appropriation if I could by so doing bring about a cessation of what I have at the outset referred to as Government handouts, special purpose and privilege legislation, and the curse of subsidies which are threatening to engulf our entire free enterprise system. You and I as representatives of the great American middle class may well be the principal victims caught between high taxes on the one hand and a cheapened dollar on the other. Of course, many factors contributing to this problem do not come within the purview of the Federal Trade Commission. Nevertheless as a citizen and, I hope, a patriotic one, and as a member with you of that great middle class, and as an official close to the Washington scene, I am disturbed—and I feel that if I can alert intelligent groups like yours to the problem, perhaps your influence and the influence of others like you may be brought to bear on the power centers in Washington. This is not or should not be a partisan matter and both great parties might not only take heed but even join forces to combat the evil. For if foreign policy is traditionally considered bipartisan, why should not the preservation of our free enterprise system be viewed with a similar bipartisan approach? The leadership of both our great political parties might well join in a blueprint plan for a victorious solution of this problem of keeping our economy strong. Now what might that blueprint consist of? The overriding public interest in controlling threatened inflation, strengthening the dollar, balancing the budget and eventually reducing the tax burden on our people must be given paramount priority. Special handouts, subsidies (both domestic and foreign) must be eliminated in all areas, except those absolutely vital to national security. Small business and its sponsors can play a vital part. I believe you should have the right to a competitive position which permits you to fight it out fairly and openly with your competitors both large and small in the marketplace. But you should have no more than that. Nor do I believe that you require any built-in special security. I only wish that some of your small business champions had the same confidence in you that I do. We at the Commission are concerned about many legislative proposals granting special exemptions which would break down the antitrust laws. For example, several bills have been introduced to limit manufacturers in selling direct to retail outlets unless price differentials are established to protect the profit margins of competing wholesalers. Under such proposals the Federal Trade Commission would be required to investigate every wholesaler whose business would be affected and determine what his profit margin should be. This would put the Government in the price-fixing business and eliminate price competition at the wholesale level in the businesses affected. Such proposals are inconsistent with the free enterprise system and with the basic principles of antitrust law.

Other bills introduced seek to give auto dealers a virtual monopoly to sell cars at probably higher prices in territories assigned to them by the manufacturers, and any dealer selling outside his own territory would be required to pay a commission to the dealer in whose territory the sale was made. It seems clear to me that such special-privilege legislation providing for built-in territorial monopolies would not be in the best interests of the consumer nor does it foster the principle of vigorous competition at the retail level. Other bills of like character have been introduced; and, of course, we have as always a fair trade bill with us in some form or other. Yet let us not ignore so-called big business, or the farmer, or the unions from a consideration of this legislative search "to get theirs." Subsidies to the airlines, subsidies to the shipping lines, oil and gas depletion allowances and subsidies, and farm subsidies run into billions. Sometimes I wonder if there is any organized group in our economy that is without benefit of some subsidy. It seems to me there is only one forgotten group without some subsidy—the American taxpayer.

The unions continue to benefit by immunities granted under the antitrust laws at a time when labor was weak and fighting for its life. They should be continued to be fostered as an indispensable part of our economic fabric. However, now that labor is as powerful in the industrial arena as any combination of capital, surely the public interest suggests that these immunities be reexamined. Yet current criticism of some of the activities of some unions, such as "union featherbedding," bring to mind similar abuses on the part of industrial management. For example, I am reasonably certain that many corporate managements have successfully insulated themselves against some of the more serious effects of our present very burdensome tax structure by the creation of various schemes which may well be described as "executive featherbedding," such as overly liberal executive retirement and pension plans, stock option agreements, executive incentive plans, and the like.

Nor are our State governments beyond blame for another tremendous drain upon the public treasury. Increasingly vast sums are going out as grants in aid to the States. Even the most ardent States righters are agreeable, and indeed receptive, to Federal largess to the States. While Federal grants in aid for everything from highways to free lunches may seem desirable, certainly these expenditures should be weighed against the old-fashioned question "where do you find the money"? In my judgment only when disaster or emergency creates a situation beyond the control of local communities or the States should the powers of the Federal Government be brought into action; somehow and soon there must be a return to State, local, and individual responsibility. The whole area of grants to the States should be reexamined.

Finally, the Federal Government itself must bear its full measure of blame. Failure to resist the pressure of the farm lobby, the union lobby, yes, and the small business lobby, is a part of the story; failure to recognize that it is more important to keep our Nation strong than to attempt to win dubious allies by the inempt use of vast sums in foreign aid is also part of the story; and above all, failure to make a real effort to abolish these practices—failure to think in terms of the public interest as a whole, completes the story.

Now do you think I am a disillusioned cynic and view the situation as hopeless? No, I don't. Americans have always been able to rise to any crisis once they recognize it. None of us would tolerate for a moment seeing America reduced to a second-class power or, worse, to a slave state. With leaders brave enough to rise above political expediency and show us the way, we can and will remain indomitable. But the leadership must truly represent a resurgence of the public conscience—a conscience which recognizes that subsidies must be vastly curtailed or limited, a conscience which recognizes that special purpose and special privilege legislation must be abandoned, a conscience which recognizes that there should never be allowed to exist peculiar favorites of the Government at the expense of the general public.

I firmly believe that what this fine group and other important groups in our economy need is not more legislation to protect them and insulate them from competition or from price declines. Needed, instead, is the will to fight it out fairly as vigorous competitors in the marketplace, protected only by being assured that the competition required to be

met is itself fair, free, and open. This leads me back to the thought I expressed at the outset of these remarks, namely, that I conceive it as the paramount duty of the Commission to preserve and foster such a wholesome competitive climate. To accomplish this requires not a relaxation, but a more vigorous enforcement of the antitrust laws.

I am satisfied that the greatest boon to business, both small and large, would be a sizable reduction in the present burdensome tax structure. You want to get the Government off your backs. But you will never accomplish this unless all the pressure groups get off the back of Government.

In closing may I say that above all else we need a courageous leadership, able to rise rise above sectionalism and political pressures. The type of leadership I envisage (and don't misunderstand me, for there are quite a few of them in this category in Washington today—for example, the names of RAYBURN and JOHNSON stand out as veritable towers of strength and patriotic courage)—the kind of leadership which I envisage is happily expressed in a few lines of verse which I read to you now:

"God give us men. The time demands
Strong minds, great hearts, true faith, and willing hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagog
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

Khrushchev Marches On

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. DORN of South Carolina. Mr. Speaker, radio station WMUV, Bob Jones University, Greenville, S.C., is doing a superb job to bring our people the truth. The following radio editorial is excellent. I hope it will be read by all the Members of this Congress and yes, President Eisenhower:

WMUU RADIO EDITORIAL

"And the days dwindle down to a precious few. . . ." The words are part of the lyrics to "September Song." They were written by the late Maxwell Anderson almost a generation ago for the aging Peter Stuyvesant in the musical play "Knickerbocker Holiday." But they might have been written by Anderson not for a character in a play about early America but about his concern for America itself today.

The playwright who died just a few days after the Associated interview from which these statements are taken then went on to say: "Khrushchev has declared that Russia will bury us. I think he believes this. I think the Russian people believe the same doctrine, because that's what they've been taught. I've never been in Russia, but I gather from what I read it's routine in that area to be fanatical about our extinction. Of the present America, Anderson said: 'As a nation we're so spoiled, so luxury-minded, so carefree, so devoted to the pursuit of happiness, that we have let Russia get ahead of us in the armament race.'" And there we interrupt for a moment our quote from the late Maxwell Anderson.

Sometimes it is difficult not to become pessimistic about the future of our country the United States—not because of the strength of our enemy from without but because of our own weakness from within. We do not mean military weakness—we mean moral and spiritual weakness—the kind of weakness our quotation from Maxwell Anderson was talking about. It's the kind of efete, decadent weakness that existed in the Roman Empire just before it was swept away by the great heathen hordes from the north. Nowhere is this efeteness, this decadence more sickingly evident than in the silly, simpering attitude so many Americans have taken toward the forthcoming Khrushchev visits. The UPI newswire recently carried the following story:

"From the hundreds of invitations pouring in for Nikita Khrushchev's forthcoming visit, it's hard to say whether the plan is to bore him to death, scare him to death, or just wear him out. His presence is being sought for civic club luncheons, local fairs, and meetings of county commissions. It has been suggested he would enjoy visiting a Glenridge, N.J., Girl Scout troop and the junior women's club of Elk Grove Village, Ill. He also has been urged to attend a turkey day fete in Worthington, Minn., and to address the Brooklyn Ocean Front Men's Civic and Social Club. Protocol experts say one thing Khrushchev has to see first thing when he gets off the plane is about 1,500 hammers and sickles adorning the local light poles. We fly national emblems for all visiting big shots."

Can you imagine it? The hammer and sickle flying all over Washington. It sort of makes one wonder if it might not be prophetic. The silly, morbid curiosity to entertain and rub shoulders with the butcher and cold-blooded murdered Khrushchev reminds us of news stories of the slaying of John Dillenger, notorious gangster and murderer of the thirties. Some of you may remember that he was ambushed and shot down by police as he came out of a theater. The reports were that scores of people, mostly women, literally mobbed the place to get souvenirs. Some even mopped up his blood with newspapers to keep as a momento.

It reminds us also of the crowd of silly bobbysoxers who stood outside a police station a couple of years ago to cheer and throw kisses at a cowardly teenage thug who had ambushed another boy and shot him in the back.

What's wrong with us here in America? Have we gone crazy? As Eugene Pulliam said in a recent editorial:

"Don't the people of the United States any longer believe in honor, decency, and morality? Don't they and their Government any longer dare to affront tyrants and murderers, thieves, and liars—all of which Khrushchev is? This is the man under whose orders 17 young American soldiers died just last December when their unarmed plane was shot down without warning by Soviet Mig 19's. This is the man under whose orders Soviet troops smashed their way into Budapest and began the slaughter of the heroic patriots of Hungary who sought to win only their freedom from his foreign tyranny. This is the man under whose orders thousands of Hungarians were put to death, who lured their leaders by promises of good faith, and then had them murdered in violation of his pledges. This is the man who presides over an empire of millions of people yearning to be free from his savage rule.

"This is the man who boasts that he and his Communist comrades will 'bury us' and that one day our children will live under the same kind of dictatorship that he imposes on the slaves of his Communist state. His record for killing, lying, enslaving, and torturing is unmatched by any other tyrant in modern history—except, perhaps, his predecessor, Stalin. He is worse than Hitler and Mussolini combined.

"And we invite him into our American home as an honored guest? Why? In our opinion there is only one reason for such a travesty—fear. The American people and the American Government are afraid not to invite this barbarian bully to the 'land of the free and the home of the brave.'"

In conclusion, let's go back to our interview with the late Maxwell A. Anderson. The playwright asks the question, "But what if the Soviets did conquer the earth? With America and the Western world gone, what would happen?" He answers by saying that the flame of freedom might conceivably burn again after several hundred or even several thousand years but concludes: "But this would be cold comfort if the United States, as a nation, were to die young. Also, it would be inexcusable. We are not old enough to be so enfeebled by corruption, so unwary in statesmanship, so deficient in education, that we let the late starters catch and pass us. And yet, that seems to be exactly what we're doing. And because of it the Nation may not have long to live."

And with that final quote from the late Maxwell Anderson, we end our WMUU radio editorial for today.

The Poll Tax, a Price Tag on American Democracy, Should Be Abolished

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. YARBOROUGH. Mr. President, there have been many changes in American political and governmental life since the Constitution was adopted. When the Nation was formed, ownership of property was generally required as a qualification for voting. Indeed, even human beings were owned and traded, bought and sold as property in that long ago day. But as our democracy has developed all property qualifications fortunately have been abandoned, until now, a poll tax levied by five States is the only price tag on American democracy.

Three States now have cumulative poll tax requirements, that a citizen must pay a poll tax 2 or 3 consecutive years before he can vote in one election. These are such unreasonable burdens upon the franchise and so undemocratic as to shock the national conscience.

For this reason, I joined with 60 other Senators in sponsoring Senate Joint Resolution 126 proposing to amend the U.S. Constitution to abolish the poll tax in Federal elections.

There are substantial numbers of residents in lower income brackets in these

States who are disfranchised by imposition of having to pay a poll tax. Experience in States which recently abolished the poll tax shows that thousands of additional citizens voted when they no longer had to pay this uneven economic burden to participate in selection of their elective officials.

All of us will agree, I believe, that the most important and most basic right in our great system of Government by consent of the governed is the right to vote in honest democratic elections at all levels of government.

Mr. President, surely thoughtful Americans should support this move to extend the right to vote in Federal elections to all Americans. This is fundamental to the democratic principles upon which this Nation was founded.

For this reason, I want to most strongly urge—and I hope many other Senators will join me—that the Senate Judiciary Committee favorably report Senate Joint Resolution 126 within the next few hours so that the Senate can have an opportunity to act on this proposal during the current session.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Washington Post and Times Herald of September 12, 1959, concerning the report entitled, "With Liberty and Justice For All," which has a section on the history of the right to vote in America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Sept. 12, 1959]

THE CRC LOOKS AHEAD

Before Congress passes judgment upon the Civil Rights Commission it would be highly desirable if every Member could read its report or at least the 200-page abridgment entitled "With Liberty and Justice for All." The report is humanitarian in tone, constructive in outlook, and thoroughly grounded on the basic principles of the U.S. Constitution. In no sense is it a tirade against the South. Rather, it recognizes that the struggle for attainment of the great principle of equal justice is going on in all parts of the country in one way or another. In the great majority of its observations southerners and northerners on the Commission were in full agreement.

The Commission has, of course, uncovered many unpleasant facts about discrimination in voting, in housing, and in education. This was its special assignment. On the basis of these facts, local and State governments as well as Congress and the administration should be able to correct many injustices to minorities that are a reproach to our democratic system. But there is no muckraking in the report. The Commission sees the lights as well as the shadows in the panorama it has surveyed.

It notes, for example, that the southern States have outlawed "the hooded violence of the Ku Klux Klan"; that the right of minorities to vote is established in many areas of the South as well as the North; that segregation has ended in interstate transportation throughout the country and in buses and streetcars in a number of southern cities; that some Northern States are seeking to outlaw discrimination in housing. "The pace of progress during the 96 years since emancipation," says the report, "has been remarkable."

The Commission also sees that the many facets of the problem are closely related. The extension of voting rights may have disappointing results because of apathy and ignorance unless that reform is accompanied by better education and the elimination of demoralizing slums. What the Commission is pleading for is a general elevation of sights to "new and challenging targets." In addition to equality under the law, it says in effect, the country needs a great creative effort that will absorb the minds and hearts of men so completely as to submerge petty prejudices and emotions rooted in the past.

Aside from this play of enlightened imagination upon a baffling national problem, the CRC has offered numerous specific recommendations in the fields of education and housing, as well as that of suffrage. Not all of these are likely to be acceptable, but they do emphasize the desirability of continuing study in this field by a group of experts chosen from many backgrounds and dedicated to the general objectives of tolerance and human dignity. The Commission notes, moreover, that it has not yet had an opportunity to study directly discrimination in employment, in the administration of justice, and in public accommodations.

To cut the Commission off after it has made so promising a beginning and finds so much territory yet to be explored would be an inexcusable blow to the cause of civil rights and good human relations. Congress must not adjourn until provision has been made for the Commission's work to continue.

American Farmers Should Write the President

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. WOLF. Mr. Speaker, it has been stated in farming circles that sometime in the fall the President will make a nationwide radio and TV appeal for new farm laws in the 1960 session of Congress. If this is so, and I hope it is, I hope that the President will present the actual problems of agriculture and solutions to them positively, constructively, and comprehensively. Unless he departs from present Agriculture Department policy, any statements that he might make will serve only to confuse and add to the further breakdown of our general farm situation.

I hope that he will not take the line of some of our large prestige newspapers and magazines which have done much to unfairly present the farmers, their problems, hopes and aspirations to this Nation. I hope that he will make clear that farmers seek the return of importance and dignity which they deserve as citizens of the United States and an important element in our economy. I hope that he will support the family farmer who is truly the backbone of the United States.

I would like to include part of an excellent editorial by Howard A. Cowden on the subject of the President's talk:

WHEN THE PRESIDENT TALKS

The leading article on the front page of the Wall Street Journal on August 24 was under this headline: "Rural Power Reaches New Congressional Low As City Allies Desert."

In nearly two columns of type the paper detailed developments in Washington which point up the disappearance of the old farm bloc in Congress and the growing tendency of urban lawmakers to take a dim view of Government farm programs.

Chairman COOLEY of the House Agriculture Committee was quoted as saying:

"The farm organizations are divided, this committee is divided, the Congress is divided, the Agriculture Department seems to be divided, and we are all bogged down."

It is against this background that President Eisenhower is planning to make a nationwide radio and TV appeal for new farm laws in the 1960 session of Congress.

The President, I think, can do one of two things. He can present agriculture's problems and predicaments positively and constructively, or he can contribute to further deterioration of the nonfarm public's interest in these problems and predicaments.

The President's decision to make a nationwide farm talk, we are told, was inspired by the effect his recent TV-radio appeal had on the course of labor legislation. There are some major differences, however, between our farm problems and our labor problems. No one is charging farmers with corruption. No one is accusing them of under-cover operations or dictatorial tactics. Farmers have had no occasion to hide their activities behind the fifth amendment.

I hope Mr. Eisenhower does not take the current line of some of our big daily newspapers and national magazines and contribute further to agriculture's bad image in the public eye. I fear that he may do that—perhaps unwittingly—unless farmers bestir themselves in the meantime.

The President, I fear, is hearing too much unqualified criticism of farm programs and too little constructive comment on what is good in farm programs and what could be done to make them more equitable in the eyes of urban and rural folk alike.

I hope, therefore, that a lot of farmers will take the time this fall to let the President know where they stand.

Robert Evans Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre (Pa.) Record, September 1, 1959:

ROBERT EVANS HONORED

Scranton-Spring Brook Water Service Co., by electing Robert R. Evans, of Dallas, as executive vice president, has recognized the efficiency of a young man who has been with the company about 12 years. He began his employment in 1947. He was appointed purchasing agent in 1948 and vice president in 1952. He was elected a director in 1955. The experience he has had is well suited to his broadened responsibilities.

In the Wilkes-Barre area, Scranton-Spring Brook has long functioned as a water-service company. It has operated the gas company in Scranton for many years. In 1951 it pur-

chased from Pennsylvania Power & Light Co. the gas-distribution facilities in Wilkes-Barre, Bloomsburg, Danville, Sunbury, Milton, and Williamsport. In 1956 the Kingston gas division was purchased from the United Gas Improvement Co. In addition to his other duties with these operations, Mr. Evans will have charge of the company's advertising and sales.

He attended Wyoming Seminary and its Dean School of Business. He served in the U.S. Army from 1943 to 1947, most of that time in Alaska and the Aleutian Islands. The Army Commendation Ribbon was awarded to him in 1946. Presently he is a Reserve officer.

A director of the Kingston National Bank, Mr. Evans is well known to the business community. Civicwise and fraternally, he has been responsive to calls for service to the public in many connections.

Need for Postal Service Improvement at White Bear Lake, Minn.

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. KARTH. Mr. Speaker, yesterday I received a letter signed by four very distinguished, highly respected men devoted to public service. All four of these gentlemen live in White Bear Lake, Minn., and as their letter indicates, are devoting substantial time and effort to improving postal service in that city.

This letter very well indicates the great need for improvement of postal service in that part of my district. It is obvious that the postal requirements on a population basis have increased 400 percent since facilities were initiated in 1937.

In every respect this letter carries the message of need, urgent need: urgent need to provide additional facilities for proper service; urgent need to house many thousands of dollars worth of equipment; urgent need to correct insanitary and intolerable working conditions for the postal workers.

Mr. Speaker, I know these men. I know them not to be wild-eyed spenders. Rather I know them to be sane conservators of public moneys, not 1 cent of which they would ask for if the need be not of utmost importance.

Mr. Speaker, I address myself to this problem on this occasion for the purpose of calling the attention of Congress, the President of the United States, the Postmaster General, the Bureau of the Budget, and the Administrator of the General Services Administration to the real needs of our Nation for improved postal facilities. I would be less than candid if I did not admit to the need in many other areas in our Nation. I urge that the executive agencies recognize this need and initiate improvements in postal service, if necessary, by charging the publishers of mass circulation magazines postage which will more nearly cover the costs of delivery.

The letter follows:

CHAMBER OF COMMERCE
OF WHITE BEAR LAKE,
White Bear Lake, Minn., September 8, 1959.
Congressman JOSEPH E. KARTH,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KARTH: It has come to the attention of the Chamber of Commerce of White Bear Lake that requests for improvements for the local post office have met with the response that no money is available through 1961. A committee from the chamber has inspected the building and premises and call to your attention the following facts:

1. White Bear Lake is operating in a building constructed in 1937 when the post office here served a community of about 3,000, plus a rural community of about 5,000; whereas now the local post office serves a city of 13,000 population with approximately 25,000 additional in the area.

2. The local post office is operating 13 trucks, while there is access for loading for only 2 trucks.

3. Inside the building we found crowded working conditions and inadequate toilet facilities.

Due to our tremendous growth, we feel a great deal of improvement is needed and it is our thought that you could give us some assistance in the program we propose.

We recommend that the building be enlarged for an increase in working space. We also recommend that a garage be acquired so that trucks may be stored there rather than being parked back of the post office in the open. Such a garage should possibly include parking space for employees cars while working rather than having them parked on the streets.

For public safety we recommend that the driveway leading from Highway 61 be widened and a new drive built on the west side of the building, entering from Third Street. Large mail trucks bringing mail from St. Paul are at present required to back in from Highway 61.

When you get back to Minnesota, we will appreciate a visit and will be glad to inspect the post office with you. We extend to you a cordial welcome to any of the Tuesday noon luncheon meetings of the Chamber of Commerce of White Bear Lake.

Sincerely,

CLEO G. SMITH,
Chairman, Parking Facilities.
H. A. WARNER,
Chairman, Highways and Streets.
CHARLES A. HAUSSNER,
Chairman, Safety.
R. V. MAGNUSON,
Chairman, Civic Improvement.

Schedule of Meetings in the Fifth Congressional District of Ohio

EXTENSION OF REMARKS
OF
HON. DELBERT L. LATTA
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. LATTA. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever official duties do not require him to be in Washington.

When Congress adjourns in a few days, I expect to return to my district and to be available for conferences and visits with residents of the fifth district in the courthouse of each county seat between 10 a.m. and 4 p.m., in accordance with the following schedule:

October 1, Van Wert County, Van Wert.
October 2, Defiance County, Defiance.
October 3, Ottawa County, Port Clinton—until noon.
October 5, Paulding County, Paulding.
October 6, Williams County, Bryan.
October 7, Putnam County, Ottawa.
October 8, Henry County Napoleon.
October 9, Fulton County, Wauseon.
October 10, Wood County, Bowling Green—until noon.

No appointments will be necessary. All problems which constituents have with the Federal Government will be proper subjects for discussion.

Until Congress reconvenes in January, I will be available for conferences with constituents by appointment in my district office at 304 Wood County Bank Building, Bowling Green, Ohio, except on the days scheduled above.

Memorial Day Address by Mr. Tom Eastman, Jr.

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. McGOVERN. Mr. Speaker, the following Memorial Day address was delivered at Parker, S. Dak., by a very fine lawyer and a treasured friend of mine, Mr. Tom Eastman. Under leave to extend my remarks, I include the address at this point in the RECORD:

MEMORIAL DAY, 1959

Commander and officers, members of the Veterans of Foreign Wars, the American Legion, Gold Star Mothers, and ladies and gentlemen, may I first take a moment to express my thanks to the members of the veterans organizations for affording me the opportunity of taking part in this Memorial Day service. Not only am I pleased and proud to be a part of this service because I am a veteran, but also because it gives me the opportunity to take part in a ceremony by which we rededicate ourselves to the end that our American way of life may continue.

I would say a word to those of you who are Gold Star Mothers. Today in the midst of the celebrating, holiday moods, and relaxation, you wear the mantle of sorrow. This day brings back to you vivid memories of those whom you loaned into the service of their country, and into God's service. Each year as these services are conducted, this memory is brought again, fresh to your heart.

But I say to you, as you place that mantle of sorrow on your shoulders, wear it proudly. Hold your head high, for that mantle is a badge of a secure place in the history of mankind. You wear that mantle secure in the knowledge that countless thousands of children, in the future, will go to school and to the church of their choice, because of the gift which you have made to their future. Wear that mantle especially proudly today.

For today is the day that we have come to know as Memorial Day. In meetings such as this across the face of our land, the Amer-

ican people are gathered today to pay homage to the memory of those who, down through the pages of our history, have gone forth to defend and to secure our freedoms, and to give meaning to the right to call ourselves American citizens.

Memorial Day is a sacred day in our national year.

Were it not for the untold heroism of these men who have laid down their plows, their tools, and their books to take up arms in defense of these freedoms which we hold so dear, we would not be able to be gathered here today.

Following World War I, many new nations emerged as free nations. Men in those nations fought for freedom and for all that that word implies.

Yet today, in many of those nations, there are no services to mark the gallant fight which those men made. Today, in Estonia, Latvia, Lithuania, Czechoslovakia, and many others, the celebrations which are held, are held only in the secret hearts of the people, in their dreams, and in their aspirations.

For today, those countries lie behind the Iron Curtain. This can happen to all people. This has happened to country after country.

This could have happened to us in this country, had those men, in whose honor we are gathered today, had those gallant men not held the heritage of freedom more precious than life itself. For truly, the price of freedom is high.

There is a tendency for people in general, and Memorial Day speakers in particular, to discuss freedom in its larger sense. Freedom of the seas, freedom of the air corridor into Berlin, freedom from unauthorized search and seizure. Freedom is all of this, but freedom is also a great deal more.

Freedom by its very nature, is a personal thing. It is something which you as an individual must exercise by yourself. The minute that you become a part of a group, acting by the will of that group, instead of by your own will, a bit of your freedom is gone.

We recognize, of course, that a part of our freedom must indeed be surrendered in order to provide a peaceful and stable community in which to live.

The history of Government is a history of freedoms and powers voluntarily given or forcibly taken from all people. Government must exist on the freedoms and rights taken from the people, either with their consent, or without it.

It is the philosophy of the Communist regimes, that all freedom must be taken from the people in order to provide a stable government. They hold that where a people have and exercise basic freedoms, to that extent the government is weakened. The American philosophy, on the other hand, holds that when people freely exercise the rights retained by them, freely practice their freedoms, to that extent the government is strengthened.

For in a free and peaceful economy, in a country where each person is proud to be an individual and proud to be a citizen, the government is then composed of those who are proud to be in government, proud to be able to be of service to these men and women who have asked them to so serve.

Not only, then, have these men whom we here honor secured that government and those larger freedoms for us, they have also by their efforts, secured for us the freedoms which we exercise in our everyday life.

Freedom is also a lot of little things. When you go forth in the morning to work your fields, perhaps it never occurs to you that this is an exercise of freedom, the right to which has been dearly bought, for no one tells you how many acres you may own, and indeed, there is no one to tell you that you may not own property at all.

When you go to the refrigerator or the deep freeze to select food to prepare for dinner, this too is an exercise of freedom. This, too, was bought for you on the battlefield. For as you look over your selection or as you stand in the store to decide which meat to buy, there is none to tell you that today is a meatless day, and no meat may be eaten.

You children, as you plan for the next school year, you plan for a future in a field wherein your interests lie. As you do this, give thanks in your heart to those men who bought for you, the right to select your own chosen profession.

When we make a telephone call to a close friend or a business associate, we should give thanks for the knowledge that no one is listening to our conversation to see if we voice some criticism of some government official.

Every 2 years, as our election time rolls around, as we debate the pros and cons of of the particular party which may be in office, or which is striving to attain that office, as we hear charge and countercharge, and as we attend meetings, let us also at that time recognize our obligations to those men who have made the supreme sacrifice that we might enjoy these freedoms.

How then do we recognize these obligations, and what is our obligation to these men? Is it not an obligation to insure that these freedoms which we enjoy today may be enjoyed by our children and our children's children?

We stand today on the threshold of an exciting new age. Those of us living today have been privileged to see a great many changes. Some of us witnessed the advent of the motorcar, others, the beginning of the air age. We are now witnessing the first faltering steps toward interplanetary travel.

But the new innovations which will come in the lifetime of our children, will be so many, so strange, and so awe inspiring as to make the changes of this last half-century seem slight by comparison. For change is a snowball, gathering speed and momentum and weight as it goes.

In this haste to meet tomorrow, this urgent necessity to speed into the space age, to develop new methods of propulsion, and to unlock new secrets of nature with our microscopes and our telescopes, we are much in danger of overlooking the fact that the great strides that have brought us to this point, that have made all of the advances into tomorrow possible, were made to a large extent, because we had a free society in which they could be made.

It was to the freedom of this country that an Einstein fled. It was to the freedom of this country that Enrico Ferimi fled. It was to this free nation that men of every color, race and creed have fled in times of trouble and oppression at home. America has always been the shining goal of every oppressed people.

It was in our free atmosphere that America was able to take the lead in scientific, cultural and economic advances.

This free atmosphere, this fresh air of freedom did not just happen. We here today bear witness to the terrible price that must be paid if a people are to remain free. It is for us here today to become rededicated, to renew our faith, to the end that this fresh wind of freedom that blows across our mountains and prairies, our rich farmland and our seacoasts, will not turn into the stagnant vacuum of oppression, dictatorship, and slavery.

But, we say, how can we do this? As we think to ourselves, we consider that each one of us is just one person, alone, and of little or no practical experience in the ways of government and diplomacy. How can one person help shape the course of destiny?

Yesterday morning, in listening to my radio, I heard a short sermon from one of the ministers in the Sioux Falls area. And he spoke of this very thing. I think I may mention here one of the things which he suggested. He suggested that we devote ourselves to teaching. Teaching not only by example, but teaching our young people directly wherever the opportunity arises.

In the Sunday school classes, at Cub Scout meetings or Scout troops, the 4–H, in the organized sports and activities of our young people during the summer months.

And for those of us who for one reason or another are not able to actively participate in these activities, to make our support felt in every way possible. In doing this, we will keep faith with those men to whose memory we pay our respects today.

In this way, we can continue during peacetime, the gallant fight which they so ably carried on during wartime.

In this way, perhaps more than any other way, we will make our contribution to the future of this country, and indeed to the future of the human race. For who can say but what, from the class which benefited from our guidance, may come tomorrow's Dr. Salk, Bernard Baruch, a Dr. Lawrence, or an Albert Einstein.

This then is our heritage which these honored dead have given us and this is our obligation to hold those freedoms sacred, to exercise them to the fullest, and to hand them down, intact to our children. If we do this, we will make our last journey, secure in the knowledge that we have indeed been of benefit to mankind, and of service to God.

I thank you.

Now a Business Reform Bill

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Reading (Pa.) New Era, calling for business reform:

NOW A BUSINESS REFORM BILL

Now that the labor movement is going to salaam regularly at the feet of Secretary of Labor Mitchell under the new labor reform law, we feel it would be a good idea in the interests of fairness to give similar autocratic powers to the Secretary of Commerce.

It's a well-know fact that the call girl racket is an adjunct of some industrial sales forces. Now when information is uncovered, why shouldn't there be a law requiring the Secretary of Commerce to investigate and prosecute?

The Labor Secretary is given unprecedented authority to snoop into labor matters and make them his own. He can dictate and destroy, if he so desires.

Is business any better that it should not be policed by the Commerce Secretary? After all, billions are paid in bribes each year. And if labor unions can be chained to the Labor Secretary, then industry and business should also be tied to the apron strings of the Commerce Secretary, thus keeping everyone on the "straight and narrow."

Last week the International Association of Machinists called for a full-scale probe of management practices.

Nothing came of the request—not even from management people who talked loudest for ending corruption in labor. If these people are sincere about gouging out corruption wherever it exists, they should be anxious for a peep into management's carryings-on.

There should be no objections to this plan. If management is as clean as it has contended during 2 years of McClellan hearings, then certainly business has nothing to fear. It should welcome a law giving powers to the Commerce Secretary to enforce rules telling the firms how to run their business.

Business advocated this for labor—and got it from Congress.

Let the press demonstrate equal diligence in uncovering the stories of internal graft, shakedowns by purchasing agents, gifts to individuals who can do the company some good, and even the stock options which are legalized ways of grabbing corporation stock at a discount.

Come to think of it, stock options in a way are a method of diverting corporation funds to individuals.

Where is the first management man willing to talk up for business reform with the same lung-bursting noise reserved for labor?

Science Age Studies Developed for Grades

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. DADDARIO. Mr. Speaker, a heartening national development in the last 2 years has been the determination at local levels to improve the standards of instruction in scientific subjects. While we face a general need to keep an eye on all phases of the education of our youth, to build new schools, to see that teachers are adequately paid, to modernize the teaching aids and curricula, it is good to see local programs in motion that will meet the devastating scientific needs dramatized little less than 2 years ago by the launching of sputnik.

While Hartford and other communities in my district have outstanding programs, and Connecticut itself has an overall scientific adviser at State department of education level to make proposals, I would like to include in the RECORD today a story of what is being done in the New Britain public schools, as reported in the New Britain Herald of September 3:

TO GIVE BASIC CONCEPTS—SCIENCE AGE STUDIES DEVELOPED FOR GRADES

To keep abreast of the rapid technological growth and to meet the need for an integrated science program for the lower grades, an elementary science program curriculum guide has been developed for the public schools.

This guide is the handiwork of the Elementary Science Curriculum Development Committee—one representative from each of the elementary schools—working under the guidance of Winaten B. Keck, former curriculum coordinator of the New Britain public schools, and Dr. John Read of Boston University.

This is an age of science. In one short day, a child comes in contact with scientific phenomena over and over again. The child examines the world around him, touching, tasting, smelling, listening, and always asking how and why things are what they are. Science is an integral part of the child's world. Just as certain basic food elements are necessary for the healthy physical growth of the child, so also, science functions as an essential component of a balanced educational experience of a child.

During the last decade there has been a rapid technological growth. The child of today lives in a world of nuclear energy and earth satellites as well as in a world of flowers and birds. His environment is increasingly subject to modification and control through science.

Since the elementary school must be concerned with helping the child to acquire useful, functional knowledge, skills, and understanding, it is but natural that science is given a significant place in the elementary school.

This guide aims to assist teachers in their work with science and to improve the effectiveness of science instruction in the elementary schools. It is designed to satisfy the child's inquiring mind, to stimulate curiosity, and to closely tie in with subsequent experiments presented in the junior and senior high schools.

The content of the guide is found in the everyday world of the child. The method, natural to children, is to investigate through observing, experimenting, manipulating, questioning, constructing, reading, and solving problems that are significant in daily living.

OVERALL CHART

The total science pattern for the elementary schools is included in a scope and sequence chart, which presents an overall view of the topical areas included in the science experiences of all children.

Basic science concepts have been developed. They represent the essential understandings and knowledges which form the basis of the instructional program in grades K–VI.

Also included is a list of appropriate pupil-teacher activities, basic and comprehensive, structured to attain the stated concepts. References to related films and filmstrips, and a pupil-teacher bibliography have been provided to complete a well planned, orderly, and flexible science program in New Britain's elementary schools.

Security in Family, Friends, Freedom, and Faith

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech written by Judith Ann Rogers, a senior high school student from Albany, Oreg., in my congressional district. Miss Rogers wrote the speech for the "My True Security" program and was declared winner for the State of Oregon. She attended the national awards banquet here in the Nation's Capital in July:

THIS IS MY SECURITY, MY TRUE SECURITY
(By Judith Ann Rogers)

The tiny baby grasps tightly to its mother's outstretched fingers; the youngster, left alone temporarily by his parents, wails mournfully; the elderly woman grips the railing before descending the stairs: these people are all searching for something.

Will they find that thing for which they search? Some do, yet mental hospitals are full of those who have searched in vain.

Yes, security is an elusive thing—it is in great demand, yet no one has managed to find a way to bottle and sell it. One need not have dollars and cents to have it for those who have everything would give it all for security while some of the poorest people own the largest quantities of this precious possession.

The greatest problem in finding security is knowing where to look. Some surround themselves with the riches of the world, but when they have finished amassing a fortune, they realize that security is not found in silver or gold. Others seek it in a bottle or a hypodermic needle and, for a few hours, they may even think that their search is over, yet, when the effect wears off, security has disappeared.

What is this security which everyone seeks? If I were Sherlock Holmes or a Canadian Mountie out to get my man, I would want to know something of the subject of my search before I began. Although security is not something that can be tracked down by a private eye until it is behind bars, it is easier to find when it is understood.

We have observed these things about security—it cannot be purchased at any price; it is not found in material things; and it must be permanent to be the true thing.

Webster defines security as "the quality or condition of being free from fear, care, or anxiety." Since these are all chains that bind the mind, then might we say the security is a freedom of the mind?

Now, with the meaning clear, we may begin our search.

True security is like the roots of a tree. In the center is the trunk root, the family. Our parents shelter us from the fears of the world and see that our needs, both material and spiritual, are not neglected. Yet they take care to instill in us a sense of responsibility and judgment so that we might grow in the right direction when it comes time for us to branch out on our own.

Branching roots represent friends with whom we have laughed and cried, played and fought. The earth in which we are rooted is the society which encourages or discourages our growth. Just as an elm tree could not be expected to grow on the desert, or a palm at the North Pole, one could not expect us to grow in the wrong sort of society. Just as most trees grow best where the soil is loose and gives the roots freedom, security needs freedom to grow.

Tree roots cannot subsist by themselves—they reach out to soak up their lifeblood, food from the soil. Our lifeblood is faith. Without faith our security cannot exist. This is a threefold faith—faith in God, faith in humanity, and faith in oneself.

And so we see that true security is not in a clause of an insurance policy, or in the Government's promise of money for our old age. It is in family, friends, freedom, and faith.

Our Stake in Israel: An Act of Faith in Man

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. TOLL. Mr. Speaker, under leave to extend my remarks, I include an address by Rabbi Aaron Decter on the Voice

of Israel program over station WBBZ in southern New Jersey and Pennsylvania. The occasion was the 12th anniversary of the continuous presentation of this educational program to the Jewish and Christian communities of the area. Rabbi Decter is an outstanding citizen of Philadelphia, is coordinator of the Foundation for the Jewish National Fund, secretary of the American Committee for the Writer's Center in Israel, and former editor of Israel Speaks:

OUR STAKE IN ISRAEL: AN ACT OF FAITH IN MAN

On behalf of the Jewish National Fund Council of the Penn-seaboard region, I am delighted to extend greetings to all of our audience as well as to the dedicated men and women who have made the Voice of Israel such a remarkable channel of communication of ideas and information about Israel and its people. I am proud to greet you on your 12th anniversary of continuous service and to extend to you, not only our hopes and prayers for your good health and future dedication, but also to bespeak the good wishes and the prayers of all of those who are associated with the Jewish national fund; with the great work of land reclamation, soil afforestation of this great agency, whose purpose is to restore the land to its Biblical fertility. I am also proud to bring to you greetings of the men and women who are associated with the Israel Histadrut campaign, whose cooperative institutions are making Israel so unique.

What has been the character of the life of the people of Israel that has drawn so many members of the Afro-Asian bloc? It is because the people of Burma, India, Ghana, etc., have recognized that in Israel's social philosophies and in the lives of the people of Israel, animated as they are by the ideals of the visions of the Bible and by great social visionaries of every generation, there is a purpose: namely, to respect the human personality, to create social institutions that raise man above the subhuman, to decuate its people to release them from bondage to ignorance, to save them from the fear of disease and of death and to give them the opportunity to live in freedom, with hope and with dignity. It is because of this that a man like Prof. Robert Oppenheimer, another neighbor of this community, was able to say after visiting many countries and after visiting Israel, "There is only one country where I have been able to find hope for the world, and that is Israel." A man like Oppenheimer, who has been close to the work of atomic research which has been utilized for destruction, has found discouragement in sicentific work and disappointment with those who are guiding the destiny of millions of people.

There is need today to have men's minds and spirits strengthened by faith, faith in man's ability to overcome great and almost insuperable difficulties; faith in man's ability to create social engineering, whereby people can learn to live together; faith in man's wisdom and inteligence to resolve problems as they arise constantly. This faith, the people have inherited not only from the Torah, the Bible, they have inherited it from hundreds of years of difficulties, pogroms, disabilities and persecutions and because they have been the social heirs both of a great vision and a philosophy as well as a long history of difficulties, they have emerged in this, our day, with a determination that created a state and a democracy that by the quality and character of its social lving, will be able to inject new hope and give new stimulation to those who believe in the democratic way of life. There will be many difficulties that will have to be faced, difficulties not only in the continuous struggle against nature; the struggle against the desert and the Kibbush Hashima, the conquest of the desert; the struggle to maintain a level of normalcy between the development of agriculture and greater productivity in industrialization; the problems of absorption and integration of new immigrants by teaching them how to work, etc. All of these problems whether they be economic or social or psychological or even relationship with their neighbors will be overcome because the people of Israel have faith and vision. Through this faith in action, the people of Israel will enrich the world with a variegated texture of spiritual blessings, and bring light unto the nations.

Thousands of years ago, a people of farmers and of settlers met together in a great mystic union with the land of Israel, the Holy Land, and there created forms of religious manifestation rich and variegated in character that blessed and enriched not only the civilization of their day, but the lives of hundreds of millions of people in lands and civilizations far removed from them in time and space. For hundreds of years that land and that people have been divorced, one from the other, and the land has been abused, sowed under with salt, become the prey of unloving hands, the victim of the hostility of conquering armies in every generation. In our day, and this has been the privilege of our generation, we have seen and witnessed the resurrection of the people of Israel and the reestablishment of the State of Israel, Medinot, Israel.

Once again, the descendants of that small people of settlers and farmers, reunited with its ancestral soil, have recreated new forms of religious life, of social living, which are the manifestation of its unique religion—the genius for the noncombative and for the cooperative life. They are creating those forms of living which give manifestation to the ideals of brotherhood and of fellowship that was envisioned by Jeremiah and Isaiah, by Amos and Hosea. It is because of this that we can understand why the people of Israel and its government have been able to leapfrog the cold steel ring of enmity and hostility with which it has been surrounded by its immediate Arabic neighbors and to create by means of this leapfrogging, a warm and viable association of friendship and alliances with many members of the Afro-Asian bloc, such as Ghana, Lybia, Tunisia, Burma, India, and others.

William O. Sword, of Wilkes-Barre, Named Industrial Ambassador by U.S. Department of Commerce

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader, of September 9, 1959, which comments upon the selection of Mr. William O. Sword, president, Wilkes-Barre Industrial Fund, to serve as member of industrial mission to Italy for the Foreign Trade Bureau of the U.S. Department of Commerce:

INDUSTRIAL AMBASSADOR

Departure of William O. Sword, president of the Wilkes-Barre Industrial Fund and spearhead of the rehabilitation movement in this community, on an industrial mission to Italy for the Foreign Trade Bureau of the U.S. Department of Commerce, is recognition for Greater Wilkes-Barre as well as for him personally.

Mr. Sword attained national prominence because of his activities in the field of industrial development here in recent years, although the community is indebted to him for other service as well. It was the stature he acquired in trying to put this area on its feet that brought him to the attention of Washington. Thus, the progress the community has made, as well as Mr. Sword's own contribution to it, was a factor in his selection for this important assignment.

Mr. Sword is unusually well equipped for this undertaking, not only by virtue of his public service and achievements in Greater Wilkes-Barre, but on the basis of his private interests. He has a broad experience in business and banking.

It is flattering to have the Government turn to Wilkes-Barre for assistance, thus reversing the usual procedure. This area yields to none in its output of leadership, providing America with scores of outstanding personages in peace and war. Mr. Sword now takes his place in that distinguished company.

Both Chan and Elevator Stuck—His Bartender Won't Join Union

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. BOSCH. Mr. Speaker, with each passing day we see more and more evidence that the 86th Congress acted to protect the average American when it approved the final version of S. 1555, the so-called labor reform bill. I have just read with a great deal of interest an article which appeared in the September 10, 1959, issue of the New York World-Telegram and Sun which illustrates clearly the need for the type of legislation we have passed and which now awaits the President's signature.

Under leave to extend my remarks, I include the article to which I have referred and commend it to the attention of my colleagues. May the signing into law of S. 1555 bring the elevator of the House of Chan back into operation:

BOTH CHAN AND ELEVATOR STUCK—HIS BARTENDER WON'T JOIN UNION

(By Sam Schraeger)

House of Chan so sorry elevator stuck. But cannot force bartender to join union.

You listen carefully—Sou Chan, head of House of Chan, explain. This is why outside freight elevator on Seventh Avenue, up in air three days now:

In April, man from bartenders' union come see Sou Chan and say: "We want to organize your bartenders." Sou Chan tell him: "All right; I talk to them."

One of the bartenders is stockholder so he see no need to be union man. Other bartender say: "I make $95 a week now. Union scale is $75. Why should I pay dues? Anyhow, I can only work in Chinese restaurant. Irish saloon on Third Avenue not hire me. I don't need union."

Sou Chan explain this to union man. Then Sou Chan go back to kitchen, make sure steak kew, see gyp guy, shrimp puffs,

treasure rolls come out the way customers at House of Chan like them. Sou Chan step outside for breath of air. And what he see?

There are two men carrying signs on Seventh Avenue and 52nd Street. Signs say "House of Chan unfair." Sou Chan shrug his shoulders, go back inside. "Well, they only do their job," he say to himself "Their job is organize, so they organize."

"We get along, union men and me," say Sou Chan today. "No trouble. Sometimes they say words not nice to say, but I don't pay attention."

Tuesday, outside freight elevator come all the way up. Loaded with bags of rice, plums, water chestnuts, snow peas. Servitors unload, and try to go back down to basement. Elevator not move.

Sou Chan telephone elevator man, tell him come fix. Elevator man come, start to fix. Then at noon, union pickets come. Elevator man belong union. He look at pickets. Then he stop work, leave.

Cop come. He tell Sou Chan: "If you don't fix that elevator, I'll give you a ticket."

Sou Chan say: "Please give me ticket."

Cop puzzled. He say: "You're too anxious. I'm gonna talk to the sergeant."

Sou Chan tell landlord. Landlord call his elevator man. Landlord's elevator man belong to union, too. Yesterday, he come, work until noon. Then he, too, see pickets, stop work, leave.

Sergeant come, tell Sou Chan: "You have to do something about that elevator or I'll give you a ticket."

"Please be so kind, honorable Sergeant, and give me ticket. Then I can straighten all out."

Sergeant no give ticket. He go away, call police department legal department, and they say: "Stay out of it."

Today, Sou Chan still no have ticket. Elevator still stuck. On elevator is this sign: "Elevator stuck, not struck."

"Elevator, like all faithful servitors at House of Chan, anxious to do best for you. "But pickets are problem for elevator fixers, keep it up and up, instead of usual up and down."

Plaque To Mark Burial Plot of Col. John Franklin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre (Pa.) Times-Leader, September 9, 1959:

PLAQUE WILL BE UNVEILED—TO MARK BURIAL PLOT OF COL. JOHN FRANKLIN

On September 23, the State will unveil a marker commemorating Col. John Franklin, last champion of Connecticut's land claims in this area, on the Athens-Shesequin Road in the vicinity of Athens, it was announced today by Dr. Elsie Murray, historian for Tioga Point Museum.

The highway marker will be placed at the foot of a knoll overlooking Tioga Point where Colonel Franklin, after whom Franklin Street in Wilkes-Barre is named, was buried in 1834 in a little cemetery which has been lately restored through a bequest from the family of the last local descendant.

According to his diary which is on file in Tioga Point Museum, Colonel Franklin moved from the Wyoming Valley region in 1790 following 2 years of imprisonment for defying Pennsylvania during the Yankee-Pennamite Wars. He settled on a farm located in the Susquehanna Co.'s 18th township, part of the original Connecticut claims in the Wyoming region.

Stone steps lead up to the lookout on the burial knoll, now known as the Franklin Memorial Park, which is opened to the public. Other burials in the Franklin plot include a family of surveyors and mapmakers who helped draw the New York-Pennsylvania line.

Internal Revenue Code Bewildering to the Private Citizen

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. McGOVERN. Mr. Speaker, most private citizens are somewhat bewildered by the complicated Internal Revenue Code. Tax time is not only painful because of the money that we must pay to the Government, but more significantly because of the uncertainty, anxiety, and fear that we might somehow run afoul of the many aspects of the Code.

The unfortunate aspect of our tax structure in the United States is that it lends itself to manipulation by the big business groups who are equipped with superior accounting departments, tax consultants, and legal counsel. These aides are not always available to the small businessman, the farmer, the worker, or the average citizen.

Mr. Leslie H. Wald, a former Internal Revenue agent, has recently offered a most interesting discussion before the eighth annual University of Denver Tax Institute. In this paper, Mr. Wald makes clear some of the pitfalls that confront the average taxpayer.

I suggest that the following article, which I include at this point in the RECORD, may be of interest to my colleagues and to U.S. citizens in general.

WHAT TO DO WHEN THE SPECIAL AGENT CALLS

(By Leslie H. Wald)

(Mr. Wald is an attorney at law in Denver, Colo., and is a member of the California and Colorado Bars. He is a former member, Enforcement Council, Chief Counsel's Office, Internal Revenue Service. This article is the paper which he presented at the Eighth Annual University of Denver Tax Institute.)

As a prophylactic symbol, the special agent is comparable to the bogeyman of nursery literature, helping taxmen discipline their wavering little taxpayers. What's so special about a special agent? Simply that his only job is to try to make a criminal tax case. Technical issues or determination of correct tax are out of his province. His is the long view: making an example of this taxpayer to put fear into onlooker taxpayers and cause them to report more fully and pay more tax. He has a job to do, namely, to get evidence sufficient to convict a tax evader; and if that evidence can be found, he'll do his job of trying to sew it together into a choking, unbreakable band. And if the evidence is missing, he gets out of the case, turns it over to a revenue agent, except to vote on civil fraud penalty. His vote is usually "Yes." So he's the F.B.I. of the "revenooers", stalking with a pencil instead of a gun, but still stalking a suspected criminal, to put him (or her) behind bars as a deterrent example to all queasy taxpayers who can read their newspapers.

In person, a special agent doesn't look like a cop, or a detective, or the U.S. Marshal in Gunsmoke. He's a disarmingly pleasant, harmless-looking, even frail fellow, often with a smile that looks like it stepped out of a Lawrence Welk program. Certainly he's not scary-looking.

That sets the stage for the drama which usually is enacted.

In most instances, when the special agent calls, either (a) the taxpayer's guard is way down, or (b) the taxpayer is guarded and sophisticated, but with illusions of superiority and omnipotence, of being shrewder than this here fellow, or (c) the taxpayer has fear in his guts and appeasement on his lips. Appeasement is all he can think of—like Chamberlain returning from Munich.

And thus begins the honeymoon, the period in which records are generously handed over ("May I take this journal with me for a day or two?" "Of course, anything you wish."); statements are generously made, and the loss of virginal constitutional rights is consummated on a table in the taxpayer's office.

This doesn't always happen, but it happens most of the time. If it didn't, criminal tax statistics would be hungrier. An old Intelligence Training School motto is, "It's easier to catch flies with honey than with vinegar." A more detailed version is quoted in *United States* v. *Frank*, a Third Circuit case in 1957, from a written manual of instructions to agents which got into the hands of defense counsel by some fascinating means not revealed:

"When the agent has completed the preliminary background on his taxpayer, he should then contact the taxpayer, informing him that a routine examination of his tax return is being made.

"Be cautious and alert and cultivate the confidence of the taxpayer without tipping your hand as he may cooperate to some degree with you, but if he finds out that you are on his trail, he may clam up, and from then on your job will be much more tedious and a lot of harder work is ahead of you."

So this is the normal delineation of the taxpayer: on his own, blindly cooperating. He's a child playing with fire; whether he's got appeasement, outsmarting, or plain nothing in his head for a motive. And I'm not referring exclusively to the taxpayer with some small or large stains on his soul. The fellow who tells himself, "Why, I have nothing to worry about * * * my books are open to the world * * * I haven't chiseled anything, etc., etc.," is still playing with fire in honeymooning with the special agent. You can hear the background chorus softly singing, "Methinks the taxpayer doth protest too much." Protesting to himself as well as to the world. Human nature and the workings of the mind play tricks.

For example: forgetfulness, genuine failure to recapture a moment of hesitation and indiscretion 2½ years earlier, when, late at night and weary, his fingers poised over an adding machine, worrying about bills to be met, he mumbled something convenient and at the moment reasonable to himself and put down something which in the cold light of today he cannot explain. This is the Freudian commonplace of forgetting something unpleasant. Or, he clearly remembers, but rationalizations have persuaded him that this

and that item are perfectly defensible, and he's ready, by gosh, to look puzzled, surprised and shocked that it's questioned—to emote to himself as well as to the agent. Or, he's clean as driven snow, he knows it in his heart and in his head, and he isn't deluding himself, he hasn't a drop of unreported income in the veins of his net worth—yet circumstances, sloppiness, the absence of proof of his position means that he'll have a devil of a time defending a circumstantial evidence buildup of a tax evasion case. The Perry Mason type of situation, the accretion of damning evidence against an innocent, does occur. Don't ever be so cynical and world weary as to close out that possibility.

Well, we can't do anything about the taxpayer who blindly honeymoons with the special agent without notifying his lawyer or accountant, short of distributing Balter's textbook on tax fraud to all motels and hotels to be placed in the drawer with the Gideon Bible; and that mass education would be mostly wasted since, while all people are concerned with heaven and hell, only a small percentage of taxpayers will face special agents.

What should the accountant or lawyer do, or not do, however, if and when the taxpayer has the sense to notify him?

First is the problem of being effectively notified whether it's a special agent or a fraud investigation. The taxpayer will merely say that some "revenooer" from the new customhouse wants to come over. Most of the time, of course, it's nonfraud. How do you know or realize that the agent has an informer's letter, or a TCR from the bank about an unusual currency transaction, or some other lead to a suspicion of a criminal case? If it's the special agent who comes to call, you should realize that. You should know their names or at least ask what office they're from. If it's a regular revenue agent, it's tougher.

Be sensitive to signs of fraud investigation. What does the agent want to see? What years? Old ones? It's bad, of course, to fall into a trap of seeing special agents under the bed when they're not there. Let me give you a horrible example:

Agent came to dentist (had return assigned routinely): "I'd like to see your records."

Taxpayer brings out journals.

Agent: "OK., now, where are the other records?" (He means the ledgers.)

Taxpayer: "Oh. You know. Well." And with resignation and dark thoughts about a technician he'd fired, he reaches in his desk and pulls out a little black book listing about $1,500 in unreported cash receipts—nothing that would have been discoverable by investigation.

This is known as "the guilty flee where none pursueth" type of windfall for the Intelligence Division.

The other trap, seeing routine investigation where third parties are being contacted, affidavits and photostating going on, is just as deadly to the taxpayer.

Assume you realize it's a special agent case. Should you be disarmed by the agent stating that he just wants to check out a third party's taxes, he's just getting this end of third party's transactions? Partially disarmed, yes—but just partially.

Frequently, Intelligence Division investigation of taxpayer X stems from having visited X while investigating Y's case. The agent makes a note (and not a mental one either) that X looks interesting, too; perhaps we should wait 'till we're through with him as a witness against Y, but let's take a look at him. This is known as the "chain reaction bump."

Illustration: Mr. A, who has a music store, let's say, is under investigation, and his books and invoices reflect a sale of an Elvis Presley album for $12 to Mr. Z; yet Mr. Z's check (peered at on bank recordak) was for $2,000. Maybe Z got change for his $12 purchase, but then again, maybe not. Agents go to Z and find he really bought a piano.

Hapless Mr. A gets a phone call from Z. "Can't you keep your cottonpicking books in shape? The agents have been here asking about that piano I bought."

A: "Your'e complaining. I'm the one in trouble."

Z: "They're nosing around and want to know why I charged off that piano to promotion expense."

This is a true story. Only the names and occupations have been changed to protect the inno * * * to protect. This is the "never ask for whom the bell tolls—it tolls for thee" situation.

Well, what is the opposite of blind honeymooning with a special agent? What is the optimum course of action for the accountant or lawyer drawn into a special agent situation by taxpayer who says, "O.K., what should I do now?"

As a pendulum reaction to blundering into taxpayer making his own case versus himself, or the accountant or lawyer's bitter memory of blundering for the taxpayer, a popular oversimplification at present is to answer the taxpayer: "Don't give the special agent anything; don't even give him the time of day, in any special agent type case." That is still blindness, although it's an opposite of blind cooperation.

The premises which must not be discounted are:

1. The special agent by definition is looking for unreported income and willfulness to make a fraud case, and already, when he shows up, has suspicions and leads and a background of information on the case, which he is not sharing with you, not disclosing. The investigation and soliciting of answers is directly aimed at getting admissions or records to support those suspicions and that background evidence. The agent has the facts of return and this background investigation freshly in mind; the taxpayer is hit cold and off balance; and the setup is thus weighted to pick up meat to put on the bones of suspicion.

2. Everything said by the taxpayer, everything looked at by the special agent, is being irreversibly written down and preserved by the Government side. A haphazard comment or off-the-cuff explanation of an item, a mere guess to appease this agent who keeps importuning for an answer, is immediately transfixed as a fact in the case. This will haunt the taxpayer and you when, months later, with memory refreshed by examination of all the details, taxpayer and/or you sit down to examine your position. Everything said or done with the agent is irreversible, indelible. The fulcrum on which victory or defeat in a tax evasion case turns is often the evidence picked up by the agent in the first meeting with taxpayers. The hasty answer will appear in the special agent's report under the section "Proof of Willfulness" as conflicting explanations or perhaps false statements to agents. On the taxpayer's side, he may not even remember [to tell you] what he said to that agent.

Given these two premises: (a) the background and predilection of a special agent when he first appears, and (b) the indelible preservation, for better or for worse, of what is furnished to him, the end of the syllogism is just commonsense.

Don't plunge in guessing and groping, taking a position on cooperation or noncooperation; instead, preserve the status quo without taking any irreversible steps in any direction, pending competent scrutiny of the case.

This means the taxpayer or his lawyer in his behalf does not chant the fifth amendment as the alternative to cooperation. The agent is merely told that he'll have to wait until taxpayers' representative has had a chance to look into the matter, that you're not taking any position except the sweetly reasonable one of looking before you leap, before you give advice of any kind to taxpayer.

To preserve the status quo, immediate, positive action is necessary:

1. All contact by taxpayer with agents must be cut off.

2. All contact by taxpayer with his accountant must be cut off, at least temporarily. An inevitable consequence of the fact that taxpayer's statements to an accountant are not privileged communications in Federal practice is that anything told by the taxpayer to the accountant is in effect told to the agents. The accountant must, if subpenaed, tell what the taxpayer said, however damaging. It is thus necessary that the accountant, if consulted, call in taxpayer's attorney at this point. In that connection, even if there were an accountant's privilege, it should be noted that the accountant would be dealing here with matters entirely outside his experience and training, i.e., criminal law, constitutional law, etc. For example, he may have heard that corporate records are not privileged under the fifth amendment. Will he know that a corporation does have some rights under the fourth amendment? What in the world would he do with a subchapter S corporation's records?

3. The taxpayer's books and records must be immediately secured into the possession of either taxpayer or his lawyer to preserve the right to withhold, if ultimately decision is made to withhold. For example, if the partnership general ledger is sitting in the C.P.A.'s office, you can count on it being picked up by the agents in this waiting period. An irrevocable step will have been taken, willy-nilly. The grabbing will obtain while the grabbing is good.

At the same time, the opportunity is availed of asking the special agent certain minimal facts (to the common end of hastening your decision on furnishing records, etc.): what years he is investigating; is it a preliminary or jacketed case; and anything else you might worm out.

When all steps are taken to preserve the status quo, then the lawyer must start working to develop the facts on which decisions will be intelligently made with respect to cooperation. The lawyer must find out precisely what happened before he got into the case; what's the taxpayer's full story; who are the important witnesses who will have to be interviewed as soon as possible; and what evidence is available to agents without access to taxpayer or his records. Accounting work must be done; and here we are backing right back into the dilemma of the accountant's privilege. The lawyer has snatched all the books away from the accountant and now he has to have an accountant look at the books. One popular way of accomplishing this is to have the lawyer hire the accountant and cloak him with the privilege of lawyer's employee. This is not foolproof; the cases are not clear on whether the privilege will stand up in this circumstance. A second safeguard would be to hire an accountant not already acquainted with taxpayer so that the agents will not know whom you have hired. Or, depending on the facts of the case, it may turn out to be perfectly all right to let taxpayer's regular accountant do work for you.

Having explored the facts of the case, a decision on cooperation may be made. A pragmatic approach is the usual one, cooperating on this, but not on that. It is not an all or nothing affair. You may furnish records, perhaps, but not a question and answer statement. Or, you may not furnish records except for canceled checks, which

the agent can secure the hard way, burning his eyes out over records. In any case, on all exchanges of information the agents deal through you, the lawyer, and at the very least, you are in contact with them and following through on what they are doing and asking.

There is no rigid checklist of things to do in this situation. It evokes the aphorism, "All generalizations are false, including this one." I just wish to mention in closing certain stumbling blocks, certain impulses which the accountant must stifle to do the proper thing in getting representation. After all, he is normally the first person contacted by the taxpayer after a special agent moves in. He must be aware of:

1. An impulse to carry over into this situation his habits of thinking and doing in an ordinary field audit; to say to himself and to taxpayer, "I've had a lot of clients visited by agents and none of them were hurt by sitting down and openly going over everything with the agent; if we play it coy, he'll start suspecting something's wrong, and you'll really be in for a heavy investigation." This, to me, is worse than lazy thinking; it's like continuing to drive on your side of the street when you're in England.

2. A thought that, after all, I have to live with agents and I don't want to thwart them. Well, he has to live with taxpayers, too. He has a duty to both sides. Agents should respect him for following this course of action. If they show momentary pique, it merely reinforces the point that the accountant did what he should have.

3. An impulse to wait and see. If serious, then I'll make a Federal case out of it. It's always serious when a special agent is involved and the longer the contact with agent without representation, the fatter the Government's chances of a case.

With the stage properly set for intelligent dealing with a special agent, the taxpayer has effective representation on the battleground of administrative defense of a fraud case. This battleground, with an obstacle course extending through group chief, assistant regional commissioner, intelligence, regional counsel, and Justice Department is vital. Many cases can be won or lost long before the publicity of an indictment and arraignment and trial.

Federal Reserve Board

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Texas [Mr. PATMAN] is recognized for 30 minutes.

Mr. PATMAN. Mr. Speaker, there is no doubt that the country is in a fiscal crisis of major proportion. The administration, with the help of the Federal Reserve Board, has created this crisis in their determined and arrogant efforts to force Congress to repeal the interest-rate ceiling on Government bonds and thus saddle the country with an even higher level of interest rates than they have accomplished so far.

Yesterday one of the prominent financial papers, the Wall Street Journal, carried a feature story of a plan which is being considered in the White House to call Congress into special session this fall, and to put the President on television and radio to describe some dramatic incident that will inflame public opinion in support of the interest-rate repeal. The Wall Street Journal reports that one high administration official has spoken of the possibility of a money panic which would be so real that it would paralyze business and bring widespread unemployment. All this to happen probably late this fall before Congress reconvenes in January. The discussion of such a plan as this is a very disturbing thing. Furthermore, the extremes to which this administration has already gone to jack up interest rates gives some credibility to the possibility that it would actually pull off such a desperate stunt as this plan which is reported to be under consideration.

Is this administration simply incompetent to manage the public debt? Has it created this mess simply through bungling?

Certainly it is difficult to understand why such a mess could have been created simply through incompetence. The Federal debt today is a great deal smaller than it has been in many years past, both relative to the number of people in the country and relative to the national income. In realistic terms the administration has a small debt to manage. The previous Democratic administrations managed a much larger debt in real terms with a maximum 2½ percent interest rate on long-term Government bonds.

Furthermore, the total demand for savings today, including the demand for private investment, and the demand to meet the net exports of capital to foreign countries, is a smaller percentage of the national income than it has been in years past. Why is it, then, that the interest rates paid on savings have been jacked up to a 42-year World War I record, and yet our money managers are still not satisfied; they feel they have to bamboozle the public and bulldoze Congress into repealing the last remaining check and safeguard against exorbitant interest rates.

If we have a money panic in this country, it will be because of the failure of the Federal Reserve Board members to do their duty. They should be honest enough to send in their resignations rather than give any further aid and assistance to this scheme of trying to force Congress to repeal the ceiling. If we have a Federal Reserve Board that carries out the objectives, intentions and purposes of the Federal Reserve Act, it will be impossible to have a money panic in this country. So I think this question of a money panic is just something that we should not tolerate—even the consideration of it.

I am greatly encouraged by the careful attention that is being given by Members of this House to questions involving money, credit, interest rates and our national debt. The reason I have always advocated an administrative assistant for each Member of the House is so that Members can keep better informed, especially on matters relating to appropriations, taxes, debt management and monetary matters.

I know we do not have an opportunity at this time to provide for an administrative assistant, but I hope this opportunity will come soon. This would save the taxpayers thousands of dollars for every $1 that was appropriated for this purpose.

Congress appropriates money to the executive branch, to have all the administrative assistants to the secretaries, assistant secretaries, and third and tenth assistant secretaries; we appropriate money to help them do the job—even to do the wrong kind of job, such as thinking up arguments and schemes for willfully imposing bad policies.

We appropriate the money for the judicial branch of the Government to have the law clerks and administrative assistants needed by the judges, I think that is appropriate.

We appropriate the money for the Members of the other body to have from one to three administrative assistants. That is good. But why should we, the body where the most important bills originate—bills relating to taxes and to appropriations—not have adequate help? Not even the members of the Ways and Means Committee have administrative assistants nor do members of the Appropriation Committee. Where the public needs more help is right here in this body. Every Member needs at least one assistant to properly perform his duties.

If there is a weakness in our system of Government, that weakness is in the legislative branch not being equipped to do its job. Members of Congress are sincere people, and exceptionally able people. I have had the privilege of serving with probably 2,500 Members during the time I have been here—over the past 31 years—and I believe I could not have possibly been associated with a finer, better, more sincere, more honest and honorable people. But I also know that they have not been equipped to do a job of the magnitude they have to try to do. They need more expert help. Personally I would prefer to have an economist; other Members might, however, find their needs best met by other skills and training.

But each Member needs to have somebody who can help him keep up with legislation and with proposals that the Member cannot himself keep up with, because he just does not have the time to do it and perform his other duties.

Now back to this monetary system of ours.

What is it, what are its purposes, and what is wrong with it? Actually there is nothing wrong with the system itself, except in the attitudes and purposes of some of the people who are running it. Our commercial banking system is the finest in the world. The Federal Reserve System is an excellent system, and it has the means and powers for serving the country well.

Why was this System created?

Prior to 1913, when the System was established, we had a banking system which provided a rather inelastic supply of money. This gave great troubles. In periods of rapid economic expansion

there was not enough money to go around. The country went through periodic booms, money panics and then depressions.

So the first and foremost purpose of the Federal Reserve System was to establish a system which would provide an elastic money supply. The System does that. The people who designed this System recognized that money itself is not wealth. It is only a form of accounting in which economic activity takes place. Actual wealth is created only by the production of goods and services. People who designed the original Federal Reserve System recognized, as had been proved by the experience in Western Europe, that when the economy grows the country must have more money; more money should be created along with the economic growth that is taking place.

The original Federal Reserve System provided for the needed expansions in the money supply. This was a regional system with 12 independent banks. Each bank had authority to expand or contract the money supply of the region in accordance with the needs of the region. They were delegated Congress' power to create money and to regulate the value of money.

In 1935, in the depths of the depression, Congress made considerable changes in the Federal Reserve System. We made the System into what is truly a central bank, whereas previously the 12 banks had operated each with the powers of the central bank and, I might add, pretty much in a coordinated way. The central bank is a wonderful thing. I believe that Will Rogers once ranked the central bank as one of man's greatest inventions, along with the invention of the wheel. We should recognize, however, that this central bank of ours is run by a very small group of men who are exercising complete power of decision over the economic life of the Nation.

The regional banks no longer have any significant power or authority, although we read about decisions and actions which they have taken, which make it seem as though a great many different people are unanimous in what monetary policies should be.

What power of decision do these banks actually have? I have asked every Federal Reserve official who has appeared before our committees what discretionary authority the regional banks have and though most of these officials have tried to uphold the pretense that the regional banks are great centers of authority, they have actually been able to enumerate no discretionary authority which the regional banks exercise.

One of the most frequent assertions is that these regional banks fix their respective discount rates. And announcements of a change in the discount rate are made as though the decision has been made by the separate regional banks. But this is not true; they do not have the power to establish the discount rate. They go through the motions of recommending, but they have no power to establish. The discount rate for each bank is established by the Federal Reserve Board. And the Federal Reserve Board, in establishing the discount rate, is merely executing one step in the overall monetary policy decided upon by the Federal Open Market Committee.

Here, in this open market committee, are 12 men who rule over the economic life of this Nation, and to a considerable extent, over the economic life of the rest of the nations of the free world. They decide what interest rates shall be. They decide how much money and credit the country will have. They decide whether or not the economy will be allowed to grow or whether it will be squeezed. They decide how many jobs there will be. They make the forecasts of whether they think business is going up or down. They make the judgments as to what is good for the economy. They are the ones who decide when they think they can foresee some possible inflationary tendencies, and they decide what the price of Government bonds shall be and what interest rates the Treasury will have to pay to issue new bonds.

Did you know that today the central bank of this Nation is the only central bank in the civilized world that does not give aid and assistance to its parent Government? Up until about 1953, yes, our central bank behaved like other central banks in that it supported the price of Government securities at a reasonable level, recognizing, as do other central banks, that the interest yields brought about on Government securities set the pace for all interest rates. But today we have a central bank which disclaims that it has anything to do with prices and interest rates on Government bonds, and that these things are determined only by the supply and demand for money. Well, of course, the Federal Reserve authorities are determining the supply of money every day of the year, and they are also determining what the price of money or the interest rates on money is to be, and to a very considerable extent they set the interest rates on money without respect to the supply and demand for money.

Since this administration came into office, they have followed a high-interest policy and they have, during most of the time, followed a tight-money policy. They have followed these policies because these are the policies they like and prefer. They have a natural preference for policies which help the bankers and wealthy people of the country. But they have followed these policies also because these are the policies of this administration. We have all heard President Eisenhower claim, of course, that the Federal Reserve is an independent agency and that he will have nothing to do with the Federal Reserve or make any suggestions which might impinge upon its independence. Well, of this we can be sure. This fiction of the Federal Reserve's independence and the convenient device it provides for shifting off blame onto an independent agency would quickly disappear unless the Federal Reserve was following policies which the administration wants it to follow. In other words, it has an unhappy agreement over these bad policies. I know that President Eisenhower is a good and sincere man who wants to do what he believes is right. But he made a terrible mistake when he described the Federal Reserve System as an independent agency which has in effect the powers of the fourth branch of the Government. He was acting, I have no doubt, on bad advice. A fourth branch of the Government? Where does the Constitution provide for any fourth branch of the Government? Where does the Constitution say that we shall have an independent agency of the Government exercising powers to overrule the economic policies and even defeat specific programs decided upon by the constitutional lawmaking processes? There is none.

But this giving the Federal Reserve a free hand to run the country the way the administration sees fit has resulted not only in political irresponsibility, but in downright arrogance toward the Congress from which the Federal Reserve has received the delegation of power. For example, a few weeks ago the Ways and Means Committee had adopted a very good amendment to a very bad bill. This was the Reuss-Metcalf amendment which had been put on the administration's bill to repeal the 4¼ percent interest rate ceiling. The amendment did not make the bill a good bill. I was opposed to the bill, and I am opposed now to the proposal to break the interest-rate ceiling. But at least the Reuss-Metcalf amendment was in the public interest. It suggested to the Federal Reserve System that if and when it brings about increases in the money supply, it should do so to the maximum extent feasible by acquiring Government securities so that the interest payments on these obligations would go back into the Treasury. This suggested method of increasing the money supply is in opposition to allowing the private banks to increase the money supply and thus put the interest payments into bank profits.

But the Federal Reserve Board strongly resented any such suggestion coming from Congress, and Chairman Martin went to work lobbying against it. He made all kinds of nonsensical statements to make the public believe that should Congress make any such suggestion to him the result would be inflationary. That is a standard claim—"inflation." Everything that does not happen to suit Chairman Martin's wishes and preferences, he labels inflationary, just like the administration does.

Later, when Chairman Martin was before the Joint Economic Committee, we questioned him very closely about his reasoning on the Reuss-Metcalf amendment, and he admitted, as he had to, that either method of increasing the money supply would bring about the same amount of money and credit. He still contended, however, that the money supply should be increased, when it is increased, by reducing required reserves of the member banks. He made all kinds of statements which suggest that the reserves of the member banks represent money belonging to the banks, which the banks have deposited with the Federal Reserve banks, and consequently the

banks should be allowed to use more of their reserves when an increase in the money supply is needed. This is in contrast to the Federal Reserve's creating more reserves by acquiring Government securities.

This fiction about the origin and ownership of the bank reserves is one that the whole Federal Reserve System has been carrying on in all of its literature.

You will notice that in the Federal Reserve report the member banks have $18 billion in the reserves. You often hear that spoken of. Occasionally you will hear a banker say, "We have so much money in our reserves that we get no interest on. We should have interest on it. We get nothing for it." They have $18 billion in reserves. I asked the President of the Federal Reserve Bank in New York, "According to the records, you are supposed to have $5 billion of the reserves of your member banks in the New York Federal Reserve Bank, out of that $18 billion, this being the largest bank of all of them?" The President said, "Yes; but we do not actually have those reserves. It is more of a bookkeeping operation. We keep the books but the actual money we do not have."

That was no surprise or disappointment to me. As any university student of money and banking could tell you, the banks never deposited any reserves. The Federal Reserve System simply created these reserves, using the Government's power to create money, just as the private banks have created bank deposits, using the Government's power to create money.

Now, when the Federal Reserve System started, the banks were supposed to deposit their reserves in the Federal Reserve banks. And in fact they did put in some amount. No one is sure just how much, but we know that at an outside maximum it was no more than $1½ billion. And since that time the banks have put in no more. They have, however, been paid out of these reserve accounts about $29 billion in cash, and they still have in their reserve accounts about $18 billion, on which they have been permitted to create money at the rate of about $8 for each dollar of reserves.

It seems to me that it is time Congress took some drastic action about this arrogance and this misleading propaganda from the Federal Reserve System. If we cannot make suggestions to the administration as to what its policies should be, we can at least make suggestions to the Federal Reserve Board. After all, the Federal Reserve System is operating on a delegation of congressional power. It is what Chairman Martin sometimes calls an "arm" of Congress.

When the Republicans first came in, in the 83d Congress, I was sitting in a meeting that was presided over by Mr. Wolcott of Michigan. Mr. Wolcott asked Mr. Martin, "What is your relationship with the Congress as Chairman of the Federal Reserve Board?" And Mr. Martin said, "We are servants of the Congress." Mr. Wolcott said, "Well, we will not put it on that basis, but we will put it on the basis of principal and agent." Now the Federal Reserve is getting away from being the servants of the Congress and they claim there is another relationship existing.

I would, however, make this suggestion to the administration. If it finds that this fiscal crisis, of its own creation, gets so bad before the 1st of January, the President should give serious consideration, not to calling Congress into special session to take the lid off interest rates, but call the Federal Reserve Board in and make his pleas to them. Furthermore, I have this suggestion for Congress. If the President does feel it necessary to call Congress back into special session to deal with the fiscal crisis, then I think we can deal with that crisis by enlarging the Federal Reserve Board and demanding that some public interest members be appointed to the Board. And if these demands are not met, then it will be time to consider making a different kind of delegation of Congress' power to create money and regulate the value of money.

I heard a distinguished gentleman of the House on the other side say today that we should take that lid off because that would bring about lower interest rates. Now, we have all witnessed the power of the Madison Avenue public relations people—their power and their influence and their ability to make black look like white and I have no doubt the gentleman has been persuaded by the repetition of this statement. But this is too much for me to swallow: Remove the obstacle, take off the lid so that interest rates can go up, and we will have lower interest rates. That does not make sense to me—common, book, or horse. I hope the Congress holds the line at least on the 4¼ percent ceiling. We should not boost one rate when we know it will only make the other rates go up.

Mr. Speaker, traditionally the Democratic Party is a party of low interest. It has always been so since the time of Andrew Jackson.

Traditionally the Republican Party is the party of high interest, and it has always been so.

High interest helps the great money interests. It helps the wealthy families, diverts income to them and diverts income from the great masses of the people. High interest goes with the restrictive economic policy. It holds back economic growth, keeps money out of the hands of new business firms and small-business firms that might expand and take markets away from the monopoly industries.

Now I want to invite attention to speeches of mine in the RECORD of yesterday, at page 17466, "Why the Administration Cannot Sell Government Bonds," and also on page 17467, "The Administration Is Imposing High Interest on the Whole Free World; Now Has Four Interest-Rate Races Going: A Race Between Rates on Government Securities and Private Loans, A Race Between Short-Term Rates and Long-Term Rates on Savings Bonds and Rates on Marketable Bonds, and A Race Between U.S. Interest Rates and Interest Rates in Other Free World Countries."

In the most trying time in the history of our Nation, during World War II, when inflation was the greatest threat that it had ever been at any time in our history, we held Government rates down to 2½ percent and the bonds were selling at par. If it can be done in a period like that, it can be done at any other period in the history of our Nation. We have had this 4¼ percent rate for more than 40 years. We have gone through wars and depressions with it, and never before has any attempt been made to take that lid off.

The SPEAKER pro tempore. The time of the gentleman from Texas has expired.

American Veterans of the Elbe River Linkup

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Joseph Polowsky, of Chicago, Ill.:

CHICAGO, ILL., *August 28, 1959.*

In the spring of 1958, and in the spring of 1959, during the 13th and 14th anniversary reunions of American and Soviet World War II veterans, there took place an unprecedented and extraordinary presentation of gifts of wide and enduring historic significance. The gifts directly concerned President Eisenhower and Premier Khrushchev, and the honor and the good will of the 60 million American and Soviet World War II veterans and their families.

The first gift was from the Soviet side, consisting of a bratina, a large lacquered wooden drinking bowl of friendship famed in Russian history. The Soviet gift of the bratina was presented at President Eisenhower's office at the White House in Washington on Elbe Day, April 25, 1958.

The second gift was from the American side, consisting of the original patrol map used by the first American patrol to link up with the Soviet forces at Elbe River during the wartime alliance between the two countries. The American gift of the patrol map was presented at Premier Khrushchev's office at the Kremlin in Moscow on V–E Day, May 9, 1959.

The tradition of the bratina is that those who drink together out of the bowl will never raise their arms in anger at each other. The bratina, the drinking bowl of friendship, represents the first gift from the people of the Soviet Union to the people of the United States in the history of the two countries. The honor and the dignity of the tens of millions of Soviet World War II veterans and their families are directly involved in the bratina. The eyes of the more than 200 million Russians will be focused on the bratina, the bowl of friendship, on the day President Eisenhower and Premier Khrushchev meet in Washington.

Many brave soldiers gave up their lives during the Second World War to make possible the presentation of the friendly gifts of the bratina and the Elbe linkup patrol

map to the chiefs of state after the war. It must assuredly be the fervent hope of men of good will everywhere that President Eisenhower and Premier Khrushchev, carrying on the friendly traditions of the bowl, will often drink together out of the bratina when they meet in Washington. And, in the same spirt, may Premier Khushchev and President Eisenhowerhower often examine and appreciate the Elbe linkup patrol map when they meet in Moscow in October.

The 60 million American and Soviet World War II veterans, and their loved ones, remembering the moving, friendly circumstances under which the American and Soviet armies met at the Elbe River 2 weeks before the end of the Second World War in Europe, can take great pride in the fact that the whole postwar series of direct friendly person to person contacts—from Roswell Garst and the farmers in the summer of 1955, to the chiefs of state in the autumn of 1959, on to all the pepole in coming decades—was begun and established on a sound, enduring historical basis by the great 10th anniversary reunion of American and Soviet World War II veterans in the spring of 1955.

As a member of the first American patrol to link up with the Soviet forces at the Elbe River on April 25, 1945, I believe I voice something of the thoughts and feelings of all American and Soviet World War II veterans in this critical juncture in the history of the human race.

I therefore call upon the nations for a new birth of conciliation and friendship, a renewed sense of human responsibility, that the oath sworn on the blood-soaked historic ground at the Elbe River shall not have been taken in vain.

JOSEPH POLOWSKY.

Inflation and Interest on Government Securities

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. HENDERSON. Mr. Speaker, as we discuss the issue of interest rates on Government securities today, we face again the issue which seems so unpalatable in this Chamber. That issue is the consequence of the calculated policy of living beyond our means.

The Federal debt is, too often, regarded as a mythical problem having little relationship to daily economic realities. I have heard it often referred to in this context by my colleagues here as they work for the passage of new spending programs or castigate those of us who believe that the Congress has pursued an irresponsible line of continually rising Federal costs in the cynical hope for political reward in the next election. There can be little doubt that this formula has been successful in the past. However, there is today a growing realization and awareness that this is a formula which is intellectually bankrupt, despicable, and against any morally defensible conception of the public interest.

This morning I received a letter from one of my constituents in southeastern Ohio discussing this issue in what I regard as a sound and carefully reasoned argument. In his statement, he points to the responsibility of the Congress for much of the inflation from which we suffer today and its blithe refusal to legislate the means for its control. He points out the fact, which I believe is undeniable, that the Congress is now taking a shortsighted view in increasing the interest rates on short-term obligations while leaving the rates on long-term obligations untouched. The effect is to popularize those Government securities which have almost the same qualities as currency, thereby increasing the amount of money in circulation and creating still another inflationary step.

Since I believe this letter is outstanding it its analysis of the situation, I wish to call it to the attention of the Congress. It is as follows:

Congress has refused to raise the interest rate that can be paid by the Government for long term bonds despite the following factors that are obviously forcing the Government's hand, many of these factors having been created by Congress itself.

Starting with the assumption that we are all against inflation, let us analyze what is happening.

Savings of corporations and individuals are the source of all capital investment. Taxes finance Government operations and where taxes are not sufficient to cover the expenditure, such deficit financing must come from these same savings. Even individuals who spend more than their income through installment purchases must obtain these extra funds from someone else's savings. Assuming that there is no inflation, these statements are axiomatic; you will find no disagreement between various economic schools of thought on these basic principles, however far apart they may be on other economic theories.

It therefore follows that if there is more demand for these funds than there is supply, the cost of borrowing will go up. This in turn increases the incentive to save until a point of equilibrium is attained.

The total savings of corporations and individuals (not including funds developed through equipment depreciation) for the year ending June 30, 1959, was approximately $27 billion. The demand for these funds have approximated the following total:

	Billions
Home building	14
Federal deficit	13
State and local deficit	3
Inventory buildup	8
Installment purchase excess of new debt over repayments	4
Total	42

Here we have a demand for $42 billion against a supply of only $27 billion. Not included is the demand for capital equipment funds in excess of the supply of such funds through depreciation. The demand at the moment is about $32.5 billion down from the $37 billion peak in 1957 but still above the supply furnished through depreciation. I do not have up-to-date figures on this difference but whatever it is, it must also come from the savings listed above. There are other miscellaneous items of demand not listed, not the least of which is school construction, but it is obvious from the above that we have enough to prove my point.

Industry and private individuals are willing to pay more than 4¼ percent (Government ceiling on long-term bonds) for the available money. The only recourse left to Government is to pay more for short-term loans on which there is no ceiling. Congress has refused to lift the ceiling on long-term bonds presumably for the reason that it would increase Government costs. This argument is not valid, however, when we look at the latest interest rate the Government had to pay for 26-week bills—4.2 percent, already at the maximum rate allowable by Congress for long-term bonds. And this is only the beginning; during the next 12 months, the Government will have to refinance $85 billion of maturing debt, most of it long term. What do you think will happen to the short-term interest rate by the time this $85 billion is refinanced? I don't see how it can stop below 5 to 5.5 percent. The next year there will be more long-term bonds maturing on top of the refinancing of this $85 billion.

The Government is in a trap. The Treasury Department is in a trap created by Congress, aggravated by congressional extravagances of wanting to do everything for everybody with no help forthcoming from the same Congress that created this absurd situation. They have, in effect, said, "It's your problem, not ours. Get the Federal Reserve to help you out by pegging the price of long-term bonds." This would mean that the Government would buy its own bonds at a predetermined price and they would end up owning all their own bonds as present owners unloaded to put their money into stocks and corporate bonds, tax-free municipals, or other Government-guaranteed bonds paying higher interest rates such as FNMA, etc.

This situation is impossible and is apparently based on the fact that prior to 1952 the Federal Reserve was pegging the price of bonds fairly successfully. This was stopped in 1952 because they were running into more and more difficulty accomplishing their goal and in agreement with the Treasury Department decided to let bonds seek their normal level. One reason that they were able to get by earlier was the excess of income over outgo of the social security fund. Even up to 1950 over 60 percent of the income was going into the trust fund which was used to purchase Government bonds. This trust fund came in very handy in helping to peg bond prices through purchase of Government bonds. Whereas from 1937 until 1956, the income exceeded outgo by an average of over $1 billion per year, the first deficit occurring in 1957, increasing to one-half billion in 1958, with increasing deficits expected in ensuing years. The present trust fund is $22 billion, of which $1 billion is in cash, with $21 billion being in bonds. Whereas this trust fund helped the Government in its financing in past years it is now a hindrance and is also adding to the pressure for higher interest rates. Incidentally, the reason for the deficit in the trust fund can be laid at the door of Congress since they expanded payments and coverage with little thought of the consequences.

When you add up this collection of facts you arrive at one or the other of two possible conclusions:

1. Congress has no conception of the problem it has created in Government financing, or

2. It favors full-blast ruinous inflation for the country, hoping that someone else will be around to handle the catastrophe that is bound to come. It has no consideration for future generations that will have to pay for this extravagance.

Increasing the short term percentage of our total debt will add fantastic quantities of money to the system and start pushing up prices in an ever-increasing spiral until the bubble finally bursts. So far the Federal Reserve Board has done an outstanding job against tremendous odds in limiting the supply of money as well as it has. However,

their job is going to get tougher as time goes on unless the interest rate ceiling on long term bonds is lifted.

Eight-Billion-Dollar Government Metals Reserve Only To Bolster Prices

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. WOLF. Mr. Speaker, I would like to read into the record an article which discusses the strategic metals stockpiling and shows it for what it is—a price support program for the metals industry. The article points out this stockpiling has already lost the U.S. Government $1.2 billion.

It is further indicated that after the Federal Government advanced M. A. Hanna $22 million to build a nickel plant Uncle Sam has generously bought $63 million worth of surplus nickel and promised to buy $45 million more from this concern.

Surely a good reserve of food is equally if not more important than is nickel. I do not believe the food reserve is a curse.

The following article is taken from the GTA Digest:

METALS CACHE MATCHES FARM SURPLUS

The much-publicized farm stockpile, which represents an investment by Uncle Sam of $9 billion, is almost matched by stashed-away defense reserves of strategic materials worth some $8 billion.

The strategic materials reserve is all owned by Uncle Sam, but only about $6.5 billion of the farm stockpile is in Uncle's name. The rest is owned by the farmers, but the Government has lent them money on it. Rather than pay off the loans, many farmers will let Uncle Sam take possession of the collateral.

By some, including Secretary of Agriculture Benson, the food stockpile is considered a curse, and he delights in calling it so. But the strategic materials stockpile, equally as expensive to the public, is accepted generally as a national necessity. Rarely is it mentioned. Even less is it criticized.

What the public may not realize is that half of the strategic materials reserve is made up of metals and minerals, most of them bought, not as a reserve, but to bolster prices.

It is a price suport program for the metals industry, pure and simple. Late reports say that 1959 first-half profits for the mining and metals industry are 123 percent higher than last year.

And, while price support payments to a single farm concern of $500,000 are headline material, though very uncommon, that's chickenfeed in the mining industry.

For example, the Government advanced $22 million to the M. A. Hanna Co. to build a nickel plant. Thus far Uncle Sam has bought $63 million worth of surplus nickel from Hanna, and is obligated to buy $45 million more.

The mineral surplus is cached away at 216 locations scattered throughout the country. It includes 74 minerals, including mica, nickel, cobalt, diamonds, manganese, silicon carbide, fluorspar, aluminum, bauxite, jewel bearings, and titanium.

Thus far Uncle Sam has lost $1.2 billion on the mineral purchase program through resale at a lower price. More losses are in view. The Government must keep buying certain minerals to rotate the stockpile and keep it from spoiling, much as is done with farm stocks. But when it sells the old minerals, the Government is forbidden to upset the private market.

In these times of peace and plenty, both stockpiles are being criticized, but the spotlight is on the farm surplus. Still there are many who say they are necessary and prudent safeguards. The question is how to draw the line between a necessary reserve and a surplus, whether it be minerals or farm products?

Death Took a Holiday—in Nebraska

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. McGINLEY. Mr. Speaker, Gov. Ralph G. Brooks of the State of Nebraska and the Nebraska Safety Patrol have shown the Nation that highway death does not have to go unchecked.

Governor Brooks, with the cooperation of the patrol which worked many extra hours, made an all-out drive over the Labor Day weekend to see just what could be accomplished through this kind of effort.

The result is history. Nebraska recorded one traffic death—that a pedestrian fatality in a city.

I have sent the following telegram to Governor Brooks:

Your faith in the belief that something can be done about traffic accidents and fatalities is graphically proven by Nebraska's Labor Day weekend traffic record. You, Col. C. J. Sanders and his men of the Nebraska Safety Patrol saved lives during this time just as surely as if you had been skilled surgeons at work in a hospital. This will not end suffering or sorrow from highway tragedies in the future, but it is a firm reminder to every public official that he would be remiss in his duties at whatever level of government if he did not study every possibility as to government's place in traffic safety.

The story of this shining hour in Nebraska's history, and of the work of the men who made it possible is well described in the news story which I wish to insert at this point:

[From the Lincoln (Nebr.) Star, Sept. 9, 1959]

While the rest of the Nation struggled through a Labor Day weekend shrouded with traffic deaths, Nebraska apparently found a temporary answer to the problem.

Spearheaded by Gov. Ralph G. Brooks, who personally took part in patrol duty and issued two warning tickets, the Nebraska Safety Patrol under Col. C. J. Sanders staged one of its toughest crackdowns in its history.

The Governor, his aide Robert Conrad and Col. Sanders personally manned at times the two National Guard helicopters pressed into service.

The result of the enforcement crackdown showed in the statistic book.

Not a single highway fatality was recorded during the 3-day weekend. The only death to mar the record was a pedestrian in the city of Lincoln, making Nebraska's record one of the five best in the Nation.

The 1959 Labor Day holiday was the State's best record since 1936 when there were no fatalities recorded. For each of the intervening years there have been between two and seven fatalities on the Labor Day weekend.

Colonel Sanders pressed his 160 troopers plus patrol officers into cruiser duty. Even the criminal investigation division took to patrol cars. The troopers volunteered to extend their 10-hour regular shifts to 16-hour shifts.

Conrad, who heads the Governor's traffic safety committee, tabulated these results of the weekend's efforts:

The patrol arrested 1,075 motorists, of whom 37 were drunken drivers taken off the road; 2,317 were ticketed for vehicular defects, and 1,532 were issued warning tickets.

The total number of contacts were 4,924 for an average of 1,641 for each of the 3 days, compared with an average of 476 contacts per day for the patrol during the first 7 months of this year.

The longer shifts were the equivalent of 96 additional troopers patrolling the highways in addition to the 4 airplanes and 2 helicopters.

The troopers burned a train tank car of gasoline and drove an equivalent to six times around the world during the 3 days.

Governor Brooks, Colonel Sanders, and Conrad personally kicked off the crackdown by heading the dawn patrol Saturday morning.

Governor Brooks commented Tuesday that "this is not a record of which we can be proud but it is a record for which the entire State can rejoice."

Delaware Valley Shoe Servicemen Association Supports Shoe Labeling Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was passed by the members of the Delaware Valley Shoe Servicemen Association. The members believe Congress should approve shoe labeling legislation such as I have introduced in my bill, H.R. 1320. The resolution follows:

DELAWARE VALLEY SHOE SERVICEMEN ASSOCIATION

"Delaware County residents have a right to the same governmental protection when they buy shoes as they do when buying drugs or food."

With these words the Delaware Valley Shoe Servicemen Association, in a national drive initiated by Mr. Gardner, of Medford, Oreg., launched their plan to petition Congress to require labeling of materials used in footwear—as a protection against the use of inferior and low-grade products and components in shoe manufacture.

"There is little wonder whey we have so many children and adults with foot problems," states a spokesman for the association, "when the public is bound to buy shoes by appearance rather than by quality standards

that would assure the buyer of comfort, retention of shape and wear."

Each of the members of the Delaware Valley Shoe Servicemen Association is circulating a petition in his shop urging Congress for legislation of governmental control of footwear quality standards.

A Distinguished Constituent Reports on a Recent Trip Around the World

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. KEARNS. Mr. Speaker, it is a privilege and pleasure to insert in the Appendix of the CONGRESSIONAL RECORD a letter that I received last month from a distinguished lawyer, banker and recognized economist in my congressional district, Mr. Chauncey E. Brockway of Sharon, Pa.

This report was written after he and Mrs. Brockway returned from a 5-month journey to 35 countries around the world. The story of this trip, which was taken at their own expense, makes such interesting reading that I want to share their experiences and impressions with my colleagues in the Congress and all those who are privileged to read the CONGRESSIONAL RECORD.

May I suggest, after reading Mr. Brockway's report, that my colleagues in the Congress secure a copy of H.R. 1921—which I introduced on January 9, 1959—and study one of Mr. Brockway's proposals for solving some of our economic problems in this country.

BROCKWAY & BROCKWAY, LAWYERS,
Sharon, Pa., August 4, 1959.

Hon. CARROLL D. KEARNS,
House Office Building,
Washington, D.C.

DEAR CARROLL: I wrote you one letter while Mrs. Brockway and I were on our trip around and up and down the world.

I am now beginning to put together some of the impressions that were made upon me from the contacts that we made.

I want to give to you the overall impression of the 5 months' trip, visiting 35 countries, taking us down to Australia in that part of the world; into the Far East; up into Formosa, Japan, and Korea; down through Bangkok, Rangoon; through India; the Near East (Lebanon, Syria, Jordan, and Israel); into Istanbul, Athens, Cairo; down through Africa as far as Capetown; and up to Portugal, Spain, Paris, London and home.

What was the first overall impression?

America is like the enormous Sleeping Buddha which I saw in Japan. But there is a difference. The Sleeping Buddha cannot be awakened, but his followers are being awakened. America can be awakened from its apathy, if once the people can be aroused to the danger that lurks on every corner of the highways of the world.

I realize only too well that if I were to write this for general publication that many people would say that I have a superficial view; that I am one of those people who spend 2 weeks on a trip in some country and then go home and write a book about my experiences.

I recognize that I have not spent the past 5 months in a living contact with the peoples of the world. Time and time again I had persons say to me:

"The hotel where you are staying is not representative of this country."

I recognize that fact very easily. At the same time I did not confine myself to sitting in those hotels. I went out into the streets. There I saw how people live. I saw how the "Hawkers" of Singapore feed thousands every day. I went onto the streets of Hong Kong, where thousands are living in hovels in which we Americans would not house a mongrel dog; I went into the street of thieves to see how they did business; I went along the rivers where thousands live in boats and never step onto land, except to get a little water from a pump; I went along the canals in Bangkok, where thousands are living in houseboats all of their lives.

We traveled along the banks of the Ganges, watching the Indians come to Benares for their pilgrimage to bathe in the holy waters of that river, the day before their "Holi" day, and traveled for hundreds of miles on the dusty roads of India, studying the rural peasant living in mud huts and pasturing the sacred cow along those roads.

This trip of 5 months took us into the Hawaiian Islands (now the 50th State of our Union) which with its Polynesian background will be many years before its people fit into the United States, as the first 48 States do.

You will recall that this last trip was preceded by one to Alaska, before it became a State; by a 12-week trip, visiting nine countries in Europe in 1952; a trip of 6 weeks (by air) into Europe and the Near East, in 1954, at which time the little party I was with were briefed by 130 different persons, including the Patriarch of the Greek Orthodox Church in Istanbul; Arab leaders in Lebanon and Jordan; Israeli officials in Israel; the mayor of Istanbul; Vatican officials in Rome and other political, educational and cultural leaders. This also included two trips into East Berlin and refugee camps in five countries. A total of 12 countries were visited on this trip.

Then came the planning of this past trip, beginning in January 1959, which lasted 5 months and 1 week, taking Mrs. Brockway and myself into 35 countries of the world, flying 57,000 miles in order to cover long distances quickly; 12,000 to 15,000 miles by auto, train and boat; many hours in every city visited talking to bankers, newspapermen, businessmen, guides, missionaries and other persons one naturally meets on such a trip.

Among those with whom I talked were shopkeepers; the operators of small manufacturing plants, where I saw the conditions under which men, women, boys and girls were working, using candles for light; visiting silk weaving plants and rug weavers. We also saw those attractions that are shown to the ordinary tourists: the mosques, shrines, temples, art galleries, a few picture shows. We drank Kava with the Fijians.

I looked into the thatched roof homes of many of these people, seeing the dirt floors covered with mats.

I attended a lunch given by the newsmen of one of the cities visited, where I listened to a top leader of one of the Far Eastern countries that is very much in the limelight these days say in reply to a question, "Where peoples' bellies are hungry, they will listen to propaganda."

Perhaps the impressions received, and the opinions formed, are wrong, but they came out of the same atmosphere from which our newsmen around the world are sending forth their dispatches to American newspapers; they came from the same background that surrounds our Embassies; they came from the economic background of bankers who are dealing with the local and international exchange of money.

What are some of the impressions with which I came home?

The real problems of the world calling for solution do not lie in Germany and Berlin during the next 5 to 10 years; those spots are large, diversionary sideshows. (I say this in the face of the endless words that have come forth from past conferences and that are pouring out of the present conference in Geneva, relating to Germany and Berlin.)

The real problems of the world (and they must be solved within the next 10 years, and in some instances, even 5 years may be the limit) lie in three spots: (1) the Far East; (2) the Near East; (3) Africa. Just at the present time it does not matter in which order you place them, from my viewpoint, but I believe that we have less time in the Near East than we do in the Far East and Africa.

My reason for this is, the Near East is so much more concentrated in territory than the Far East and Africa. You cannot extend the geographical limits of the Near East as you can the Far East and Africa. Both of them are tremendous portions of the world. I am not taking sides in this quarrel in the Near East, but I am trying to properly evaluate the situation from my conversations with both Arabs and Jews, Englishmen and some Americans. The economic pressure surrounding Israel is going to become tighter and tighter as the weeks and months go by. The web has been spun by the Communists and it is going to be terribly hard for the West to win in that section of the world.

That is a hard statement to make, but some of the actions of the United States in that section of the world are not being forgotten.

The Government of Lebanon wanted American troops to land, but the common man did not and does not understand why it was done and does not like it. The common man is the man to whom the Kremlin talks. We had promised to aid Egypt in building the Aswan Dam. The withdrawal of that promise opened wide the door to the Kremlin.

These are only two of the situations that are being played up to the common man. But they are samples of what I was getting in the Near East.

I was told to watch this Near East situation very closely over the next 18 months to 2 years.

If, and when, the Near East actually falls under the polical influence of the Kremlin, the soft underbelly of Europe is at stake. How can it be defended.

The feudalism of the Near East makes it a very vulnerable spot. The education that has been given to thousands of young people in such colleges as the American University in Beirut; Roberts College in Istanbul; the American University in Cairo, have produced a generation that is spread all over the Near East.

The solution of this problem does not lie in England, France, or Germany. It lies in the United States of America. But our present methods are placing the solution in the hands of the Kremlin.

Let us go to the Far East for a moment.

Singapore was preparing for an election when we were there. I was told that the extreme left socialists would easily win that election, but no one went as far as to predict that the P.A.P. Party would win 43 seats out of 51 in the legislative body of that island city.

The followers of the young Prime Minister (36 years old) are in complete control of the administration. As an indication of the anti-British feeling when we were there, the city administration snubbed the queen's husband when he visited Singapore only 10 days after we left.

Out of 1½ million population in Singapore 1 million are tied to Communist China in one way or another. It was easy to understand why they said they were neutral in this election. They were merely waiting to see who would be the winner there.

They are remaining neutral still, waiting to see how the elections go in Malaya, just across the strait. Tengku, or Prince, who resigned as the Prime Minister to campaign for his party in the various states of Malaya, has found the political going very hard as several of the States have supported the extreme left Socialists. He may win in this coming election, but if gains are made by the Communists, they will step up their pressure for the next election.

Up in the Philippines, the Huks, who were supposed to be completely suppressed, are coming back into the labor unions, using infiltration methods under different names. Their influence is growing again.

Over in Hong Kong, with its teeming millions, and hundreds of thousands of refugees living on the sidewalks, on the flattop roofs of apartment houses, and elsewhere, Red China has an opportunity of getting all the information it desires at this crossroads of the world. It will take more than a trip by Prince Philip (we were there just as he was leaving) to hold Hong Kong for the West.

In Burma and Thailand, the struggle is being won by the Communists because they are feeding propaganda to the common people. I was told of the marking of rice bags that had come from America, with the hammer and sickle, so that the common people obtained the impression that this rice had come from Russia. Farm implements from America were also marked with the hammer and sickle before they left the docks.

I was taken out onto the streets of Calcutta to look at the refugees living in hovels, who said India owed them protection and food because they were refugee Indians from Red China. This gentleman wanted to take me to a Communist meeting one afternoon, but said he dared not do so; that my presence would cause a riot, and in all probability I would be severely injured. It was here and elsewhere that I was told that West Bengal (the State in which Calcutta is situated) would go Communist in the next election; and that several other Indian States would, in all probability, fall to the Communists.

While we were in Darjeeling, the Tibetan affair occurred. Many papers stated that now Prime Minister Nehru, and the Indians, would know what tactics the Communists were using, and that as a result the Indians would turn against the Communists. It has been very interesting to me to see how carefully Mr. Nehru has referred to that situation. He, nor the West, can do a thing to assist the Tibetans without going to war, and once more the Communists win without opposition.

Let us go down into Kerala, the Indian state that went Communist 2 years ago, where violent anti-Communist rioting has taken place since the Tibetan situation. Mr. Nehru went down there at the behest of the Congress Party. Have you noticed how gingerly Mr. Nehru has handled that situation. He said there was no need for Congress Party intervention there. (In the last few days it has interfered.)

The Communist pressure will now increase all over India. Who calls the signals in India? Only one nation: the Russian Kremlin.

Go over into Bombay. We were there when they elected a mayor. That mayor was an untouchable 12 years ago; today he is the mayor of a city of 4 million people. That ought to give us an inpression of how fast changes are taking place in India.

Two of our hotels in India were former palaces of Maharajahs. Since the end of English rule, the Maharajahs have had their lands taken away from them and had them broken up into small holdings and given to the peasants who do not know what to do with the land, now that they are the owners.

The Maharajahs are now living on pensions, which end with their death. Their children must now find a way of making a living, using their ability if they have any; otherwise, they will fall by the wayside.

Over in Japan I was told that the once 12 most powerful families were on their way back to power, just as the cartel system is on its way back in Germany.

We think we have only Communists to fight. There is something, to my mind, that is much more fundamental.

We have been educating boys and girls around the world and when they go out into the highways of life, they find that their education is not recognized in the fields of commerce, politics, and social affairs; they are not allowed to go forward in the economic, political, and social activities of their countries. This, it seems to me, is the fundamental issue around the world, as well as in America.

What is the result? Young people, under 40 years of age, are rebelling at a system that does not recognize them.

So-called capitalism does not recognize their ability in this country; capitalism does not recognize the ability of these young people in other lands. They are not allowed to think. They are told they must fit into the groove of the past (of feudalism, of cartels, of great corporations) which is now dead, or dying, but trying hard to maintain the former "status quo."

Along comes the Communist, with his socialized program, telling these young people to follow him; that communism will get the recognition for them that they so much want. The same thing is happening in America with its 50 million high school graduates.

As the young people of the world have not been allowed to think things through for themselves, they are unable to see through the Communist or socially false propaganda, and they fall for it. Once in its grips they try to rebel, but it is too late. They are caught in that web that has a caste system as strong as that in India. While Bombay elected a former untouchable, the caste system is far from destroyed in that country, or around the world in its various forms in other countries.

Why do I write this way? In one country I met a retired representative of one of our largest American corporations. He said to me, "Now I'm retired; I have been here for years representing this company. Now I can talk. The tactics of this company fit right into the feudalism of the country, and that is on the way out."

The representative of another large American company said to me (he has been there for several years), "My company is doing business on the cartel system, and its days are numbered. I am glad I am getting out before the Communists take over."

All of this says to me, the labor union, with its power, is coming first to the Far East, the Near East, and into Africa, and then the Communist.

Men have learned how to drive an automobile, but when something goes wrong, they do not know how to find the trouble, but they will one of these days.

We are reaping the whirlwind of having sown a handful of education, mixed with a little bit of Christian teaching (Christianity tells a man that he counts for something), and as a result, we are producing a situation that is far more explosive than any hydrogen bomb.

We drove one day from Fort Portal in Uganda, down to some hot springs in the Great Rift that reaches from Lebanon down through Egypt and down into Africa. Here we saw the boiling water bubbling up out of the ground. The human element is just like that. We sensed it time and time again. On the surface things seems to appear calm but time after time I was told that there can be an explosion at any time; not in one country, but in many countries.

Look at the little countries that have obtained their political freedom from England, France, and Holland since the end of the war.

It apparently didn't mean anything to Alexander the Great; Greece, Rome, the Pharaohs. England, France, and the Dutch didn't learn any lesson from this stirring of the people.

The mighty have fallen in days gone by; the mighty are falling at the present time.

Doesn't this mean anything to America?

When I say America, I mean the people who control great wealth. The great corporations have been battling the rising power of labor unions since the days of Samuel Gompers. But the unions are getting stronger day after day, under a very rabid leadership.

Unfortunately, Mrs. Brockway and I did not help relations between these countries and America. Why? We cannot dodge the fact that we represented imperialist America. We were traveling, practically all of the time, when not on planes, by a private American car, with an English-speaking guide; and about 75 percent of our thousands of miles of automobile travel we had a second person, a driver who did not speak English.

Try to dodge the fact that we did not represent the American imperialist, if you can. You simply cannot do it. We were using principally Fords, Plymouths, and Dodges. The American who uses a Cadillac—well, he is to be hated. When I inquired who was using Cadillacs, I was told, "American officials, American touring Senators and Congressmen." What kind of an impression were they making upon these people? Tell me, if you can.

How do the Russians travel? In small cars, on bicycles, mingling with the people.

Who is going to win?

The billions and billions of dollars that we are pouring into the countries of the Far East, into Africa, into the Near East, where is it going? I do not know. I can only tell you what I was told. It is making the rich richer and the poor poorer. A banker put it this way to me, "We will continue to take your money as long as you want to give it away, but it is not making friends for you."

I went on this trip, Carroll, as you probably are aware, not just to see ruins, old temples and forts of a dead past, but for the purpose of learning, if I could, what is stirring the people around the world, as anyone who reads the daily papers, weekly and monthly magazines must realize.

There are many men coming onto the horizon of politics, like Tom Emboya and Lutthuli in Africa, whose activities Roy Wolensky, in the Rhodesias, and Prime Minister Verwoldt in South Africa, are trying to stop. Stop it they cannot; the wave that is rolling up is like a giant wave coming in from the ocean. A lot of people are going to get hurt.

I had a missionary tell me that there was a leader of 1 million Africans in his church; that despite the Christian teaching that he was giving to him, the biggest job he had was to convince this leader that the Communist propaganda with which he was being fed, was false. He said that a few months' time would tell the tale as to which side this leader would take, and it would not be the teaching of the missionary that would bring the decision, but the action of so-called Christian business and political leaders.

I have jumped around in this letter intentionally, just as the Communist does. You never know where the Communist will bring

forth the next "hot" spot for his propaganda.

This can be met, in my opinion, by only one positive program.

Our program must be much like that of the missionary in Burma with whom I talked. He told me that his work is quite close to the border of Red China; that he cannot reach these people with a spiritual message; that he is showing these people how to increase the weight of their pigs from 75 pounds to 150 pounds; that they ask him to come to their farms and teach them how to do this. After doing this, then he can get across a little of the teaching of Christianity. But woe to his program if someone from imperialist America comes along and exploits him in this pig business.

The American corporation is being held up to the common peoples of the Far East, the Near East, and Africa, as an exploiter.

A few contacts with businessmen who were willing to talk to me, when they found out my mission—and they were willing to talk if assured that I would not use their names—convinced me that the American industrial corporation must come to some plan similar to that which I have developed, and which you have been so kind as to introduce into the Congress of the United States.

Feudalism and cartels have no place in that program, as you well know, but the individual will have the opportunity to develop his ability to the very utmost. When this program is in effect, the rulers who are using force will be put out of business; the labor union officials who are ever seeking a stronger position in industry by calling strikes, will find that the common men will not support them.

More than one man said to me, "Brockway, how can we use your program?" I had to tell them that they could not, if they were saddled with a program that puts a tax upon a corporation, when it is merely another way to heavily tax the individual. I well remember what one man said to me about this program:

"America better hurry with your program, as in 2 or 3 years, this section of the world, moving at its present speed, will be completely lost to the West."

Since reaching London and coming on to America, and reading the columns of stories in the newspapers every day that I have, with the background which I now have of actually having seen some of the "hot" spots of the world, I can only pray that the so-called leaders of American industry will awaken to the fact that in their hands lies the solution of the present agitation of the Communist around the world; but that the sands of time are rapidly running out.

I hope I haven't bored you with this rather extended outline of some of the impressions that have been made upon my mind since January 19, 1959, when Mrs. Brockway and I left Sharon on this 5-month trip that took us across the Equator eight times.

Sincerely,

C. E. BROCKWAY.

Mobridge, S. Dak., Issues Challenge to Mobridge, Mont.

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. McGOVERN. Mr. Speaker, the president of the Mobridge (S. Dak.) Chamber of Commerce has issued a humorous challenge to the proposed city of Mobridge, Mont. I think Mr. Bob Bickett's letter of September 1 will be of interest to my colleagues and, under unanimous consent, I insert it at this point in the RECORD:

MOBRIDGE CHAMBER OF COMMERCE,
Mobridge, S. Dak., September 1, 1959.

Mr. GEORGE KOMERIK,
The First Mayor of the New City of Mobridge, Mont., Roy, Mont.

DEAR SIR: We, at Mobridge, S. Dak., were unaware until very recently that a new town was being built in Montana, near the new Missouri River bridge in Fergus County, which would be named "Mobridge, Mont." As you may have heard, our community of Mobridge, S. Dak., has long prided itself as being the only Mobridge in the world. Actually, we have long been puzzled because we could not understand why other cities have not adopted such an excellent name. Now, you have joined the club, and we have two Mobridges in two States; 2 down and 48 to go.

Our reason for writing you this letter, in addition to congratulating you on your new city, is that we wish to call your attention to the standards for cities named "Mobridge" as has been established by our community in the past 53 years. For example: To qualify as a Mobridge, first class, you must assemble a citizenry of 5,500 friendly people, who have stuck to their town, through thick and thin, dust, drought, grasshoppers, and Republican and Democratic administrations alike. (The number of citizens can be varied, the quality must be up to the standard as outlined). To qualify as a Mobridge, first class, you must have wide, blacktopped streets, a first-class water supply, and adequate transportation via railroad, and highway. You must have a ballpark, swimming pool, and other recreational facilities so that your young people have adequate opportunities for good clean fun. You must have civic-minded organizations, ready to assist with the work of building your city ever larger and better. (Of course, an active chamber of commerce is a must, without it you will spend a good deal of time charging windmills, instead of progressing, and taking advantage of your opportunities.) And last, but not least, you must have an Indian chief, of the stature of Sitting Bull, buried near your town, properly marked and cared for, as a tribute from your people to America's original citizens.

That's all there is to it. Whenever your town is formaly opened, we would appreciate an invitation to attend any ceremonies you may plan. And if you need any advice on how to be a Mobridge, first class, drop us a line, we've got 53 years of experience going for us, we may be able to help.

Every good wish.

BOB BICKETT,
President, Mobridge Chamber of Commerce, Mobridge, S. Dak.

Statement by Czechoslovak National Council of America With Respect to Upcoming Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. James Hovorka, president, Czechoslovak National Council of America, with headquarters in Chicago, with which Mr. Hovorka forwards a copy of the memorandum sent by the council to the President of the United States regarding the visit next week of Prime Minister Nikita Khrushchev of the Soviet Union.

CZECHOSLOVAKIA NATIONAL
COUNCIL OF AMERICA,
Chicago, Ill., September 10, 1959.

Hon. DANIEL J. FLOOD,
U.S. House of Representatives, Washington, D.C.

DEAR SIR: Speaking for Americans of Czechoslovak descent represented in the Czechoslovak National Council of America, we thank you for your extension of remarks in the CONGRESSIONAL RECORD on August 11 and for including the article by Mr. David Lawrence who asks: "Do the people of the United States really want Nikita Khrushchev to visit this country?" Frankly, we do not.

We view with alarm the forth coming visit and have expressed our fears in a memorandum submitted to the President of the United States, a copy of which we are enclosing for your information.

Respectfully yours,
CZECHOSLOVAK NATIONAL COUNCIL
OF AMERICA.
JAMES HOVORKA, *President.*

MEMORANDUM OF THE CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA TO THE PRESIDENT OF THE UNITED STATES CONCERNING THE VISIT OF THE PRIME MINISTER OF THE SOVIET UNION

SEPTEMBER 11, 1959.

MR. PRESIDENT: The executive committee of the Czechoslovak National Council of America begs leave to submit the following memorandum.

The present international situation is of paramount importance to the future of the United States of America and to the well-being of the now captive nations of Europe. Under these circumstances we consider it our duty to draw your atttention to the anxieties and wishes of our members, tens of thousands of loyal American citizens of Czechoslovak descent, on whose behalf we speak.

We are prompted to take this step primarily by your decision to invite the Prime Minister of the Soviet Union to the United States and by your acceptance of his invitation to visit the Soviet Union.

The fact that the President of the United States extended an invitattion to Mr. Khrushchev and accepted his invitation to the Soviet Union is being erroneously interpreted in Czechoslovakia—equally by Communists and non-Communists—as a major shift from a tougher to a softer U.S. policy toward the Soviet bloc.

The communist authorities in Czechoslovakia seem to rejoice in this change of policy. They expect from it an increase of domestic and international respectability and they hope it will result in a weakening of the NATO cohesion.

The non-Communist majority of the people in Czechoslovakia appear to view this very same change of U.S. policy with regret and apprehension.

The non-Communists seem to consider Mr. Khrushchev's invitation to represent a refutation of the previous line of U.S. policy toward the U.S.S.R., as it was often stated by the President and Secretaries of State and formulated most eloquently by the Policy of Liberation and recently by the Captive Nations Week resolution.

The people of Czechoslovakia seem to be so confused by the latest development of U.S. foreign policy that they believe the exchange of invitations is to be a prelude to a new Munich agreement.

This wrong impression of a shift in U.S. policy may cause in Czechoslovakia and presumably in the other captive nations a major deterioration of the psychological situation with adverse results for the future security of the United States.

Some consequences of this psychological change are feared to be the following:

(a) A feeling that the United States is abandoning the people of Czechoslovakia and is giving up its hope and interest in an ultimate liberation of the captive nations.

(b) An impression that the United States of America is accepting the status quo in central and eastern Europe as being just, desirable and lasting.

(c) A stronger grasp of communism over the minds of the people.

(d) A weakening of the spirit of resistance and western sympathies throughout the captive nations with all the regrettable consequences for the NATO forces in case of a future outbreak of hostilities, which we all fervently hope will never come to pass.

(e) A loss of confidence in the integrity of American intentions and in the trustworthiness of American moral and legal pledges.

Against the backdrop of these premises we wish to recommend most urgently the following desiderata to your consideration.

Let it be made known to Mr. Khrushchev in a way which shall reach the hearing of the Communist government and the non-Communist people in Czechoslovakia:

(a) That Mr. Khrushchev's invitation does not represent a basic change in the line of U.S. policy toward the U.S.S.R. and their puppet governments in the captive nations.

(b) That in consequence the United States does not accept now—any more than before Mr. Khrushchev's invitation—the status quo in central and eastern Europe as just, desirable and lasting.

(c) That the cause of the captive nations shall be discussed by the President of the United States and his representatives with the Soviet Prime Minister and his representatives not only at the forthcoming visit, but at every future meeting or conference concerning itself with problems of European security, be it in the United Nations or elsewhere.

(d) That the U.S. spokesmen shall insist on the restoration of independence and freedom to the formerly sovereign nations of central and eastern Europe, as was solemnly pledged by the United States of America and the U.S.S.R.

(e) That the United States shall insist on free elections under effective international control.

(f) That, if a German peace treaty were to be discussed and if the Soviet Government were to insist on the presence of representatives of the Communist governments of Prague and Warsaw, the U.S. Government shall invite such spokesmen as have a right to represent the true interests of free Czechoslovakia and free Poland.

(g) That any European security pact will have to be preceded by the complete evacuation of all Soviet armed forces and other control organs from the territories of the captive nations.

In conclusion we wish to assure you, Mr. President, of the wholehearted support of any policy intended to alleviate the present hardship of our oppressed brethren and to accelerate the liberation of Czechoslovakia and all other captive nations.

Very respectfully yours,

CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA,
JAMES HOVORKA, *President.*

The Fight Against Pornography

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. JAVITS. Mr. President, as concern mounts with increasing evidences of juvenile delinquency and communities and governments mobilize their resources to combat this danger we must note the racket which thrives on such delinquency and, according to many eminent authorities, encourages delinquency in youth. I refer to the half billion dollar annual traffic in pornography. I append as part of my remarks an article on the fight against pornography from the current issue of The Jewish Veteran, national publication of the Jewish War Veterans of the United States of America, the Nation's oldest continuing veterans organization, by Roy H. Millenson, my own legislative aid.

In appending this article, I should like to make an additional observation. I am convinced we can join to help stamp out the despicable pornography racket, which reaches into our very homes, without impinging upon traditional liberties. The recipe for roast pig is not a burned-down house. Publicity, religious, and lay leadership and due process of law can meet the challenge.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DISPLAY IN CONFERENCE ROOM B

(By Roy H. Millenson)

There are only four keys to open the locked doors of conference room B in the Post Office Building in Washington. For this chamber houses the exhibit by the Post Office Department as part of its drive against the half-billion-dollar annual mail order obscenity racket in the United States.

Smut in the mails is big business. With profits ranging as high as 5,000 percent and averaging in the neighborhood of 1,000 percent, dealers in pornographic matter are possessed of a growing enterprise which seeks to reach into every home in the Nation.

The Post Office Inspection Service has estimated that probably 700,000 to 1 million children this year will receive in the mail alluringly worded invitations to purchase smut from such dealers in pornography as French Features, Stagorama, French Novelties, G.A.L.S., Inc., Layne Movie Club, and Man Comfort.

The merchants of filth go far afield to obtain their mailing lists, resorting even to school yearbooks. A favorite device is to offer at a bargain price in a legitimate advertisement some item of interest to a girl or boy—an airplane model, for example—and once the order is received, the child's name is soon on a mailing list to receive solicitations through the mail for obscene material.

In a recent raid in New York City, in which 17 tons of highly obscene printed and filmed material was confiscated, a mailing list of 100,000 was found, including the names of many high school students.

Careful studies have shown it is impossible to estimate the ultimate effect of pornographic material in the hands of either adults or children.

However, it is safe to state that such material in the possession of one child will undoubtedly be exhibited to numerous others. It has been said that one difference between narcotics addiction and the effects of pornography is that the former stops when the addict injects the drug into his veins but the contaminative consequences of one piece of pornography in the hands of just one minor is incapable of measurement. The Post Office Department estimates that 25 percent to 40 percent of the $500 million of mail order smut ultimately finds its way into the possession of adolescents.

The analogy between pornography and dope addiction is not made lightly. A Senate committee which had made a study of this question observed:

There is a peculiar resemblance to narcotics addiction in exposure of juveniles to pornography. There is the same pattern of progression. Once initiated into the knowledge of the unnatural, the impressionable young mind with the insatiable curiosity characteristic of those reaching for maturity inevitably hunts for something stronger, something with more jolt, something imparting a greater thrill.

The dealer in pornography is acutely aware of this progressive facet; his array of material to feed this growing hunger is carefully geared to the successive stages. Like the peddler of narcotics, his only interest is to insure that his customers are "hooked"; he knows that once they are "hooked" they will continue to pay and pay.

The Post Office display confirms this. For in addition to the photos that go a degree or two beyond publicly-sold "girlie" magazines, there is a curtained exhibit of "hard core" matter which reaches the ultimate in obscenity in photographs, drawings, booklets, and devices. This "hard core" pornography goes beyond the usual bounds of depravity, seeking into every conceivable byway of sexual aberration. And, remember much of this material finds its way into the hands of teenagers.

A footnote of interest to readers of the Jewish Veteran is the fact that some drawings in the "hard core" exhibit have definite anti-Semitic undertones. Depicted were Jewish stereotypes similar to those used in Nazi propaganda. However, in this regard, the Post Office Department assured me that they "have not been aware of any concerted efforts to use pornographic matter in furtherance of anti-Semitism and feel sure that material of this nature that may have been observed was an isolated instance.

On the positive side, the Post Office Department has received from civic-minded organizations throughout the Nation hundreds of expressions of support for the campaign against obscenity. There is a public display of these letters; JWV members should be proud to note that as representative of the sentiment of the Jewish community was selected the letter from National Administrator Joe Barr attesting to the backing of the Jewish War Veterans. This support was emphasized by the resolution overwhelmingly adopted at the August national convention in New York City.

How can the individual citizen help in the campaign of the post office against commercialized filth in the mails? Its hand strengthened by a new law enacted last year, the Post Office Department is now intensifying its war against the "barons of obscenity." To do the job, it needs the help of every citizen, for the Government can act only after evidence has been obtained from the recipient of obscene mail. Should such material come into your hands, send the pornographic matter as well as the envelope in which it came, to your local postmaster. The Post Office Department will handle the case from there.

Last year, the Postal Inspection Service investigated some 14,000 complaints concerning obscenity in the mails—two-thirds of these complaints came from shocked parents who found lewd material sent to their youngsters. The fight against obscenity in the mails, as Postmaster General Summerfield has so well summarized it, is a task for "everyone who can, and will, contribute effort, and dedication to it."

The Importance of Followthrough on the International Public Health and Medical Research Year

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. HUMPHREY. Mr. President, on Wednesday, September 9, the Senate soundly approved, by unanimous consent, Senate Resolution 129, 86th Congress, for the observance of an International Public Health and Medical Research Year.

This action was, I believe, of deep international significance. It reasserts American leadership in medicine and medical research.

It is an action consistent with the outstanding record of the U.S. Senate in spearheading advances in international health.

The action is a source of pride to me not simply as author of Senate Resolution 129, but as a member of the Committee on Foreign Relations and as chairman of the Senate's current international health study, as conducted by a subcommittee of the Committee on Government Operations.

PLAN NOW FOR A SOUND BASIS FOR THE INTERNATIONAL HEALTH YEAR

Certain facts should be clearly understood with regard to the proposed International Health Year.

A brief history of this project was previously presented in comments which I made in the Senate on June 5, 1959. At that time, beginning on page 8993, I traced the origins of the legislation.

I pointed out how the Senate, in August 1958, in the closing days of the 85th Congress, had unanimously approved Senate Resolution 361, which I had introduced for this purpose.

That resolution represented the first formal expression by any parliamentary or executive body anywhere in the world on this subject of what I call IHY—the International Health Year.

Senate Resolution 361 established unmistakably the U.S. origin of the concept.

Thereafter, in December 1958, at the initiative of the Soviet Ukraine—which is, incidentally, an inactive nonpaying member of the World Health Organization—the United Nations General Assembly—with U.S. support—approved the concept of the International Health Year. The U.N. General Assembly commended it to the World Health Organization.

Subsequently, at its 12th General Assembly, in May 1959, World Health Organization, while expressing deep appreciation and satisfaction in the concept of the year and while appreciating the value and importance of the year, stated that it found it necessary to postpone any action on plans for the possible year, for the present. WHO stated however, that it would take the issue up again in the World Health Assembly, convening in May 1960.

PURPOSE OF NEW RESOLUTION

The present Senate resolution is, therefore, designed to maintain the constructive momentum. It seeks to use the time period between September 1959 and May 1960 for the most constructive work possible.

Senate Resolution 129 envisions that the President of the United States will now take the lead. He will through his appropriate advisers help lay the basis for detailed planning of possible projects under the year.

By whom will this initial planning be done? By the expert Federal agencies most directly concerned with this subject, notably the Department of Health, Education, and Welfare and the National Science Foundation. Of assistance as well will be the National Academy of Sciences—National Research Council, which played so indispensable a role in the precedent for the International Health Year—the International Geophysical Year.

VITAL ROLE OF MEDICAL PROFESSION

But just as important, and indeed far more important than the role of official agencies, will be the role of private sources.

No single private source is more important than the medical community of the United States as ably represented through the American Medical Association. In addition, outstanding organizations such as the World Medical Association and specialized medical organizations such as the various academies and colleges concerned with particular medical fields will play a vital role. So, too, will the Nation's medical schools.

TWO-FOLD CATEGORIES OF PROJECTS

To find the right type of projects which the United States might formally and informally recommend is a real challenge.

We must remember that the very title of the year indicates its twofold nature: (a) International Public Health and (b) Medical Research.

Category (a) indicates improved service—assistance—care-type programs.

Category (b) indicates programs aimed at new discovery.

In turn, the projects under both categories must be thought through very carefully.

THREE TYPES OF CHALLENGES TO UNITED STATES

Here, as I see it, are three types of projects:

First. Independent U.S. projects for our own people.

Second. U.S. and international collaborative projects which will concern many people.

Third. Independent foreign projects on behalf of the needs in individual foreign nations.

In other words, the International Health Year is an opportunity to raise our targets.

Targets for whom?

First. For ourselves, as one nation.

Second. For all peoples, across the board.

Third. For other individual nations and regions.

Obviously therefore, all other nations will similarly have to think through what they propose to do and can do for themselves and/or for others.

AMERICA'S PRIMARY RESPONSIBILITY

But as the leading power, no nation faces greater responsibilities or greater opportunities than ourselves.

No nation can do, has done or will do more in both public health and in medical research than ourselves.

The United States, of course, is but one of the member nations of the World Health Organization. It is not for us to attempt to tell World Health Organization what it should do. We have never presumed to do so. Rather, consistent with our past record in World Health Organization, we would simply submit to it the very best judgment which we could make available and seek to secure favorable action by the majority and if possible, all members.

THE BASIC WHO DECISIONS

So, would the other nations do likewise, WHO, would thereafter, through its able Director-General, Dr. M. G. Candau, through its executive committee and through its general assembly, decide (a) what is feasible, (b) what is desirable, (c) what is necessary, and (d) and how, when, where, and with what resources.

Let it be noted that the International Health Year will cost money. How much money will depend upon the projects to be decided upon, their nature and their scope. Neither Senate Resolution 361 of the 85th Congress, nor Senate Resolution 129 of the 86th Congress, specifically provides money.

But I am certain that when the time comes, the money will be forthcoming. It has been forthcoming for the International Refugee Year. It was generously and rightly made available for the International Geophysical Year.

NO CURE-ALL TO WORLD PROBLEMS

Here, however, let it be noted that the International Health Year is not purported to be the cure-all to the world's medical problems.

It is simply a means by which we can break through to higher levels of attack against those problems. It is a means by which we can raise the visibility of the people of the United States and the peoples of the world to the nature of health needs and resources.

Most major health problems, by their very nature, cannot be solved in a 12-month period, or an 18-month period, or even perhaps a decade or a quarter century. But that is no reason why we should not start or proceed ahead.

The value of an intensive period of collaboration has long since been proven, notably in the International Geophysical Year.

Research, in particular, never offers a guarantee of success. No one can devise a timetable for future discoveries. The problems of cancer for example, may be solved in 1960 or in 1970 or still later. No one can be sure.

Nor can the world's shortage of doctors, nurses, and other specialists be

solved overnight. Training takes time, long years.

But the time to begin is at hand.

CARRY ON EXISTING PROGRAMS

Here, too, a further fact should be noted. Nothing would be more contrary to the spirit of the International Health Year than to lag in present health programs.

In other words, we have a health job to do right now—in 1959, 1960, 1961, and in the period thereafter. We must provide every possible nickel which we can for these purposes. We must not hold back one iota, simply waiting for the International Health Year to commence in 1963 or 1964.

I point this out because the World Health Organization currently does not have sufficient financial resources to move ahead on one of its own great projects, namely: the worldwide malaria eradication program. As Dr. M. G. Candau has pointed out: Antimalaria funds must be provided right now if the present campaign is to be prosecuted to a victorious conclusion. Let us not, therefore, in preoccupation with what might be done in 1963 or 1964, forget what we must do right now.

IMPORTANCE OF HILL-FOGARTY LEGISLATION

As for U.S. congressional action, starting next January, we must not delay at all in the second session of the 86th Congress in moving ahead on international health legislation.

No single step would be more important than House approval of Hill-Fogarty legislation to create a National Institute for International Medical Research. The great coauthors, Alabama's distinguished senior Senator, LISTER HILL, and Rhode Island's devoted Representative, JOHN FOGARTY, are the leading builders of what could become the most important single institution for the International Health Year or any year.

The International Institute is not just necessary, it is indispensable. No one has more eloquently proved the case for it than its tireless champion, LISTER HILL.

TRIBUTE TO HEW DEPARTMENT

Meanwhile, fortunately, the International Health Year has been the subject of very careful consideration by outstanding authorities.

In May 1959 there was held here in the city of Washington a conference of the National Citizen's Committee for the World Health Organization. That conference heard a splendid address by Secretary of Health, Education, and Welfare, Arthur Flemming. Dr. Flemming stated his enthusiasm for the concept of the year and his words were a source of inspiration to all present.

Secretary Flemming's comments were faithfully implemented in the World Health Assembly which started shortly thereafter in Geneva. No single individual contributed more to the effort of implementation than the able Surgeon General of the U. S. Public Health Service, Dr. Leroy Burney. I wish to pay tribute to Dr. Burney and to his special assistant for international affairs, Dr. H. van Zile Hyde, for the splendid contributions which they have made in this as in other respects.

I want to state, too, that outstanding in the careful consideration of this matter has been America's most foremost medical research leader, Dr. James Shannon, Director of the National Institutes of Health.

ROLE ON INTERNATIONAL HEALTH SUBCOMMITTEE

I am pleased to report that the International Health Study which is being conducted by the Senate Committee on Government Operations has been in continuous contact with these leaders and with this entire project. Indeed, I believe it is safe to say that no single source, in or out of Congress, has initiated, or has received more contacts, not only here in the United States but throughout the world, concerning the International Health Year than has this subcommittee.

For the health year, we must not set our sights either too high or too low. We must attempt to do the possible, but must not shrink from attempting new, bold, and imaginative programs.

DR. GUNDERSEN'S SOUND COMMENTS

A welcome cue for our role has come from the American Medical Association, to which I earlier refered. I should like to point out that the distinguished past president of the American Medical Association, Dr. Gunnar Gundersen has urged that great body to offer leadership and maximum help to the proposed International Health Year.

As reported in the December 15, 1959, issue of the AMA News, Dr. Gundersen said that the health year would give medicine a chance to offer imagination on the international scene and make a contribution to world understanding.

Speaking at the opening of the 12th clinical meeting of the House of Delegates of the American Medical Association, Dr. Gundersen declared that "the time has passed for policies based on generalities, platitudes, and flagwaving." He then suggested that the association offer support and cooperation to proposals for the International Medical Year.

So, too, we look to the Nation's leaders in other life sciences—to biology and chemistry for example—for maximum contributions.

That is why I wanted to see Senate Resolution 129 enacted. What it does is flash a "green light" to the President of the United States and to the people of the United States.

It says "Please proceed ahead. Please hold the necessary conferences and assemblies, so that the broadest thinking, the best thinking which can be mobilized is made available."

EVERYONE MUST DO HIS PART

Who should be represented in these conferences and assemblies?

Everyone who can make a constructive contribution. Doctors and laymen, civic leaders and scientific leaders. There is room for all. There is opportunity for all. Let each do what he can. That includes, for example, the voluntary health agencies and the other great organizations which represent millions of Americans in all walks of life.

The International Health Year will be a success if all of us help make it a success. Where? Right in our own backyards, so to speak, as well as throughout the world.

My words include the Congress. They include the executive branch. I include great leaders like Dr. Detlev Bronk of the National Academy of Sciences—National Research Council. I include labor and business and agriculture, women's organizations, veterans' groups, and professional organizations.

May I respectfully extend, therefore, this invitation to them. I extend it to the fine National Health Council and the American Public Health Association—which convenes next month in Atlantic City.

I extend the invitation especially to those who guard the Nation's health—our physicians to whom we look for continued guidance.

Let International Health Year meetings be held. Let problems and projects be explored. Let us get on with the task of the advance work.

I invite now the comments and reactions of the American public. They may wish to obtain copies of this legislation, together with a reprint of my June 5, 1959, comments and of a splendid article on the health year which was published in the May 29, 1959, issue of Science magazine, published by the American Association for the Advancement of Science.

I include now, an editorial from the May 12, 1959, issue of the New York Times which was published on the day of the opening of the 12th World Health Assembly in Geneva. This editorial rightly stressed the concept of continuity in health advances.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORLD HEALTH PLANNING

Another conference is opening in Geneva today. It will not be controversial, except as its members try to find ways to do a good job better. This is the annual Assembly of the World Health Organization, and its 12th meeting.

The function of this Assembly is to examine the proposals for the organization's operations next year. High on the list is the continuing fight against communicable and preventable disease. The gains made thus far are encouraging and this is the time to give fresh impetus to the various campaigns.

Part of this impetus should come from the plan to make 1961 an international "year" for medical research and its support. Appropriate legislation is before our Congress to further this plan. But in the minds of all those who are concerned with world health planning is the larger concept of more than a "year." It can be a decade or half a century. The very existence of a World Health Organization has shown us there there can be no narrow geographical limits in this field. There are also no time limits. The good fight must be waged until the last battle is won.

Appendix

Knowledge Is Power

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address I delivered before the International Conference on Machine Searching and Translation, held in Cleveland, Ohio, on September 9, 1959, be printed in the Appendix of the RECORD.

In this address I made special reference to my bill to establish a Department of Science and Technology. As my colleagues know, the Committee on Government Operations, on which I serve, earlier this year held extensive hearings on this proposal. Upon conclusion of the hearings the committee agreed that it would be well to establish a commission to further consider the establishment of such a department. This idea for a commission study was incorporated into a bill which I offered on behalf of myself and other Senators, S. 1851, and which was favorably reported to the Senate on June 18.

This bill merits the consideration and the approval of the full Senate. I do not believe that we can afford to further postpone consideration of this proposal in this period of great advances in science and technology.

In this connection, I invite my colleagues attention to an article from the Washington Evening Star of September 11 reporting that England's Prime Minister, Harold Macmillan, has promised to appoint a cabinet member for science to keep British abreast of atomic energy and space research. I ask unanimous consent that this newspaper article also be printed in the Appendix of the RECORD.

There being no objection, the address and article were ordered to be printed in the RECORD, as follows:

KNOWLEDGE IS POWER

(Address by Senator HUBERT H. HUMPHREY before the International Conference on Machine Searching and Translation, Cleveland, Ohio, September 9, 1959)

Last month, in a rare news conference in the Kremlin, Soviet Premier Nikita Khrushchev said that the object of his scheduled history-making visit to the United States next week, and the return visit later of President Eisenhower would be to find a common language, and a common understanding of questions to be resolved.

Without violent interpolation, I can say that the aim of this week's conference, "standards for a common language for machine searching and translation," is in the same ball park as Khrushchev's stated aim.

Although the present conference is scientific and not political, the language used to describe specific aims resembles that of politics and diplomacy.

1. To encourage an environment for working toward a common machine language or a series of compatible machine languages for processing scientific and technical literature so that it may be searched, selected, correlated, and translated by automatic equipment.

2. To characterize equipment requirements for use with common language systems or with compatible machine languages.

3. To create an environment in which it will be possible to foster agreements for cooperative processing and exchange of encoded materials for machine searching of the world's scientific literature.

4. To work toward initiating cooperative collection and analysis of scientific and technical terminology for preparation of dictionaries and thesauri for code establishment for use in machine searching and machine translation.

5. To promote cooperative research programs and free exchange of research materials.

6. To review interrelationships between machine literature searching and machine translation and to consider how progress in one field may advance the other.

I am convinced, both from my own personal experience, and from examining history, that the key to finding a common language on the international scene, as in the political, scientific, or other scene, is the willingness to seek a way to achieve mutual understanding.

My interest in the problem of machine literature searching and translation is deep seated, as a student, a teacher and a public official.

Later, the problem of utilizing recorded information faced me when I became mayor of the thriving city of Minneapolis. The importance of making decisions quickly became apparent to me when considering the drastic reduction in the time scale of information gathering for decision making and control during the past 40 years.

I discovered another dimension to this problem when I moved to the U.S. Senate. From that vantage point, I observed that the rapidly expanding research facilities of Government agencies, universities, and industrial concerns were pouring forth a cascade of new knowledge so great that existing arrangements for collecting and organizing the records no longer would control the flood. The inability to lay hands quickly on essential information has been leading to enormous intellectual and social waste which no business, no industry, and no government activity could either escape or afford.

As soon as I had the opportunity to do something about this problem I became busy. As chairman of the Subcommittee on Reorganization and International Relations of the Senate Committee on Government Operations, I was able to have the committee staff study the library problem thoroughly, in connection with a bill that I introduced—to create a Department of Science and Technology—whose function it would be, among others, to take appropriate action toward "the development and utilization of mechanical aids and new devices for collating, translating, abstracting, indexing, storage and retrieval of scientific and technological information under the control of the Federal Government, and to coordinate such data as may be available from other sources."

Another function of the proposed new Department would be "to establish rules and regulations governing the distribution of scientific publications as may be necessary to assure maximum utilization. * * *"

The subcommittee held extensive hearings on this subject. The first group to testify was Dr. J. H. Shera, the distinguished dean of Western Reserve University's School of Library Science, and Dr. J. W. Perry and Dr. Allen Kent, director and associate director, respectively, of the university's center for documentation and communication research. They presented a comprehensive picture of the Russian activities in the field of collecting, analyzing, and dissemination of the world's scientific and technical literature. It was a revelation to me that this group had performed so much of the pioneering research work in the field of machine literature searching and in mobilizing national attention on the problem through three national conferences which they organized, in 1956, 1957, again in 1958, and now the present conference.

After their testimony there followed a parade of witnesses from Government, industry, and universities. Many spoke of the extreme needs for more effective control of scientific and technical information in order to advance the efficiency with which research in our Nation is conducted—particularly with regard to avoiding loss of our Nation's precious research time in duplicating work already completed or underway. I was shocked by the testimony of one research director in particular who estimated that the efficiency of chemical research in the United States is only 5 to 15 percent—with much of this low order of efficiency caused by incomplete control of the literature.

I heard other witnesses at the hearings who proposed the creation of a national center—financed with Federal funds—to coordinate the processing, abstracting, searching, and translation of the world's scientific literature output.

Estimates of $30 to $300 million were made as to the cost of such a center. Neither of these figures frightened me when I considered the estimated $7 billion annual research bill of our country. If the experience of the chemical research director who testified is valid for other industries, then the 15 percent efficiency would point to an annual waste of between $3 to $5 billion. I could not be staggered by costs of $300 million to some of that estimated waste. Nor am I frightened by the spectre of Federal aid in this important field. The annual Government expenditures to support research in our Nation is so great that it could well afford a centralized literature effort for its own purposes—even if it were necessary to establish such a center entirely for use in research programs supported by the Federal Government.

Other witnesses at the subcommittee hearings represented various of the abstracting and indexing services in this country. In general, they described the heroic attempts that they are making to keep abreast of the mounting flow of scientific literature. Most

of the editors of these services felt that they could more adequately cope with the scientific literature situation if more funds would be made available to them. However, they apparently did not clearly envisage the need for mechanized systems for searching and correlating the literature. I had the distinct impression that these editors were convinced that their responsibility for solving the problem was limited to providing the conventional tools such as printed abstracts and indexes. Also, at least one editor of a major service in this country felt that the reports of Soviet advances in this field were somewhat overrated, and that they were not making as much progress as might be inferred from their writings.

When the witnesses from Federal agencies testified, I detected that many of these persons were following the opinions of many of the editors of the abstracting and indexing services. There appeared to be a defensive attitude toward what they had done and an attempt to justify what they had not done.

I think that much of their attitude stemmed from the generally defensive attitude on the part of the executive branch of the Federal Government resulting from the electrifying discovery of the progress that the U.S.S.R. has been making—and brought to public attention by the announcement of the launching of the first Soviet sputnik.

It was a curious experience to see two types of witnesses before my committee talk right past each other.

There were the users of scientific information who were, in general, frantic in their desire for better information services—both with regard to desire for better coordination and coverage, and with regard to the development of better tools for exploiting the world's scientific literature. One survey reported at the hearings showed that industrial companies were engaged in supplementing existing services for abstracting and indexing of published literature. They reported that approximately 40 percent were incurring annual expenses of more than $5,000, and only 4 percent of more than $50,000, with the others expending from $10,000 to $35,000 annually.

The same survey showed that the median 1956 expenditure for professional societies in processing the published literature in their field for the benefit of their members was exceeded by almost 20 percent of the individual user companies that processed published literature for use by employees.

In the face of these costs, it was reported that 50 percent of the companies replying indicated that their internal scientific literature processing expenses could be reduced and the effectiveness of exploitation of the published literature enhanced by auxiliary services from various centralized sources.

It was also found that the user companies averaged about 10 abstracting and indexing services to which they subscribed. In this survey, 312 different abstracting and indexing services were identified—a commentary on the fragmentation of secondary information processing services that have sprung up in a frantic and uncoordinated effort to control the burgeoning literature.

On the other hand, many of the abstracting services and Federal agencies with responsibilities in this field were all for standing pat, or at least were proceeding with too much hesitancy.

A year after the first hearing had been held on the committee's proposed Science and Technology Act of 1958, the subcommittee held further hearings on proposals to create a Department of Science and Technology, and on a proposed commission, composed of Representatives from the legislative and executive branches of the Government and members of the scientific community, to determine whether or not a Department of Science and Technology would be desirable and, if so, what components of the Federal Government should be included therein.

The subcommittee also took this opportunity to review the progress that had been made in the field of documentation and machine retrieval within the year following its previous hearings.

As a direct result of the hearings, I cite the following areas where some positive action has resulted.

First, there was a stepped up program of translation of Russian scientific publications, both within and outside of the Federal Government. There was also a greater effort made to pool translations so that there would be less duplication in having various groups work on identical translations.

Second, there was a stepped-up program of research and development in machine translation and machine searching, with the National Science Foundation acting to coordinate work in this field. In accordance with one of the objectives of the committee's bill, the proposed Science and Technology Act of 1958, one of the responsibilities placed on the Foundation resulted from the enactment of Public Law 85-864, which provided in part:

"SEC. 901. The National Science Foundation shall establish a Science Information Service. The Foundation, through such Service, shall (1) provide, or arrange for the provision or, indexing, abstracting, translating, and other services leading to a more effective dissemination of scientific information; and (2) undertake programs to develop new or improved methods, including mechanized systems, for making scientific information available."

In accordance with this provision of the National Defense Education Act of 1958, the National Science Foundation has entered into a contract and made a preliminary grant to the National Bureau of Standards for the operation of the program, to be undertaken by the Science Information Service, for the evaluation and development of existing programs in these fields.

During the past few years a number of other interesting developments have taken place, which have resulted in the improvement of the availability of scientific and technical information in the United States. The Western Reserve University Center of Documentation Research and Communications has been cooperating with the American Society for Metals and the General Electric Co. in developing a system of coding abstracts that can be stored and searched mechanically, and have developed a machine for this searching purpose. This is an excellent example of cooperative enterprise by university, professional society, and industry which could lead to a usable mechanical search system of textual and graphic scientific and technical material. There are approximately 58 similar and promising ventures underway throughout the country, in which Federal agencies are participating in many instances, (i.e. Air Research and Development Command, Air Force Office of Scientific Research, Office of Naval Research, National Science Foundation.)

A third area of constructive action has resulted in the stimulation of non-Federal groups, who have advanced a number of serious proposals to create a program for the centralized, mechanized exploitation of the world's scientific and technical literature. One of these that has been brought to my attention is the program of Western Reserve University, one of the organizers of this international conference. The pioneering documentation research center of the university is working toward the creation of a "model center for the mechanized exploitation of the scientific and technical literature." As a matter of fact, this plan is now before the National Science Foundation for consideration. Many of my colleagues in the Senate and the House of Representatives have shown a keen interest in this proposed program, and my committee has endeavored to see that its full potential is evaluated and utilized as a part of the Federal support program. I shall be looking with interest at the outcome of this project.

Mechanical systems and devices are part of the broad pattern of scientific information services, and this pattern is in turn a part of the processes of science. In order to properly mechanize processes or to design systems, we must be able to specify in great detail just how it is to be done. Much of this research must draw on the combined skills of trained information specialists and librarians, linguists, logicians, mathematicians, statisticians, computer engineers, operations research analysts, philosophers, psychologists, behavioral scientists, and specialists in the different scientific disciplines.

Involved in these cooperative ventures are many educational institutions (such as the University of Pennsylvania, Harvard Computation Laboratory, University of California, Massachusetts Institute of Technology, Stanford University, Cambridge Language Research Unit (England), Georgetown University, Columbia University, etc.) and large business concerns (such as the International Business Machines Corp., Radio Corp. of America, General Electric Co., Eastman Kodak Co., and Documentation, Inc., etc.). While great progress has been made in these joint ventures, and while it can be safely stated that mechanical translation is possible, still I must caution that we have not yet reached the stage where we have either the system or machine to accomplish it rapidly or economically; much more research and development work remains to be done before we reach that point.

Scientific societies, long the backbone of strong scientific effort in the United States, are passing through a period of self-appraisal and are actively seeking improvement of their publications and their publishing techniques. For example, the American Society for Metals supports an experimental mechanized literature searching project at Western Reserve University; the American Chemical Society has a program of research within its Chemical Abstracts services; the American Institute of Physics has commenced a similar study of the entire physics communication problem; the biologists are reviewing their entire information mechanism, and among the steps they have taken to improve their communications is the formation of a conference of biological editors and the planning of a central business and information office in the American Institute of Biological Sciences to coordinate and insure data compilation activities of a specialized type; the American Physical Society has established an express journal titled "Physical Review Letters," as an experiment in rapid dissemination of short notes on current research in physics.

Another very important development in connection with the documentation program is the establishment of an office of documentation within the National Academy of Sciences. The objective of this new office is to advise and assist not only activities within the National Research Council to insure proper direction, but it is also proposed that it will work out a system of maximum participation of leading U.S. scientists and engineers in the programs approved for support, in order to insure the highest possible contribution these leaders in the field of science can make toward the development of an adequate documentation center. The third objective of the office of documentation is to create an advisory board of scientists, whose abilities would be directed toward serv-

ing the National Science Foundation and nongovernmental groups working in the documentation field, and to assist the National Science Foundation in determining the areas where Federal funds or grants could be best allocated toward achieving the maximum goals in the development of an overall scientific information and documentation program and center.

A fourth result of the hearings of our Senate subcommittee has been the attempt to assess firsthand the scope of the Soviet effort in this field.

A great deal has been said about the efficiency and comprehensiveness of the Russian system of publishing scientific material in abstracts and making it available to Soviet scientists. They have developed an extensive organization, and are expending a great deal of energy in abstracting and indexing scientific material from all parts of the world. In addition, they are exploring vigorously the possibilities of mechanical storage and search in mechanical translation. We must not discount their effort, but there are some areas where there is doubt as to the superiority of Russian progress. For instance, it can be pointed out that "Chemical Abstracts," produced by the American Chemical Society, is universally acknowledged to be the greatest abstracting and indexing service in the world relating to the field of chemistry.

To illustrate the foregoing comparison, this year the American Chemical Society will produce over 130,000 abstracts of articles of interest to chemists; the Russians will produce less than 90,000. Further, "Chemical Abstracts" coverage is better, and its entries are issued more rapidly than those of its Russian counterpart. The Russians have better coverage in other fields, such as biology; however, "Biological Abstracts" has increased its coverage by 33⅓ percent during this year, and for the coming year it expects to very nearly equal the number of entries produced by the Russians; the currency of "Biological Abstracts" entries matches that of the Russian service.

It should be noted that indexes to the abstracting services of the Russians are available only for occasional years, a factor greatly handicapping search of their abstract literature. Obviously, it would be very difficult to search through hundreds of thousands of abstracts without the benefit of good indexes such as are provided by the indexing and abstracting services of the United States. As one example of the never-ending search in this country for better finding tools for more effective use of abstract publications, "Chemical Abstracts" is studying the feasibility of new types of indexes to supplement those already extant. Another is the formation of the National Federation of Abstracting and Indexing Services to effect better cooperation and to develop studies seeking better tools for the benefit of the scientists of this country.

In connection with these problems, the cosponsor of this conference, the Rand Development Corp., headed by James Rand, took a hand in financing a long visit by Wetern Reserve University's Allen Kent, to assess the U.S.S.R. accomplishments in this field. When he returned from this trip last year, he reported to my committee and advised us that the Soviet effort was indeed of significant magnitude, and that in many areas of abstracting, and in research the machine searching and translation, the Soviet attack on the problem was of a most significant nature. He reported that about 500,000 scientific papers culled from the world's published literature were being abstracted under the direction of their Institute of Scientific Information—a branch of the Soviet Academy of Science. The abstractors—as in the United States—were specialists in their fields and were contributing part of their time to this work. Furthermore, the Russians have organized an "Express Information Service" which took the cream of the published literature and long summaries of these were printed in Russian each week in 36 fields. In addition, work was going forward in the construction of an information machine.

As a result of this trip, and following contacts with the work in other countries, the present International Conference was conceived and organized. James Rand financed another trip for Kent to the U.S.S.R. to arrange for Soviet participation at the meeting. Also, Rand Development Corp. provided travel grants for a number of participants from overseas.

I should also like to extend my commendations to Mr. Rand for his testimony earlier this year before the Senate Committee on Foreign Relations, when he made some very important observations which were of inestimable value to members of that committee. In addition to submitting comparative figures relative to Soviet progress as compared to advancements in the United States in the science information field, he was also able to submit many additional facts relating to the problems of interexchange of information between the two countries, which he has done much to overcome in connection with his work.

I believe all of us can agree that Mr. Rand has performed an important service to our Nation in his attempts to arrange for the cooperative activity evidenced by this meeting. All of the participants are rendering an important service to world progress and peaceful cooperation by spending a week here in Cleveland to work out solutions to a very vexing problem.

You may have wondered when I would get to the theme of this talk, "Knowledge Is Power." Every business or Government manager knows the extent to which his ability to make worthwhile decisions and to exercise control is influenced by the amount of knowledge pertinent to a given problem that he may have available to him. The power of the individual to do good and useful work is influenced by his information resources. A company's power to do business in a competitive economy is directly related to the knowledge of significant market—the know-how—and other factors that it has available to it. In the same way, the power of a country to maintain its competitive position economically, scientifically, militarily, is strongly influenced by the convenient availability of important information at the time when it can best be used.

The effective exploitation of intellectual resources is perhaps the most urgent problem of our times, for upon it depends the solution to many problems, including that of survival itself.

The truth of the epigram that "Knowledge Is Power" is more apparent today than ever before, yet a disturbing paradox confronts those most vitally concerned with the production and use of knowledge. Until quite recently, it was axiomatic that a research project in any field should begin with a review of the literature in order to provide the basis for research planning and to avoid wasted effort in duplicating previous work. Previously recorded knowledge was the most important single tool of the investigator. However, today, with the inability to lay hands quickly on essential information, therein lies the paradox. Because of the chaotic state of our documentation services, our stockpile of knowledge has become an embarrassment of riches and we find ourselves ignorant in the midst of a plethora of knowledge.

A solution to the problem of documentary chaos will be found only when it is recognized that this is a problem in intellectual engineering, and that such engineering must be based upon a body of fundamental knowledge out of which sound principles of operation may be derived. Traditionally, the collection and organization of the records of knowledge has been the task of the social institution known collectively as the "library," and the library profession has developed, partly from philosophical principles and partly from pragmatic experience, a body of general principles and established methods.

Today, as I look over the program of the world's leading specialists coping with the problems of documentary chaos, I find only two librarians—the remainder are, by training, chemists, mathematicians, engineers, linguists, philosophers, logicians, physicists, lawyers, physicians, statisticians, lexicographers, and computer designers. I am pleased to see that the team of specialists attacking this problem has grown.

In seeking a solution, the problems of maintaining a common language, both intellectually as well as technically, is of extreme importance. The international attention and participation of this conference is most gratifying. I will leave Cleveland with a feeling of gratification that the problem of our documentation chaos is in good hands.

Returning again to the concept of knowledge as power, let us examine what we really mean by the word "power."

I believe that careful analysis reveals that knowledge gives man three types of power:

First, the power to comprehend. This is the realm of pure science and relates to the power of man to understand the universe and man's place in it. It includes, as well, the comprehension of natural law and the ability of man to understand his environment.

Next, we have the power to build. This is the realm of technology, and relates to man's power to build himself a better physical world. This includes better homes, better means of transportation and better instruments, generally, with which to enrich his life and add to his physical comforts and well-being.

Finally, we have the very vital power to harmonize. This is the realm of personal and group relationships, and relates to man as a social being and man in his relation to other men both at home and abroad.

Now I think it is evident that the problems to which this conference is addressing itself relate to all three of these powers. And I believe it is also evident that mastery over man's recorded knowledge is essential to his ability to comprehend his environment, to build for himself a better physical world, and to create a world that is free from tension and in which he can live in peace and harmony with his fellows.

It is primarily with reference to this third power that I have addressed my remarks this evening.

Strife and conflict, both among individuals and among nations, are born of ignorance. Our ability to reconcile our differences, to resolve conflicts and to create an atmosphere of mutual sympathy and understanding is related directly to our understanding of each other and of each other's problems, ambitions and points of view. I believe it is well established that people who understand one another are not likely to make war against each other. It has long been established that most of the great power conflicts occur in the political arena and arise out of misunderstandings, lack of knowledge of motives, objectives and backgrounds.

On the other hand, we have had much success in establishing mutual relations and understanding among nations in the intellectual arena. Notable among man's

achievements toward international understanding is the field of science, which has long been regarded as international, and I believe that history demonstrates that scientists have, in their professional contacts, done much to destroy international barriers. Therefore, the realm of science is clearly an admirable bridge over which we can pass from a world of tension to a world of peace.

The recent work in the field of international health of the Subcommittee on Reorganization and International Organizations has also demonstrated this truth in that field, to a degree comparable to the accomplishments in the field of science, which have resulted in an acceleration of the work being performed by various public and private international organizations in both fields.

Unfortunately, however, increasing specialization in science tends to create barriers across this bridge and to obliterate the bands of communication that scientists have long maintained with each other. To improve the flow of scientific knowledge, both within our own country and between our own country and the other powers of the world, I have urged the establishment of a Department of Science and Technology which would serve the cause of international science as I hope our Department of State serves the cause of international peace.

I believe we will all agree that international understanding and agreement are fundamental to the free sharing of knowledge. Conversely, the free sharing of knowledge is also fundamental to international understanding and agreement. However, such understanding and agreement cannot be achieved without a common basis of communication. To achieve such agreement we must teach ourselves to work together, to plan and to develop solid working relationships in which all of us must share responsibility and contribute to the whole, even if it means that we must surrender something of immediate benefit to ourselves for the good of the group.

This conference is a very important forward step in the achievement of vital international understanding as it relates to the freedom of man to pursue knowledge and to share that knowledge with other men. It is particularly appropriate that these meetings are being held in Cleveland with Western Reserve University as one of its sponors, for it is here that the United States is making one of its more significant contributions to the communication and dissemination of man's recorded knowledge.

In conclusion, I believe we can all agree that knowledge is power—but it actually reaches its greatest heights and achieves its highest use when it is shared with others for the benefit of all.

Tonight we dedicate ourselves, not to man's enslavement of other men, or to a nation's conquest of other nations, but to the mastery of knowledge itself.

This conference is the prolog to man's ultimate conquest of knowledge. This is a heavy burden and a lofty goal, but it is vital to our survival, and I am confident of success.

[From the Washington (D.C.) Evening Star, Sept. 11, 1959]

MACMILLAN PROMISES SCIENCE POST IN CABINET

LONDON, September 11.—Prime Minister Macmillan's Conservative Party promised today to appoint a Cabinet Minister for Science to keep Britain abreast of atomic energy and space research.

The promise was contained in a manifesto asking the voters for support in the October 8 parliamentary election.

Macmillan, in launching the manifesto at a news conference, described the Conservative program as "imaginative and level-headed." He said the new aims represented a continuation of the party's past and present policy.

The opposition Labor Party, in an election pamphlet issued previously, declared the Conservatives during 8 years in power made foreign policy mistakes and administered Britain for the benefit of the property-holding class.

The Conservative manifesto said if the Macmillan government is retained in office its first legislative tasks will be to strengthen the machinery for coping with local unemployment.

The manifesto said the Conservatives hope to double Britain's standard of living in the next generation.

On foreign affairs the manifesto said Mr. Macmillan's initiative had brought about closer contacts between the big powers.

Both Mr. Macmillan and Labor Leader Hugh Gaitskell expect a summit conference to materialize in the next few months. Each man wants to speak for Britain. That has become a major issue in the campaign to win control of the 630-seat House of Commons.

A Memorial To All Presidents Needed

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. McDOWELL. Mr. Speaker, I have introduced, for appropriate reference, a joint resolution to establish a Commission, to be known as the Presidential Memorial Commission, for the purpose of considering and formulating plans for the design, construction, conversion, and location, in the Capital City of the Nation, or its environs, of a permanent memorial or memorials, including cultural facilities befitting the Capital City of our country, to past Presidents of the United States.

The Commission is to be composed of four Members of the U.S. Senate, four Members of the U.S. House of Representatives, and four persons to be appointed by the President of the United States.

At the present time there are three monuments in Washington, D.C., to past Presidents which are visited by hundreds of thousands of our citizens each year. These are the Washington Monument, the Lincoln Memorial, and the Jefferson Memorial. Presidents Buchanan, Garfield, Grant, and Jackson are commemorated by statues. The Congress has, in addition, authorized the establishment of a memorial to President Franklin D. Roosevelt.

There is much discussion of a memorial to President Woodrow Wilson, and the Senate has adopted legislation to establish a James Madison Memorial Commission.

The joint resolution I have introduced is similar to a measure sponsored in the Senate by the Senator from Indiana [Mr. HARTKE] who said in introducing it that—

The joint resolution will provide a fitting memorial to all Presidents. As each President completes his term of office he, too, will be recognized in this memorial.

He went on to say that—

Any man who is outstanding enough to have served as a President of the United States deserves a memorial which will take its place in the architectural splendor of the Capital City. Certainly it will provide a real lesson in American history and will commemorate the true meaning of democracy.

A Presidential Memorial Commission such as I have proposed would have a priceless opportunity to make a major contribution to the advancement of the cultural life of the Capital City of our Nation, which has often been called a "cultural backwater" and compared unfavorably with the leading cities of Europe and even of the U.S.S.R. Time magazine on February 23, 1959, in an article on the subject of "Capital Culture," declared that Washington, D.C., "has long been known as a cultural backwater."

The New York Times reporting on the subject of "Capital Revival" said on February 22, 1959, that—

The city of the Potomac was once regarded as a horrible example of a world capital that was provincial in its neglect of the cultural amenities. Compared with London, Paris, Rome, Berlin, and Moscow, it looked like an esthetic desert. Foreigners who liked to scoff at the United States would point to the paucity of artistic activity in Washington as another demonstration of American materialism.

The New York Times hastened to add that—

The comparison was never quite fair, for Washington has always been an artificial city, a Government center whose population fluctuates substantially with shifts in party power. Nevertheless, there seemed to be a basis for the charge that the community cared for little but the political and social game. The symphony orchestra was in the doldrums; there was no opera, and apart from Zelda Fichandler's arena stage, no continuous theater.

Some citizens complained that Washington was missing an opportunity. No longer a village on Foggy Bottom, they insisted, it ought to behave with the pride of a great Capital. It ought to be a showplace in the humanities and arts. Conscientious Congressmen introduced legislation and generally it was interred in committee.

Since the New York Times and Time magazine are both published in New York City, which has more cultural facilities than any other American city, they may be written off as prejudiced witnesses with the pride, snobbishness, and provincialism which seems to be inherent, in many cases, in those who live in great cities.

However, it is harder to explain away the following statement by the Washington (D.C.) Evening Star on July 19, 1959:

It is illogical to compare Washington with other capitals in its need for theaters.

Unlike London, Paris, Rome, and even isolated Berlin, it is not a major center of population, finance, art, culture, and the other elements of metropolis. While it is growing in all of these areas, it is primarily a political capital, like Ottawa in Canada, but much better off than Canberra in Au-

tralia which is woefully younger than either Washington or Ottawa.

Actually, Washington equates much more logically as Harrisburg to Philadelphia, Springfield to Chicago, or Albany to New York. As a world capital, naturally, it is obligated to stir itself culturally at a much faster rate than the political center of a single State. Yet, nothing could be more unreasonable than to expect it to become a Rome, Paris, or London in so much less time than these had to become Rome, Paris, and London.

With the visit of Soviet Premier Khrushchev this week on what has been described as a cultural mission it is important that all of us think concretely about the best way for the Capital City of our country to make a cultural breakthrough of significant proportions. A Presidential Memorial Commission could make a study of this subject which could guide us in the years ahead.

I am not inclined to favor more statuary memorials to our past Presidents and other great statesmen since the District of Columbia has nearly 200 of these. Even the use of the columns of the East Front of the U.S. Capitol Building itself should be used only in connection with a living memorial.

A National Conservatory of Music was authorized by the Congress in the 1890's, but was never built. The proposed Presidential Memorial Commission might well give some thought to how this might be finally established in the Nation's Capital with the cooperation of the five great universities located here, that is, George Washington University, Georgetown University, American University, Howard University, and Catholic University of America.

Leonard Bernstein and the New York Philharmonic Symphony Orchestra scored their great triumphs for American art at the Tschaikovsky Conservatory in Moscow last week, and it was at this same conservatory that Van Cliburn made the greatest cultural breakthrough of the decade only last year.

I have long felt that we should have a national program in the fine arts such as all European countries and the U.S.S.R. have, and as was recently established in Canada. Many South American countries have such programs. The establishment of such a national conservatory of music, and the theater arts, in the Nation's Capital would give great encouragement to our composers, writers; indeed, it would greatly encourage all of our creative people.

The offer of the Keith Theater and the Albee Building to the Nation's Capital by one of the leading citizens of the District of Columbia makes possible at last part of the program which the Congress envisioned in the 1890's. The Keith Theater could be a downtown showcase for the students of speech, drama, and music of all of the Nation's colleges and universities.

Museums and even a building to house productions of music, dance, and drama, and an experimental theater encompassing the fine arts, are a necessary corollary to a program for the living artist, but surely the one thing which would be most effective for our own people and for the impression that we make upon all foreigners is the extent to which art lives and affects our way of living through contemporary creative artistic endeavor.

The location of the Keith Theater and the Albee Building within a block of the White House is surely one of the choice locations in America.

Only today Mr. Joseph Intermaggio, acting director, of the Washington Center for Metropolitan Studies, told me of his great personal interest in such a development as I have outlined here. The Washington Center for Metropolitan Studies is cooperating with the universities of the District of Columbia and the Brookings Institution.

It was his thought that many of the country's educational, and planning organizations might be interested in having space in the Albee Building. He mentioned specifically the American Educational Theater Association, the National Council of the Arts in Education, the American Planning and Civic Association, the National Conference of Mayors, the American Council of Learned Societies, and the Washington Center for Metropolitan Studies.

It is important to note in this connection that in a survey report for the American Council on Education, submitted on January 2, 1958, by Dr. Donald J. Stone, dean of the Graduate School of Public and International Affairs of the University of Pittsburgh, it was declared that—

In one respect at least, the Nation's Capital is an underdeveloped community. It lacks adequate institutions to meet the needs of thousands of foreign visitors or temporary residents who come here under the auspices of the Federal Government, of foreign governments, international organizations, foreign or American private institutions, or on their own. Most of these foreign visitors are persons of status in their own countries. All told, there are each year between fifteen and twenty thousand of them.

The report called for an enlarged center which should foster the international enlightenment of the Washington community. This could be done by cultural and social programs of general interest which would include American and foreign music programs.

A national showcase for the fine arts such as I have in mind is familiar to all European and Russian cities which have conservatories of music and academies of fine arts.

Vice Adm. Hyman G. Rickover, U.S. Navy, in his testimony before the Committee on Appropriations, spoke of the excellent foundation laid in the Soviet 10-year schools in languages and in literature, not only of Russia but of foreign countries.

Admiral Rickover spoke with approval of the findings of Dr. Harlan H. Hatcher, president of the University of Michigan at Ann Arbor, and Dr. F. Cyril James, president of McGill University in Canada, that in the pursuit of scientific work the Russians have not neglected the areas of culture and the arts.

A recent study made at my request by the Library of Congress shows that the Nation's Capital, as a political entity, does less than any other major U.S. city for the fine arts. The Board of Commissioners of the District of Columbia seems content to let the Federal Government or private benefactors support the arts. Such a course would be unthinkable in any European capital city or, indeed, even any large provincial city in Europe or the U.S.S.R.

I have briefly sketched some of the areas which the President Memorial Comission might cover. I would hope that the President would appoint distinguished educators and cultural leaders to it when it is finally established.

In conclusion, I would like to include as part of my remarks the study by the Library of Congress to which I have just referred, together with the text of my House Joint Resolution 530, and my H.R. 7989.

HOUSE JOINT RESOLUTION 530

Joint resolution to establish a commission to formulate plans for memorials to the past Presidents of the United States including Presidents James Madison and Woodrow Wilson

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established a commission, to be known as the "Presidential Memorial Commission" (hereinafter referred to as the "Commission"), for the purpose of considering and formulating plans for the design, construction, conversion, and location, in the city of Washington, District of Columbia, or in its immediate environs, of a permanent memorial or memorials (including cultural facilities befitting the capital city of a great nation) to past Presidents of the United States including Presidents James Madison and Woodrow Wilson. The Commission shall be composed of twelve Commissioners appointed as follows: Four persons to be appointed by the President of the United States, four Senators by the President of the Senate, and four Members of the House of Representatives by the Speaker of the House of Representatives. The Commissioners shall serve without compensation, but may be reimbursed for expenses incurred by them in carrying out the duties of the Commission. The Commission shall report such plans, together with its recommendations, to the President and Congress at the earliest practicable date, and in the interim shall make annual reports of its progress to the President and Congress.

SEC. 2. The Commission is authorized to—

(a) make such expenditures for personal services and otherwise for the purpose of carrying out the provisions of this joint resolution as it may deem advisable from funds appropriated or received as gifts for such purpose;

(b) solicit and accept gifts to be used in carrying out the provisions of this joint resolution or to be used in connection with the construction, conversion or other expenses of such memorial or memorials;

(c) hold hearings, organize contests, enter into contracts for personal services and otherwise, and do such other things as may be necessary to carry out the provisions of this joint resolution; and

(d) avail itself of the assistance and advice of the Commission of Fine Arts, the National Capital Planning Commission, the District of Columbia Recreation Board, the National Capital Regional Planning Council, the National Park Service; and the Bureau of International Cultural Relations of the Department of State, and such Commissions, Board, Service, Bureau, and Council shall, upon request, render such assistance and advice.

SEC. 3. There is authorized to be appropriated such sums as may be necessary to carry out the provisions of this joint resolution.

H.R. 7989

A bill to provide for the adoption in the Nation's Capital of the practice common to many other cities in the United States with regard to cultural activities by depositing in a special fund 1 mill out of each $1 of tax revenue of the government of the District of Columbia to be used for such programs, to advance the National Cultural Center and its educational and recreational programs, to provide financial assistance to the nonprofit art programs of the District of Columbia, and for other purposes, by amending the Act of April 29, 1942

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Act entitled "An Act to create a Recreation Board for the District of Columbia, to define its duties, and for other purposes," approved April 29, 1942, as amended (D.C. Code, sec. 8–211), is amended by inserting "(a)" immediately after "SEC. 4." and by adding at the end thereof the following:

"(b) In addition to the trust fund authorized by subsection (a) of this section, there shall be deposited in a special fund in the Treasury of the United States to the credit of the Board 1 mill out of each $1 of tax revenue of the government of the District of Columbia. There is authorized to be appropriated to the Board each fiscal year, an amount equal to the amount deposited in such special fund during the preceding fiscal year out of such tax revenue. Such appropriated amount shall also be deposited in such special fund.

"(c) All money in the special fund authorized by subsection (b) of this section shall be available to the Board to defray in whole or in part the expense of programs in arts and crafts, music, drama, speech, dancing (other than social dancing), lectures, forums for informal discussions, and other creative opportunities for leisure-time participation, as authorized in section 3 of article II of this Act, and the expense of carrying out the programs authorized by paragraph 3 of section 4 of the National Cultural Center Act."

SEC. 2. The amendment made by the first section of this Act shall take effect July 1, 1959.

THE LIBRARY OF CONGRESS,
Washington, D.C., July 30, 1959.

To: Hon. HARRIS B. MCDOWELL (Attention Mr. Frain.)

From: Education and Public Welfare Division.

Subject: Municipal financial support of certain artistic and cultural activities in selected U.S. cities.

This is in reply to your request of June 23, 1959, for information concerning municipal support of artistic endeavors and cultural activities and to describe the mechanics of this type of support. Your request also states that you are especially interested in determining what cities, if any, earmark a certain portion of their taxes for use in supporting artistic and cultural endeavors and how the amounts set aside by the larger cities compare with the $16,000 for cultural and art purposes in the D.C. Recreation Department budget.

The following table represents a brief summary of answers to letters, which we recently sent to chief finance officers in selected U.S. cities, requesting certain information about municipal financial support of artistic and cultural activities. The 56 cities selected to receive copies of our letter were chosen on the basis of their population size (as indicated in the 1950 Bureau of the Census report) or because they were known to give municipal financial support to certain artistic or cultural activities.

Number of letters sent	56
Number of replies to date (July 30, 1959)	38
Number of cities which indicated current support of artistic and cultural activities	34
Number of cities which indicated the lack of any current support of this type	4
Number of cities which indicated that a certain portion of taxes are set aside for such support (Evansville, Ind., and St. Louis, Mo.)	2

For the most part, letters received from the cities deal with: (1) sources of funds (i.e., general revenues, taxes earmarked for such purposes, etc.); (2) the artistic and cultural activities, organizations, institutions, buildings, etc., which receive municipal funds; (3) the amount of municipal funds expended for such purposes; and (4) how such funds are allocated to the various municipally supported fine arts and other cultural programs. With respect to your inquiry concerning Washington, D.C.'s $16,000 recreation budget appropriation for cultural and art purposes, the enclosed chart indicates considerably higher appropriations by most other large cities.

In preparing the enclosed chart we have attempted to limit the facts and figures included to those which seem most pertinent to the nature of your request. Information contained in the responses from the cities has been presented as we received it. Due to the lack of uniformity of methods of answering our questions, no attempt has been made to interpret the facts contained in the letters.

Furthermore, since a definition of the phrase "cultural activities" was not included in our letter to the cities, some of the information received and also listed on the enclosed chart may be extraneous to your purposes, depending on how one defines "cultural activities." In general, we have omitted the following types of activity from inclusion in this chart: Libraries and certain library fine arts programs (unless the latter were specifically mentioned), historical societies, academies of sciences, institutes (unless specifically called "art institute"), certain arts and crafts programs of recreation departments, planetariums, aquariums, zoological parks, botanical gardens, etc., societies of natural sciences, spring fiestas, and certain types of indirect assistance given by city, such as use of staff, office space, etc. (unless specifically mentioned in letters.)

We hope that this information and the accompanying chart will be helpful.

HELEN A. MILLER,
ANNE M. FINNEGAN.

Municipal financial support of certain artistic and cultural activities in selected U.S. cities, a compilation of answers to a questionnaire

City	Amount of municipal financial support	Source of municipal financial support	Type of activity supported
Akron, Ohio	$36,000	General fund (indirect support in lieu of tax for facility).	Art museum.
	$5,000,000	Direct tax construction cost	Plans for the construction of a municipal auditorium and "cultural grouping for arts, library and arena."
Atlanta, Ga	1 or 3 parts of a $100,000 recreation program	General fund (part of "recreation program")	Band concerts.
	$7,500	General fund	Atlanta Symphony Guild.
	$6,000	do	Atlanta Pops Concert.
	$5,000	do	Municipal Theater Under-the-Stars.
	$10,000	do	Atlanta Art Association for Benefit High Museum and School of Art.
Baltimore, Md	1959 appropriations:		
	$25,594	do	Municipal Museum.
	$119,994	do	Bureau of Music.
	$288,000	Endowment funds (estimated income)	Walters Art Gallery
	$15,000	General funds (pensions)	
Birmingham, Ala	$90,000 (this year's appropriation)	General funds	Birmingham Museum of Art.
Buffalo, N.Y	Appropriated in 1958–59:		
	$75,430	Real estate tax and other current revenues	Albright Art Gallery.
	$30,000	do	Buffalo Philharmonic Orchestra Society, Inc.
	$27,300	do	Kleinhans Music Hall.
Chicago, Ill	Calendar year 1958:		
	$232,405.87	Payments from Chicago Park District, an independent municipal corporation in the city of Chicago.	Art Institute of Chicago.
	$232,309.11	do	Museum of Science and Industry.
	$232,405.92	do	Chicago Natural History Museum (field museum).
Dallas, Tex	$80,000	General revenues, "the major part of which is ad valorem tax."	Fine Arts Museum.
Detroit, Mich	1959–60 gross appropriation, $543,081	Local taxes, grants and gifts, and revenues	Arts Commission.
Evansville, Ind	1959 contribution, $9,200	Civil City of Evansville	Evansville Museum of Arts and Sciences.
	Proposed budget for 1960, $18,400		
	1959 contribution, $9,200	School City of Evansville [1]	Do.
	Proposed budget for 1960, $18,400		

[1] City budget for 1960 based on 1 cent per $100 valuation of the city. Funds provided by taxes earmarked for this specific purpose.

Municipal financial support of certain artistic and cultural activities in selected U.S. cities, a compilation of answers to a questionnaire—Continued

City	Amount of municipal financial support	Source of municipal financial support	Type of activity supported
Hagerstown, Md	$12,500 (provided for in annual budget)	General revenues	Washington County Museum of Fine Arts.
Houston, Tex	$19,500	do	Museum of Natural History.
	$20,000	do	Museum of Fine Arts.
	$3,000	do	Civic Theatre.
	$25,000	do	Houston Symphony.
Kansas City, Mo	For fiscal year ended Apr. 30, 1959:		
	$21,211	General fund; park funds	Nelson Art Gallery (buildings and ground maintenance).
	$9,925	General fund	Philharmonic Orchestra (free rent).
	$42,830	General debt and interest fund	Starlight Theater (debt service for facility developed by park department).
	$48,231	General fund	Museum (buildings and ground maintenance).
	$33,592	do	Liberty Memorial (operation and maintenance).
Los Angeles, Calif	Appropriation for fiscal 1959–60: $196,998	General revenues	Department of municipal art: bureau of music.
Newark, N.J	1959 appropriation: $525,426	Tax and general revenues	Newark Museum.
New Orleans, La	$40,000 annually	Appropriated by city	Delgado Museum of Art.
	Appropriated "this year":		
	$5,000	do	New Orleans Philharmonic Society.
	$2,500	do	New Orleans Opera House Association.
	$875	do	Crescent City Concerts.
New York, N.Y	$944,525 (operating budget, July 1, 1959, to June 30, 1960).	Tax levy and general fund revenues	Metropolitan Museum of Art.
	$904,989 (capital budget, Jan. 1, 1959, to Dec. 31, 1959).	Capital allocations	Do.
	$1,329,559 (operating budget, July 1, 1959, to June 30, 1960).	Tax levy and general fund revenues	American Museum of Natural History.
	$1,071,985 (capital budget, Jan. 1, 1959, to Dec. 31, 1959).	Capital allocations	
	$125,140 (operating budget, July 1, 1959, to June 30, 1960).	Tax levy and general fund revenues	Brooklyn Institute of Arts and Children's Museum.
	$95,866 (operating budget, July 1, 1959, to June 30, 1960).	do	Brooklyn Institute of Brooklyn Academy of Music.
	$69,510 (capital budget, Jan. 1, 1959, to Dec. 31, 1959).	Capital allocations	Do.
	$127,000 (operating budget, July 1, 1959, to June 30, 1960).	Tax levy and general fund revenues	Museum of the City of New York.
	$50,250 (capital budget, Jan. 1, 1959, to Dec. 31, 1959).	Capital allocations	
Norfolk, Va	$2,000	General revenue	Norfolk Symphony Orchestra.
	$69,083	do	Norfolk Museum of Arts and Sciences.
Oakland, Calif	1958–59:		
	Salaries for a professional staff of 6 plus $2,000 allowance for books and $500 for pictures.	Annual appropriations by city council to library department from which library and museums commission adopts an operating budget.	Art and pictures department of main library.
	$70,377	do	Oakland Public Museum.
	$57,212	do	Art Museum.
	$31,577	do	Snow Museum.
Philadelphia, Pa	$25,000	General revenues	Academy of Fine Arts.
	$75,000	do	Robin Hood Dell.
	$25,000	do	Philadelphia Grand Opera.
	$624,760	do	Philadelphia Art Museum and Rodin Museum.
	$30,000	do	Johnson paintings.
	$10,000	do	Philadelphia Art Festival (every 2 years).
Pittsburgh, Pa	$35,000 (1959)	General revenues (through specific appropriations each year).	Pittsburgh Symphony.
	$20,000 to $30,000 (annually)	do	Free summer band concerts.
	$25,000 (approximate cost to city annually)	do	Arts and Crafts Center.
Providence, R.I	Current appropriations:		
	$24,877	General revenue	Museum in Roger William Park.
	$1,500	do	Band concerts.
Reading, Pa	$140,000 (approximate expenditures for 1959)	General revenues (budgeted annually according to estimated needs).	Recreation Bureau (sponsors orchestra, Nature Museum, etc.).
	$3,028 (1959)	do	Bureau of parks weekly band concerts.
Richmond, Va	$5,000	Direct appropriation	Valentine Museum.
Rochester, N.Y	1959–60 expenditures:		
	$10,000	General revenues or real estate taxes	Civic Music Association.
	$20,000	do	"Opera Under the Stars."
	Not indicated	Not indicated	Museum.
Sacramento, Calif	1959–60 budget amounts:		
	$4,500	General ad valorem taxes	Philharmonic Orchestra.
	$4,000	do	Park band concerts.
	$66,866	do	Crocker Art Gallery (city-owned).
	$17,000	do	Children's art and dancing classes (city recreation department).
St. Louis, Mo	1958 Revenue: $320,007.53	Permanent levy of $0.02 per $100 valuation on all real and personal property (established under State law in 1907).	St. Louis Art Museum.
St. Paul, Minn	1959 city budget appropriations:		
	$13,500	Appropriations "financed as part of the overall city budget."	St. Paul Gallery and School of Art.
	$10,000	do	St. Paul Civic Opera.
San Antonio, Tex	$81,000 (approximate budget for ensuing year)	Supported primarily by general fund	Witte Museum.
	$81,000	do	2 municipal auditoriums.
	$1,500	do	San Pedro Playhouse (auditorium devoted primarily to theatrical productions).
San Diego, Calif	1959–60 city budget:		
	$57,159	General revenues	Fine Arts Gallery.
	$19,289	do	Serra Museum (local history).
	$48,715	do	Natural History Museum.
	$45,949	do	Museum of Man (anthropology).
	$10,000	do	San Diego Symphony.
San Francisco, Calif	1958–59 budget:		
	$158,365 (taxes, $120,665; other, $37,700)	Budget of the city and county of San Francisco.	Art Commission.
	$35,493 (taxes)	do	War Memorial Art Museum.
	$255,456: (taxes, $254,856; other, $600)	do	California Palace of the Legion of Honor (art museum).
	$367,942: (taxes, $367,692; other, $250)	do	de Young (art) Museum.
Scranton, Pa	An average of about $28,740 per annum over the past 10 years.	General funds	Everhart Museum.
Seattle, Wash	$233.37	City's annual budget funds without regard to income source.	Art Commission.
	$34,097.55	do	Art Museum.
	$18,000	do	Public Music.
	$62,743.57	do	Art division of the library department.

Municipal financial support of certain artistic and cultural activities in selected U.S. cities, a compilation of answers to a questionnaire—Continued

City	Amount of municipal financial support	Source of municipal financial support	Type of activity supported
Springfield, Mass.[3]	$33,127.93	General tax revenues	Museum of Natural History.
	$31,092.45	do	George Walter Vincent Smith Museum.
	$18,161.40	do	William Pynchon Memorial (Connecticut Valley Historical Museum).
	$1,267	do	Springfield Museum of Fine Arts.
	Not indicated	do	Fine arts department of library.
Syracuse, N.Y.	$25,000 appropriation annually	General tax levy	Syracuse Museum of Fine Arts (privately chartered institution).

[3] Included in the library budget is the position of musical adviser, which is the way in which the city contributes to the salary of the conductor of the Springfield Symphony Orchestra.

Regional Corporation Would Provide Continuity in Water Resource Development in Columbia Basin

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, in his opposition to water resources development projects, President Eisenhower continually stresses the theme of economy versus water. Yet harnessing of our rivers for production of power, reclamation of agricultural land, control of floods, and development of recreational sites is creation of wealth—and investment in American productivity.

A recent editorial in the Pendleton (Oreg.) East Oregonian, pinpointed this inconsistency, declaring—

Mr. Eisenhower has steadfastly refused to recognize the facts upon which the Congress approves these projects—they do not get approval until they show a favorable benefits-to-cost ratio. He has refused to recognize that these projects represent investments—investments that will be repaid many times over.

Water resources development is vital to development of the Northwest. To insure economic stability in that area of our country as we attempt to meet power needs of a growing population and an expanding industrial base, growth of electric power potential must be a continuing basis. The Eisenhower administration's opposition to new starts has destroyed this needed continuity.

However, this situation could be remedied, and on a long-term basis, by enactment of my bill, S. 1927, a proposal to create a Bonneville Regional Corporation with authority to issue revenue bonds to finance new starts approved by Congress and responsibility to supply the geographic area in which it would serve with an adequate supply of power.

The East Oregonian endorses this view, and states—

The best way out for this region in the face of such Presidential opposition is through a regional corporation that would permit the issuing of revenue bonds to finance water resources development projects. Because this would not require continued Federal appropriations, other than for non-reimbursable items, one assumes that the President would not oppose it. He has approved the regional corporation principle of financing in the case of the Tennessee Valley Authority.

I ask unanimous consent that the entire editorial, which is entitled "A Regional Corporation Is the Way," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pendleton (Oreg.) East Oregonian, Sept. 4, 1959]

A REGIONAL CORPORATION IS THE WAY

Some Republicans in the Northwest must be thinking that one more such victory as President Eisenhower scored this week when the House upheld his veto of a public works appropriation bill and they will be completely undone. In this region of the country where water resources development means so much it will be extremely difficult for Republicans to defend a Republican president who refused to approve appropriations for water resources projects in the region.

The stand Mr. Eisenhower took in this matter was not, of course, new. He has consistently said that the Federal Government cannot afford to start new water resources development projects. In the past he has not been able to make it stick. But this year he got away with it when an override of his veto failed by one vote in the House.

Mr. Eisenhower has steadfastly refused to recognize the facts upon which the Congress approves these projects—they do not get approval until they show a favorable benefits-to-cost ratio. He has refused to recognize that these projects represent investments—investments that will be repaid many times over.

But for stubborn resistance by some extremists, water resources development in the Northwest has been a nonpartisan consideration. Knowing that full and comprehensive use of the vast water resources of the region will hasten development of the region people of both parties have stanchly supported all those projects that the Federal Government could best do.

It is difficult to understand why Mr. Eisenhower has not sensed this, has not comprehended the thinking of the vast majority of citizens in the Northwest. It is particularly so when one looks at the results of contests for House and Senate seats in the States of the Northwest since Mr. Eisenhower took office.

The Oregonian, a Republican newspaper, has pointed out that Mr. Eisenhower's opposition to Federal development of water resources in the Northwest is the best available argument for a regional corporation. We thoroughly agree. The best way out for this region inthe face of such presidential opposition is through a regional corporation that would permit the issuing of revenue bonds to finance water resources development projects. Because this would not require continued Federal appropriations, other than for non-reimbursable items, one assumes that the President would not oppose it. He has approved the regional corporation principle of financing in the case of the Tennessee Valley Authority.

This has seemed to us for a long time to be the best way for the Northwest. President Eisenhower's veto of this week makes us doubly certain that it is.

Nixon Culling Communist Bluff

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a column entitled "NIXON Culling Communist Bluff," by George Todt, which appeared in the September 8 Valley Times, a newspaper serving California's San Fernando Valley.

I believe this column and the remarks therein, on how we must react to the Communist menace, is very timely in view of Soviet Premier Khrushchev's arrival in this country tomorrow. I believe it will be of interest to the Congress:

NIXON CULLING COMMUNIST BLUFF

(By George Todt)

A significant addition of new ideological concepts in the cold war between the politico-economic systems of the free and slave worlds was contained in a thought-provoking address by Vice President RICHARD NIXON before the 60th national convention of the Veterans of Foreign Wars in Los Angeles last week.

It was hardly the same old rehash of the identical mish-mash that we hear so repetitiously during these trying times.

Thanks to the young and erudite Mr. NIXON, we heard something different, and challenging, for a most welcome change.

Now let's try on for size a few of the most important excerpts of his intriguing and interesting address to the VFW:

"I think it is time for us to recognize that the Communists are not so smart and we are not so dumb. * * *

"We in the free world must stand up and fight for our ideas just as the Communists do for theirs. We have allowed too much to go unchallenged, the kind of talk that: 'The free nations are decadent, divided, and weak. The only and best way to progress in the newly developing countries is through communism. Communism rather than freedom is the wave of the future. The Commu-

nist leaders are too crafty and shrewd for us at the conference table. Their education system is superior to ours.'

"We have been on the defense long enough. It is time for us to take the offensive and help make the whole world realize that the Communist idea is not a superidea—that the Communist leaders are not supermen—and that the Soviet Union is not a supernation.

"We should not underestimate the deadly seriousness of the challenge which is presented to us because of the disciplined dedication of the Communist leaders. But let us not make the mistake of meeting that challenge with a negative, defeatist, static posture. * * *

"When Mr. Khrushchev challenges us to peaceful competition, let us go him one better and urge expansion of that competition to include the spiritual as well as the material aspects of our society. Let there be competition between ideas not only in the free world but in the Communist world as well. * * *

"When Mr. Khrushchev says that our grandchildren will live under communism, our answer should be: 'We do not fear the outcome, provided they have the freedom to choose the system they want.' We do not say in reply that his grandchildren will live under capitalism. The very essence of our belief is that we will not impose it on anyone else—and that every people should have the right to choose the kind of economic and political system which best fits its particular problems.

"But this we do believe: that all the people on this earth, including those of the Soviet Union, will inevitably demand and obtain more and more freedom. Because history teaches us that man was made to be free and that freedom—not communism or any other form of dictatorship—is the wave of the future. * * *

"Let our answer to the aggressive tactics of world communism not be simply defensive, negative, and fearful. The best answer to the Communist revolution is the kind of life produced by the American Revolution.

"The most effective antidote to communism is a program of intelligent, articulate, positive Americanism."

Now genius is often let loose in the land under the guise of unpretentious simplicity and a lot of us get fooled that way.

Those who will take the time to analyze very carefully what DICK NIXON has just said in the few telling paragraphs I have excerpted as the ideological meat of his address to the VFW will scarcely need to look further for an example of what I mean.

Actually, this constantly improving young man has laid his strategic groundwork in a sound and even brilliant way for what could indeed become "the wave for the future." Let's hope so.

Here he is preaching positive Americanism of the most constructive variety as the antidote to compulsory Communist one-worldism. He tells us to get off our dimes and toss apathy into the ashcan. In effect, he is saying: "Let's fight."

Well, isn't it about time for us to heed such words as these?

Trust and Confidence

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, prepared by me, paying tribute to the career of Gen. Randolph McCall Pate, Commandant of the Marine Corps, who will retire on December 31, 1959.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Before this Congress reassembles in January, the active military career of a distinguished American marine will have come to a close.

Gen. Randolph McCall Pate, Commandant of the Marine Corps, will retire on December 31. It is, I believe, only fitting that the Senate pause for a moment in these crowded, final days of this session to pay tribute to this dedicated, devoted and highly competent Marine.

I shall not comment upon his total career. His selection to command the Nation's elite force in readiness is in itself eloquent testimony in the caliber of his earlier service.

Instead, I believe we should give recognition to the innate dignity and professional competence which has characterized General Pate's performance of duty in the four difficult and trying years of our national history during which he has led our incomparable Marines.

They have not been easy years for the Nation. Certainly they have not been easy or quiet ones for our Marine Corps or its Commandant.

General Pate has led a corps which throughout his stewardship has been forced to accept and be prepared for heavier and heavier burdens even as its resources were steadily reduced.

It is in coping with the many problems which have inevitably resulted from meeting increased responsibilities with ever lessening means at hand that General Pate's steadiness and strength of character have proved of such value to the Nation and to his corps.

The corps has responded promptly, effectively and efficiently to every emergency it has been called upon to meet. I am convinced that its very readiness, so constantly stressed by General Pate, has on more than one occasion during his tenure been the decisive factor in crucial moments of international difficulty.

Trust and confidence are the key words in the commission of any officer of our Armed Forces. No words more correctly describe the relationship which has existed between General Pate and the Congress. We learned early, both individually and collectively, that in our dealings with General Pate we could trust his honest, clear, straightforwardness and repose complete confidence in his sound, professional judgment.

Pretense is foreign to his makeup. In any matter concerning the Marine Corps, large or small, we have always been able to feel that from General Pate we could expect a factual report, open discussion, a spirit of helpfulness, the traditional Marine Corps insistence upon serving well and with honor.

This esteem in which he is held is partly reflected in the repeated efforts of the Congress to insure to the Nation a Marine Corps of adequate strength in these perilous times—in our insistence that the status of this always combat-ready expeditionary force continue to be that of a separate service—that funds for its operations not be merged with those of another service, and most certainly in the strong congressional conviction that the Nation's security continues to rest upon the bedrock of properly balanced forces.

General Pate will leave a Marine Corps combat-ready, alert, constantly prepared to the limit of its resources to meet any demand the Nation may place upon it. He may properly take pride in the professional, soldierly, disciplined forces he has commanded so well.

In turn, we and the American people whom we represent, may take a quiet pride in the honored career of this distinguished Marine officer who is about to leave the active service of his corps and country.

I am certain that he will carry with him into retirement the best wishes of all of us who have learned to admire and respect him as one of the very best and very finest of our great American military leaders.

Author of Captive Nations Week Resolution a Virginian

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BROYHILL. Mr. Speaker, there can be no doubt about the impact made by the Captive Nations Week resolution upon recent international developments. The explosion that this resolution caused in Moscow is sufficient evidence of this. The attack against the resolution in Mr. Khrushchev's article in the advance October issue of Foreign Affairs gives further evidence of the deep penetration it has made under the skin of Communist imperialism and tyranny.

I am proud to say that the author of this resolution, which rings with the principles and ideals of Thomas Jefferson and Abraham Lincoln, is a constituent in my district in Virginia. He is Dr. Lev E. Dobriansky, a professor in Soviet economics at Georgetown University. Dr. Dobriansky is also member of the Republican Committee on Program and Progress, the widely known committee of "44" which has been at work on long-run principles and programs for the Republican Party. As vice chairman of its task force on national security and peace, Dr. Dobriansky has made several contributions to a forthcoming report in this field.

In his academic right, the professor is internationally known for his recent work on "Veblenism: A New Critique." He writes and lectures extensively on the subjects of communism, the Soviet Union, and the non-Russian nations within the U.S.S.R. In 1957–58 he was a member of the faculty at our National War College.

Relevant to his authorship of the Captive Nations resolution, I include in the RECORD the Chicago Daily Tribune interview of July 25, 1959, the August 6 article by David Lawrence on "U.S. People and Khrushchev," which appeared in the Evening Star, and Dr. Dobriansky's letter to the editor on "Irritating the Bear," that appeared in the July 29 issue of the Washington Post:

[From the Chicago Daily Tribune, July 25, 1959]

CREDIT PROF WITH CAPTIVE NATIONS IDEA—LAYS KHRUSHCHEV PEEVE TO INCLUSION OF U.S.S.R.

WASHINGTON, July 24.—A professor of Russian economics at Georgetown University here was disclosed Friday as the man who conceived the Captive Nations Week idea that aroused the ire of Russian Nikita Khrushchev.

He is Dr. Lev E. Dobriansky, 41, who was born in New York City of parents of Ukrainian descent. Dobriansky first started work on the project more than a year ago.

The office of Senator PAUL DOUGLAS, Democrat, Illinois, who guided the resolution in connection with the observance through Congress, confirmed the educator's role.

NAMES NATIONS IN U.S.S.R.

Dobriansky told the Chicago Tribune that the impact of the congressional resolution on Khrushchev apparently lies in the fact that it includes not only the names of recognized satellites of Russia, but also of countries that now are a part of the Union of Soviet Socialist Republics.

"The resolution," said Dobriansky, "marks the first time that the United States has recognized by public law that captive nations exist within the U.S.S.R."

A check of the resolution bears Dobriansky out. Mingled in with Poland, Hungary, and other satellite nations are the following Soviet Republics:

White Ruthenia, Armenia, Azerbaijan, Georgia, Idel-Ural, Cossackia, Ukraine, Turkestan, Latvia, Estonia, and Lithuania. What is Turkestan now once was the Republics of Uzbekistan, Turkmenstan, Taikikistan, Kazakistan, and Kirzikstan.

If Russia had not taken the above countries by force, claimed Dobriansky, it would be a third-rate power now. He said the fact that the resolution contains names of Soviet Republics has received a big play in American foreign language papers read here by the Russian Embassy.

STIRRED BY NAGY FATE

Dobriansky said he got the idea for a congressional resolution recognizing the plight of captive nations at the time of the execution in mid-June of 1958 of Imre Nagy, Premier of Hungary at the time of its unsuccessful revolt against the Kremlin.

He said his first attempt last year consisted of a resolution introduced in the House by Representative ALBERT CRETELLA, Republican, Connecticut, which called for Presidential proclamations on independence or constitution days of 19 captive nations. The resolution died in the House Judiciary Committee on a tie vote. This year he lumped recognition into one Captive Nations Week.

IKE'S WORDING DIFFERENT

Dobriansky pointed out that the congressional resolution refers to Russian communism and Communist Russia as the aggressor in the plight of the captive nations while President Eisenhower's proclamation of Captive Nations Week, based on the resolution, refers to Soviet-dominated countries.

He charged the State Department watered down the proclamation because it is unimaginative in failing to realize the power of non-Russian nationalism, hostility, and resistance in the Soviet Union.

[From the Washington (D.C.) Evening Star, Aug. 6, 1959]

U.S. PEOPLE AND KHRUSHCHEV—CITIZENS' DISSENT AGAINST VISIT BY DICTATOR HELD CONSTITUTIONAL RIGHT

(By David Lawrence)

Do the people of the United States really want Nikita Khrushchev to visit this country? President Eisenhower assumes that they do. The governments of Sweden and other Scandinavian countries recently issued a similar invitation, but the Soviet Premier, after accepting it, decided not to go there because it was evident the people didn't want him to come.

What happened in Sweden between the time the invitation was extended and the announcement that Khrushchev had given up the idea for the present? A letter from Dr. Bela Fabian, written from Geneva a few days ago, tells the story. He is chairman of the Federation of Hungarian Former Political Prisoners and was in Sweden at the time of the planning for the visit of the Soviet Premier. Dr. Fabian writes:

"Naturally, Major General Zacharov, deputy chief of the Soviet security police, knew that the august committees were preparing mass meetings and demonstrations. In Sweden 10 meetings were to be held simultaneously on August 13. The one thing he did not know was whether the Swedish people would demonstrate by ostentatiously staying at home, so that the streets would be empty and there would be no one there except the police, or that there would be enormous crowds who would turn their backs on Khrushchev."

Dr. Fabian writes that the august committees contained a large number of members, among them prominent intellectuals, several Nobel Prize winners, university professors and writers. Many student organizations were represented.

Already there are varying points of view in this country as to what the reaction of the American people will be in the cities to be visited by Khrushchev. Certainly any disorderly demonstrations would only result in worldwide criticism on the theory that the Americans were not as courteous to the Soviet Premier as the people of the Soviet Union have been toward Vice President NIXON. But inside the United States—unlike the situation in the Soviet Union, where everything is controlled by the Government—the people have a right under the Constitution to speak. They have a right to picket peacefully, if they like, with placards expressing their ideas.

If the Scandinavian plan were put into effect in the United States by boycotting the parades or by viewing in silence the public events where Khrushchev makes his appearance, an ordely protest could be registered.

There may be some in this country who are willing to let bygones be bygones, but, among the hundreds of thousands of Americans who came here originally from the lands which now are held captive by the Communist dictatorship, there will be no suppression of emotions. Their point of view toward the Moscow autocracy which has ordered the murder or exile of so many innocent people in the last several years is deeply rooted. They cannot forget.

It is true that, after wars are over, friendly feelings toward former enemies often are developed. But the governments which ruled in Nazi Germany, in militaristic Japan, and Fascist Italy have been removed and free governments established. No such change has occurred in Moscow, where the same kind of regime is in power today as the one that broke the pledges given at Yalta in 1945 and at Geneva in 1955.

"Khrushchev's criminal record exceeds all," wrote Dr. L. E. Dobriansky, professor of economics at Georgetown University, in a letter to President Eisenhower dated July 31. The Georgetown professor was the originator of the resolution adopted by Congress to proclaim Captive Nations Week. Expressing the hope that Khrushchev would not be invited to America, Professor Dobriansky added:

"It is patently naive to believe that a visit by the 'hangman of the Ukraine' would add anything to what he already knows about our country. * * * Moral principle alone should dissuade us from conferring respectability and legitimacy to a dedicated enemy, the attributes he desires in order to extend his empire."

There is talk now of arranging a parade of hearses in each American city where Khrushchev appears. On each hearse would be placarded the statistics of the number of persons murdered or exiled from each of the 14 captive countries in recent years. This is one type of orderly demonstration.

Another which is being suggested is that memorial services be held throughout the Nation to carry out the spirit of the resolution in behalf of the captive nations adopted overwhelmingly last month by both Houses of Congress. Nationwide prayers for the liberation of the captive peoples, as well as memorial tributes to the many who have been enslaved or killed by the ruthless Communist dictators, would at least let the rest of the world know that, however polite the Government has to be to any visitor, the people here have the right of free speech. They can express their dissent from the position of their Government, which has invited to free America at this crucial time the man who has threatened war unless the Western forces surrender Berlin and who has never withdrawn that threat.

[From the Washington (D.C.) Post, July 29, 1959]

IRRITATING THE BEAR

Since the idea of a Captive Nations Week originated with me, I should like to reply to the specious and inaccurate arguments you raise against it in your editorial of July 24, "Irritating the Bear."

On the basis of my own lecture experiences, and those of many others, before diverse American groups throughout the country I have no doubt whatsoever that this idea is in complete harmony with the thinking of the vast majority of our people. When the facts of the mortal cold war threat that confronts the security of this Nation are explained to them, they readily preceive the insidious nature of the enemy.

They are not taken in by the wiles of Moscow as, unfortunately, you appear to be. On this observance the Congress and the President are to be commended for reflecting the commonsense an freedom instinct of the American people.

Contrary to your simplistic comment on sympathy for the captive millions, this national observance goes far beyond emotional sympathetic expressions. Mere sympathy is the last thing the captive peoples need. Basically for our own security as well as their freedom aspirations, what the captive nations need most is the denial of what Khrushchev wants most. And these are respectability and legitimacy based on the security of a consolidated empire.

Your editorial reveals a total lack of comprehension regarding the prior and vital importance of all the captive nations, including those in the Soviet Union, for our own security. It indicates, too, an unawareness of what conditions of "neither peace nor war" mean.

Your suggestion that exile emigree groups sponsored this idea is without any factual foundation. One, the Assembly of Captive Nations, which is really a one-third assembly that speaks in behalf of a minority of captive nations, participated in the observance itself. Surely you would not deny them the right to join with us in this important event.

Further statements in the editorial are as groundless as your alleged points of information. In view of your obvious inability to grasp the concept of total cold war, it is not surprising that you deem the liberation policy "misleading and empty." Being a policy for conditions of "neither peace nor war," its meaning and content would naturally escape you. Furthermore, and factually, it is still the official policy of this administration.

To offer, as you do, Moscow's well-controlled "liberalization" as a substitute basis for our foreign policy efforts is, indeed, the height of intellectual folly. When the Marquis de Custine wrote over a century ago that "foreigners who have described Russia have united with the Russians to deceive the world," he was certainly writing for our

time, too. In less conspicuous but more effective ways terrorism prevails under Nikia the Sanguine as much as it did under Stalin in the late 1920's and early 1930's when another generation of misled Americans was cleverly duped.

All this and more demonstrates how a dearth of knowledge about cold war operations, as developed by Russian autocrats for centuries, can produce a deep and perilous naivete. It is neither "plain" nor a "fact" that, short of a hot war, we are powerless to advance the cause of freedom in Moscow's present empire. The more one examines the evidence on the Hungarian revolution, the more one is convinced that we missed a glorious opportunity. We muffed it because in our ignorance of what cold war operations necessitate, we were not prepared for such an opportunity.

Experience and lessons of history should have taught us by now that appeasement and deals on a basis of equality conduce to the very thing we want to avoid, i.e., a hot global war. You evidently have not profited by these criteria. Khrushchev, a political criminal no matter how you paint him, operates from weakness, not strength.

His outbursts against the congressional resolution can only be explained by the fact that the resolution points to his greatest weakness, namely the captive non-Russian nations in the U.S.S.R. Without these nations, Russia would be a second or third rate power. The spread of such understanding exposes the fiction of equating the United States and the U.S.S.R. as two nations in supposedly peaceful competition.

In Moscow, Mr. NIXON should know better than to perpetuate this fiction. For, in truth, the cold war struggle is between our Nation and Nikita's substrate empire. It is the effect that this will have on his propaganda ruse that disturbs him most. No amount of sputniks, ICBM's, luniks, or grandiose economic plans can conceal this deep weakness in Moscow's position.

When you raise the scare of provocation and a hot war in this matter, you are concealing either your own lack of knowledge or a fear to face basic truths. Neither is of service to our freedom and survival. Don't worry, this action of Congress will not lead to a hot war. In fact, it works against it-and also in our decided favor in the cold war. Believe me, we are not trying to irritate the Bear whose appetite you wish to appease. Commonsense urges us properly to cage him so that you will not fall prey to him.

DR. LEV E. DOBRIANSKY.

The Future of Agriculture

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. YOUNG of North Dakota. Mr. President, an old acquaintance and friend of mine, Mr. Robert Harriss, is among the businessmen who have a deep concern for the future of agriculture.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement that he has prepared for presentation to the Senate and House Agriculture Committees.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DESTROY AGRICULTURE AND DESTROY AMERICA

(Statement by Robert M. Harriss sent to the U.S. Senate Agriculture Committee and the House of Representatives Agriculture Committee)

Gentlemen, I am a native Texan, but now a resident of Florida. I have been interested in agriculture for the past 40 years and have farms and ranches in Texas, Florida, and old Mexico. I have also had experience in foreign exchange, currencies, and exporting and banking.

Agriculture being our greatest and basic industry upon which the existence of our Nation depends, I believe we agree that this problem should be given first consideration. It is all vital to our national security. I believe if we destroy agriculture we destroy America.

I also believe we will agree that paying our farmers not to produce for the past 25 years has proved uneconomic and destructive. It is against nature's or divine law. While we have been paying our farmers not to produce, Communist Russia and Communist China have been doing everything possible to increase their agricultural production. Our present surpluses are not a liability but could prove one of our greatest assets in combating communism, provided a constructive program is adopted for the disposal of same among the starving, hungry, and needy of the world.

I believe you will agree the American farmer, the man who is feeding and clothing the Nation is entitled to a fair or parity price on that portion of his major nonperishable commodities domestically consumed and leave him a freeman to compete in the world markets at world prices on any surpluses produced above his allotment for domestic consumption. Such a program would be rather simple in administering and would save the Government and taxpayers billions of dollars. If the farmer produced in excess of his domestic allotment he would have the option of either selling it in the world market at world prices or holding his surplus against his allotment for the following year. If the domestic consumption should prove less than anticipated then the excess production could be held by the Government for a reduction in the allotment for the following year. If the domestic consumption should prove more than the allotment, then the farmer or the Government could be permitted to sell the shortage out of their surplus.

Regarding the existing surpluses in major nonperishable commodities, the selling of them should not be left to the discretion of any one man. A portion of them should be stockpiled for national emergency and the selling of the remainder should be definitely fixed equally over a 5-or 10-year period but only for disposal in the world markets.

To facilitate the disposal of existing surpluses three things should be done without delay:

1. Government credit insurance to American exporters on liberal terms guaranteed by reputable foreign buyers.

2. Long-term loans with acceptance of foreign currency of friendly free nations as collateral.

3. Outright gifts to the people of certain nations who are in dire need of food and clothing and under the control of our Government.

Regarding the perishable crops: It would be impracticable to have a domestic allotment on these. However, I think you will agree that our farmers are entitled to the domestic market on these crops and should be fairly protected against the importation of perishable crops from foreign countries that they can produce with their cheap labor and low taxes at much less than our American farmers with high labor and standard of living and taxes. Many of our American manufacturers are now beginning to find that they cannot compete with foreign nations for this same reason. In a recent article Mr. Leslie Gould, one of the outstanding financial authorities in the country, stated, "Today, foreign steel producers can and are underselling American companies in the domestic market and in neighboring Canada. The same for many other goods."

There may be opposition from certain foreign sources regarding adoption of the domestic allotment plan and the orderly disposal of existing surplus commodities. However, why should we permit foreign sources to dictate our economic and agricultural program. Why should the domestic market not be protected for our own farmers at fair or parity prices and why should they not be left free men to compete in the world market at world prices on any surpluses.

In connection with the foregoing it would be well for us to take into consideration the following farm and agricultural statistics:

According to Government figures the national income has increased 100 percent during the past 12 years and at the same time agricultural income has declined 20 percent, and to make the situation worse the purchasing power of the paper dollar they receive has declined 33 percent. In other words, in terms of dollar purchasing power agriculture is receiving only about half of what they received 12 years ago. The farmers' situation is even worse. According to Government figures, the net farm income, compared to national income, was 104 percent more 12 years ago and, considering the decline in the purchasing power of the dollar, he is only receiving a net income of about one-third what he received 12 years ago. Is it any wonder that during these 12 years the farm population has declined more than 6,500,000 despite the increase in the national population from 144 million to 174 million? Has not the influx of farm population to the cities and factories had a direct influence on unemployment and relief?

I do not believe the domestic allotment program would be the fundamental solution of our economic troubles, but it would be helpful and constructive for agriculture and our conomy and save the Government and the taxpayers billions of dollars.

I believe the most helpful step that could be taken for a sound national recovery would be a free gold market. Since the value of gold was arbitrarily fixed 25 years ago, the general price level and labor costs have risen about 300 percent, while the only recognized medium of exchange—gold, has been arbitrarily pegged at $35 per ounce. How can we have a sound recovery in our country or world recovery until we have a free medium of exchange on which exports and imports and world trade is based—gold. This would naturally result in a higher price for gold in terms of the unredeemable paper dollar, which would be essentially helpful not only to agriculture, industry, business, and labor, but a sound national and world recovery. This because such a free gold market would permit foreign nations to buy more of our agricultural and manufactured products for less gold. During the past 24 months we have been losing gold at an alarming rate; about $3 billion of gold has been lost during this period. In Associated Press, June 24, 1959, article by Mr. Sam Dawson, he stated "Uncle Sam's stock of gold is dropping below $20 billion for the first time since 1940, when it was nearly $25 billion. At the same time total payments by the United States to other nations continue to exceed receipts from them. Latests figures show exports slipping while imports hold high." New York Times article on financial page, June 25, 1959, also

stated U.S. gold stock was below $20 billion for the first time since 1940. About one-half the gold in the United States is earmarked or belongs to foreigners or foreign governments. Why wait for the inevitable to happan and, in the meantime permit confusion and inflation and economic conditions to grow worse? Until we establish a free gold market and find out what the paper dollar is worth in terms of gold, economists whose opinion I value and agree with, believe the inflation and debasement of the paper dollar will continue.

Some argue that because England, Canada, Australia, South Africa, Russia, and other countries urge higher price gold we should not cooperate in same. They also argue it would be helpful to Communist Russia. May it not be the case that because Communist Russia advocated higher price gold they do not want it because they know their advocacy would be a handicap in bringing it about? Also higher price gold is not important to Communist Russia as the free world, because Communist Russia produces gold with slave labor. The record shows the present price of gold is destroying the gold mining industry in the United States and adversely affecting allied mining. Eighteen years ago we produced 270 percent more gold than now. In any event we own a large part of the gold. Therefore, higher price gold would be helpful to our exports of agriculture, manufactured goods and our economy; also a free gold market is essential to free trade. In the long run this would be most detrimental to Communist Russia.

Not long ago Dr. Ludwig Erhard, Economic Minister om West Germany, who is credited with engineering Germany's prosperity to its present world position, when asked if he saw any end to the gradual decline in the purchasing power of money, replied: "There is no way of knowing whether the dangerous trend toward inflation will come to an end, so long as there is no real progress toward making currencies freely convertible into gold." Recently I attended an all-day seminar on the gold, dollar, and inflation question given by Dr. Franz Pick, who is considered one of the outstanding world authorities on gold and the money question. Dr. Pick was of the opinion that inflation, debasement of the dollar and confusion would continue and grow worse until we had higher price gold. With your permission I would like to leave a few articles that have a direct bearing on Dr. Erhard's and Dr. Pick's statements, if you desire them for the record.

As some of us may remember, in March 1933, when our country was in the depths of the worst depression in history, we were forced to place an embargo against the exportation of our gold. This was promptly followed by unbelievable economic recovery in agriculture, industry, business, and employment.

Economists, whose opinions I value, do not advocate the arbitrary raising and pegging the price of gold at a fixed price. We advocate a constructive monetary policy on gold, medium of exchange for 6,000 years; first, an embargo on the exportation of our gold followed by a free gold market, to determine what the value of the unredeemable paper dollar is worth in terms of gold. When this has been determined we can return to redeemable currency and with economy in Government and a balanced budget. We can go forward with a sound prosperity for agriculture, industry, and world trade and recovery.

Attached are some statistics, reports, and data, substantiating the foregoing, which I believe conclusively prove:

1. That inflation will continue as long as we are on a paper unredeemable dollar and end in disaster.
2. That in order to return to redeemable currency we must have higher priced gold.
3. We should stop the export of gold until it can be determined what the dollar is actually worth in terms of gold.
4. That higher priced gold would be of great benefit to agriculture, industry, and labor because it would make it possible for foreign countries to buy more of our surplus commodities and goods and make it more difficult to dump cheap foreign products on the American market.
5. On pages 9 and 10 of the gold report it shows the falsity of the Communist propaganda that higher priced gold would help Communist Russia and that the reverse is true—that higher priced gold would be of great benefit to the economy of our country, the free nations, and damaging to Communist Russia and other Communist countries.

Appropriations for Medical Research

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a letter that I have received from our distinguished colleague, the gentleman from Rhode Island [Mr. FOGARTY] conveying to me information what his subcommittee did in relation to appropriations for medical research. The gentleman from Rhode Island [Mr. FOGARTY] is entitled to the thanks of the American people for his great leadership in this great field of such vast importance to the American people and, in fact, to human beings throughout the world. As the result of appropriations made by the Congress, under the leadership of JOHN FOGARTY, great advances have been made in medical research, all beneficial to sick and suffering human beings.

This action alone is one of the great contributions of the 1st session of the 86th Congress. The information of the action of this Congress, in this important field, should be disseminated as broadly as possible.

AUGUST 19, 1959.

Hon. JOHN W. McCORMACK,
Majority Leader,
House of Representatives,
Washington, D.C.

DEAR JOHN: This is in reply to your recent note regarding appropriations that this session of Congress has made for certain public health programs.

Medical research undoubtedly attracts the attention and interest of the people to a greater extent than any other program in this field. The Federal Government's activity in medical research is largely centered in the National Institutes of Health. The following table will summarize, statistically, the appropriatiosn made for N.I.H. this year compared with the President's budget and last year's appropriation.

	Appropriation for fiscal year 1959	President's budget for fiscal year 1960	Appropriation for fiscal year 1960	Appropriation for 1960 compared with—	
				Appropriation for 1959	President's budget for 1960
General research	$28,974,000	$28,974,000	$45,994,000	+$17,020,000	+$17,020,000
Cancer	75,268,000	75,218,000	91,257,000	+15,989,000	+16,039,000
Mental health	52,419,000	52,384,000	68,090,000	+15,671,000	+15,706,000
Heart	45,613,000	45,594,000	62,237,000	+16,624,000	+16,643,000
Dental health	7,420,000	7,420,000	10,019,000	+2,599,000	+2,599,000
Arthritis and metabolic diseases	31,215,000	31,215,000	46,862,000	+15,647,000	+15,647,000
Allergy and infectious diseases	24,071,000	24,071,000	34,054,000	+9,983,000	+9,983,000
Neurology and blindness	29,403,000	29,403,000	41,487,000	+12,084,000	+12,084,000
Total	294,383,000	294,279,000	400,000,000	+105,617,000	+105,721,000

The budget for 1960 appeared on the surface to represent a leveling off of our medical research program but actually it would have been a definite and significant backward step. In the hearings, we developed the fact that increased costs in 1960 would amount to over $15 million which, under the budget, could have been met only by cutting back the level of medical research. It was further developed that the budget actually lacked more than $2 million of being adequate just to finance the

projects already approved in 1959 and would not allow for any new projects.

The President indicated, in his budget message, that he was doubtful concerning the adequacy of the amounts requested for the National Institutes of Health. The Secretary of Health, Education, and Welfare, in his testimony on the budget, indicated on 15 separate occasions that the budget for National Institutes of Health was not necessarily final. His testimony left no doubt that he hoped to secure approval of an upward adjustment. The National Institutes of Health had submitted to the Secretary a proposal for an amendment to the budget to increase the requests for the various institutes. The committee finally recessed hearings to give the executive branch time to study the proposed amendment and send a more nearly adequate budget to the Congress. However, no revision was ever submitted.

The increase of almost $106 million which Congress made in the budget for medical research was almost unanimously agreed to. But there are a few in Congress and elsewhere who criticize this increase on the ground that we should economize and that such increases in the budget are inflationary. Such specious reasoning hardly deserves rebuttal. It is difficult to conceive of anything more anti-inflationary than a successful medical research program. It is obvious that disability is doubly inflationary—it reduces tax revenue on the one hand, and it increases the expenses of government on the other. It is equally obvious that medical research, which reduces disability and lengthens productive life, is doubly anti-inflationary—it increases tax revenue on the one hand, and decreases the expenses of government on the other.

But we would be less than human if we looked only at the economic side of the picture. It is estimated that 16 million of our people suffer in some degree from mental disorders. Almost as many are partially or totally disabled by diseases of the heart and the circulatory system, including cerebral vascular diseases. There are 11 millions of our citizens suffering from arthritis and rheumatic diseases. Cancer afflicts 700,000 and annually kills 250,000 people in this country.

Finding the answers to these and other diseases means more to humanity than it would ever be possible to measure in dollars and cents. And our medical scientists are finding the answers. The tendency is to think of the many horrible afflictions for which we do not have the answer and overlook the really wonderful progress that has been made. For example, 1 cancer patient out of 3 can now be saved as compared to 1 out of 4 in 1938. Because of new medical and surgical treatment developed during the last few years, approximately 80 percent of all people with epilepsy are capable of regular, productive employment. Research has led to methods that can reduce tooth decay by 50 percent. The major cause of blindness among infants has been eliminated. With new drugs and methods of treatment and diagnosis, it is possible to prevent crippling in 70 percent of the patients suffering from rheumatic disease. The hearings before the Committee on Appropriations contain literally hundreds of pages describing these and many, many other advances that have been made possible, to a considerable degree, by the Federal support of this program.

The Congress can certainly take a great deal of pride in the results of its work on these appropriations. We have provided for real progress in a field which is perhaps more important than any other to the health and welfare of not only our people, but people throughout the world.

There are other, closely related, Federal programs for which grossly inadequate provision was made in the budget. The work that this Congress did and the final action it took on these programs is obviously going to result in better medical services and better health for the people of this country.

In 1956 the 84th Congress passed the Health Research Facilities Act which authorized the appropriation of $30 million per year for grants, on a matching basis, for the construction of health research facilities. Experience has shown that even this amount falls far short of actually meeting the need. Unfinanced applications and formal notices of intention to file applications total about $80 million. But the President's budget sought to cut back the rate of progress we have been making by recommending an appropriation of only $20 million. This was corrected by Congress. The full $30 million was actualy made available for this essential program.

There is no Federal program in this area that has met with more enthusiastic support throughout the Nation than the Hill-Burton hospital construction program. This is another matching grant program with the Federal funds being matched by over 2 to 1. Previous Congresses have authorized a total annual appropriation of $211,200,000. That this is a conservative amount compared with the need is clearly shown by two facts—(1) the States and localities are in a position to match $879,960,000 during the next 2 fiscal years if there were no limitation on Federal appropriations; and (2) there is a shortage of 867,000 hospital bed capacity in the hospitals we have in this country today. Yet, in the face of these facts, the budget requested only $101,200,000, only half of the authorization and, according to the Secretary of the Department of Health, Education, and Welfare, the amount recommended would not provide for any reduction at all in the backlog of need since it would only provide for the normal increase in the population and for replacement of hospitals destroyed by fire, and so forth.

Here again, the Congress corrected the obvious inadequacy of the budget and appropriated $186,200,000. There can be no doubt that the people will benefit from this action.

Because the pollution of our streams had become a national disgrace, Congress, in 1956, passed Public Law 660 which authorized the appropriation of $50 million annually to be granted, on a matching basis, for the construction of sewage treatment plants. That even this sum is inadequate is attested by the enormous backlog of applications that cannot be financed even though Congress has provided the full amount authorized each year since the law was passed. The House, of course, has recognized this by passing a bill this year to double the authorization. In the face of the great need and the great, ever-increasing popularity of this program, the budget recommended an appropriation of $20 million, a cutback of over half. Again Congress responded to the proven need and the obvious will of the Nation, and corrected the gross inadequacy of the budget. The final action of Congress provided the maximum authorization of $50 million.

I hope that the above will be helpful to you. If there is anything additional that I can do I would appreciate your letting me know.

Sincerely,

JOHN E. FOGARTY.

If Integration Needs Force

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent news column by Mr. George Todt which appeared in the September 11, 1959, issue of the Valley Times of North Hollywood, Calif. The column is entitled "If Integration Needs Force."

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the North Hollywood (Calif.), Valley Times, Sept. 11, 1959]

IF INTEGRATION NEEDS FORCE

(By George Todt)

Will Congress finish its business this weekend?

Admittedly—this is a goal aimed at getting out of Washingtn before Nikky arrives for fear the Red boss might be asked to address our legislators on Capitol Hill—much will depend upon the way the red hot issue of legislation on civil rights goes.

The fight over integration of schools and the controversial Civil Rights Commission is extremely touchy with neither side in a mood to accept dictation from the other.

The result could be a filibuster although, admittedly, the chances are that there will not be one. But you never can tell about issues as explosive beneath the surface as this one.

Over the last 5 years we have had more racial friction in our country than in all of our past history put together.

This is a sad commentary on our times and none are happier about it than are the leaders of international communism. They have been plumping for racial agitation in the United States for decades.

Well, now they've got it. Tovarisch, comrades.

Personally, I favor voluntary integration where it stems from mutual consent and from the heart. But not the kind which has to be forced upon those who don't want it. The latter is not the American way based upon freedom of choice through moral conscience.

How do the Negroes in the South feel about this matter?

This is a good question and an Associated Press story I noted recently from the Charleston (S.C.) News and Courier, datelined September 2, may give us a most revealing insight into this thought-provoking matter.

Here's the story, written in Birmingham, Ala., with the AP's headline: "Negroes Don't Want Forced Integration."

"A Negro group wired President Eisenhower Tuesday that most southern Negroes don't want forced integration. And the group asked for a Government-sponsored poll of southern Negroes to prove the point.

"The statement and the request were included in a 350-word telegram sent to Eisenhower by the Southern Negro Improvement Association of Alabama.

"Samuel H. Moore, of Birmingham, president of the group, said it had more than 5,000 members in Alabama.

"Moore told the President: 'I assure you that both races in the South are unalterably opposed to the integration of races in public schools. Racial hate and racial prejudice that was dead is now reconstructed. Threat of forceful integration has created fear and hate in many of our former white friends.'

"Moore said he put these question to the President: 'Since this is free America, why not put your racial policy upon voluntary action of the citizens, not forceful compulsion? Why not have the Government take a poll of the southern Negroes?'

"Moore said that such a poll should be confined to southern Negroes because 'our northern Negro brothers do not live in the South and therefore do not understand our southern bicultural socitey.'

"He urged the President 'not to use force to integrate the schools and deny our race a major symbol of our progress—all-Negro schools.'

"Moore said, 'for lasting and enduring advancement of our race our progress must be achieved with good will from the white people among which we must live.'"

It ought to appear strange indeed to unbiased observers that the greatest demand for forced integration is emanating out of New York City—an area which has produced such dismal results from its program of forced integration dictated by political pressures.

Consider the words of the eminent New York syndicated columnist, Raymond Moley, who recently wrote:

"A count of 22,000 felonies by youths between 16 and 20, and the more shocking total of 14,700 felonies by children under 16 is the disgraceful harvest of politics and sentimentality in New York. Politics, to grab manageable votes, opened the doors. It is not necessary for the city to declare a curfew. Armed juvenile gangsters have already taken care of that. The people are already afraid to go out at night."

Few apt students of the incredibly bad New York situation have failed to perceive that forced integration is very much a factor in this deplorable instance.

Can the southern people—both Negro and white—be blamed for working against the New York model which has produced such an awful record of juvenile delinquency?

When will it be understood outside the South that the southern Negro has his pride as much as the white man—and doesn't care to be yoked unequally in an enforced mismatch by judicial decree?

Why do we permit racial agitators to sow hate where it didn't exist before?

Shall we ask Ivan?

The Real Democrat Spending Record

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. RHODES of Arizona. Mr. Speaker, it is a matter of common knowledge that the Republican administration since 1953 has been far more concerned with controlling spending and inflation than the preceding Democrat administrations. The record of the two parties in Congress is equally evident, and recent efforts to create confusion by publishing misleading tables on the last page of the CONGRESSIONAL RECORD should fool no one.

Clear evidence of the Democrat spending record and the real record of Republican responsibility is unmistakable when we use "constant dollar" figures for comparison instead of fluctuating, inflated dollars. To do this we select some particular year as an anchor, and express expenditures for all other years in terms of that year's dollars. For example, let us use 1954 dollars and see how much the budget has actually gone up or down each year.

Table No. 1 which I am inserting in the RECORD shows that from 1933 to 1953 Federal spending in constant dollars rose 524 percent.

Let us subdivide this 20-year period of the New Deal-Fair Deal and look more closely at the runaway spending trend.

In the first 6 years to 1939, spending rose 57 percent. In the next 10 years to 1949, it rose 137 percent. In the final 4 years to 1953, it rose another 68 percent.

But, a dramatic reversal occurred under the Republican administration. By fiscal year 1959, Federal spending in these real terms, had been cut a sharp 10 percent.

Another basis of comparison would take into consideartion the annual increase in population. In other words we should look at the number of citizens for whom the Federal Government must provide services, and who are available to share the burden of the expenses involved. Table No. 2, which I am inserting in the RECORD, shows that under Democrat administrations the Federal budget outlays per capita rose nearly 400 percent. Under the present Republican administration nearly one-fifth of that rise has been cut back. This is a remarkable and immediate reversal of the preceding trend.

Now, what is the outlook for fiscal year 1960? The President's budget proposes expenditures of $77,030 million. If this Congress has not exceeded that budget, Federal spending per capita this year will be cut by nearly one-fourth of what it was in 1953.

Mr. Speaker, the Republicans have a program of fiscal responsibility. If the spenders will not cooperate in keeping the Federal budget and the national economy on a sound basis, they should at least agree to the validity of the changing dollar value as an element to be considered when comparing spending records.

The validity of the comparison I am making here should be clearly evident when we remember that we are living on an inflationary plateau built by the Democrats. The administration now responsible for Federal budgets has no choice but to construct its program on that plateau. I am simply stating that the only way to make accurate and reliable comparisons of Democrat and Republican spending is by including the vast inflationary accumulations in the economy put there during and by Democrat administrations, with which this Republican administration must live.

TABLE 1

Time period	Change in total Federal budget expenditures in dollars of constant purchasing power	Change in per capita Federal budget expenditures in dollars of constant purchasing power
1933–39	Up 57 percent in 6 years	Up 50 percent.
1939–49	Up 137 percent in 10 years	Up 109 percent.
1949–53	Up 68 percent in 4 years	Up 58 percent.
1953–58	Down 19 percent in 5 years	Down 26 percent.
1953–59	Down 10 percent in 6 years	Down 19 percent.
[1] 1953–60	Down 14 percent in 7 years	Down 24 percent.

[1] Based on budget estimate.

TABLE 2

Fiscal year	Total Federal budget expenditures in millions of current dollars	Total Federal budget expenditures in millions of 1954 dollars	Federal budget expenditures per capita in 1954 dollars	Total population residing in the United States (thousands)
1929	$3,127	$7,027	$57.71	121,770
1930	3,320	7,943	64.54	123,077
1931	3,577	8,578	69.16	124,040
1932	4,659	12,196	97.69	124,840
1933	4,623	12,070	96.11	125,579
1934	6,694	15,495	122.61	126,374
1935	6,521	14,922	117.27	127,250
1936	8,493	18,109	141.42	128,053
1937	7,756	16,397	127.28	128,825
1938	6,792	14,733	113.48	129,825
1939	8,858	18,927	144.61	130,880
1940	9,062	19,281	146.12	131,954
1941	13,262	24,069	180.81	133,121
1942	34,046	55,450	414.05	133,920
1943	79,407	121,047	901.68	134,245
1944	95,059	147,836	1,112.51	132,885
1945	98,416	154,016	1,162.55	132,481
1946	60,448	82,805	591.24	140,054
1947	39,032	48,307	336.76	143,446
1948	33,069	39,181	268.10	146,093
1949	39,507	44,894	301.98	148,665
1950	39,617	44,215	292.36	151,234
1951	44,058	44,638	291.02	153,384
1952	65,408	65,935	423.31	155,761
1953	74,274	75,329	475.82	158,313
1954	67,772	67,772	420.45	161,191
1955	64,570	62,027	377.52	164,303
1956	66,540	61,158	365.80	167,191
1957	69,433	60,063	352.70	170,293
1958	71,936	61,014	352.15	173,260
1959	80,699	[1] 68,109	[2] 385.99	[2] 176,428
1960	[3] 77,030	[1] 64,677	[3] 360.12	[2] 179,600

[1] Projected on assumed price rise of 0.5 percent per year.
[2] Projected.
[3] Estimated in fiscal year 1960 Budget document.

Explanation of tables: The second column, "Total Federal budget expenditures millions of 1954 dollars," is obtained by dividing the first column by the implicit deflator or Federal purchases of goods and services for the corresponding calendar year. The expenditures and the deflators are obtainable from the economic report except for the latest years. There, the expenditures can be obtained from the budget document, but the deflators have to be projected.

The final column is the population residing in the United States. It is obtainable from the statistical abstract of the United States, except for the most recent years, which can be obtained from the census. The last 2 years have to be projected.

The third column is the second divided by the fourth.

The smaller table of percentages is computed from the larger table.

Premier Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the Hudson Dispatch of Union City, N.J., from one of my constituents, Mr. Samuel W. Silverman. Mr. Silverman, a resident of Point Pleasant Beach, expresses his hope that Americans who come in contact with visiting Premier Khrushchev will show respect for the Premier's official position.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RESPECT KHRUSHY

POINT PLEASANT, *August 17, 1959.*

EDITOR, HUDSON DISPATCH:

I take great delight in endorsing editorial, "Let's Keep Our Guard Up All the Time," and your cartoon as well in August 12 issue, and reading the various opinions of the man in the street as to Khrushy visit to this country. Must admit that each one has the right to his opinion. I was against the visit of Khrushy to this country but must bow to the wishes of the majority and respect our President that it may do some good. Anything to bring about world peace is in order.

I agree with Ike—as long as he is coming, show him everything. Let him and the Russians know our strentgh. It can't do any harm. Can't agree with Governor Meyner to have him come to New Jersey—we don't want him here. I fear his visit may cause a great risk as some of our anti-Communist fanatics may not be controlled too well, because many of their relatives died across the sea on Khrushy's account and they may desire to seek revenge.

The majority of us have nothing but complete distaste for this living devil in sheep's clothing who represents nothing but evil; my advice to the American people is to pay very little attention to his visit; treat him with courtesy when you do come in contact with him, at least respect his position in the same way we do all other foreign statesmen. It is the duty of our national and state officials, as well as the officials of all municipalities that he may travel through to treat him with kindness and see that he is well protected from harm, at least while he is in our country.

His visit at least will awaken Russian people that our desire is for justice and peace, not only for ourselves but for the entire world. No public official, elected or appointed, has the right to snub Khrushy on this trip—they do have the right not to extend an open invitation, but if Khrushy desires to visit their municipality the official shall not make any statement indicating their contempt; the public does not have to come in droves to welcome him, but in any event those that do come out to greet him should show respect for his official position.

SAMUEL W. SILVERMAN,
National Director, Department of Americanism, Regular Veterans' Association of the United States.

Letter to Mr. Clyde Ellis, General Manager of the National Rural Electrification Cooperative Association

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of a letter I have today directed to the Honorable Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association. The letter, is self-explanatory and deserves the attention of every Member of Congress.

SEPTEMBER 12, 1959.

MR. CLYDE ELLIS,
General Manager, National Rural Electrification Cooperative Association.

DEAR MR. ELLIS: This letter is being written to you in the spirit of fair play and mutual understanding which should be manifest between your organization and the Members of Congress on strictly a nonpartisan basis if the best interest of REA, RTA, and the country as a whole are to be served.

As you well know, the rural electrification program and the expanding program as assistance in the improvement of rural telephone communications have always been the accomplishment of bipartisan support in both Houses of Congress. Democrats and Republicans have joined in advancing these programs and in voting adequate funds for their development. Under Administrators selected both by Democratic and Republican Chief Executives, the programs have prospered and expanded. The statistics clearly demonstrate that the present REA Administrator, David Hamil, for example, has given efficient and sympathetic direction to the REA and RTA programs.

Under Mr. Hamil's administration, processing of loans has been expedited; collections from borrowers have an enviable record; adequate loan funds have been kept available. In the main, relationships between REA and RTA and Members of Congress have historically been friendly and productive regardless of partisanship. It is my conviction—and I hope yours—that they should be kept that way.

I give you this brief review, Mr. Ellis, of facts with which you are, of course, familiar simply to demonstrate the importance of keeping REA and RTA out of politics and free from the sharp repercussions of partisan campaigning which should have no place in worthy programs of this type.

I mention the foregoing because of rumors reaching me that the organization which you head and which draws its support from user-sponsored cooperatives is about to "enter the field of active partisan politics." I am sure this would be a most regrettable development.

On occasion reports have reached me of speeches you have yourself given before REA and RTA groups and annual meetings or of your public writings which carry a slanted political tinge. That, in itself, is most regrettable. I have also heard that some of your associates in the field have similarly shown an increasing tendency to move in the direction of injecting political discussions and considerations into their activities. Complaints of this type continue to reach my office, both from Congressmen who feel aggrieved over an attempt to use REA and RTA for political ax grinding and from REA subscribers who resent it.

Recently, it has been reported you propose to "loan" some of your employees to Democrat candidates for Congress to serve as campaign counselors or managers with the understanding they will be reemployed by you after the elections are over. I am not clear on whose payroll they would serve but assuming they would be taken off your salary lists while so serving such a temporary severance of connection with your office would not divorce them from the serious implications involved. Such a practice would be tantamount, of course, to putting your organization directly into political activity and do serious injury to the productive and effective cooperative support of REA and RTA which has meant so much to this movement in the past and is so necessary to its future development.

As chairman of the Republican Congressional Campaign Committee, my responsibility is of course to support Republican candidates for office. All I ask for those I support is the consistent practice of fair play and the proper public identification of all political functionaries involved. Naturally, I do not want your organization or any other nonpolitical group supporting the Democratic candidates as a matter of partisan philosophy or to promote the personal political fortunes of anyone so long as it enjoys the reputation, tax advantages, and safeguards of being a nonprofit and nonpolitical organization. That is simply asking for fair play. To engage in the type of practices mentioned in this communication would, I am sure you must agree, necessitate your forfeiting the position of being a nonpolitical and nonpartisan service organization.

It is for this reason I am writing you this frank and earnest letter. I sincerely hope my reports are inaccurate but they seem sufficiently well founded to warrant this letter which I shall insert in the CONGRESSIONAL RECORD and to which I hope you can give me a categorical reply which I shall also be happy to incorporate in the RECORD. I hope your reply will contain complete assurances that I have been falsely informed and that you are not going to besmirch the concept of your organization by making it and its employees and associates the handmaiden or tool of either political party.

Sincerely yours.

Dare Accepted

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MANSFIELD. Mr. President, this morning's Washington Post and Times Herald contains an excellent letter in response to a recent editorial pertaining to pork barrel politics and the public works appropriation bill. The letter refutes this reference to pork barrel leg-

islation and is another fine addition to the volumes of testimony and facts which support the continued development and conservation of the Nation's natural resources.

The letter is signed by our very distinguished and able chairman of the Senate Interior and Insular Affairs Committee, the senior Senator from Montana [Mr. MURRAY]. I was very pleased to see that Senator MURRAY has again spoken out so forcefully in support of our public works programs. Senator MURRAY has no equal in the Senate when it comes to the development of nature's resources in our State and the entire country.

I ask unanimous consent to have this editorial, appearing in the September 14 issue of the Washington Post and Times Herald, appear at the conclusion of my remarks in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Sept. 14, 1959]

DARE ACCEPTED

Your September 10 editorial, "Dare Accepted," imputes "pork-barrel politics" in the Congress on water resource programs as the cause of the double veto of the public works appropriation bill.

I dissent entirely from that interpretation of Congress action on programs for development and conservation of the Nation's water resources. As I stated to the Senate on September 4, "to brand the public works appropriation as overspending in respect to water resources (to quote the veto message) is both false and dangerous. It is dangerous because it threatens to trap us into continuing underdevelopment of our resources, continuing lost production, and lost opportunities to conserve and develop our resources."

The "no new starts" program that has prevailed for 7 years is not an economy program. It is a program that wastes human and natural resources. It does not husband public funds; instead, it minimizes public revenues. This restrictive program hoards money while it dissipates resources.

The paramount issue is that the Nation must maintain the basis of its strength and well-being. National growth requires extension of water resource programs just as it requires expansion of industrial production capacity. This policy is the basis for congressional insistence on "new starts," and on this basis, the Congress overrode the Presidential veto of the public works appropriation bill.

Your editorial argues that the double veto fiasco points to desirability of the item veto procedure. From this conclusion also I wholly dissent, but I do agree that there is need for major change in the approach to resource development programs. On August 17, for myself and 30 other Senators, I introduced legislation (S. 2549) to provide the needed new approach.

All resource programs lag far behind the need for them—in some cases, critically far behind. Properly developed and wisely conserved, our forests, rangelands, minerals, fuels, and the waters of our rivers and lakes can be adequate for a growing population and an expanded economy.

The present problem and the impending crisis are due not to scarcity but to neglect, underdevelopment, and despoliation. For too many years the administration has been looking the other way, and it has made the country live by the rule of "no new starts" no matter how urgently they are needed.

The measure that I have introduced (S. 2549) is comparable in form and structure with the Employment Act of 1946. It seeks for natural resources answers to problems comparable with the employment and economic problems dealt with in the 1946 act. Our experience with that act demonstrates that it provides a workable method. The combination of the Council of Advisers in the White House and the Joint Committee in the Congress provides continuing informed attention to the needs and capabilities of the Nation in the field of natural resources.

It is my intention to proceed this fall with hearings on the proposed Resources and Conservation Act with a view to readying it for enactment during the second session of Congress.

Under the Constitution, Congress has the responsibility to establish the programs for natural resources. The proposed Resources and Conservation Act will make possible exercise of this responsibility on a sound basis, and in a courageous spirit in keeping with the American tradition. This is required to maintain the United States strong at home and abroad—for our own citizens and for the free people everywhere who look to us for support of freedom.

JAMES E. MURRAY,
Chairman, Senate Committee on Interior and Insular Affairs.
WASHINGTON.

A Source of Water for the Lakes

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune:

[From the Chicago Daily Tribune, Sept. 14, 1959]

A SOURCE OF WATER FOR THE LAKES

H. T. Blockley, a Canadian foreign service officer who helped draft the 1950 Niagara Treaty between the United States and Canada, has come forward with an answer to Canadian protests against Chicago's plans for more lake diversion. He said the opposition of his Government to the diversion bill now before Congress is based on emotionalism, not facts.

Mr. Blockley's suggestion is that water from the Albany River, which flows through wilderness into James Bay, could easily be turned backward into Lake Superior, as Canada already is doing with the Ogoki River. This method of conserving water is well known in the Canadian external affairs department and in the Ontario provincial government, he said. Mr. Blockley felt free to advocate the plan only because he has resigned his government job and is moving to California.

His proposal is one of the matters that should be taken up if our State Department ever gets around to negotiating the diversion issue with Canada, as Senator FULBRIGHT, chairman of the Foreign Relations Committee, has urged. The committee has before it a bill, passed by the House, to permit a slight increase in diversion at Chicago for a one year test.

There is nothing new about the suggestion to use Albany river water to compensate for taking water out of the Great Lakes. As long ago as 1926 Horace Ramey, retired chief engineer of the Chicago sanitary district, wrote an article for an engineering magazine pointing out that it would be possible to get an average flow of 12,000 cubic feet a second out of rivers in the Hudson bay watershed.

In 1939 Canada began doing so without consulting the United States, and since 1954 about 5,000 cubic feet a second have been diverted into Lake Superior from Long lake and the Ogoki river for power purposes. A few years ago when lake levels were high there were many protests against this diversion by lake front property owners in both the United States and Canada, who suffered heavy damages from storms.

Mr. Ramey agrees with Mr. Blockley that it would be a simple matter to turn Albany River water into Lake Superior, if Canada really is worried about the effects of diversion at Chicago. The solution also is well known to the U.S. Army Engineers.

So far it has been impossible for Chicago officials and Illinois members of Congress to explain the problem to the dimwits in our State Department. Twice President Eisenhower has vetoed lake diversion bills on their advice.

Maybe they will listen to a Canadian specialist on the subject of boundary waters. Mr. Blockley should be asked to give a deposition for the State Department, for Senator FULBRIGHT, and for the U.S. Supreme Court.

The Vital First Years

EXTENSION OF REMARKS
OF
HON. WINSTON L. PROUTY
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. PROUTY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the attached comments of Mr. Raymond Moley which appeared in the September 14, 1959 issue of Newsweek magazine.

Mr. Moley is a trustee of Vermont College, a so-called junior college for young women at Montpelier, Vt. I believe that his comments and those of Dr. Ralph E. Noble, president of the college and formerly Vermont's commissioner of education, on the benefits to be derived from a so-called junior college education are of general public benefit, and I commend them especially to the attention of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek, Sept. 14, 1959]

THE VITAL FIRST YEARS

(By Raymond Moley)

MONTPELIER, VT.—This month hundreds of thousands of young people are enrolling in college, many for the first time. Parents pause, pen and checkbook in hand, to consider what is ahead. My suggestion is that they realize that the first 2 years are likely to be decisive. Only a little over half the freshmen will graduate—61 percent of the boys, and 48 percent of the girls. Many will regret in later years the diversions and the courses with little relevance to their later life.

Last week in this space I listed some of the problems and shortcomings of the 4-year liberal-arts colleges, their students, and faculties. Largely because of these, there has

grown to maturity over the past 60 years the 2-year junior college designed to round out and conserve what may be the end of the beginning, or the beginning of the end, of formal education. A third of our institution of higher learning are junior colleges attended by a quarter of our students. More than half of them are public and tax-supported. The rest are private. This piece concerns the latter.

Some junior colleges were formerly 4-year institutions where, for a variety of reasons, the final 2 years were amputated. Public institutions predominate in the Middle West and West. But in New England several originated in sectarian seminaries when good public high schools were scarce. I have selected Vermont College, here in Montpelier, to illustrate what a good junior college does and can do.

A GOOD JUNIOR COLLEGE

This college today materializes the educational ideals of a wise, competent, conservative, experienced educator, Dr. Ralph E. Noble, who 10 years ago resigned as Vermont's Commissioner of Education to become its president. The foundations were laid in 1865 as "the Vermont Conference and Female Seminary" by members of the Methodist clergy. Later it became Montpelier Seminary for young men and women. In 1941 it became Vermont Junior College, and in 1953, Vermont College. Its student body consists of about 325 young women.

In these 10 years, with the aid of individuals and local financial institutions, a group of fine buildings have been built which combine simplicity, utility, and rare beauty and taste. The college stands on a hill at the edge of the State capital.

The curriculum is designed to meet the needs of three classes of students: Those who will transfer after graduation to a 4-year liberal arts college, those who neither want nor need more than 2 years, and those whose purpose is to combine some liberal arts courses with preparation for a specific vocation. For the latter, preliminary training is provided for teachers of nursery schools, for secretarial assistants for physicians and dentists, hospital laboratories, and public health offices. Graduates receive the degrees of associate in arts or associate in science.

YOUTH PLUS MATURITY

About 25 percent of the graduates transfer to some form of advanced education. Of these, most go on in liberal arts colleges, others continue their vocational training. Many 4-year colleges welcome such transfers to help fill the ranks thinned by failures and dropouts.

Students from the local region or even Vermont are in the minority. The larger number of students come from New York, New Jersey, Massachusetts, and Connecticut.

"The junior college," says Dr. Noble, "has been in existence long enough to have proven policies, but not yet so long as to be enslaved by tradition. It is old enough to bear mature responsibility, yet young enough to respond readily to the changing character of American life. Its ideal is the effective citizen, able to contribute constructively to the civic, economic, spiritual, and cultural life of the community."

This college is for women. But the general pattern applies with equal pertinence to young men. A 2-year college provides an alternative to the overextended, presently experimental, and expensive offerings of many 4-year institutions or a preparation for the final 2 years of same. With military service looming for most young men, 2 good years of college may be a solution to their serious problem.

Summary of 86th Congress

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit herewith a summary of the 86th Congress, 1st session, which I am sending to my constituents in the 10th District of California.

ON CAPITOL HILL WITH "CHARLIE" GUBSER, REPRESENTATIVE IN CONGRESS 10TH DISTRICT, CALIFORNIA

SEPTEMBER 13, 1959.

DEAR FRIENDS: This letter is an effort to render a concise report on a session of your Congress as it approaches adjournment. I hope it is useful.

Getting water for the 10th District continues to be my most important activity. On the reverse side you will find a complete progress report.

Local projects for flood control, harbors, armory and hospital construction are ahead of legislative timetable. Progress is very satisfactory.

The national interest was not so well served. Handling of your tax money this session was not entirely in your best interest. With others I consistently voted for economy but we were outnumbered.

Did Congress cut budget? Technically yes, but practically no. Ten percent of alleged billion-dollar cut was only postponement of present obligation which must be paid next year. Cuts were in items stretching beyond this year while increases were for current items. This will increase debt and inflation.

Backdoor spending is a way Congress spends without having it appear in the budget. A new program may not cost much this year but it commits us to tremendous future costs. Often the Treasury is required to pay for these programs directly. This is backdoor spending. Congress has already "built in" $2¼ billion in budget increases for next year.

Nothing is free from Uncle Sam. He can only give what he takes from you in taxes less the handling charge. If America would just accept this fact we could handle problems locally at less cost and prevent more debt and inflation.

Landrum-Griffin bill was a victory for the American people. This bill protects the right to strike and picket in primary labor disputes; also protects innocent parties. It guarantees union members more rights; protects them from men like James Hoffa. Despite contrary propaganda it will not hurt legitimate unions and is in the people's best interest.

Cold war seems thawed but don't be fooled. We must remain strong to maintain peace. As Armed Services Committee member I believe we are strong; getting stronger.

Other laws enacted: Highway program continued with new gas tax caused by deficit financing last year. Some bond interest rates raised to boost lagging sales. Not raising others will put small business in competition with Government for short term credit making special session possible. VA pensions raised. Housing bill finally passed with some new public housing, reasonable funds for urban renewal and college housing. Hawaiian statehood. Draft law extended.

Things Congress didn't do: Civil rights and aid to education postponed to next year. Also restriction of passports to Communists and mailing of obscene literature. Farm problem still unsolved. Unfortunately price supports will continue.

Space limitations have forced me to generalize. For details please write me. Also please send your address if you'd like to receive On Capitol Hill regularly.

Before closing let me say "thanks" for the privilege of representing you.

Sincerely yours,

CHARLES S. GUBSER.

SPECIAL REPORT FROM WASHINGTON: ACTION TO SOLVE OUR LOCAL WATER PROBLEM

Six long years of effort directed toward making it possible for my district to be served with imported water have definitely begun to pay off as several major hurdles were cleared this session. As we move closer to the realization of the Pacheco Tunnel project, I've prepared this brief review to show how far we have progressed.

As you know, I successfully sponsored a resolution in August 1958, which directed the Bureau of Reclamation to make a feasibility study of the Pacheco Tunnel project. The cost of this study was to be shared equally by the Federal Government and local agencies in the proposed project service area. When the Tricounty Water Authority quickly agreed to cooperate in the study and carry the local share of the financial burden, you can see that we had passed a most important milestone on the road to a water project.

San Luis legislation: This session, hearings were reopened on legislation to extend the Central Valley project by constructing the San Luis unit. I submitted an amendment which was accepted by the authors of this San Luis legislation. My amendment called for the construction of the Pacheo Tunnel as part of the San Luis unit, when a favorable feasibility study on the Pacheco Tunnel is completed.

The Senate Interior Committee reviewed the bill with my amendment and gave its approval to the revised bill. A delegation of tricounty representatives, which included Frank J. Polak, Francis Silliman, Dean George L. Sullivan, and Albert T. Henley, helped me immeasurably with their supporting testimony before this committee. I cannot express enough gratitude for the outstanding support given by these men.

The House committee, before which we also testified, adopted slightly different language regarding the Pacheco Tunnel but both bills recognize the project as necessary and a logical part of the San Luis unit. Final action is expected in January. I am confident that Pacheco will be authorized as a Federal project.

Meanwhile, action on the Pacheco project is moving along at an accelerated pace. The Bureau of Reclamation and the Tricounty Water Authority have been going ahead in high gear on the joint feasibility study. Secretary of the Interior Seaton has personally promised me he will give the study high priority in order to hasten authorization and construction.

The Tricounty Water Authority has turned over a large number of important engineering studies on the Pacheco Tunnel to the Bureau of Reclamation. The two agencies are working in close cooperation to develop the complete project requirements. The pace that has been set indicates that every effort is being made to complete this important work well before the time we had expected.

Some people seem to think that there is a sharp controversy between the Pacheco Tunnel project and the South Bay Aqueduct. In my opinion, there should be no argument because in any event the Pacheco project must be built. I say must be built because it is the only means by which San Benito, Santa Cruz, and Monterey Counties can be served with imported water. The two State plans for water service to these areas recognize this concept for they both employ a Pacheco Pass tunnel route for water importation.

I am not going to take the position of telling local citizens what they should do to solve their water importation problems but I definitely believe that it is my responsibility to make Pacheco project possible. In other words, I will continue to work to open a door and it is your decision as to whether or not you wish to use it.

The County Agent and Vocational Agriculture Teacher Magazine, the Des Moines Register and the Farmers Union Score Antifarmer Policies of U.S. Department of Agriculture

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President—

Is the Department of Agriculture antifarmer? If it is not—it certainly acts like it is.

The words I have just read were not written by me, nor am I the only one whose thinking they represent. The report detailing just how the Department of Agriculture has followed policies that are unfriendly to America's farm families is printed in a very significant article in the September 1959 edition of the National Union Farmer.

This excellent article, which was written by Washington farm reporter John Harms and was originally published in the County Agent and Vocational Agriculture Teacher magazine, points out:

The USDA is one of several agencies in the Government charged with running programs concerning special factors of the economy. For example, the Labor Department has the interests of the city worker at heart (and favors the minimum wage), the Veterans' Administration looks after the veterans (and refrains from asking for big cuts in benefits), and the Commerce Department is on the side of business and industry (and has never advocated an end to shipping subsidies or oil depletion allowances). The State Department, for its part, fights for foreign aid as though its top officials were running for election in foreign countries. The USDA, on the other hand, has a 6-year record of advocating legislative changes intended to withdraw benefits from the industry for whom it acts as spokesman.

Mr. President, in these few words which I have just read, Mr. Harms has put his pen on the major trouble with our national agricultural program today. Appointing Agriculture Secretary Ezra Benson to administer national farm laws in which he has no faith is about as sensical as naming a Moslem Muezzin to head the Baptist Church in America.

The article also points out:

Perhaps the biggest disservice USDA has performed for farmers in the damaging publicity which it not only condones, but actually put out in the form of public speeches.

This practice of the USDA in propagandizing against the farmers brings up another important article, also reprinted in the September 1959 edition of the National Union Farmer. This article, written by Charles Bailey, Washington correspondent for the Des Moines Register, sets forth an even dozen false and misleading statements about agriculture which are being circulated these days and debunks every one of them.

As we approach the close of the 1st session of this 86th Congress, one of the genuine disappointments to most of us is that we have not enacted a new, workable farm program. We all know that this is a field vitally in need of remedial legislation, one as important as the labor legislation which took much of our time and effort this session.

In this period of alltime high cost of living, the plight of the family farm operator has gone from bad to worse. During President Truman's last 4-year term, net farm income averaged $14.3 billion a year. During the Eisenhower administration, net farm income has averaged only $12.3 billion annually and has resulted in some 800,000 farmers being driven from their land.

All of us, Mr. President, must assume some degree of responsibility for our inability, our failure, to legislate an omnibus farm bill. Nothing is more important to a long-range healthy economy for this Nation than finding a system under which farm families can receive a fair return on their products.

It is my firm belief that in the final analysis, Agriculture Secretary Ezra Taft Benson and the administration must be held largely accountable for the fact that a strong bill for farmers was not worked out. Senate and House Agriculture Committee plans for farm legislation were thwarted mainly because of an utter lack of cooperation by Secretary Benson and the administration with Senators and Congressmen who are dedicated to solving this critical farm problem.

Mr. President, it is a matter of sad and sorry public record that Secretary Benson and the administration have lacked the will or the ability to present any constructive solution to America's trouble on the farm. Instead, Benson whistles through a graveyard of bankrupt family farms, glibly posting statistics to show that surviving farmers' gross income is higher but failing to consider that the farmers' net income is lower, his unit cost of production is higher and his unit price for what he sells is lower, and nearly 20 percent of the Nation's farmers have gone broke in the last 7 years.

It is my strong hope that despite the dying-days opposition of this administration, and the continuing heavy threat of veto, that we will be in position to pass a strong and effective farm bill early in the second session.

Mr. President, I believe it is noteworthy that both of the excellent articles concerning the farm problems which I have mentioned were published in the National Union Farmer, the official publication of the National Farmers Union. All of us who are interested in the problems of American farmers have come to know and to appreciate the National Farmers Union as an organization dedicated to a better America in general, and a better rural America in particular.

In saying that I point out that there are more farm families in my State than in any other State in the Union. We are vitally interested. Much has been said about gas in Texas, but cotton brings more money into my State than all the natural gas production.

Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD Appendix the two articles from the September 1959 issue of the National Union Farmer, entitled "Is the USDA Antifarmer?" and "Farm Myths Exploded," they in turn being reprinted from the County Agent and Vocational Agriculture Teacher magazine, and the Des Moines Register, respectively.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the National Union Farmer, September 1959]

IS THE USDA ANTI-FARMER?

(This significant article by John Harms, Washington farm reporter, is condensed from the County Agent and Vocational Agriculture Teacher magazine.)

Is the Department of Agriculture antifarmer? If it is not—it certainly acts like it is.

The USDA is one of several agencies in the Government charged with running programs concerning special factors of the economy. For example, the Labor Department has the interests of the city worker at heart (and favors the minimum wage), the Veterans' Administration looks after the veterans (and refrains from advocating big cuts in benefits), and the Commerce Department is on the side of business and industry (and has never advocated an end to shipping subsidies or oil-depletion allowances). The State Department, for its part, fights for foreign aid as though its top officials were running for election in foreign countries.

The USDA, on the other hand, has a 6-year record of advocating legislative changes intended to withdraw benefits from the industry for whom it acts as spokesman. Is agriculture less important to the national well-being than, say, foreign aid, which costs about $3 billion of direct benefits; or veterans' benefits, which cost about $5 billion a year? Certainly the current farm program is not working, but does that mean that there is no need for a farm program? Is it possible that at least some of the blame for the failure rests with the USDA bureaucrats?

Perhaps the biggest disservice USDA has performed for farmers is the damaging publicity which it not only condones, but actually puts out in the form of public speeches. No other similar agency puts out so much propaganda about the economic sector it's supposed to represent.

No other agency has done so much in its sphere of influence to damage the economic status of the sector it serves without providing compensating influences * * * recent examples are the reduction in feed grain and

oilseed price supports and the revision in the parity index. Reliable estimates indicates these two moves alone will cost farmers at least three-fourths of a billion in income this year if market prices follow supports down as USDA fully expects them to.

A further major disservice performed by the USDA is its part in erecting an insurmountable wall of animosity between itself and the Congress. This, more than any other single factor, is what's preventing enactment of sorely-needed farm program reforms. USDA brass takes the easy way out, and blames Congress—while the surplus problem gets worse. Why is it that most lawmakers, both Republicans and Democrats, just don't believe the USDA spokesmen are out for the best interests of agriculture? Is it all politics?

Are the best interests of agriculture and the Nation furthered by stubborn insistence on a favored idea, or by honest effort at compromising differences—as most other Government agencies do all the time in their negotiations with Congress? Congress shows no intention of giving USDA what its leaders say it needs. Perhaps all problems would be solved if Congress were abolished.

Whether USDA is sympathetic to agriculture depends solely on the policy decisions of a handful of political appointees at the top—and not on the 98,000 able workers who daily do their level best to serve agriculture.

These employees, along with farmers everywhere, may well ask: If the USDA is not antifarmer, why is it doing everything in its power to run the farmer down?

[From the National Union Farmer, September 1959]

FARM MYTHS EXPLODED

(Some of the most false and misleading statements about agriculture these days have been exploded by the National Planning Association, a nonprofit, nonpolitical organization. Its new publication, Myths About Farming, deals with 12 of the worst. It is reported here, in part, by Charles Bailey, a Washington correspondent of the Des Moines Register:)

1. "If farmers were as efficient as city workers they wouldn't be in trouble."

National Planning Association cites figures showing that the index of output per man-hour in agriculture was higher than in on-farm industries and manufacturing 10 years ago and has risen faster in the intervening period as well.

2. "Farm price supports are causing the increase in the cost of living."

This myth the study says, has been circulated widely, even from such an eminent source as the White House. Nation Planning Association cites a statement by President Eisenhower that deliberate policy to bring the farmer his own proper share of national income has caused a very considerable amount of this increased cost.

3. "Farm surpluses will be gobbled up by increasing population."

National Planning Association calls this a widespread delusion. Actually, the study says, farm production will continue to run ahead of population for some time.

4. "Every farmer drives a Cadillac."

National Planning Association notes research findings that less than one-half of 1 percent of Iowa farmers owned Cadillacs in 1954, with about 12 percent owning either Buicks or Oldsmobiles. A 1957 study showed little change.

5. "The Federal taxpayer now hands out to farmers an annual gift amounting to one-half of the farmer's net income."

National Planning Association notes that much of total Federal farm spending does not go to farmers at all. An additional amount is in repayable loans, and even some of the price-support costs cannot be considered subsidies, it says, because they benefit needy persons and schoolchildren.

6. "Farmers don't need much cash. They raise most of their own food."

Farmers, National Planning Association says, pay most of the same monthly bills that city people pay. They spend 31 percent of their family living budget on food. They spend 65 percent of their gross income for production expenses.

7. "Farmers are getting along fine. There is no sense in giving them any help from Government, which means help from nonfarmers."

National Planning Association notes, with statistics, that farm expenses tend to stay steady or rise even though net farm income goes up and down. Further, it says, farmers turn out the same amount of food to meet the Nation's needs regardless of price fluctuation, and cannot adjust production to demand as industry can.

8. "Farm subsidy programs are keeping people on farms who ought to be getting out of farming and into city jobs."

National Planning Association cites statistics showing that farm population declined more sharply from 1950 to 1957 than in any similar period on record—during the period of "big farm programs."

9. "The Nation is carrying enormous surpluses of wheat, corn and cotton at a great expense to taxpayers."

National Planning Association says that "part of this myth is fact—stocks of corn and wheat are high." But it adds that some of the stocks are "needed reserves" rather than "surplus."

10. "The way to solve the farm problem is to reduce or remove support prices. Then farmers will reduce production and the surpluses will vanish."

National Planning Association prints a statistical table showing that from 1951 through 1958, farm costs stayed high, farm prices dropped—and farm production increased anyway.

11. "Put high supports—90 percent of parity or better—on farm products and we farmers will be all right."

National Planning Association lists some of the controversial points bearing on this familiar argument, and sums up: "Just raising the support price, without doing anything else, can make trouble and do little for farm income."

12. "Farmers have an advantage over nonfarm people, because of Government aid to agriculture."

This myth, National Planning Association says, is characteristic of newspaper handling of farm questions—but it's a myth anyhow. Farm people made up 11.9 percent of the population in 1957 but got only 5.9 percent of national income.

Per capita net income of nonfarm people was double that of farm people in 1957, even though there is a steadily decreasing number of farmers to split up total farm income.

Resolution of the County Commissioners of Thurston County, Wash.

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MACK of Washington. Mr. Speaker, I have been asked by the County Commissioners of Thurston County, Wash., to read before Congress their resolution in behalf of in lieu of taxes legislation now before the House and Senate. Under leave to extend my remarks, I include the resolution at this point so all Members may have the opportunity of reading it in full:

RESOLUTION No. 2557

Resolution approving Senate bill 910 and its identical House version, House Resolution 5731 and House Resolution 6073

Whereas Senate bill 910 would provide a limited program whereby Congress would consent to nondiscriminatory payments in lieu of taxes; and

Whereas it is deemed for the best interests of all the counties in the United States: Now, therefore, be it

Resolved, That the County Commissioners of Thurston County, Wash., unanimously approves Senate bill 910 and its identical House versions; House Resolution 5731 and House Resolution 6073.

This resolution is necessary for the preservation, health, and welfare of all the citizens of Thurston County, Wash.

Dated this 8th day of September 1959.

BOARD OF THURSTON COUNTY COMMISSIONERS,
GEO. ELDER, *Chairman.*
GEORGE F. YANCH.
WALTER MILLS.

Attest:

A. E. NELSON,
County Auditor and Ex Officio Clerk of County Commissioners.

Needed: A Strong Mutual Security Program

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. WILEY. Mr. President, during discussion on provisions of the mutual security bill, there were certain questions raised, both in the military and economic field, that I believe should be answered.

Overall, the mutual security program continues to be an essential part of our own defense, as well as that of the free world. In addition, it is not a complete economic loss, as some would have us believe.

I request unanimous consent to have printed in the Appendix of the RECORD a statement reviewing the merits of this essential program, as well as answering some of the questions that have been raised.

There being no objection, the statement was ordered to be printed in the RECORD, as follows.

STATEMENT BY SENATOR WILEY

I have listened with interest and, I believe, some profit, to the discussions on the mutual security program.

The program, I believe, serves the security interests of the United States—and the free world—and I shall support it.

We recognize, of course, that there are differences of opinion on: (1) how much should be spent; (2) what kind of aid—that is, military, economic, technical assist-

ance or other—should be supplied our allies and less-developed countries of the world; (3) how the programs themselves can be more effectively administered to serve the interests of free world security.

We recall that in the past, the leaders of both major political parties; the majority of the elected Members of the Senate and House of Representatives; specially-appointed committees comprised of representatives of labor, business, and other segments of the economy—all have generally agreed that the mutual security program, dollar-for-dollar, provides more defense than could be provided in other ways.

I am well aware, of course, that the more than $3.2 billion mutual security program is an expense to the American taxpayer.

As a taxpayer, myself, I am as deeply concerned about this as anyone else.

To put the picture in perspective, however, we might well recall that the Congress approved an appropriation of almost $39 billion for the defense program of the United States alone.

For expenditures that amount to less than 10 percent of our own defense program, we are getting twice the manpower, and tremendously increased naval, air and other powers.

Now, what has the mutual security program actually accomplished?

First, the program has provided the strongest link in the alliance of free nations, withstanding the efforts of communism to expand its area of control over more lands and people.

Second, in addition to warding off Communist enslavement of new areas, it has helped the less-developed countries of the world to get on their feet.

We recognize that substandard conditions, if allowed to exist, serve as the breeding ground for strife, discontent, or revolution. Particularly, they serve as hotbeds of communism which seeks to capitalize upon such conditions, wherever possible.

Third, the program, I am confident, has been a major factor in preventing a third world war.

I am well aware, of course, that there are differences of opinion—not only as to the merits of the program itself, but also as to where the emphasis in the program should be placed.

Such questions have arisen, for example, as what should be the proportion of money spent:

For direct military aid?

For military support of the armed forces of other nations?

For economic assistance?

For technical assistance for less-developed countries?

For the Development Loan Fund?

For other aspects of the program?

The funds, I believe, should be allocated on a flexible basis, according to the needs of the situation.

For those who would either kill the program entirely, or drastically reduce it, these questions, I believe, merit an answer.

First, is the Communist menace any less today that 2, 5, or 10 years ago?

And the answer, I believe, is "no." To the contrary, the Communist threat is greater and more powerful.

Second, are our allies—or other people just emerging as nations—more capable, individually, of withstanding the broad-scale military threats, as well as the economic, psychological, subversive, and ideological efforts at penetration by the worldwide Communist conspiracy?

The answer, I believe, is that nations of the free world, too, are stronger.

However, it would be extremely unwise, now, to cripple the program which has served as a major support for efforts to combine their strength to combat communism.

Let's not kid ourselves. The battle is not over. To the contrary, communism can be expected to remain a threat to our security for many years ahead.

ECONOMIC FACTORS

I am aware, of course, that questions, too, have been raised as to the effect on our own economy, not only of such expenditures as a burden on the taxpayer, but also as to competition which we are creating abroad for our own industries.

Certainly, this is a serious problem. As a matter of trade policy, I believe the situation needs to be thoroughly examined to see what can and should constructively be done; (1) To attempt to assure that there is maximum exchange of commodities between ours and other nations, on a mutually beneficial basis; but (2) to take those constructive measures that are essential—without raising any impenetrable walls—to provide the necessary protection for our domestic industries.

We cannot delude ourselves, however, into believing that the free world can withstand ever-growing Communist pressures by having allies that are economically weak—rather than strong.

If war can be averted—as we pray will be possible—one of the greatest tests of strength between the free and Communist worlds will be the capability of differing economic systems to provide for their respective peoples.

Overall, the mutual security program, I firmly believe, continues to be an essential part of our overall free world defense, and a good investment in security for the American people.

Worms in Water

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, one of the tragedies of this session of Congress was the failure to complete action on H.R. 3610. In face of the threat of a pocket veto failure to go to conference is understandable.

The problem continues in Colorado. H.R. 3610 would have provided the incentive now lacking to cooperative action in adjacent communities. I hope action can be completed at an early date. An illustration of the problem in Colorado is the following item from the Rocky Mountain News of September 10, which may be of interest:

WORMS REPORTED IN ARVADA WATER UNIT

An Arvada housewife charged Wednesday she found worms in her drinking water.

Mrs. Martha Studenka, 38, of 6370 Janice way, said she found two worms in a water filter unit Wednesday morning when she invited her neighbors to inspect the filter.

"I thought I'd found a way to get the water clean when I got the filter, so I invited the neighbors over to look at it," Mrs. Studenka said. "As they were looking, one of the girls saw the worms."

She said her husband, Joseph, a truck-driver, bought their $14,000 home last November.

"Right after we moved in I noticed the water was dirty," she said.

"I couldn't get the washing clean, so I had to take it to a self-serve laundry to do it," Mrs. Studenka said. "Last spring, the water department people started using Clear Creek water because of the increased use of the water for lawns * * * then the situation got very bad.

"We bought a water softening unit thinking it would help clear the water, but the water's so dirty the machine couldn't keep it clean permanently," she said.

"By putting a new filter in the machine pretty often, I thought I'd found a solution to the problem, but now comes the worms," she said.

Mrs. Studenka said she discussed the murky water with officials of the Arvada Water Department and the Jefferson County Health Department.

"They told me the water is clean, but I have proof it isn't * * * and the neighbors are beginning to complain, too," she said. "I'm disgused * * * all I want to know is where the dirty water—and worms—are coming from and what's going to be done about it."

In addition to hauling her family's clothing to a laundry, Mrs. Studenka said she is afraid her children, Sharon, 13, Stephanie, 10, and Joe, 9, will become sick if they drink the water.

How Missile and Space Program Spending Enriches the Peacetime Economy

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CONTE. Mr. Speaker, it is often said that our spending on missiles and space projects is a total waste for the real prosperity and future of our Nation. In large measure, of course, any spending for primarily military purposes is a drain on an economy. But since the exigencies of the cold war make it absolutely essential for us to make these expenditures, I think we have a right to look at the cloud's silver lining and review some of the real contributions being made to our future in the form of new goods, techniques and industries.

Under leave to extend my remarks, I wish to include an article by Edward J. Michelson, Washington correspondent of Forbes and Printer's Ink magazines and the Berkshire (Mass.) Eagle which appears in the September 14 issue of Missiles and Rockets. Accompanying Mr. Michelson's article I include an editorial from the same issue of Missiles and Rockets, entitled "The Warm Side of the Cold War":

HOW MISSILE AND SPACE SPENDING ENRICHES THE PEACETIME ECONOMY

(By Edward J. Michelson)

WASHINGTON.—Vast U.S. Government spending during the past cold war decade for missile and space research, technological military development, testing and space exploration activities is beginning to yield tremendous dividends in terms of American economic growth.

The Nation has spent billions for research and development in these fields. The current R. & D. budgets alone for the Department of Defense and the National Aeronautics and Space Administration total more than $4.2 billion. Of this more than $2.4 billion is for missiles and space activities.

From this cold war research, quantities of new consumer goods, services, and industrial processes are now appearing on the American scene. Even new industries have appeared as the results of inventions, techniques, and knowledge gained since the dawn of the space age.

One of these is the computer industry. Computers were developed as a result of military demands for faster figuring and the industry itself has developed as a result of the even greater demands imposed by missile and space operations.

Companies of virtually every size and description participating in missile and space programs today are alert to the opportunities for new industrial, commercial, and consumer ventures growing out of their work.

The firms surveyed by Missiles & Rockets range in size from General Motors to small electronics companies founded in the first half of the now-ending 1950's. In numerous cases, newcomers in nucleonics, avionics, metallurgy, "hardware" production, and plastics are planning to promote goods and services for industrial and consumer use even though the enterprises don't have sales promotion or marketing staffs. Their sole customer until now has been Uncle Sam.

One space age supplier, North American Aviation, Inc., has gone to the length of establishing a subsidiary, Navan Products, Inc., for the specific purpose of marketing its own and others' inventions.

Evidence that military-supported scientific and technological advances have already resulted in new goods now under development abounds. Westinghouse Electric Corp. is actually showing three prototype appliances in television commercials—thermoelectric devices for cooling and heating. Thermoelectric research has been a company interest sporadically since 1937, but it was Navy and Air Force requirements for highly efficient, lightweight prime energy sources of space vehicles that spurred this development.

Corning Glass Works cites an impressive array of products ranging from Pyroceram skillets and pans to silicone rubber interlayer material, making possible "windows" capable of resisting Mach 2 temperatures (approaching 500° F.). Emphasis is on improved glassmaking technology and higher quality materials for myriad uses, including nuclear food preservaton and power reactors.

BORN OF WORLD WAR II

Corning developed a mass-production process for the manufacture of optical glass to meet military needs during World War II. The company's scientists developed platinum-clad melting chambers and blending machines that made possible an unprecedented production rate of 50 pounds of optical glass per hour.

In the ensuing years the process was adapted to production of optical blanks of all sizes—for us in lenses for bombsights, periscopes, aerial cameras, wind tunnel windows, and missile-tracking optics.

The production technique allowed Corning to go into peacetime production of low-priced, high-quality lenses for spectacles, telescopes, and cameras.

The chief accent of management men responding to a survey questionnaire is on development of better, more durable materials, more reliable manufacturing techniques, and increased product reliability. This reatcion is inevitable; American businessmen have traditionally excelled in developing engineering ideas aimed at offering end products of higher quality, greater utility, and minimum unit manufacturing cost.

In the missile and space field, gains have been made in such areas as materials, electronics, equipments, medicine, propulsion, communications, areonautics, air traffic control and navigation, and knowledge of human psychology and physiology.

COMPETITORS RELUCTANT

For obvious competitive reasons, some firms are none too communicative. This is especially true of the motor car manufacturers. Chrysler Corp. acknowledges that its propulsion work for satellite vehicles is bound to generate scientific and engineering suggestions to be considered ultimately for application to its commercial product lines.

General Electric also is reluctant to speak in general terms of the potentialities of its space work assignments for other manufacturing divisions. GE regards space travel as an extension of terrestrial travel. GE also points to benefits in the development of materials—metallic and otherwise—which make possible recoverable nose cones capable of withstanding the stresses and strains of reentry.

SIZING UP MARKETS

Volume procurement of lithium has brought down the price, sparking producers' thinking about commercial markets. The sole commercial use that immediately comes to mind is in nickel-oxide storage batteries. Firestone and Shell Chemical are reported to be employing a litium catalyst in synthetic rubber production. Frank R. Cook Co., Denver, suppliers of silver-zinc batteries for guided missile power, look to civilian customers in need of lightweight and small (one-sixth to one-fourth the dimensions of conventional batteries) for portable and airborne applications.

Rosemont Engineering Co., Minneapolis, has only begun exploiting the market for a variety of precision platinum resistance temperature sensors developed for missiles. The company stresses the high accuracy and stability of its product for temperature measurements, in selling for all industrial or commercial applications.

CASES IN POINT

Raytheon Manufacturing Co. uses the term "fallout" for products originally designed for military needs. In World War II, Raytheon supplied three of four allied warships with surface search radars. Today Raytheon claims to be the largest single producer of such equipment for the world's merchant shipping and passenger lines.

In little more than 3 years, Raytheon's payroll has increased from 18,000 to 39,000. Where its ratio of government to non-Governmental activity was 60–40 percent in 1956, company responsibilities for the Falcon and Sparrow III, among other systems, have increased the ratio to 85–15 percent.

With an eye to the future, Raytheon's market planners are concentrating on resources which, combined with capabilities of companies Raytheon has been acquiring, will make the company name as familiar in commercial marts as it was before its radio-TV operations were sold to Admiral Corp.

A major rubber company, whose identity is withheld by request, reports that a high-speed, fabric-laminated tread tire used on recoverable test missiles is also being sold now for commercial jet aircraft. Marblette Corp., producer of resins for missile and rocket applications and atomic submarine construction, cites civilian uses for each type. One is already popular in plastic tooling, metal-bonding, adhesive and casting, and laminating operations; the other, in high-density casting compounds. The latter type resin is lead-filled for barriers against radiation.

SKF Industries is now producing for non-Government users all precision, special tolerance bearings for electric motors, including those of unique design, that the military had to have. Both Air Force and Navy needs have contributed greatly to such advances. A major Air Force contribution in recent years was the technique for plating nickel and tin-indium without electrical current to prolong the life of friction bearings and similar parts.

PEACE-TO-WAR-TO-PEACE

The inter-relationship of peaceful industrial research and that for defense is graphically illustrated in the case of Westinghouse Electric's interest in thermoelectrical developments.

The company began to study the possibility of converting electricity directly to heat in 1937. By 1939, the Westinghouse Exhibit at the New York World's Fair was showing thermocouples demonstrating this principle.

Early in the 1950's, management's imagination was fired by the possibility of thermoelectric household appliances which would be highly efficient, have no turning parts, nothing to wear out. The intensive laboratory activity for the next 3 years centered on a small but highly dependable prime source of electricity, a generator that would be gas-fueled at first but eventually nuclear-fueled.

The Navy happened to be in the market for such a power generator. Since Westinghouse had acquired considerable experience and knowledge in this field, the company was put to work. The objective: to build a lightweight, highly efficient generator capable of performing the selective cooling required for electronic gear in aircraft and in equipments such as those used in the Arctic for commuications networks.

The advent of the space age heightened the need for power generators for satellite vehicles. Westinghouse is subcontractor in this connection for projects on which the Martin Co. and Minnesota Mining & Manufacturing have prime responsibility. Westinghouse also has an Air Force order for a TAP–100 (Terrestrial Auxiliary power—100 watts) generator for remote locations such as the Arctic. Ultimately, such equipment, relying on nuclear fuel, can power relay stations for round-the-world communications.

A Navy contract calls for a 500-watt generator and a thermoelectric air conditioner for shipboard use, with a capacity of 1 ton. This unit is a parallel development of the baby bottle warmer-cooler, dehumidifier, and refrigerator prototypes already being pictured in ad copy as part of Westinghouse's projected line of thermoelectric home appliances.

IMPROBABLE DIVERSIFICATION

Most Americans are not only startled by the fact that billions in Government scientific and engineering research and technological development pay off in terms of new jobs, new products, new industries, and the resulting increase in economic wealth; they are also surprised to see that companies engaged in one line of manufacturing diversify into remote fields as a result of their defense activities.

The public thinks of Food Machinery & Chemical Corp. as a packaging business, with some ordnance work. Not generally realized is the new technique Food Machinery has for continuous welding of various types of aluminum, including those of considerable thickness.

Another example is the case of Rocketdyne Division of North American Aviation, a division created because of the space age. Rocketdyne produces hydrazine liquid storable propellants. Rocketdyne officials say drugs based on hydrazine derivatives have been tested in terms of treatment for mental illnesses and tuberculosis. The company gives no indication that it contemplates entering the pharmaceutical industry. But it is significant that most of the 10,000 compounds that have been introduced in medical practice since 1939—the outbreak of World War II—were available much sooner than might otherwise be the case

because of mobilization requirements and wartime demands.

General Bronze Corp., a leading manufacturer of metal windows and other construction items, is preparing to spill over into the industrial and commercial electronics fields. A subsidiary devoted to space science and engineering requirements, G. B. Electronics, Inc., was established less than 2 years ago, to develop tracking antenna systems for missile support equipment supplied by prime contractors. The company has now gone in for infrared research, with prospects of turning out highly sensitive devices for such industrial uses as the detection of flaws in the welding of aircraft.

MOVING INTO AERONAUTICS

The aeronautics industry is eyed by numerous companies—even though some of the best-known aircraft manufacturers, such as Douglas and Northrop, are turning to such fields as data processing and reduction techniques, and systems for production control in highly automated plants, respectively.

Summers Gyroscope's inexpensive autopilot for target drones has applicability in light aircraft as a cheap pilot assist/safety device. Avco's Lycoming Division anticipates that within a year it will be selling commercial versions of its T–53 and T–55 gas turbines for helicopters. Marine and industrial versions also will be offered. General Precision Laboratory, prime contractor for the Federal Aviation Agency's semiautomatic traffic control system, cites its radar doppler automatic navigator (RADAN 500), for sale to business and commercial aircraft. The Stalker Corp., Essexville, Mich., mentions jet engines it builds for the military under GE subcontract as a line for other buyers.

RCA is optimistic as to the civilian usefulness of its radar equipment for Air Force and Navy weather studies. Stavid Engineering, Inc., Plainfield, N.J., has elaborate apparatus for locating lightning flashes over a 2,000-mile radius and for instantaneous transmission, monitoring and plotting of weather front locations and movements.

PEACEFUL ELECTRONICS

A vast array of precision instruments, refinements and improvements on automatic production control components, photographic equipment, and infrared appliances will go into industrial and consumer marts. Miskella Infra-Red Co., Cleveland, is transferring capabilities and know-how that go into its tasks for the Atlas satellite to new types of electronic lamps, hot dog roasters, switches, and ovens. ECO Engineering Co., a Newark, N.J., supplier of Redstone Arsenal, had to develop an inert thread sealing compound for that key customer. Now ECO counts on such sealing and antiseize compounds to appeal to pump manufacturers in the process industries.

The tremendous impetus which defense research gave to the miniaturization of electronic components continues. Dresser Industries' Southwestern Industrial Electronic Co., Houston, is "transistorizing and minifying" for portable radio and television sets. In addition, Southwestern makes microminiature roller, needle and ball bearings for compressed air-turbine dental drills. Another missile electronics suplier, Miles Reproducer, Inc., New York City, is promoting an automatic voice recorder which starts and stops at the sound of a voice, and a Walkie-Recordall which is a miniature conference recorder-transcriber.

LONG RANGE JOBS

An eloquent indication of the benefits to industry of current programs is the spate of large "engineers wanted" ads in metropolitan Sunday newspapers; most of the advertisers are space age research and development organizations.

In the hectic competition for the most desirable mechanical and electronic engineers, companies emphasize the long-range attractions of careers in their laboratories. The propeller division of Curtiss-Wright Corp., for example, specifically mentions that the design, development and testing work available on "advanced air vehicles" and the control concepts under development have "application in industry as well as many other areas yet to be fully explored."

A few winters back, after the Soviets had orbited their second satellite, a group of U.S. Congressmen landed in Sydney, Australia, on a transpolar Antarctic flight. One of them, Representative TORBERT H. MACDONALD, of Boston, was properly respectful in reading of the accomplishment in a Down Under newspaper. The hotel elevator operator was reassuring and consoling. "You Yanks needn't worry," he said. "You'll do all right. And when you get your satellites going round the earth, they'll be much better. They'll be air-conditioned."

The lawmaker from an area abounding in electronics production and research activities for the Space Agency and ARPA thinks this point was well taken. Experience has proven that every military undertaking in nuclear fission and fusion, astronautics, electranic computation, and new aerodynamic and hydrodynamic R. & D. is from the outset destined to pay off in new skills, technologies, industries, and related forms of economic wealth.

THE WARM SIDE OF THE COLD WAR

(By Clarke Newlon)

The visit to this country of Nikita Khrushchev is significant in several ways. Historically, he is the first Russian chief of government to set foot on American soil. Historically, also, he arrives near the second anniversary of his Nation's greatest technological triumph—the orbiting of Sputnik I. Politically, he is linked to the Administration's hopes of cutting down the military budget. Morally, he holds the hope of the West for a lessening of tensions, for disarmament, for global sanity.

It is very difficult to believe that the Soviet Premier will really change any of his communistic spots during his visit here, or immediately thereafter. However, we do believe it is far better for East-West protagonists to meet personally on almost any terms than to stand glowering at each other across the oceans and continents. And there is always the hope that the visit will enlarge the Premier's outlook.

With this in mind we would like to call his attention to the lead story in this issue of this magazine—a story dealing with the peaceful uses which American industry has found for products and techniques developed during the cold war of the past decade.

Khrushchev's contempt for capitalism is well and widely known. Alluding to America on October 10, 1957, he said: "There are still reactionary militarist forces in the world which are preparing for war and which do not want disarmament, fearing to lose their profits. The capitalists are worried about their profits."

It would be strange indeed if capitalists were not concerned to some extent about their profits, profits being one of the prime bases of capitalism. But it might surprise the Soviet Premier to learn the trend this concern takes.

As detailed in this week's story, a missile and rockets survey revealed that during the past decade military, missile, and space research has produced countless new products, new industrial techniques, and even entire new industries for peaceful, civilian usage. While working to produce better defense vehicles and spacecraft, American industry has never lost sight of the fact that it is inherent in its very nature to be always searching for ways to improve the everyday living of the American people. Missile optics produce better eyeglasses; the material created for a radome also makes more durable kitchenware; the search for a new fuel produces a new medicine and thus on.

No democratic society has ever looked favorably on military expenditures. The attitude has always been, understandably, that military spending is almost literally waste, that a dollar for defense could be spent for some worthwhile purpose if defense weren't necessary.

Within our military budget, which accounts for from 10 to 15 percent of our gross national income, many items have been produced which have great economic (as well as military) value. They have lessened man's labors, improved his health, and well-being, lengthened his life span. This is not and never will be an argument for increasing military budgets, of course; but it does demonstrate that these military expenditures have brought civilian benefits which otherwise might not have resulted—or at least would have been years longer in arriving.

The point which we hope will not be permitted to escape the attention of Premier Khrushchev is this:

Not only can this country devote its economy to building one of the greatest defense machines in the world, aid its western allies both militarily and economically, create and carry out a potentially great space program—it can do this and at the same time give its citizens the highest living standard ever known.

Not only has this country accepted the challenge of the cold war which the Russians have forced upon us, but in effect we are making it pay for itself through our vast production system and consumer capacity.

We think this is a tribute to the American system and to American industry. We doubt that the same thing is even remotely true in Mr. Khrushchev's country; his own technical leadership isn't geared to think of civilian well-being, either industrially or spiritually.

If this one fact can be brought home to the Soviet Premier it may both enlighten and discourage him somewhat—enlighten him to the fact that though we don't try to force our way of life on the world, we like it; and discourage his hopes of changing that fact.

Traditional Values in American Life

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. McCARTHY. Mr. President, Dr. Ralph H. Gabriel, distinguished American historian, has prepared a study called Traditional Values in American Life for the U.S. National Commission for UNESCO. Dr. Gabriel's study is to be used in a proposed series of round-table discussions on the theme, "Traditional Values in Modern Life in India and in the United States." The round-tables are to be held concurrently in India and in the United States under the sponsorship of the Indian National Commission for UNESCO and the U.S. National Commission for UNESCO. A similar paper is being prepared under the auspices of the Indian National Commission dealing with traditional values in Indian life.

This project is planned as a bilateral contribution to UNESCO's project on Mutual Appreciation of Eastern and Western Cultural Values. Its aim is to help increase and deepen mutual knowledge, understanding, and appreciation between the people of the United States and the people of India.

Dr. Gabriel formerly held the chair of sterling professor of history at Yale and has been for the past year a professor at the School of International Service at American University.

In his foreword to the study, Dr. Gabriel says, "The present essay has attempted a kind of silhouette of the values of one civilization—that of the United States." He has summarized American values under the following headings: Politics, Law, Religion, Education, Social Values, Science, Economics, Art, and International Relations.

Dr. Gabriel's complete study is available from the U.S. National Commission for UNESCO. I should like to include here a part of his discussion of American values in politics, as they have evolved from the days of the American Revolution.

Mr. President, I ask unanimous consent to have excerpts from Traditional Values in American Life printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Out of the heritage from England, the experience with government in the Colonies, the struggle for independence, the creation of the Republic, and the experience of more than a century and a half of independence have come American values in the area of politics. They include the following concepts and goals:

1. The concept of the State as a utilitarian device created to further the general welfare.

2. Freedom and responsibility of the individual adult person to have a voice in the Government under which he lives as exemplified in the right and responsibility to vote.

3. Freedom of access to knowledge of all kinds save only when disclosure of particular information would endanger the whole community. Sound judgments by persons having a voice in their Government must be based on knowledge as full and as accurate as possible.

4. Freedom to express orally or in writing opinions honestly held concerning economic, religious, political, or social matters. In the case of political opinions, this freedom is limited by the requirement that actions to carry opinions into effect must conform to the procedures for changing the policies or structure of the State as set forth in the Constitution of the United States. A further general limitation is that expression of opinion must not lead immediately to panic or disorder. Americans regard freedom of speech and freedom of the press as the cornerstone or republican institutions.

5. The protection of the free citizen against unreasonable invasion of privacy by officers of government.

6. The right of free citizens to assemble peaceably.

7. The supremacy of civil authority over the military in conformity with the principle that the civil authority is the decisionmaking power and the military is the instrument, when needed, to carry decisions into effect.

Efforts throughout our national history to realize fully the goal of citizen participation in government suggest the evolutionary character of American values. By the end of the first third of the 19th century practically all of the States had extended the right to vote to all males 21 or over. As the century ended most of the States had passed laws requiring that a voter cast his ballot in secret. These laws were intended to prevent the improper manipulation of elections by threats or bribery of electors. In 1920 an amendment to the Constitution gave to women of the United States the right to vote. In the first half of the 20th century, the States in the southern part of the United States where Negroes were very numerous sharply limited by legislative enactment or by administrative procedures the number of Negro citizens permitted to vote. In the middle decades of the century, the Supreme Court of the United States struck down these enactments and administrative procedures that came within its jurisdiction on the ground that they were contrary to the Constitution. In 1957 the Congress of the United States enacted a civil rights law, the purpose of which is to protect the right of the Negro to vote. The act represented a step forward in guaranteeing throughout the Nation full political rights to the colored man. Determined opposition in many southern communities, however, impeded its full enforcement. But the very fact that the goal had not been completely realized tended to focus public attention throughout the country on the transcendent importance of this value for the principle of government by the consent of the governed.

Since the establishment of the Nation each generation of Americans has faced in one form or another the problem of maintaining freedom of speech and of the press. The exercise of these rights has at one time or another been threatened in local communities where tensions arising out of religious, racial, or political issues exacerbated the relations between a dominant majority and a dissenting minority. In the decade that followed World War II, several disclosures of subversive activities in the Federal Government on the part of persons working in the interest of a foreign power created at a time of international tension widespread fears for the security of the Nation. Anxiety, affecting large numbers of the people and appearing in the Congress, created a situation in which public criticism of certain of the policies of the United States became a dangerous activity for the citizen. In these months of fear, however, many citizens in public addresses and writings and many newspapers in editorials stoutly maintained the ancient right to responsible and honest criticism. Such affirmations did much to rouse the public to the danger that ill-considered measures intended to maintain the security of the Nation might destroy the rights and liberties upon which its institutions depend. The Supreme Court in several important decisions struck a balance between the security of the Nation and the freedom of the individual. In these decisions the Court moved to preserve freedom of thought in an age of international tension. Experience, beginning in the early days of the Republic, has given force to the American maxim: "The price of liberty is eternal vigilance."

Khrushchev's Conditions

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I should like to call to the attention of my colleagues an excellent editorial on the recent foreign affairs article by Mr. Khrushchev which appeared in the Commonweal, September 18, 1959. This is one of the most thoughtful and closely reasoned statements on the article which I have been privileged to read.

The editorial says that the real difference between the Soviet Union and the Western democracies has to do with the basic conceptions of man and human society, conceptions which derive from the great Judaeo-Christian tradition and which emphasize the dignity and inviolability of the human person and the democratic freedoms that protect him from all manner of tyranny.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Commonweal, Sept. 18, 1959]

KHRUSHCHEV'S CONDITIONS

In some ways it is curious that so able a dialectitian as the Soviet Premier should in his foreign affairs article have led up to his three conditions for peace by a series of palpably false assertions. Surely he would credit the elite which reads that informative American quarterly with enough knowledge of recent history to perceive the lack of any real factual basis for certain of his leading claims. Perhaps, in this trial balloon preceding his American visit, Khrushchev was counting more heavily on the impact that mass media summaries of his article would make on the less interested and less informed but wider American reading and listening public.

In any case these claims do little to build up confidence in his estimates of present conditions and his promises for the future. To begin with, how can we reconcile his contention that the Soviet Union has from its beginnings adhered to peaceful coexistence as the basic principle of its foreign policy with its actual expansionism of the past 40 years? The list of its successful conquests by force is a long one, from the Baltic States and other subject nations now within the Soviet Union to the satellites of Eastern Europe. Or how can Soviet "renunciation of interference in the internal affairs of other countries with the object of altering their system of government, or mode of life, or for any other motive" square with the long-standing existence and activity of Moscow-directed Communist Parties in virtually every country in the world?

Mr. Khrushchev goes on to eschew economic imperialism because of the unlimited home market enjoyed by the Soviet Union and other socialist countries, when it is widely known that the purchasing power of the individual citizen in those lands has been for years, and still is, far below that of its contemporaries in the West. As head of one of the most drastic and efficient totalitarian dictatorships the world has ever seen, the Soviet Premier has the effrontery to say that "it is the people who determine the destinies of the socialist states * * * the people who themselves create all the material and spiritual values of society."

Alongside the Khrushchev claim that the Soviet Union has reduced its vast armies by more than 2 million men must be set its marked growth in undersea, missile and nuclear-weapon strength. And its temporary discontinuance of thermonuclear tests must be balanced by Russia's adamant refusal, up to now, to agree to systems of international controls involving adequate inspection by non-Russians within the U.S.S.R. as well as by inspection teams made up of a number of nationalities operating in other countries.

In the light of these opening gambits, it is difficult to see how Mr. Khrushchev can expect Americans to have confidence that his conditions for peace will be acceptable. Doubtless it has been tragically misleading for us to address the captive nations in terms of liberation without any feasible means of effecting it. But as a people long identified with the democratic freedoms and the principle of national self-determination, we can hardly be expected to agree to the permanent subjugation against their will of the Hungarian and other subject peoples.

The German question scarcely looks more promising. Except that West Berlin might curtail its propaganda activities in the interests of a settlement, there seems to be little that the Western powers have to offer here. It is again barefaced effrontery for Khrushchev, with his East German puppet regime continuing against the manifest opposition of the people, to declare that "no attempts should be made to interfere from outside" with the process of German reunification. In view of Russia's flagrant violations of the Potsdam agreement and many others, how could any credence be placed in its promise to guarantee the independence of West Berlin and "the preservation of the existing way of life there"?

On the question of trade with the Soviet Union there might be somewhat more leeway. At one point Mr. Khrushchev calls for "extensive and absolutely unrestricted international trade," at another for "the exchange of everything produced by human genius in the sphere of peaceful branches of material production." There is a difference between the two phrases, particularly as one of the things that restricts American-Soviet trade is our embargo against exports of strategic materials to the Soviet Union. It appears possible that trade could be expanded on a pragmatic basis for the mutual benefit of both countries, especially wherever such exchanges of goods and services would incline the Soviets toward converting their impressive productive powers away from war industries to the makings of things that raise their general living standards.

As an able debater, Khrushchev has uttered a number of sober truths to accompany his fictions. His comments on the vulnerability of all of us to modern weapons, and the need of avoiding at all hazards an all-out shooting war, cannot be gainsaid. His reiteration of the challenge that his way and our way be permitted to compete unhampered for the allegiance of men and nations has its appealing side.

But he resorts to the clever debating trick of misstating the issue. He would have the contest between socialism and capitalism, rather than between communism and democracy. Once he has identified the American way with capitalism, a concept which inspires hostility on almost every hand, he has gone far toward winning the big debate before the peoples of the world. And it has been all too easy for Mr. NIXON and other American spokesmen to fall into this trap.

Mr. Khrushchev also likes to present the debate in terms of productivity and future standards of living. Here defenders of the American way are even more easily led down a debating cul de sac. Not only can we point to our color TV sets, air-conditioners, 1960 cars, deep freezes, and washing machines, but we can contrast present living standards generally under the two systems. Here Khrushchev cites comparative rates of growth and forecasts a rosy Communist future. That takes some of the starch out of our productivity argument, but it is not the main reason for warning against this pitfall.

The real difference between the Soviet Union and the Western democracies is not one of productivity, of low versus high living standards or—especially where the United States is concerned—of socialism versus capitalism. It goes far deeper than that. It has to do with the basic conceptions of man and of human society, conceptions which derive from the great Judaeo-Christian tradition and which emphasize the dignity and inviolability of the human person and the democratic freedoms that protect him from all manner of tyranny. That is the burden of our side of the debate with Mr. Khrushchev, but until we demonstrate that we are willing to make adequate sacrifices during this cold war period for the sake of these things in which we believe, we shall have a hard time convincing Mr. Khrushchev, other peoples—or ourselves.

Lessons From Harvey Point?

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BONNER. Mr. Speaker, I ask unanimous consent to extend my remarks and include therein an editorial from the Greensboro Daily News dated September 13 entitled "Lessons From Harvey Point?"

In the area of 50 miles, including the city of Elizabeth City, Edenton, and Hertford, N.C., on the Albemarle Sound, the Navy has completely built and closed three naval installations: an airfield costing many millions of dollars; a lighter-than-air base at Weeksville, near Elizabeth City, N.C., at tremendous cost; and now Harvey Point.

It is difficult, Mr. Speaker, to understand.

LESSONS FROM HARVEY POINT?

This promised investigation into the fiasco of Harvey Point should not be allowed to trail off in mere words. North Carolina has a particular interest in it. But our concern goes much further. Is what happened with reference to this seaplane base and abandonment of the planes which were to be based there representative of the armed services'—in this instance the Navy's—lack of long-range planning and waste of millions of dollars of tax money?

It is not enough to assure contractors that they will not lose as a result of the sudden shift of plans, after $11,500,000 had already been spent on land acquisition and facilities and around $400 million in research work and development of the now outcast Seamasters. The taxpayers have already caught it in the neck; and a large sum which might have been spent on some other phase of our sorely pressed defense program has gone down the rathole.

The Daily News has looked upon the Harvey Point installation with quizzical eye ever since it was announced. We trust that any investigation will determine whether this completely new installation was necessary when facilities had only recently been abandoned at nearby Weeksville and Edenton.

Withal, there is the lesson for every community whose economy is geared to defense to realize the instability of that dependence and to seek to prepare for the day when its defense payroll may be sharply cut or eliminated. Our transcending desire is for peace, but there is a shudder at what might happen to our economy if, all of a sudden, peace did descend upon us.

Harvey Point calls for expanded study, in its implications, its immediate application, and its symbolism of defense helter-skelterism.

The Chaplain of the Senate Writes on Mr. Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, our worthy Chaplain of the Senate, Dr. Frederick Brown Harris, has advised us neither to jeer nor cheer during the tour in this country of Premier Khrushchev, of the Soviet Union. I agree with this sound advice. Whenever I read the Chaplain's brilliant articles on the editorial page of the Washington Sunday Star, I realize anew what a talented and gifted man presides over the spiritual needs of the U.S. Senate. I ask unanimous consent that a particularly able piece of writing by Reverend Harris from the Star of September 13, 1959, entitled "Who Goes There?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Sunday Star, Sept. 13, 1959]

WHO GOES THERE?

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

"Who goes there?" Every true American sentinel on the ramparts of freedom will be forced to utter that challenge in the crucial days just ahead. The rotund Russian peasant who has fought his way to the top of the bloody Soviet pyramid is coming to the America he has long eagerly desired to see. He who despises spires comes to a Nation whose proudest boast is that it is under God and whose uncoerced pulpits, from sea to sea, as a follow; there is no such thing as honor. famous French visitor put it years ago, "are ablaze with righteousness." In his vast domain the ancient church is but a Charlie McCarthy on the knee of the police state. To this threatening Goliath who so soon will tread our soil, the sacred beliefs which made and preserve America, and lifted its spires against the sky of an expanding democracy where the people rule, are but the opiate of the people—nothing but a snare and a delusion.

Who goes there? It is one whose basic creed rises no higher than the dust beneath his feet. For him, everything in the universe is explained by whirling atoms. There is no God high over all. From that creed it follows as the night the day that for individuals or a nation there is no moral code to follow; there is no such thing as honor. The disciples of Karl Marx have no rule of action but expediency. Morals is anything that will make any contribution to the communization of the world—no matter who or how many are marked for liquidation in the pursuit of that objective. Nikita S. Khrushchev subscribes fully to the dictum of his master, Lenin, who decreed: "It is necessary to use any ruse, cunning, unlawful methods, even concealment of the truth."

In the carrying out of that creed without pity or conscience Khrushchev's record is stained blood red by terrible ruthlessness,

in purges and perfidy, in executions and murdered freedom fighters, which put Nero in the shade. Upon his hands is the blood of our slaughtered sons in Korea. And upon his lips are the falsehoods charging the United States with deadly germ warfare. In very truth all this must be said as the cry is raised, "Who goes there?"

Inasmuch as we are standing under the spires of the Spirit let us enter church portals and listen to a prophet of the Most High, beloved these many years by his nation, Sweden, Bishop Bengt Jonzon. To any thought of inviting the boss to that nation, so close to the Red abomination as to feel its hot breath in their faces, the good bishop warns: "To invite Khrushchev to our country would be the same as letting an enemy through the frontlines in a shooting war. Every word and action of his serves a definite purpose to split the free world, to confuse our judgment, to break down the will to resist, to encourage defeatism." That's the answer of a great churchman to the question, "Who goes there?"

But in this crisis all Americans should vow that nothing be said or done to embarrass our President or to make more difficult his noble attempt to seek for some ray of hope as he deals face to face with the headman of the Kremlin. By personal contact, amid visible fruits of democracy in this promised land flowing with milk and honey, our peace-loving Chief Executive has taken it upon himself to face this ebullient, confident exponent of the false gods of materialism with the truth as it is exemplified, however imperfectly, in the American system. Of course, it is all a gamble. But the President is convinced, in these epochal days of dread and danger, that as the dictator sees and feels our America some of his erroneous, preconceived notions may be modified, as he realizes that we are all in the same boat now in the swift rapids, with the thunder of Niagara just ahead. The President, as he deals with this man with such enormous power in his hands, deserves the fervent prayers of the millions under the Stars and Stripes who believe in the God the Kremlin denies.

We can rest in confidence that our elected leader who faces the unelected Soviet spokesman has often declared that our democracy does not even make sense without God and without a deeply felt religion.

To the visitor who in these September days will be answering, in his pronouncements, the question "Who goes there?" America will be saying at every turn: "We believe that the American Revolution was tremendously more significant than the Russian revolution, and that the inspiring exemplar of the possibilities of the common man is not Lenin, but Lincoln—the Lincoln who said: 'Our reliance is in the true love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men—in all lands—everywhere.'"

And so, without any illusions as to who goes there, with eyes wide open we say to our President, with the plaudits of Europe ringing in his ears, "May God empower you as you face this noble gamble." Let us remember that even Paul the Apostle approved the murder of Stephen and counted it a stern duty to deal out threatenings and slaughter, and to make havoc for the early church. But Paul, as he was then, the high-handed persecutor, became Christ's devoted bondservant. Across the centuries his name stands next to the one he persecuted. Could not that miracle of transformation happen again?

Who goes there? One who if he could but see, like Paul, the light, and repent, and change his attitude, could go down in history as a great benefactor of humanity in this age on ages telling.

But as matters now stand, for loyal Americans, while there must be, of course, no jeers, there must be no cheers. This visitor must be received—not as a friend—for he is an enemy—with correct and dignified formality. If this avowed foe of the precious things we hold nearest our hearts should be received with fulsome welcome, or as a conquering hero, we would be doing something terrible to ourselves. To receive him, thus, America would be crucifying her own principles. Any applause will be to toll the bells of hope for all the captive nations who will be listening.

Courtesy does not even demand that we lend our physical presence. It is possible to look and listen by way of the radio and television. In any event, to be true to ourselves the reception accorded should be politely regular. Anything else will be a vote to sell the soul of America to the devil of tyranny.

The Khrushchev Invitation

EXTENSION OF REMARKS
OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JOHANSEN. Mr. Speaker, since Soviet Premier Khrushchev, in his recent article for the magazine Foreign Affairs as seen fit again to chide the Congress for adopting the captive nations resolution, I believe it is particularly in order to place in the RECORD the views on the Khrushchev visit held by the principal author and sponsor of this resolution.

I refer to Dr. Lev E. Dobriansky, a professor in Soviet economics at Georgetown University and chairman of the Ukrainian Congress Committee of America. Dr. Dobriansky is an authority on the empire-building activities of Soviet Russia and the role which Mr. Khrushchev has played in this brutal conquest.

Under permission to extend and revise my remarks, I include a copy of the telegram sent to President Eisenhower by Dr. Dobriansky prior to the announcement of the invitation to Mr. Khrushchev to visit the United States and also a copy of the statement to the press by Dr. Dobriansky on August 7, following public disclosure of the invitation:

TELEGRAM SENT TO PRESIDENT EISENHOWER BY ORIGINATOR OF CAPTIVE NATIONS WEEK IDEA

THURSDAY, JULY 30, 1959.

DEAR MR. PRESIDENT: As the originator of the Captive Nations Week idea and resolution, I cannot adequately express in words our profound gratitude for your well-worded proclamation and also for your personal participation in a prayerful observance of the week in Gettysburg, Pa.

Contrary to the understanding of some, both the resolution and proclamation are unique documents. For the first time they direct world attention to the fact that the majority of the captive nations are in the Soviet Union and Asia. It is this truth that disturbed Khrushchev most. By pointing to the gravest weakness in the Communist empire we placed Nikita the Sanguine on notice that we are well aware of the empire character of the U.S.S.R. itself. Without the resources of the captive non-Russian nations in the U.S.S.R., Russia itself would be a second- or third-rate power. The spread of this truth enormously devaluates Moscow's propaganda bluff in any comparisons with our Nation.

In the spirit of the Captive Nations Week, we sincerely hope that you will resist the ill-advised pressure to invite Khrushchev to these shores. Wisely, we extended no official invitation to Mikoyan. Khrushchev's criminal record exceeds all. It is patently naive to believe that a spirit by the "Hangman of Ukraine" would add anything to what he already knows about our country. If he should acquire facts of incidental worth, it is equally illusory to think that this would produce a cessation of the cold war which, historically, imperialist Russia plays for keeps. Moral principle alone should dissuade us from conferring respectability and legitimacy to a dedicated enemy, the attributes he desires most in order to extend his empire.

Sincerely yours,

Dr. LEV E. DOBRIANSKY,
Georgetown University.

THE STATEMENT TO THE PRESIDENT

(Delivered Aug. 7, 1959)

DEAR MR. PRESIDENT: The Ukrainian Congress Committee of America again cannot thank you enough for your historic Proclamation of Captive Nations Week. By act of Congress and your splendid proclamation, the United States has officially recognized for the first time the existence of the many captive non-Russian nations within the empire known as the Soviet Union. This represents a great stride in our real understanding of the prison house of nations parading as the U.S.S.R. It was most significant that while the Vice President was in Russia proper, Khrushchev had to hurry down to Ukraine to give a self-reassuring speech.

We are, however, gravely disturbd by the invitation extended to Mr. Khrushchev to visit this country. In our judgment, this invitation cannot but be deplored as another Russian cold war victory which Moscow is already celebrating as Khrushchev's triumph. To countless Americans, this planned action appears now as a cynical sequel to our first observance of Captive Nations Week.

In the view of this committee, the invitation constitutes another cold war defeat for the United States by placing the cloak of respectability and legitimacy on a political criminal, no matter how he is painted. Moreover, Mr. President, it so obviously contradicts your own test, put so often before our people, that you would not meet with Khrushchev unless there were some encouraging progress at Geneva. There was none. What this and a forthcoming summit meeting amount to are a dangerous retreat from the policy you so admirably upheld against all shortsighted pressures when Secretary Dulles was alive.

This step really ushers in a new phase in our foreign policy. We now seem to be reducing our last and most potent weapon of clearcut superiority, our discriminating moral world leadership. Secretary Dulles must have rolled in his grave when this invitation was announced. The pressures that sought to oust him over a year ago, have now, but momentarily, won their first round.

To us, who follow closely developments within the multinational Soviet Union, it is incredible that a genocidist and political criminal should be extended the official hospitality of this home of the free. His record in part shows: (1) As a party functionary in the early thirties (he played a brilliant role in the Moscow man-made famine in Ukraine that resulted in the annihilation of some 5 million lives; (2) for his excellent performances, he was elevated to high party posts in Ukraine and had a hand in the genocide of some 11,000 lives in Vinnitsa, Ukraine, before the war; (3) although a Russian, he paved his way to leadership in the party in Ukraine by conducting many purges; (4) following World War II, he was specially dispatched by Stalin to quell the patriotic national resist-

ance in Ukraine. This partial record explains why he is widely regarded in Eastern Europe as the hangman of Ukraine.

Terrorism comes easy with the Hangman of Ukraine. He showed it also in Georgia, Poland, and Hungary in 1956. Through his puppets, he showed it in Tibet. Only last month it was against the Ukrainian underground in the Carpathian Mountains. Fooling many of our Americans today as Stalin did before fully entrenching himself over 30 years ago, the hangman continues this terrorism by less conspicuous but more effective methods in the Soviet Union. To assert, as some do, that peaceable methods have featured his regime since the 20th Party Congress belies the facts.

This committee, doubtless in addition to millions of Americans, regards the arguments offered to justify Khrushchev's visit here as spurious. It is almost insulting to the intelligence of the American people that we are deemed by some as being naive enough to believe that Khrushchev does not already understand what the United States represents and possesses. Clearly, it didn't take the Russians long to understand where our atomic and missile secrets were. Khrushchev understands our country far more than many of us understand his empire in the Soviet Union itself and his centuries-fashioned methods and techniques. Those, like our visiting Governors to the U.S.S.R., who speak in mythical concepts of "the Soviet people" and "the Soviet nation," and with callous disregard of the Lithuanian, Latvian, Ukrainian, and other captive non-Russian nations in the U.S.S.R., may well learn from the late Secretary of State Dulles. "The Soviet bloc," he said on October 10, 1955, "represents an amalgamation of about 900 million people, normally, constituting more than 20 distinct national groups." The untutored harm some of us do to the freedom aspirations of 110 million people making up the captive non-Russian nations in the U.S.S.R. cannot be too strongly emphasized. The blemish this places on our own traditions and the reciprocal harm it incurs for our own security interests need hardly be stressed.

It is an illusion to think that this visit and the later calculated summit meeting will relieve pressures on Berlin, the Middle East, Laos, free Korea, free China, and, indeed, upon our United States. This action shows how woefully unprepared we are to cope with Moscow's cold war challenge. More than anything else that Khrushchev now wants is respectability and legitimacy to consolidate his empire. He is behaving in a tradition developed long before the Russian Revolution and we have not even begun to learn the lessons of Russian empire building. Some of us may just as well pay tribute to Ivan the Terrible who was the first to use the "friendship and peace" tool in his cold war conquest of the Khanate of Kazan in the 16th century.

In the light of these facts and reasoned judgments, our conscience moves us to join with other Americans in peaceful demonstration of protest and righteous condemnation against the hangman. The Russians—and, indeed, the Vice President traveled only in the Russian part of U.S.S.R.—had no crimes to denounce. By any stretch of logic, the hangman is no parallel case to our Vice President. We, as indeed many other Americans who will in time voice themselves, cannot but share the moved feelings of Richard Cardinal Cushing, Senator STYLES BRIDGES, Congressman WALTER JUDD, and many other outstanding leaders in our society.

In full confidence of your understanding and with God's many blessings upon you, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Chairman, the Ukrainian Congress Committee of America.

General Bradley Tries To Save Taxpayers' Money

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, Gen. Mark E. Bradley, Jr., Deputy Chief of Staff, Materiel, U.S. Air Force, is conscious of the great responsibility which rests on his shoulders. The watchword of his office is the wise use of funds appropriated by the Congress. General Bradley has to make many decisions involving very large sums of money. Many of the contracts which he authorizes must necessarily be done without the benefit of competitive bidding. For reasons of security, performance, and ability to produce, he must decide on who shall construct what, and for how much. Because of these difficult decisions and because of the fine character which he possesses, General Bradley is instituting many fine procedures designed to save the ultimate in the funds entrusted to his use.

In an address before the Air Force Association meeting in Miami on the 3d of September, General Bradley explained the policy of his office.

Under leave to extend my remarks, I include therewith General Bradley's speech for insertion in the RECORD:

ADDRESS BY LT. GEN. M. E. BRADLEY, JR., DEPUTY CHIEF OF STAFF, MATERIEL, AT PROCUREMENT SEMINAR, AIR FORCE ASSOCIATION MEETING, MIAMI BEACH, FLA., SEPTEMBER 3, 1959

Mr. Chairman, gentlemen, your invitation to address this seminar made it clear to me that you consider the Air Force and industry partners in the business of defense. I agree that we are partners and that each of us often speaks for the other. But although we may have a dual mission we must never lose sight of the important mission of protecting the taxpayer's dollar. I assure you that the Air Force intends to do this at all times to the best of its ability.

Your invitation left me a choice of topics for discussion. I have, therefore, selected a subject, "Current Air Force Procurement Problems," in which I am sure you are vitally interested. Like most discussions of procurement this one too is basically about money. But it is a particular aspect of procurement money as it bears on Air Force-congressional relationships.

Air Force funds are, of course, appropriated by Congress. Congress bases the appropriation of funds for the Air Force primarily upon three considerations:

The type of proximity of the threat facing us;

The strength of the national economy;

The ability of the Air Force to use the money wisely and efficiently.

It is the third consideration—the ability of the Air Force to use its funds wisely—which I want to discuss today. This thought is highly important because it affects the relationship of the Air Force to Congress. Unless Congress is convinced that the Air Force handles its funds carefully, it will not be willing to grant the Air Force the sums it needs. The denial of funds would seriously affect the ability of the Air Force to execute its mission.

I am keenly aware of the fact, and I am sure you are too, that the Appropriations Committees of both Houses of Congress seem to be convinced that the Air Force and industry—the partnership we are talking about—are not managing the defense dollar as well as we might. We have only to look at the reports of the Senate Appropriations Committee for the past 2 fiscal years to see why I say this. In both cases the committee expressed grave concern over spiraling defense costs. This year the House Appropriations Committee made a 1 percent across-the-board slash in the amount appropriated. The purpose of the slash was to obtain improved management of funds and economies in procurement. The final defense appropriations approved by Congress carried a one-half percent reduction in funds.

Congress did this partly because of the recent reports of the General Accounting Office on the misuse of funds by contractors. Several contractors had to refund substantial amounts to the Air Force on the ground that the money they had received was not earned.

You can help us improve our position before Congress if you will cooperate in three problem areas. These, then, are the sore spots we want to eradicate. First of all, as partners we must be able to depend on each other for reliable and accurate information when we are negotiating contracts. Secondly, when we arrange letter contracts, we must be able to expect definitization of contracts without undue delay. And thirdly, we in the Air Force must have cooperation from contractors in reducing costs. A fourth point I will mention already has your cooperation. This relates to small business. We are doing pretty well here, but I want to encourage further progress. Now, let me elaborate somewhat on these subjects that are so vital to our progress.

As partners we must be able to trust each other fully during our negotiations of target prices. Both of us must furnish the other with current and completely accurate information. Inaccurate or out-of-date information defeats the purpose of the incentive type contract. This type contract, properly used, benefits both the Air Force and industry. It benefits the Air Force because costs are substantially reduced. It benefits industry by making profits commensurate with your performance. It benefits the taxpayer by giving him more defense for his money. I appeal to all of you to see to it your company gives our negotiators good and up-to-date prices. If the Air Force is to continue to utilize incentive contracts, you must prove by your actions that this will be done.

It should not be necessary for one partner to require signed certificates attesting to the accuracy and currency of cost information. However, it now appears, from the facts furnished by the General Accounting Office,, that we will have to continue to require a certificate of accuracy.

We are acting in accord with the policy of requiring a certificate of accuracy already adopted by the Department of Defense. In the next revision to the ASPR this requirement will be extended to include all first tier subs where the sum involved is over $100,000 and where there is no effective competition.

As one of the partners in this business, then, let me urge complete cooperation in achieving the purposes of this certificate of accuracy. It is my feeling that whatever officer of the company signs the certificate of accuracy should give careful consideration to the responsibility he has to himself, his corporation, and the Government.

The Air Force expects its contractors to earn reasonable profits. Close pricing at the outset through all tiers will benefit everyone in the long run. But we cannot, and you would not expect us, to condone any action

which would not carry out the intent of the certificate of accuracy.

The second problem area is that of prompt definitizaton of letter contracts. Delays often occur because negotiators are reluctant to disclose information to our auditors and price analysts. As a result, negotiations over prices are lengthy and time consuming. I think it is important for contractors to recognize that these delays cost them money. For example, as long as a letter contract is in effect, the contractor is paid 70 percent progress payments. However, if this contract is definitized as a cost-type contract, the contractor gets 80 percent of the allowable items of cost. That's a 10-percent spread in financing which should not be overlooked.

We have an additional reason for avoiding delays. The House Armed Services Committee has indicated that it will insist upon complete and accurate cost information as a basis for negotiating contracts. Contractors can help us greatly here by giving us this information promptly. Failure to cooperate on this will reflect adversely on both of us.

We all recognize that letter contracts are valuable. They help us to buy that very scarce commodity—time. If we misuse the letter contract, we hurt ourselves and discredit the letter contract.

Here again the Air Force needs the help of its contractors. We must cooperate. The Air Force intends to keep the use of letter contracts to a minimum. We, for our part, will also definitize them as rapidly as possible.

The third problem is concerned with ever-rising costs. Air Force policy is to reduce costs wherever possible. Right now we are very much concerned about a specific area where we think we can make immediate substantial cost reductions. That is in overhead costs.

Overhead costs are troublesome because we are faced with a curious fact—although production runs have decreased overhead costs have not. Just a look at the figures tells us what we should expect.

In 1944, we produced 95,272 military aircraft, in 1933 the figure had shrunk to 10,626, and in 1957 it was down to 5,500. Clearly, the good old days of long production runs are gone. As firepower has increased, costs have increased and production runs have decreased and will continue to do so. I don't think I'm wrong when I say they've gone forever. This is a fact, gentlemen, and we must face it. Now, here's the curious part. As production runs have decreased direct labor hours have also decreased. However, overhead expense, especially engineering, is ever rising.

I know complexity has increased. I know many thousands more engineering hours are required to accomplish the development of these complex weapons. But I still have a feeling that industry is still holding to much of the capability required to meet the large scale, long run production programs of the past. Gentlemen, the good old days are gone, and the more we increase complexity, the higher we let our costs get, the less and less today and tomorrow are going to look like yesterday. Let's you and the Air Force join in a real soul-searching cost reduction program. I know some companies have made some progress but we need across-the-board action.

Complex modern weapon systems, are, by their very nature, more costly than any of our earlier systems. The basic cost of modern weapon systems is so great that we cannot afford to allow any unnecessary costs to creep into the price. Just compare the figures. A B-52 costs about 35 times as much as we paid for a World War II B-17. The B-58 Hustler, currently in limited production, will cost about twice as much as a B-52. Figures on the B-70 are classified, but they are considerably more than the B-58. If we let them, costs could even run us out of business.

But the contractor, as our partner in this business, can help us here. He should make a definite, firm effort to hold the line against increased costs, to hold back on items that his engineers or individuals in the Air Force may request until he is absolutely convinced that they are necessary. If he does this he will be helping us do our job and will be truly playing the role of partner. These are the shared responsibilities of the Air Force-industry team.

There is one more topic on which I'd like to comment before we finish this discussion. This also is a responsibility shared by Air Force and industry as partners in the business of defense. Of course, the ultimate responsibility always rests with the Air Force, but we do have to turn to you for considerable assistance.

Congress expects the Air Force to accept the responsibility to help keep our economy strong. One means of doing this is to distribute the work to the various levels of the industrial community. The Air Force must adhere to the basic procurement principles of quality, prompt delivery, and lowest price. At the same time, we must be sure that competent small business concerns are given every opportunity to share in our business. As you probably know, over 90 percent of industrial concerns in this country employ less than 500 people. These are the concerns we characterize as small business—the ones we're interested in here.

You may be interested in knowing that in the direct Air Force purchasing in fiscal year 1959, the dollar value of contracts awarded to small business concerns was 22 percent higher than in fiscal 1958. This is significant because in both years our total procurement remained approximately the same. The $920 million in prime contracts awarded in 1959 to small business was the highest figure since we started keeping such records about 9 years ago.

This large and impressive figure of awards to small business did not come about by chance. It is the result of an intensive small business program the Air Force has been carrying on since 1950. While this practice helps the national economy, it also benefits the Air Force in a very special way. Small business concerns over the years have not only been able to meet specifications and delivery schedules, but they have given us the lowest prices in a great many cases.

Let me give you a rather extreme example of what small business can do. When I was Director of Procurement and Production at Wright-Patterson Air Force Base, we had a requirement for a thousand rather difficult items. We had been paying $3,000 per unit for them. We found a way of getting small business to bid on this device. Small and large firms competed and in the end the contract price was $670 per unit. The successful bidder was a small business concern. It did the job capably and on time. It saved the Air Force over two $2½ million, and made a profit for itself.

Our large contractors use many thousands of small concerns over the country as subcontractors and suppliers. Over 25 percent of the dollars we place with large prime contractors find their way to small business concerns a subcontractors in one tier or another. We are pleased with this. It is a respectable sum, but we are interested in seeing it increased. Here's where we turn to you again as partners in business. If you will make a special effort as large contractors to offer more competitive bid opportunities to small concerns, you will be helping us spread the work among the smaller concerns. Although we know it means more work and a special effort, the result will be worthwhile for both of us. It will pay off in lower costs. And you know how important that is.

By making these savings we will also convince Congress and the public that we are handling our appropriated funds in the most efficient manner possible. I think, gentlemen, that if we work together in these areas I have discussed, we will be able to satisfy Congress that we are carrying out our responsibilities properly. We have an important job to do and we must do it together.

As partners we share the burden of the mission we are entrusted with. We cannot share the final responsibility for the mission which the Air Force has been given. I thank we must also remember the Air Force is the senior partner, the one that has the ultimate responsibility. The Air Force, nevertheless, relies upon you for assistance in carrying out this responsibility.

I think I have said enough to give you a clear idea of some of the problems troubling us and what we think should be done to overcome them.

The U.S. National Exhibition in Moscow

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mrs. BOLTON. Mr. Speaker, this summer saw a rather unique happening in the effort we are making to bring about a greater understanding between this country and the U.S.S.R. It saw a Russian exhibition in New York and a U.S. fair in Moscow. There is no need to discuss here the Russian effort, thousands of Americans including many Members of Congress have seen it. But few Americans and only a handful of Members of Congress have seen the exhibition we put on in Moscow. Having gone there as a member of the Subcommittee on State Department Organization and Foreign Operations of the House Committee on Foreign Affairs, with its chairman, the Honorable WAYNE HAYS, of Ohio, it seems to me important that some record of the amazing thing that was done should go into the RECORD.

Our purpose was clear—to strengthen the foundations of world peace by increasing understanding in the Soviet Union of the American people, the land in which they live, and the broad range of American life, including American science, technology, and culture.

President Eisenhower, in a message prefacing the official guidebook, said:

> It is my fervent wish that by this means, and through the corresponding exhibition which your country is holding in New York City, the people of our two great nations may gain a better understanding of one another. Thus can the foundations be strengthened for our cooperation in the achievement of mankind's greatest goal—a fruitful and flourishing world at peace.

The exhibition was a joint endeavor of the U.S. Government, American industry, and other private groups and organizations. Government participation centers in the Department of State, the Department of Commerce, and the U.S.

Information Agency, with the Director of USIA, George V. Allen, serving as coordinator. Harold C. McClellan, Los Angeles industrialist and former Assistant Secretary of Commerce for International Affairs, was made general manager. Assistance and counsel on content were given by an advisory committee of 51 representatives of U.S. education, industry, foundations, science and the arts, as well as by a group of American newspaper and radio-TV correspondents formerly stationed in Moscow. McClellan and all those associated with him deserve the highest commendation and praise. They succeded beyond expectations in carrying out what Mr. McClellan expressed at the outset of this amazingly successful effort:

We definitely are not putting on either a propaganda show or a trade fair. It is going to be as comprehensive a presentation as we can make it of the way the American people live, work, and enjoy the fruits of their labor. It will reflect our attainments in the cultural and scientific fields as well as in the production of consumer goods. We will endeavor to exhibit the type of things the Soviets are interested in seeing. The Soviet people are tremendously curious about America, and we hope, in part, to satisfy that curiosity.

In no way was the American exhibition a trade fair, though there were industrial displays. It was an amazingly successful effort to project a realistic and credible image of America to the Soviets through exhibits, displays, films, publications, fine arts and performing arts. The exhibition reflects how America lives, works, learns, produces, consumes, and plays; what kind of people Americans are and what they stand for. America's cultural values were dramatically displayed in the 6 weeks when there was a corner of America in the heart of Moscow.

Nor were the outward and visible signs all that we sent there. The museum marvel was the fact that it was not just our Government that set it all up, but that in spite of the fact that it was not a trade fair, nearly 800 firms contributed products and/or foods to this national exhibition. Many paid all the shipping and underwrote the cost of maintaining their own—Russian speaking—personnel at Moscow. The cost of the plastic pavilions was borne by a group of leading firms in the plastic field. It has been impossible to determine the total value of industry's contribution, but it runs into the millions of dollars in goods, transportation, and services. That is the kind of people we are.

Could you have watched, as I did, the eagerness with which the Russians flooded in through the gates and seen them as they crowded into the exhibits, you would not question the success of the venture. To those of us who saw it, every penny put into it of Government and private enterprise money and effort, was well spent. Our fair was a living, breathing, heart-warming picture of what a free, independent, courageous and capable people have built for themselves and their children, and which they want for all the world.

The location in Sokolniki Park, 15 minutes by subway from downtown Moscow, serviced also by bus and trolley lines, could not have been improved upon. Not only did the Soviets provide various landscaping improvements in the park and extend the paved roads to the exhibition grounds, but they also made available water, gas, electricity, and sewage disposal and permitted the United States to landscape its exhibition area of 400,000 square feet. In addition the U.S.S.R. agreed to buy the aluminum geodesic dome building and the main exhibition hall for $375,000 after the exhibition was over. This has given us a return on our buildings, has saved us the cost of removing them and restoring the site to its original state, and leaves there a continuing reminder of modern American architecture and engineering achievement.

Let me give you as briefly as possible some of the main features:

THE GEODESIC DOME

A Kaiser aluminum gold-anodized geodesic dome building, 200 feet across and 78 feet high, with 30,000 square feet of floor space, was the information center about America, designed to handle traffic at the rate of 5,000 persons an hour.

The unique geodesic dome principle was developed in 1947 by the American architect-engineer R. Buckminster Fuller. It is like a huge half orange in appearance, and has no interior supporting pillars.

Around its inside perimeter were exhibits on space research, education, labor, health and medicine, agriculture, basic research, synthetics and nuclear energy. Around the exterior of the dome was a "Gallery of Americans"—5-foot photographs of American figures such as Benjamin Franklin, Walt Whitman, Abraham Lincoln, and Mark Twain.

A continuous documentary film portraying key aspects of American life was projected on one-third of the dome's interior circumference by means of the unique Charles Eames motion picture technique which uses seven simultaneous screens, each 30 by 20 feet, with a single Russian-language sound track.

Ramac 305, the "electric brain," provided split-second answers—in Russian—to thousands of questions about the United States.

Four American voting machines were on hand for Soviet visitors to vote for their favorite exhibits and displays.

THE EXHIBITION HALL

A 50,000-square-foot fan-shaped steel structure 28 feet high, glassed front and rear and covered by an accordian-pleated aluminium roof, displayed American cultural attainments and exhibits showing the results of the American economic system: the abundance so broadly shared by the people. These reflected the great freedom of choice enjoyed by the American family.

A special interior exhibit design of modular steel permitted maximum use of space. The display framework created mezzanine areas from which the visitor could observe exhibits above, below, and on the same level as himself.

THE PLASTIC PAVILIONS

Three plastic pavilions covering 15,000 square feet were located in three clusters. They housed:

First. The Museum of Modern Art's "Family of Man" Exhibit of 500 photographs assembled by Edward Steichen;

Second. An exhibit of contemporary American architecture showing models and 100 black-and-white photographs of schools, churches, shopping centers, skyscrapers and other buildings throughout the United States; and

Third. A display of American wearing apparel ranging from workclothes to formal attire. The majority of the models were nonprofessional, and included three American families who had been selected by the fashion industry to represent various economic groups. The live presentation consisted of a half-hour show four times a day, with commentary in Russian. This was really tops.

CIRCARAMA

This 360° "movie in the round" which was so successful at Brussels, was housed in its own circular building. Circarama was redone and brought up to date by Walt Disney with new sequences and a Russian sound track.

OUTSIDE AREA

Outdoor displays included:

An American six-room ranch-type home completely furnished.

Twenty-two 1959 automobiles from all U.S. manufacturers, the most luxurious to the most economical.

Sporting and camping equipment, ranging from skis and fishing tackle to sailboats and outdoor cooking facilities.

Farm equipment such as tractors and combines.

A children's playground featuring a concrete abode-type playhouse, an iron grid "magic carpet" and a sand lot for tots.

A Polaroid camera demonstration which not only illustrated the "picture-in-a-minute" technique but provided some 15,000 Soviet visitors with souvenir photographs of themselves.

Brightly colored kiosks where Pepsi-Cola was served free to visitors. Other kiosks displayed American newspapers, magazines and books.

VARIETY OF DISPLAYS

Exhibits on American productivity reflected a strong, growing economy. They included food demonstrations, home appliances, toys, clothes, cosmetics, television hi-fi presentation, musical instruments, a completely furnished model apartment, a home workshop, and an exhibit on packaging techniques. There also was a travel display showing American interest in travel throughout the United States and abroad.

In the food demonstrations, Soviet visitors saw for themselves how an American housewife can dish up a full-course dinner in a matter of minutes, using frozen goods and readymixes. Demonstrators prepared 110 varieties of food.

The clothing displayed consisted of fabrics and synthetic fibers, telling the story of the needle trades unions and the leather industry. There were also sew-

ing demonstrations illustrating the use of American patterns.

A fine arts display included 49 American paintings and 23 works of sculpture selected by a non-Government jury of experts as examples of the variety and wide range of American art produced from 1918 to the present.

A completely equipped color TV studio provided 8 hours of programing daily on a closed circuit, using 16 21-inch color TV viewing screens placed at strategic points throughout the exhibition area. The color camera was trained on Soviet visitors, and tapes played back so that the Soviets saw themselves on the TV screen.

Music in stereophonic high fidelity sound was broadcast to a children's play area and a picnic area.

CULTURAL CONTENT

Displays reflecting America's culture included some 10,000 books and a bookmobile, newspapers from every State in the Union, hundreds of magazines, paintings and works of sculpture, photography, high-fidelity music, record albums, the "Family of Man" exhibit, models and photos of 100 outstanding architectural achievements in the United States, do-it-yourself exhibits, crafts, and performing arts, including the New York Philharmonic Orchestra and an Ed Sullivan variety show, in a downtown Moscow theater. Religious activities were portrayed in many ways.

Several of our groups deserve special commendation, the 75 guides first of all. Chosen from a long list of applicants on the basis of personality, knowledge of Soviet and American affairs, and complete command of the Russian language, they did us proud. Well organized and carefully disciplined, they proved themselves—with amazingly few incidental exceptions—equal to their truly difficult jobs. They took groups about, were prepared to answer any and all questions, not only about the exhibition, but about America as well, and in themselves were exponents of our American way of life.

The models of our style show, made up another group who deserve high praise. Young, full of energy, charming, with a sense of artistry and freshness, they were a gay, happy note, and were much appreciated. Here again was evidenced a fine discipline and an enthusiatic devotion to the job of showing America to the Russians for which they deserve sincere praise.

Mr. Speaker, we can be very proud of the exhibition we sent to Moscow and of the personnel who represented us there. Let us keep to this high standard in all similar adventures yet to come.

Hon. J. Bayard Clark

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BONNER. Mr. Speaker, it was my pleasure to personally know the Honorable J. Bayard Clark who so ably served the Seventh Congressional District of North Carolina here in the Congress of the United States.

Mr. Clark was recognized as one of the outstanding lawyers of North Carolina, a student of government, a Christian gentleman, and devoted to his family. He served with distinction on the Rules Committee and voluntarily resigned from the Congress to return to his home town of Fayetteville, N.C., and resume his law practice, which was always close to his heart.

In his passing, North Carolina and the Nation lose a distinguished leader. To his family I express my deep sympathy.

Interpretation of Labor-Management Reporting and Disclosure Act

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. McNAMARA. Mr. President, I ask unanimous consent that a statement I have prepared, dealing with an interpretation of the Labor-Management Reporting and Disclosure Act, be printed in the appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Many building trade union officials advise me that there have been numerous questions submitted to them both by local union officers as well as contractors asking whether or not particular subcontracting clauses in their existing agreements are covered by the proviso to section 8(e) of the new Labor-Management Reporting and Disclosure Act of 1959. More particularly, the question has arisen by the Plumbers and Pipefitters International Union based on what is known as their fabricating clause. In the plumbing and pipefitting industry, contractors have a collective bargaining agreement with the plumbers and pipefitters local unions, recognizing the pipefitters local unions as the exclusive bargaining agent for all journeymen pipefitters engaged in fabrication and installation of pipe on a jobsite.

The collective bargaining agreement further provides that all pipe installed on the jobsite must be either fabricated on the jobsite or in a shop of the employer. By fabriction is meant the cutting, bending, or fitting of pipe. A pipefitter is a fabricator. His job is to fabricate pipe. Fabrication of pipe can be performed either at the construction site or in a shop.

There is a further clause in the contract that provides that the contractor may subcontract out the pipe that is to be installed on the jobsite for fabrication in another shop provided that the subcontractor by whom the pipe is to be fabricated has an agreement with a local union of the pipefitters and pays the prevailing building and construction wage rate for pipefitters engaged in the fabrication.

This subcontracting clause is agreed upon in order to protect the wage rate and working conditions of the pipefitters. It is a term and condition of employment.

Section 8(e) was written in the Labor-Management Reporting and Disclosure Act of 1959, abolishing hot cargo clauses and other forms of contract boycotting activity. However, there was inserted the following proviso:

"Provided, That nothing in this subsection (e) shall apply to an agreement between a labor organization and an employer of work to be done at the site of the construction, alteration, painting, or repair of a building, structure, or other work."

This proviso embraces and covers all forms of contracting or subcontracting clauses in agreements between building and construction contractors and building trades unions with respect to work to be done at the jobsite. The pipe installed on the jobsite must be cut, treated, and fabricated prior to installation. This is done at jobsite in some jobs or at the shop of the employer, or may be subcontracted by the contractor. This is all a question to be covered by the collective bargaining agreement.

The proviso permits plumbers and pipefitters local unions to bargain with their contractors relative to the contracting or subcontracting out of any fabrication of the pipe or the parties may agree that it may be done at the jobsite.

A question has arisen as to whether the plumbers and pipefitters fabrication clause falls within the proviso of section 8(e). It was the intent of the conferees that the quoted provision 8(e) applies wherever the work involved could be performed at the construction site. Fabrication can be and generally is performed at the construction site and since the fabrication clause relates to work which can be done at the jobsite, the fabrication clause contained in the national and local agreements of united association local unions is within the coverage of the construction industry proviso in section 8(e). This matter was expressely considered and discussed in the conference on the labor reform bill. By use of the phrase "relating to work to be done at the site of the construction" it is my belief that the conferees intended to cover all work which could be done at the site of the construction. The type of building and construction clauses which are outlawed and do not fall within the proviso are clauses which restrict the use and installation of manufactured articles. The proviso, in my opinion as a conferee, was never intended to prohibit a fabrication type of clause where the work or fabrication could be done or performed at the jobsite.

Visit of Premier Khrushchev

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the September 8, 1959, edition of the Elizabethton (Tenn.) Star. This excellent editorial, entitled, "Face to Face," deals with the coming visit of Premier Khrushchev to the United States. The editorial most fittingly points out that we must explore every avenue of peace while at the same time remaining wary and watchful of the Soviet Union.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACE TO FACE

The coming visits of Premier Khrushchev to this country and of President Eisenhower to Moscow certainly reflects the enormous

pressures for peace that come from the people of both the Soviet Union and the United States. The leaders of the two most powerful countries in the world are reflecting, in action, what amounts to an overwhelming demand that every avenue that may lead to peace be explored.

The cold war is not going to end overnight. Mr. Khrushchev is not going to suddenly wave the flag for capitalism, and Mr. Eisenhower is not going to embrace communism. But when men of opposed views meet face to face and talk in frankness the chance for reaching an understanding necessary to coexistence may be enhanced.

We have seen this at levels other than those of chiefs of State or high officers of State. American and Russian artists, scientists and industrial leaders have exchanged visits. In every instance, so far as one can see, the results have been healthy. A new measure of respect has been gained on both sides. So has a measure of friendship.

It would be foolish to expect too much from the Khrushchev-Eisenhower journeys. We must remain wary and watchful with the the Russians. But these spectacular and unprecedented events hold hope for all the peoples of the world.

Dr. Howard A. Rusk, Medical Editor of New York, Heralds Portland, Oreg., as One of Nation's Major Medical Centers

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, the people of Oregon have worked and sacrificed over the years to build a medical center of great distinction and achievement at the University of Oregon Medical School, in Portland. This high quality was recognized during 1959 when the National Institutes of Health granted $1,297,000 for a medical research center building at the Oregon Medical School, to be matched by an equal sum from the State—a sum which the Oregon Legislature has now fortunately appropriated. I was gratified to be able to play a part in the obtaining of this grant, which will add still further to the stature of the University of Oregon Medical School.

Over the past weekend the eminent medical editor of the New York Times, Dr. Howard A. Rusk, visited Portland where he delivered the annual Sommer Memorial Lectures. Dr. Rusk, one of the world's leading authorities on rehabilitation, also participated in the dedication of the Horizon Home, at Portland, for the physically handicapped.

Dr. Rusk's pilgrimage to Portland made a powerful impression upon this man who is so great a symbol in the United States of humanitarianism and medical progress. In the New York Times for September 13, 1959, Dr. Rusk has written an unusually excellent article describing Portland as a major medical capital in general and rehabilitation center particularly. Knowing the high quality of medical care, medical education, and medical research in Portland as I do, I can only corroborate what Dr. Rusk has written.

Several months ago my colleagues of the Senate, under the guidance of the illustrious senior Senator from Alabama [Mr. HILL] voted the medical research facilities funds from which will come the $1,297,000 for the medical research center building at Portland. At that time I spoke of the stellar attainments of the University of Oregon Medical School and of medicine in our State generally. Now I have endorsement and backing from the illustrious Dr. Howard A. Rusk. I ask unanimous consent, Mr. President, that Dr. Rusk's article from the New York Times may be printed in the Appendix of the RECORD.

Title of this fine article is "Rehabilitation in Oregon," and I commend it to my associates of the Senate and the House, who I know share my respect for the good judgment and medical wisdom of Dr. Howard Rusk, of the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REHABILITATION IN OREGON—DEEP INTEREST IN AIDING DISABLED FOUND IN THE NORTHWEST—NEW HOME DEDICATED

(By Howard A. Rusk, M.D.)

PORTLAND, OREG.—Because the University of Oregon Medical School is here, Portland has long been the medical capital of Oregon.

This last week it was the postgraduate medical center not only of Oregon but also of Washington, Idaho, Montana, and Alaska.

The occasion was the first regional meeting of the Northwest Academies of General Practice. Because Oregon is now observing its 100th birthday as a State, the conference theme was the "Horse and Buggy Doctor."

An unusual feature of these sessions was that they were held in conjunction with the Sommer Memorial Lectures.

These lectures for the advancement of medical science are conducted and financed from a trust established by the late Dr. Ernest A. Sommer, an outstanding Portland surgeon and civic leader who died in 1936.

Two lecture series by national medical leaders are presented each year.

The spring program is presented in conjunction with the annual reunion of the Alumni Association of the University of Oregon Medical School. The fall program is held in association with the annual session of the Oregon State Medical Society or the Oregon Academy of General Practice.

The nearly 100 guest speakers who have participated in the lectures since 1941 comprise virtually a "Who's Who in Medicine."

FOUNDED IN 1949

Founded 10 years ago, the American Academy of General Practice and its State affiliates are dedicated to providing continuing postgraduate training to the more than 100,000 general practitioners in the United States. It is now the second largest medical organization in the Nation. Its membership is exceeded only by that of the American Medical Association.

This writer had the privilege of attending the first meeting of the then new American Academy of General Practice in Cincinnati in 1949.

In this column the following Sunday, he wrote: "In the undercurrent and overtones of the entire meeting, one sensed a tremendous, almost feverish, desire to absorb every scrap of information. * * * The eagerness with which they sought medical truth presages a bright future for medical progress."

The meeting here this past week gave evidence that during the last 10 years the general practitioners have not lost their enthusiasm for continuing education.

There is deep interest in rehabilitation in Oregon, even more than in some other States. This results partly from the great number of older persons who have migrated to Oregon because of the climate. Another factor is the large number of hazardous industries, such as timbering.

One of the first major rehabilitation centers to be established on the West coast was the Portland Rehabilitation Center. Portland also has an excellent Goodwill Industries and there is a Department of Physical Medicine and Rehabilitation in the University of Oregon Medical School.

The State also has good programs of vocational rehabilitation and workmen's compensation and active chapters of such major voluntary health agencies as the National Foundation, the National Society for Crippled Children and Adults, United Cerebral Palsy, and the Arthritis and Rheumatism Foundation.

HOME IS DEDICATED

An important step forward in rehabilitation also took place in the neighboring State of Washington last week. Yesterday, the first specially designed home for physically handicapped, cardiac, and elderly persons was dedicated in the Belvedere section of Seattle.

The home, known as the Horizon Home, was built by Eastside Homes, Inc., mass homebuilders. It is one of the a number of such homes being built throughout the United States, patterned after the original Horizon Home built in St. Petersburg, Fla., last spring.

A similar home is now being constructed by James Rosati & Sons, builders of the St. Petersburg home, on the grounds of the New York University-Bellevue Medical Center in New York City. This "Functional Home for Easier Living," which is being contributed by the builders, will be used as a model for demonstration purposes and for the training of disabled homemakers.

It is expected that the house will be dedicated and opened permanently for inspection and study next month.

Address by Former President of the United States Harry S. Truman

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. YOUNG of Ohio. Mr. President, that foremost private citizen of the free world and former President of the United States, Harry S. Truman, recently delivered an address to the Midwest Democratic Conference in Kansas City, Mo.

As one of this country's greatest students of political science, former President Truman has always been a keen observer of the political scene. His remarks are particularly important.

I ask unanimous consent that this statement be printed in the Appendix of the RECORD. I commend this to my colleagues in the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF FORMER PRESIDENT OF THE UNITED STATES HARRY S. TRUMAN

I want to call attention here to the fact that this Republican administration has been a won't-do administration, with a Congress that might be called a will-do Congress.

The present Congress, had it had a will-do administration, would have made the greatest record in the history of the Congress, but the administrative end of the Government was against a farm policy of any sort. They have arranged things so that, while the promises made in Minnesota during the campaign of 1952 were that at least 90 percent of parity in the market place would be met—what that meant, no one knows—the present administration shows parity to stand at only 65 percent.

The farmers voted for it, and I cannot feel sorry for them. They even had an opportunity to remedy the situation in 1956 and didn't do it.

The financial policy of the present administration has been to make it exceedingly difficult for the little man, who has to borrow money, to get loans. They have followed a policy of increasing interest rates, and under the present setup there is a total of about $800 billion borrowed all along the line by all the people which does not include the national debt of the United States. They have allowed the people who lend money to assess the people, who have no other recourse, about $16 billion. The result of that is to increase the income of those people who are in a position to lend money.

This administration has padded the boards and bureaus, set up for the protection of the people, in such a way that the legislation, which was passed to work in the public interest, has been made to work for the special interest classes—The Security & Exchange Commission, the Commodity Credit Corp., the Federal Housing Administration, and the National Labor Relations Board are the ones referred to, and it is particularly true in the Rural Electrification organization. The administration has tried to turn over rural electrification to the private utility companies, which is true right here in this neighborhood. They have tried to make the people who depend upon cheap electricity subservient to the private utilities.

In the Senate, it was my privilege to sit on the committee which examined these utilities, and they have been going right back to the position which the SEC and Rural Electrification were intended to prevent.

They have raised interest rates to fantastic figures. The management of the national debt has been arranged so that the debt at the present time is much greater than at any other time in our history. And there are a great many figures which should show in the national debt which are hidden away in other places. These figures should be shown as a part of the national debt. Instead of the $290 billion debt shown, it is actually more likely to be much over $300 billion.

The cost of the management of that debt has increased at the rate of $500 million a year. The cost of the service of the debt is almost double the cost in 1951 and 1952.

The monetary capital of the country has been moved from Washington back to Wall Street. Franklin Roosevelt and I spent 20 years putting it in Washington where it belongs, just as Woodrow Wilson did when he was President of the United States and as Andrew Jackson did when he took the financial control of the country away from old man Biddle in Philadelphia and set it up in Washington.

People forget very easily. They don't remember the things that were done for their welfare and benefit, and when they let a lot of fakers take over and run the Government, and misrepresent the facts, they are up against just such a situation as we are faced with now.

It is up to the Democrats, after the convention in 1960, to pull us out.

Let me reiterate that as of now I have no candidate for 1960.

And no matter what you hear or read, I have had no candidate.

But let me make it equally clear that I expect to have something to say on this subject in good time.

As a former President, I have more than an ordinary interest in the future of our party and the Nation, and I hope I have the privilege of talking about individuals as well as issues. At any rate, you may be sure I intend to exercise that privilege.

I would like to see our party united, strong, and genuinely liberal and fighting liberal. I would respectfully suggest that all those who are exploring their chances for the Presidency ought to remember that our first goal is to get the ablest Democrat into the White House and not to split our party through bitter contention and rivalry. We must avoid a deadlocked convention. Surely it is not too much to ask everyone to subordinate personal ambitions to the needs of the country, since only the Democratic Party is able to solve the problems that the Republican administration is imposing upon the people.

The popularity of a man is important—but, popularity does not qualify a man for President.

There has been considerable glee among Republicans about the uninterrupted record of vetoes by President Eisenhower which Congress could not override.

This has made it appear that the Congress—with a Democratic majority—has, in fact, sustained President Eisenhower.

Nothing could be further from the truth.

The truth is that a minority in Congress—just barely over one-third of the elected representatives of the people—has managed to thwart over 140 times the will of the American people as expressed by the majority of the Congress. And this one-third—working with a willing Republican in the White House—has managed to impose a minority rule upon the people.

This is the fact, and this is the truth, and this is how the people of the United States are being hoodwinked and defeated by the shameful use and, in fact, shocking abuse of the Presidential veto.

The administration is trying to pin a won't-do tag on Congress, and I am sorry to see some Democrats who ought to know better acquiescing in the acceptance of this label.

This Congress is a far cry from the Republican do-nothing 80th Congress which continually blocked legislation proposed by the President, whereas in this administration very little, if any, legislation has been proposed by the White House, leaving it to the Congress to propose necessary measures.

What we have is not a won't-do Congress, but a won't-do administration which has prevented a Congress, with a majority returned by the people on three occasions, from enacting badly needed domestic legislation.

This won't-do administration, in the domestic field, has been responsible for the mismanagement of the national debt and the worst mishandling of our fiscal and monetary policies in recent times.

In the face of an expanding world economy, and an exploding population, this won't-do administration has vetoed the Nation into a lot of trouble for now and in the future.

Eyewitness to History

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. AYRES. Mr. Speaker, the exchange of visits between President Eisenhower and Soviet Premier Khrushchev is receiving, as it should, widespread attention from all communications media. However, I would like to draw attention to one particular facet of this coverage which I consider to be of great significance.

The Firestone Tire & Rubber Co. is sponsoring a series of 14 special programs on these important events, which are currently being broadcast over the CBS Television Network. The programs, called "Eyewitness to History," are up-to-the-minute reports which convey concisely to the American people the day-by-day procession of events. They also provide analysis and interpretation of the deeper meaning of this exchange of visits.

To accomplish this compete coverage, CBS News is utilizing its full facilities here and abroad. For example, one of the programs just this past Sunday, September 6, featured an analysis of the President's trip to Europe by several CBS News correspondents. These correspondents were specially flown back to the United States for this program.

CBS News, as a national news service, and the Firestone Tire & Rubber Co., as one of the Nation's leading industrial concerns, should receive the highest praise for their efforts to keep the American people informed.

Steel Strike

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MADDEN. Mr. Speaker, on Labor Day, September 7, 1959, I attended the largest Labor Day rally in the history of the Calumet region of Indiana held in the Crown Point (Ind.) Fairgrounds. In former years a gathering of 7,000 to 10,000 people was an outstanding number for a Labor Day picnic. This year, both daily newspapers, the Hammond (Ind.) Times and the Gary (Ind.) Post Tribune estimated the mammoth crowd as approximately 50,000. The headine on the second page of the Hammond Times estimated that the total attending Labor Day fetes in the Calumet region in Indiana in addition to the Crown Point picnic would approximate 120,000. This is the largest turnout for a Labor Day celebration in the history of Indiana.

Without exception, the steelworkers to whom I talked at the gathering are extremely resentful to the attitude of big steel officials in instituting an employment lockout of steelworkers throughout the country. They are familiar with the fabulous profits and the great number of inexcusable rises in the price of steel during the last 10 years. They are also resentful of the fabulous preferential stock concessions given high officials in the steel industry. Some bonuses and salaries reaching one-quarter million to one-half million annually to the executives in the industry.

This lock-out has now continued for 60 days and the American public is beginning to discover some of the facts as to the reason for this inexcusable tie-up in our economy.

I wish to submit a letter from the Voice of the People in the Hammond Times written by a steelworker, P. E. Vukovich of Hammond, Ind. The same speaks for itself.

STEELWORKERS BATTLE FOR ALL OF LABOR

Is the wage increase really the cause of inflation?

Not an evening goes by that the paper doesn't report an increase in price that will affect the workingman's pay check. If it isn't the local or gasoline taxes, it's a public utility requesting an increase in price from the Public Service Commission, and there are many already pending.

Milk and many other food items have increased in price and are continually going up. While the industries are telling us they are freezing wages to keep down inflation, prices are still going up. Everyone knows the 10 cents or 15 cents raise the workingman received last year will never make up in percentage the increased cost of living.

Already, advertising tells us that no matter what the outcome of the steel strike, autos and other products for 1960 will come out with a price increase.

Every union member should be proud of the stand the Steelworkers' Union is taking against big business. The outcome of this strike will affect the whole labor movement in this country. Having been in an 8-week strike myself I know there are many hardships encountered, as proven in past history from the fight for the 8-hour day and the paid holidays which we now enjoy. This time will be no exception.

Every working union member can help by donating his penny a day or equivalent when approached by his job steward or local union representative. Let's back the Steelworkers' Union to help keep the working conditions which they have improved over the bargaining table through the last 20 years, and to keep on bettering them.

With automation entering the picture in all industry, it is the responsibility of the company, as well as the union, to come up with a solution providing jobs for the displaced workingman being forced into the streets, due to progress which eliminated his job.

Let's all fight together, for the future of the union is at stake now. The benefits not taken away at the bargaining table, legislation will undoubtedly pass in order to harness the unions. Let's all back David J. McDonald and the Steelworkers' Union in their fight.

P. E. VUKOVICH.

HAMMOND.

Civil Defense a Necessity

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I am very pleased to see the favorable editorial comment which has appeared since my recent address to the Senate expressing my concern over the Government's present program for dealing with the fallout from nuclear weapons.

Among those editorials expressing support of my position, was the editorial "Time for Uncle Sam" appearing in the Septemer 2, 1959, edition of the Atlanta, (Ga.) Journal.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Atlanta (Ga.) Journal, Sept. 2, 1959]

TIME FOR UNCLE SAM

HUBERT HUMPHREY told the Senate in a recent address that America never will have adequate protection against atomic attacks if the Government is content with a voluntary shelter program.

This argument has merit. The American public will not rise up to meet a crisis unless it senses imminent danger. Somehow or other, we have failed to fear the results of a nuclear war.

A recent study by the Joint Atomic Energy Committee revealed that 50 million Americans would lose their lives because of the nakedness of America's defenses against nuclear weapons.

Senator HUMPHREY proposes a Government-built nationwide network of shelters to protect against atomic fallous which would take more lives than the initial bomb blasts.

After 10 years of civil defense planning, it is obvious that Americans won't and can't protect themselves on an individual basis. Maybe this is one of those occasions when the Government should step in and do it for them.

Science Progresses—But Politics Lags Behind

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, at the Atlantic Congress, which met in London last June, the Honorable Lewis Douglas, former Director of the Bureau of the Budget and former Ambassador to the Court of St. James, made a very thoughtful address, in which he pointed out that science and scientists are revealing to mankind vast new horizons of knowledge, but that the political behavior of man has, on balance, been lagging behind, if not actually deteriorating. As Mr. Douglas says, many new manifestations of excessive nationalism—not patriotism—are emerging in almost every part of the world, old and new. Today, as we read the headlines that the Soviet Union has landed a rocket on the moon, is a good time to give sober reflection to the remarks of Mr. Douglas.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Royal Highness, my lords, and delegates to the Atlantic Congress, ladies and gentlemen, there are others who will address you with far more eloquence and far greater elegance than can I, but none will speak with greater sincerity or deeper convictions about the significance of the North Atlantic Community to the preservation and advancement of the type of civilization of which, with natural national modifications, we are all members. We all enjoy a philosophical, political, and general economic inheritance which is much the same. This is the foundation stone upon which the association of the North Atlantic countries, even in its military aspects, has been established.

One may define this philosophical, political, and economic community in many ways—ways which distinguish our own community from the community which lies to the east. We believe that the individual should be the master of the state, and not the slave. Others believe, as Professor Fisher has put it, in "the tyranny of the state gilded by the ethical beauty of sacrifice."

We may even define our part of the world as that part which has a conscience—a conscience which is pricked and causes us to bow our heads in shame whenever we behave in a manner which offends our generally accepted standards of moral behavior.

But however we may define the civilization to which we all belong, we both instinctively and consciously acknowledge that we are each of us part of it and that for it we are prepared to risk "our lives, our fortunes, and our sacred honor."

The events of the last half century bear mute and convincing testimony to support this naked fact of recent history.

The North Atlantic Treaty, conceived in an atmosphere of apprehension, is one of the startling novelties, perhaps the most startling novelty, of the first half of this century. In one of the most highly revolutionary periods of history, which has witnessed the rise of new seats of authority and the greatest migration of the centers of power within the span of modern history, the North Atlantic Community has been formally conceived and formally established. That the North American part of the New World is irrevocably committed to the preservation of the civilization of which it is an integral part is, I suggest, the most important of the international developments since the turn of the century. Had this commitment existed in 1914 or in 1939, it is doubtful thta we would have been dragged through the frightful experiences—the loss of millions of young lives—the complete disruption of social, political, and economic life, which followed in their wake.

And now, 15 years after the end of the last war, we meet here as individuals drawn from the countries of the Atlantic Community in an attempt—a very serious attempt—to propose various means by which governments of the North Atlantic area may move together in the political, military, and economic spheres of human activity to preserve our civilization and to fashion our community into a more solid and more enduring cooperative bastion of freedom.

In this task, and indeed in the task which confronts governments, I am bold enough to suggest that we are caught on the horns of a dilemma. We are faced with a serious contradiction. On the one hand, science and scientists have revealed to mankind vast new horizons of knowledge. They have delivered into our hands not only an accumulation of knowledge which can be ultimately employed for the greater benefit and glory of peoples everywhere, but also which can be fashioned into the most frightful weapon—more lethal than anything which President Lowell of Harvard University had in mind when he asked the question many years ago, "Is the final gift of the natural sciences to man ultimate destruction?"

At the same time that science and scientists have been bequeathing this body of knowledge to us, the political behavior of

man has, on balance, been lagging behind, if in many respects it has not deteriorated. Many new manifestations of excessive nationalism—not patriotism—are emerging in almost every part of the world—old and new.

In this matrix, science has given us the means to destroy ourselves. Meanwhile, politics, in its broadest sense, seems to be less and less able to deal successfully with the complicated issues which science and technology have created.

This is the dilemma and the contradiction of our period. We are meeting here in this Congress to attempt to persuade our respective governments that time is pressing, that politics must take control of the forces that science has generated, that unrestrained sovereignty, once constrained for almost the stretch of a century from Waterloo to the Marne, must once again subject itself to self-discipline and to wholesome restraints. We are meeting here in the deep conviction that only by acknowledging in word and by deed our common determination, and our willingness to resolve our internal and our particular international problems—in terms of their consequences to our own community and those who are associated with us—will the Atlantic Community survive in all of its greatness in order that men and women in all parts of the world may mold for themselves a future of opportunity and plenty.

Only by resolving the contradiction between science and politics, by restraining national sovereignty, and by cooperative action—economic, political and military—among the members of the Atlantic Community, can issues common to our generation, be adequately met, and an enduring peace finally be fashioned out of a period of uneasiness.

Tribute to Senator Murray

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. JACKSON. Mr. President, the Legislature of the territory of Guam has adopted a resolution expressing the heartfelt and sincere appreciation and gratitude of the people of Guam to the Honorable JAMES E. MURRAY, chairman of the Senate Committee on Interior and Insular Affairs, for his excellent grasp of the problems of the territory of Guam, and for his willingness to assist the people of Guam.

No such resolution could be more deserved. It has been my pleasure to serve under the distinguished senior Senator from Montana as chairman of the Territories Subcommittee of the Senate Committee on Interior and Insular Affairs, and I can heartily second the resolution. Senator MURRAY has vast knowledge of the problems of Guam and has worked unstintingly to resolve them. He has provided leadership and inspiration for those on his committee who have shared his legislative responsibility for the people of Guam. I am sure all of my colleagues in the Senate share in the sentiments expressed in the resolution of the territory of Guam.

I ask that this resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 123

Relative to expressing the heartfelt and sincere appreciation of the people of Guam to the Honorable JAMES E. MURRAY, chairman of the Senate Committee on Interior and Insular Affairs, for his excellent grasp of the problems of the territory of Guam, and for his willingness to assist the people of Guam: Be it

Resolved by the Legislature of the territory of Guam—

Whereas the Honorable JAMES E. MURRAY, chairman of Interior and Insular Affairs Committee of the U.S. Senate, has always been willing, courteous, and sympathetic to the problems of the territory of Guam; and

Whereas the Honorable Senator has always been courteously receiving and otherwise lending a sympathetic ear to the problems of Guam, by arranging conferences and appointments for the Honorable A. B. Won Pat, Speaker of the Fifth Guam Legislature; and

Whereas during the recent trip of the Speaker A. B. Won Pat to Washington, the Honorable Senator was especially kind, and courteous, and as well sponsored or authored legislation beneficial to the territory of Guam, including; particularly, the introduction of a bill to provide the territory of Guam with a resident commissioner to the U.S. Congress, and did also look into the matter of the dual wage system as practiced by the U.S. Navy here on Guam and other matters of concern to the territory; and

Whereas the people of Guam are cognizant to the various matters aforesaid, all of which are beneficial to the territory of Guam: Now, therefore, be it

Resolved, That the Fifth Guam Legislature does hereby on behalf of the people of Guam express its heartfelt and sincere appreciation and gratitude to the Honorable JAMES E. MURRAY for his many and varied assistance in introducing legislation and other matters beneficial to the territory of Guam; and be it further

Resolved, That the Speaker certify to and the Legislative Secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the Honorable JAMES E. MURRAY, Senator from Montana, Chairman of the Senate Committee on Interior and Insular Affairs; to the Presiding Officer of the U.S. Senate, and to the Governor of Guam.

A. B. WON PAT,
Speaker.
V. B. BAMBA,
Legislative Secretary.

Financing of Political Campaigns

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the financing of political campaigns.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DIRKSEN

The financing of political campaigns always has presented a troublesome problem, and there continues to be a great deal of discussion of the ways political campaigns are financed. Various proposals have been made. It even has been proposed that, instead of party funds being raised by contributions from individuals and organizations, that they be appropriated from the U.S. Treasury.

The objective of all of us is to preserve our two-party system and to strengthen it. The continuing struggle between the two parties enables our people to know both sides of every issue. That each party, through its candidates, may present its program, large sums of money are required to finance television programs, radio programs, for literature, for advertising, for maintaining headquarters and staffs, and for all the various media through which debate is conducted and the people obtain the facts to make their decision.

It is my opinion that the funds for this purpose should come from private sources. To be sure, simply by virtue of their contributions, certain individuals and certain groups have been able to exert considerable influence in governmental affairs. It is for us to find ways and means to correct the abuses. One of the ways is to encourage all the people to contribute to the party and to the candidates of their choice. In this way it will be the many, and not just a few, who will be taking an active voice in what is proposed and what is opposed by each political party.

I wish to call your attention to a program which has been undertaken in Illinois by the United Republican Fund to meet the twofold objective of raising the necessary funds for political campaigns and stimulate individual interest in political affairs.

As a result of its experience in 1958, the United Republican Fund of Illinois has decided to raise most of its funds for the 1960 election campaign through a dues-paying membership. This seems to me wise and sound.

The dues-paying membership campaign which has been designated Illinois' "Go for 60" campaign will allow large numbers of people to support the party instead of the limited number who formerly did so. The fund has six classifications of annual memberships which should fit the circumstances of most people who are interested in the success of the Republican Party. These are: Regular $5, associate $10, sustaining $25, contributing $50, sponsor $100, patron $500.

The "Go for 60" dues-paying membership plan has many important advantages. Under it large numbers of voters will assume the responsibilities of citizenship by taking an interest in the party in which they have a financial stake. No longer will there be a reason for those who wish to be active to be left out of party affairs. A modest stake will cause members to show a more personal concern for the party. In addition, the "Go for 60" program can broaden the base of party support, substantially increase the level of party income, regularize party financing, stabilize party organization, improve campaign planning, increase the effectiveness of political expenditures, build party strength and strengthen party loyalty, and greatly increase the number of active party workers to help rebuild the party at the grassroots level.

The obligations of citizenship involve both going to the polls and voting and individual contributions, however small, to the support of the party of one's choice.

Through the "Go for 60" program of dues-paying memberships, the United Republican Fund of Illinois is making an outstanding contribution to our country's political future—to saving the America we know and love.

James C. Worthy, fund president, and his immediate predecessor, Charles H. Percy, Samuel W. Witwer, the fund general cam-

paign chairman, and the fund board of governors deserve thanks and appreciation for their determined effort to solve this important problem.

Thanksgiving Day

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, prepared by me, relating to the theme of Thanksgiving Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In these troublesome times when all the world, and particularly our own great Nation, faces many serious problems that are worrying each and every one of us, it seems to me that a prayer to the Great Almighty can help to sooth our worried brows.

This prayer could and should be offered, regardless of race, creed or color, in the sanctity of the home, be that home a penthouse in Manhattan or a humble farmhouse in the hinterland of our country.

As we all know many, many years ago when this country was founded by the Pilgrims those hearty individuals, who landed on our rugged shores, knelt down upon this blessed soil and gave thanks to God Almighty for bringing them safely to this treasured land.

As a result there and then Thanksgiving Day became a national holiday.

Through the years many great songs have been written commemorating Christmas, and deservedly so. Who is there who does not know "Silent Night," "Adeste Fidelis," "White Christmas," and countless other great musical creations that have been written through the years commemorating this holy of holy days.

But strange as it seems our great composers with their prolific pens somehow or other, although undoubtedly they have tried, have not hit the public pulse through their music in commemorating Thanksgiving Day.

Fully realizing the importance of this day of days, it has come to my attention that two outstanding composers, namely Mr. Jimmy McHugh of Hollywood, who composed such famous songs as "Coming In On A Wing and A Prayer," "I Can't Give You Anything But Love Baby," "On the Sunny Side of the Street" and Mr. Paul Cunningham, immediate past president of the American Society of Composers, Authors and Publishers (ASCAP), who authored such great songs as "I Am An American," "Please Take A Letter Miss Brown," "All Over Nothing At All" and many others that time will not allow me to mention, have at last blended their gifted talents in a musical prayer entitled "Thank the Lord for This Thanksgiving Day."

I have had the privilege of hearing a beautiful rendition of this number sung by Mr. John Gary and recorded by Fraternity Records of Cincinnati. What struck me was the simplicity and sincerity of Mr. Cunningham's lyrical poem, which Mr. McHugh set to music. May I read it to you?

Thank the Lord for this Thanksgiving Day
As we share our pumpkin pie
Thanks to Him our children laugh and play
Underneath a peaceful sky
Rich or poor He watches over us
With a love we can't repay
So for all these blessings from above
Thank the Lord for this Thanksgiving Day.

To me this is a long overdue message of thanks to our Maker for the bounty He has showered upon us. To me, those "peaceful skies" that Mr. Cunningham writes about will continue to be calm and peaceful as long as we take time out—each and every day—to thank the Lord for watching over us. And in conclusion, to me this belated song of thanksgiving is not only appropriate but should be an inspiration to all of us not to forget Him—who never forgets us.

Soviet Education

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JOHANSEN. Mr. Speaker, the report of the first official U.S. education mission to the U.S.S.R. has very recently been issued by the Office of Education.

In view of the substantially greater enthusiasm of the New York Times for this type of tax-financed mission to Moscow than I have, it is interesting to note that the newspaper editorially rebukes "questionable and slipshod" statements in the report.

Under permission to extend and revise my remarks, I include the editorial from the September 7 New York Times:

MOSCOW'S BRAND OF EDUCATION

Youngsters in many parts of the country will be going back to school this week. The kind of education these youngsters receive, the excellence with which they are taught, the industry with which they study, all these will play important roles in determining our Nation's future. All this has always been clear, but it has become a major fact of public consciousness only in the last few years under the impact of increasingly successful Soviet technological competition with the United States. The realization that Soviet scientific prowess has its start in the schools has stimulated a widespread study of the Soviet educational system, one product of which is the report released Saturday on the observations in Russia of the Derthick team which visited that country somewhat over a year ago.

In the nature of the case it will be difficult for Americans to read this report without making comparisons between the Soviet system of education it describes and our own. Widespread public appreciation here of the emphasis on science and mathematics in Soviet schools has exerted an influence in our own schools for greater emphasis upon those subjects. The 17 characteristics of Soviet education this report praises are likely to be studied with particular care by those who will have in mind transferring positive aspects of Soviet schooling to our own schools.

Yet precisely because of the potentially powerful impact such a report issued by our Government and signed by our Commissioner of Education, may have on our own education, it is distressing that even superficial examination can find in this document questionable and slipshod statements which must throw a shadow over the document as a whole. How can Americans speak of Soviet teachers as well paid, for example, when elsewhere the report implies large numbers of Soviet teachers must receive the equivalent of less than $100 a month? Where is the proof of the claim that from 10 to 15 percent of Soviet national income is spent on education? How can there be talk about the lack of instruction on other economic systems in Soviet schools when a prime purpose of Soviet education is to present a deliberately perverted picture of non-Communist nations and economic systems to Soviet youngsters so they will believe more ardently in communism?

H.R. 6295—Mine Safety Legislation Is Imperative

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BENNETT of Michigan. Mr. Speaker, I have introduced H.R. 6295 to help the States, the mineowners, and the miners reduce accidents and promote mine safety in the metal and nonmetallic mines. The necessity of the enactment of such legislation was brought out forcibly in the 12th Congressional District, which I represent, on June 1 of this year through the disaster at the Sherwood Mine in Iron River, Mich.

My bill, H.R. 6295, would empower the Secretary of Interior, or his agents, to inspect and investigate metallic and nonmetallic mines and quarries whose products enter or affect commerce. The Secretary of the Interior would report to Congress annually giving the findings of the inspections and recommendations for any additional needed legislation. These inspections would provide information relating to health and safety conditions in the mines and the cause of accidents or occupational diseases originating therein. Such information would provide a basis for determining the best use of public funds for the advancement of health and safety of the miners, for the preparation and dissemination of educational materials for that purpose, and for the development of adequate reports to the Bureau of the Census and the Congress. It would promote cooperation between Federal and State agencies in improving mine safety. My bill also includes authorization for the establishment of a six-member advisory committee composed of metallic and nonmetallic mine and quarry owners and workers.

Mining is a hazardous occupation and the business of mining safety is a subject that all of us must be interested in if human lives are to be saved. Statistics show there are unnecessary deaths of 75 miners and injury to 5,000 others per year in the metal and nonmetal mining industry. I have long been interested in this subject and have given every effort to have an up-to-date safety program initiated. I do not believe anything can take the place of an on-the-spot inspection of a mine. Inspectors making periodic inspections would render a real contribution in cutting down the rate of accidents. Mine management is safety minded and with the Bureau of Mines making periodic inspections this would help the companies and save considerable expense for them because of the inspectors' recommendation to the companies.

I know you are not callous toward these conditions and I am sure you will

agree the existing "crazy quilt" variety of inadequate mine safety standards and poor enforcements should be abolished in order that proper and adequate protection is given to all those concerned.

On behalf of the many miners concerned in the United States and in the interest of more effective mine operations and a stronger, healthier Nation, I urge the Congress to enact my bill into law.

Let's Get It Straight, Mr. K.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Saturday, September 12, 1959, which takes the form of a memo to Red dictator Khrushchev:

MEMO TO RED DICTATOR: LET'S GET IT STRAIGHT, MR. K.

TO NIKITA KHRUSHCHEV:

You should understand exactly why you have been invited to visit this country.

No one here imagines you a true friend of peace. You and your Communist partners in Peiping have kept Europe and Asia in turmoil nearly 15 years. Even now you stir fresh trouble in Germany and far-off Laos.

When we look upon you, we see the symbol of a regime which grasps for world dominion. You are the physical embodiment of a plan of conquest which has forced immense armament burdens upon most of the world.

Essentially this arms output is sterile, representing a waste of billions in resources and human effort. Yet it is necessary to save men's freedoms.

This great weight is especially crushing at this turn in history. The luckier, more prosperous nations struggle with the problems of a swelling population whose needs must be served at constantly inflating cost. The less fortunate backward lands, long schooled in poverty, strive painfully to lift their millions to higher levels of living.

You were not asked here, either, because anyone who knows the facts thinks you are humanity's benefactor.

Besides saddling the world with costly arms, you have kept your own people for decades at little better than depression levels, have sucked your satellites dry, and have preyed on the economies of all who would let you. All this in the name of friendship for the downtrodden.

When, as in the historic case of Hungary in 1956, one people dared to strike a blow to get free of your strangling grip, you responded with bloody repression which stunned even the most gullible of the world's uncommitted peoples.

You have, in short, done nothing to earn for yourself a respected place in the society of nations. On the contrary, you have done much to thrust yourself everlastingly beyond the pale fixed by decent men.

You are here—in simple fact—because by methods which the free world abhors and could never condone you and your associates have risen to a pinnacle of great power, power which we must perforce recognize.

We invite you in the remote hope that when you see America in its full panoply of energy and capacity and will to freedom, when you talk with President Eisenhower and other top Americans, you may get a glimmering of this truth:

You cannot reduce us and our free world friends by force of arms without leveling your own land to rubble. You cannot win a "peaceful competition" with us, either, for all that you may practice a thousand deceits and stratagems in the political and economic marketplaces around the globe.

You can endure only as you understand that we and our free friends intend to endure, as we are, unmolested by aggression of whatever sort from the Communist cults of power in Moscow and Peiping.

If we can infuse that much sanity in your outlook, and perhaps into your programs and plans, then we may be glad we asked you here, even though we detest everything you stand for and regret deeply the circumstances that have elevated such men as you to a position of decisive importance for the safety of free humanity.

Labor Reform Legislation

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BENNETT of Michigan. Mr. Speaker, I have examined carefully the provisions of the conference report on the labor management reform bill and I intend to vote for it. I congratulate both the Senate and the House conferees on reconciling and adjusting differences between the Kennedy-Ervin bill and the Landrum-Griffin bill to arrive at a compromise, one which I can accept and which I believe will be in the public interest. Extremists, both in labor and in management, of course, will not be satisfied.

I have consistently favored legislation which could prevent excesses and abuses by unworthy, dishonest, and disloyal officials who have contrived to gain positions of power in the labor movement but have opposed legislation which, taking improper activities of union officials as its springboard, would punish organized labor or impair or even abolish legitimate organizational and collective bargaining activities aimed at improving the welfare of the working people of this country.

Mr. Speaker, I believe my position is in harmony with that of the great majority of my colleagues. Sincere and intelligent men may well differ, however, in applying such general principles to the specific provisions of any measure.

As I studied the various versions of labor-management reform legislation, it seemed to me that the Shelley bill, the Elliott bill, and the Kennedy-Ervin bill, were too weak and would not reach effectively the racketeering and abuses of power by officials of labor unions exposed by the McClellan committee.

On the other hand, it seemed to me that the Landrum-Griffin bill, in providing, for example, for civil damage suits and other sanctions against unions peaceably exercising the right of free speech to persuade the public not to patronize an employer who refuses in good faith to bargain collectively with organizations of his employees, would strike a severe blow at efforts of employees to protect and advance their economic interests through unions. In my opinion this would constitute a major setback in the progress of the labor movement progress which has been accomplished with great difficulty and over bitter opposition in the last two decades.

Neither my colleagues nor my constitutents should be surprised that, on an issue of this magnitude and of such vital concern to the working people of America, I would resolve any doubts with respect to the Landrum-Griffin bill in favor of the working people and the labor movement. Although I voted for the Taft-Hartley Act, the last labor legislation to appear before us during my service in Congress, which proved not to be a "slave labor" law, I consistently have spoken for and voted for legislation both in labor and other fields which I believed to be in the interest of the working people of America. That position is clear not only from an analysis of my votes and statements, but it is also clear in the support I have enjoyed, not only from individual working men and women, but from labor organizations which, because of the positions I have taken, have volunteered their help, including financial contributions, in many a hard-fought and close congressional compaign.

I do not apologize for the reputation I have gained over the years for being in favor of the common man. Rather, I am proud of it.

Mr. Speaker, I have no intention of departing from the position I have taken on labor first, because I believe that position is in the best interest of the United States of America; second, because I believe it has the approval of the people whom it is my privilege to represent in the House of Representatives. But, Mr. Speaker, I am happy that the conferees between the Landrum-Griffin bill and the Kennedy-Ervin bill have reshaped the labor-management reform bill in such fashion that I can support it in the belief that it will curb abuses without stifling legitimate union activities.

Buy American Act

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include my letter mailed this day to the Honorable Joseph Campbell, Comptroller General of the United States:

SEPTEMBER 14, 1959.

HON. JOSEPH CAMPBELL,
Comptroller General of the United States,
General Accounting Office Building,
Washington, D.C.

DEAR MR. CAMPBELL: It has come to my attention that you now have before you a

case which raises a number of fundamental points regarding the present practices of determining reasonableness of costs of bids of domestic companies on Federal procurement contracts involving the Buy American Act. I assure you that this is a matter of deep concern to me and many of my constituents and I think one of great importance to the country as well. I refer to your file B-139912.

Congress passed the Buy American Act to assure our citizens that the Federal Government would spend the taxpayers' money to purchase goods grown or produced in the United States, produced with American labor and manufactured in American factories. This is the basic intent and purpose of the Buy American Act. The few Congressmen who spoke in opposition to the bills which led ultimately to the Buy American Act raised all the questions we hear today in support of a free trade foreign economic policy. The majority of the Congress considered these opposing arguments, but then proceeded to pass the measure by overwhelming votes in both Houses of the Congress. The majority decided that the Federal Government should stand firm in its loyalty to its own people and enterprises.

The Congress, however, did not wish to leave the Federal Government exposed to unfair or unreasonable bid offers from domestic producers, therefore, the act provides that the Federal Government shall purchase American products unless the cost of the domestic product is unreasonable. The Congress did not attempt to define what would constitute an unreasonable price offer since such a determination necessarily involves a number of variables from one product to another and from one set of specifications to another. Instead, the Congress charged the agencies with the responsibility of determining factually whether or not a low American bid is reasonable in cost whenever a lower foreign bid is involved.

Presently the departments and agencies of the Federal Government are following the requirements of Executive Order 10582, which provides essentially that American bids are to be considered unreasonable in cost if they exceed foreign bids by 6 percent or more. This means that the determination is not made on the basis of what it costs to manufacture a product in the United States with American labor and under American laws, but on the basis of bid prices of foreign producers—prices which, themselves may or may not be reasonable costs offers in terms of low wage economies.

Determination on the basis of foreign price offers is clearly in conflict with the letter and spirit of the Buy American Act. The debate in Congress of both the House and Senate of the bills which led to the adoption of the Buy American Act repeatedly referred to the need for protecting American industries and American jobs against low foreign wages and against devaluation of foreign currencies. The debate also referred to the need for strengthening the determination of reasonableness of costs in several statutory provisions in existence just prior to the passage of the Buy American Act, provisions which had been diluted because reasonableness of costs had been determined on the basis of foreign bid offers.

I realize, of course, that the Comptroller General has the basic responsibility of auditing Government contracts to assure economy of Government purchase. At the same time, as you well know, the Comptroller General audits these contracts to assure that they strictly adhere to the letter and spirit of acts of Congress. This also applies to the Buy American Act. In passing this act, Congress recognized that the Federal Government has a special obligation of loyalty to the American people as taxpayers, business entrepreneurs, and salary and wage earners. The object and purposes of the Buy American Act therefore require that reasonableness of costs be determined on the basis of costs of producing an article in the United States, under American laws, with American labor, paid American wages and under the American tax structure—Federal, State, and local. It is improper and illegal that these determinations be based upon the bid price of foreign producers. If the Federal Government seeks, through the use of the 6-percent differential, to save money in the favor of the public interests requirements of the Buy American Act, then instead of a 6-percent differential, a differential which exerts pressure on foreign producers to reduce their price offers would be more appropriate, then the Federal Government will save not merely 6 percent, but many times that percentage. These dollar savings, however, will destroy American jobs, business enterprises, and the entire American industries.

Certainly objectives of this sort are in direct violation of the basic intent of the Buy American Act. Such interpretations should not be tolerated.

This case goes to the core of the Buy American Act, a ruling requiring departments and agencies to make a factual determination of the reasonableness of the bids of domestic producers on the basis of costs to produce in the American economy is needed to sustain the Buy American Act and a considerable number of American jobs and American business activities. I hope your decision will lead to that end.

Sincerely yours,

JOHN H. DENT,
Member of Congress.

Citizenship Day, September 17, 1959: A Fitting Example for Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RABAUT. Mr. Speaker, much comment has been made about the impending visit to this country of Russian Premier Nikita Khrushchev. That he is coming is a fact which must be accepted. It would be well, I think, to accentuate the positive while he is here. The power of positive example is the best foot we can put forward. In this connection, I should like to point out that by joint resolution, the Congress has requested the President to designate the week of each year commencing September 17 as Constitution Week. What better or more positive example could we show than to devote a week during his visit to honor and reflect on the Constitution of the United States?

In addition, by another joint resolution, the Congress has designated the 17th day of September each year as Citizenship Day in commemoration of the signing of the Constitution of the United States of America on September 17, 1787. It has come to my attention that the District of Columbia plans a ceremony on Citizenship Day. The essence of the ceremony will be an actual session of District Court to be convened on the monument grounds by Judge Holtzoff for the purpose of swearing in new citizens. Here is an even more active and concrete example for our Russian visitor. What more fitting example of tribute to the principles we believe in than to see throngs of people standing in the shadow of the Washington Monument to witness the coming into their ranks of new citizens? Remember that this impressive function will take place on the anniversary date of the completion of the basic document from which all rights, privileges and liberties of our citizens, new and old alike, derive. This is a powerful, positive example which everyone should support. Those who can attend the Citizenship Day program should be at the Sylvan Theater at the Washington Monument no later than 2:30 p.m. this Thursday.

The United States Lags Behind Russia in the Study of Oceanography

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BONNER. Mr. Speaker, some time ago America was amazed with the news of the first man-made satellite to be put in orbit, Russia's sputnik. Today we are startled with the news of Russia's flag being planted on the moon. In the news we also read, "Soviet Launches Atomic Ice Ship."[1]

A year ago the Congress authorized the construction of an atomic icebreaker, and the President vetoed the bill, giving the reason that we were not financially able to build it.

I include in my remarks, Mr. Speaker, the article announcing the test runs of the 16,000-ton ice ship, *Lenin*.

SOVIET LAUNCHES ATOMIC ICE SHIP

LENINGRAD, September 12.—The Soviet atomic-powered icebreaker *Lenin* was launched today and will set out on test runs within the next 48 hours, the Soviet news agency Tass announced.

The dispatch said the 16,000-ton vessel left its berth in the admiralty shipyard in Leningrad and headed out into the Neva River.

The icebreaker uses three atomic reactors. A recent announcement said the engines using electricity produced by atomic power will have 44,000 horsepower.

[1] Russia displayed in New York Harbor this past week the greatest ship afloat in the study of oceanography. It is a floating laboratory exploring scientifically ocean life, currents, ocean bottom, and every other phase of the mysteries of the seas. It is unfortunate that the United States is far behind in this field and lacking in such a comparable facility.

Appendix

George E. Clark, Retiring Bridge Tender After 35 Years in Essex County, Mass., Service

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to pay tribute to George E. Clark, of Lawrence, Mass., who has many courageous deeds to his credit during his 35 years of service as a bridge tender in Essex County, Mass. The following article about Mr. Clark appeared in the Eagle-Tribune, Lawrence, Mass., on September 12, 1959:

THIRTY-FIVE YEARS IN COUNTY SERVICE—LOCAL BRIDGE TENDER WILL RETIRE ON OCTOBER 1

A familiar colorful figure will be missing from a long held post come October 1 when George E. Clark, 118 Brookfield Street, retires after 35 years and 6 months in Essex County employ, including 33 years as a bridge tender. However, those who know him best say he will be far from inactive, though retired.

He is a man who has often been commended but never decorated for numerous acts of heroism as he went about caring for the Duck Bridge in the past 25 years, and before that, on the old Falls Bridge, since renamed the Edward F. O'Leary Bridge. Before his appointment to these posts, he worked as a painter, rigger, and iron worker on both bridges.

However, two bills now pending in Congress and in the Senate may result eventually in his being presented a gold medal.

Ever mindful of the safety of others, there are testimonials and citations that show he has saved many lives—both by actual deeds of daring and by timely warnings—yet various legislators cognizant of his deeds have failed thus far through the years in various bids to gain him the recognition of the coveted award, which has been held back on different technicalities.

ALERTED WORKMEN

For instance, there was the time on January 11, 1935, when the so-called Falls Bridge was being dismantled for renovation during flood conditions. He had been detailed to watch conditions as the river continued to swell and huge cakes of ice came crashing over the dam. About 5 a.m. on the day in question, after an all-night vigil in the cold, he noticed an impending danger due to damaged understructure, and he notified police. This resulted in police roping off the entrances and the bridge being closed off, so that a rerouting of traffic was accomplished.

His judgment was proven some 3 hours later when three 125-foot spans of the bridge collapsed. By his action, some 65 men working on the bridge had been prevented from going on it. They were standing on the street in safety when the terrific pressure of ice and rising waters sent the bridge crashing without any audible warning. He was commended for his alertness at the time by his superiors and the public safety department. He still holds a cherished letter from Charles R. Vose, then chief of police, which tells of his alertness in sensing the danger and adding "it was considered at the time that his action saved the lives of the 65 men, and probably of others who might have crossed the bridge."

It is on the basis of the above act that his name has been submitted for outstanding recognition.

MANY COMMENDATIONS

He also holds various commendations for his efforts from different public officials and administrative bodies through the years for his acts of heroism, duly accredited by witnesses.

Only recently, members of the city council and the governing bodies of the surrounding towns have recognized his services with letters of appreciation for work well done.

Typical of the letters Mr. Clark has received is the one from the chamber of commerce, which states that the chamber took pleasure in congratulating him upon the occasion of his retirement after 35 years of public service. "The records of the chamber many times refer to suggestions you have made for constructive improvements in our community. You have always been one who went far beyond the normal service to the community in supporting many worthwhile projects for the good of Greater Lawrence We are pleased that your retirement will in no way diminish your interest in community service. We hope you will enjoy many happy years of retirement, which you have richly earned," the letter states.

PUBLIC-SPIRITED CITIZEN

Through the years, he has also been extremely interested in various activities in the public interest and has worked untiringly to see these things brought to fruition. He was a prime mover in the Merrimack River flood control project and the eventual announcement that the Hopkinton-Everett Dam—largest of its kind east of the Mississippi and estimated to cost $30 million—was now a reality with ground-breaking ceremonies to be held shortly with Vice President RICHARD M. NIXON officiating was most pleasing to him. For several years past he has labored diligently to get action started on the project. Because of his unflagging interest in the project, his name had been added to the citizens' committee making arrangements for the ceremonies. He is the proud possessor of one of the pens used by President Eisenhower in signing the control compact law.

He is credited with introducing the bill that led to the erection of a footbridge over the railroad tracks from Boyd to Kent Streets, an effective means of getting across the tracks in the shortest possible route between points. He had the bill filed in the State House, Boston, in 1952 asking for $40,000 for this project which was eventually approved.

Another law in which he took an outstanding interest was one which lowered from 65 to 62 the age at which women may retire and allowing qualified permanently disabled persons to start collecting cash benefits at 50. Under this law, some 800,000 wives, widows and workingwomen from 62 to 65 were able to take advantage of the earlier retirement age.

In 1942, when the late Frederick Butler filed a bill asking for $56,000 for a new deck and grading for the Duck Bridge, Clark made it a point to speak up for the bill and helped effectuate the ultimate reconstruction of the bridge which replaced planking with the metal grating now on the bridge flooring.

More recently he took an active interest in the effort to have the Post Office Department issue a special stamp commemorating the first Postmaster General, Samuel Osgood of North Andover. He petitioned the present Postmaster General through Senator LEVERETT SALSTONTALL that he and his advisory committee give favorable consideration to such a stamp, but it was ruled that since Mr. Osgood was born in 1748 the stamp would not conform to the policy which the Department had established for commemorating stamps. However, the Department has promised to keep the Osgood stamp in mind when it can be issued in connection with some more significant anniversary.

His life-saving deeds extend back through the years when he was a younger man but still vitally interested in the safety of his fellow man.

NUMEROUS RESCUES

The retiring bridge tender, who will be 70 years of age on September 21, was but a boy when he rescued two boys, 6 and 7 years of age, from drowning in the Merrimack River, in 1900. Six years later, he rescued two men in a drunken condition from an overturned boat in the river while he was attending an outing.

In 1924 he recovered the body of a girl from the river and 20 years later saved a disabled veteran who was attempting to jump from the Duck Bridge. In 1945, he restrained a woman attempting to jump from the same location. An Andover woman was also restrained by him on the Duck Bridge in 1940 and a year later a Garden Street woman took iodine, jumped over the railing and was rescued by Clark. In 1939, and employee of the Wood mills dropped his pay out of a window and was in danger while trying to retrieve it from the water, until Mr. Clark came to his aid.

Back in 1932, three boys built a raft under the Joseph W. Casey Bridge and drifted downstream until the craft hit the abutment of the Duck Bridge and broke up. One of the boys managed to swim ashore but the other two had to be rescued.

FELLED BY ACID FUMES

His deeds have not always centered around his work on the bridges.

He was hospitalized on August 7, 1951, when four bottles of acid fell from a truck and broke on the roadway on Island Street at a time when many women were passing by on their way home from work. Clark noticed the predicament of numerous women affected by the acid fumes, so he went in and started leading them to safety. As a result he was badly burned and was blinded and was on the danger list at the Lawrence General Hospital for close to a week. He lost the sight of his left eye years ago and for 12 days he could not see out of the right eye because it had been burned by the fumes, as well as parts of his body.

On June 3, 1950, he had jumped in front of a diesel train that was express from Dover, N.H., to Boston to push a woman out of the way of the train which she had not heard due to defective hearing.

On another occasion on April 11, 1951, he spotted two boys on a home-built raft

floating down the Merrimack River while the river was very high. Sensing that they could be swept over the dam to their deaths, he directed the boys to keep paddling toward the north shore. He stationed himself on the iron catwalk near the dam and as they came near, some 50 feet away from the dam, he pulled them off the raft and onto the catwalk. Seconds later, the raft was swept over the falls.

In August 1939, Mr. Clark caught a gas smell on the O'Leary Bridge and investigated. He had the bridge closed to traffic. The next morning it was found that the 12-inch gas main had broken with the expansion of the new bridge. His action possibly saved the new half million dollar bridge from being blown up.

Mr. Clark is a tireless worker in affairs in which he takes an interest. The current resurfacing of Canal Street is due largely to his endeavors. His ability to get things done is largely the result of his perseverance and his personal contacts with those having charge of such matters.

ACCOMPLISHMENTS

To enumerate all his accomplishments in a lifetime spent in this city would take a volume.

He was credited years ago with the discovery of a fire in progress on the roof of the Premier Theater at a time when 280 persons were witnessing a performance. He sounded the alarm and alerted management so that all present could be evacuated without injury. Also, he was present at the rescue of three men in a cave-in at Hampshire and Essex Streets when the F. W. Woolworth building was being erected. He sounded the alarm for the near disaster and was digging to keep the sand from covering the men when help arrived.

MAY GET MEDAL

Deeds of this nature are many and it may yet be that a man who has spent more than his normal share of a lifetime in helping to save lives will be rewarded by receiving a medal. Currently before the Banking and Currency Committee is House bill 1538, filed by Congressman THOMAS J. LANE, for this purpose. Senator LEVERETT SALTONSTALL filed a similar bill in the Senate 6 years ago.

Mr. Clark was born in Providence, R.I., and has lived in this city since infancy. His father, the late Joseph Clark, served 2 years in Company I, First Rhode Island Volunteers with U.S. Senator THEODORE GREEN in 1898. He reenlisted a year later and served 2 years in the Philippine Islands with retired Gen. George Marshall in Company K. Another Lawrence man with Company K was the late James Joyce, a plasterer from "across the spicket."

FATHER OF SEVEN

Mr. Clark is married to the former Lillian Urquart and is the father of six sons and a daughter, six of whom saw service in World War II. He was a Republican candidate for U.S. Representative from the seventh district in the 1956 primary and was also a candidate for the same office in 1942. He was a candidate for the office of Governor's councillor on the Republican ticket in 1952.

He has been a constable for the past 30 years and was precinct officer of ward five beginning in 1918 for 6 years. He was a call fireman for 7 years, named in 1918. He is a member of the Republican city committee and was named to the Republican State convention seven times.

Members of his family include his six sons, Ralph, a police officer in San Francisco for the past 7 years; George of North Andover, employed at the Watertown arsenal; Charles H., an electrician in the Navy yard, San Francisco; Raymond J., at home, a body and fender man with a local motor company; twins, William G., a teacher at the Beth Page High School, Oyster Bay, Long Island, and Walter, with the Merchant Marine; a daughter, Mrs. Genevieve Steadman, who lives in Andover and is a telephone operator at the Lawrence exchange. There are 21 grandchildren and one great grandson.

What Khrushchev Is Like

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, on the eve of the arrival of Premier Khrushchev's visit, I ask unanimous consent that an article which I prepared, which appeared in the New York Post of September 13, and excerpts of which appeared in the Washington Post and Times Herald of September 14, 1959, be printed in the Appendix of the RECORD.

This article was based on my visit with the Soviet Premier last year on my visit to the Soviet Union.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Post, Sept. 13, 1959]

WHAT KHRUSHCHEV IS LIKE

(By Senator HUBERT H. HUMPHREY, Democrat, Minnesota)

I. INTRODUCTION

Nikita S. Khrushchev is a complicated human being with many moods. He is also a consummate politician, with my motives. And he has an alert perceptive mind. Nearly all his public statements are coldly calculated. I believe, although his phraseology may be spontaneous. He will often be telling the truth—at any time that he calculates that the truth will do him some good.

But his deceptively simple statements go first one way, then another. In one moment he will be expressing warm friendship and saying that he admires President Eisenhower. The next moment, he will be boasting about his missiles or the hideous hydrogen bomb.

All of us now have a problem of judging just which statements he means. We will have that problem until the day when Russian deeds more closely match their words. But we can learn something by listening to and studying Mr. Khrushchev.

After the 8-hour conversation I had with him a few months ago in his office in the Kremlin, I went to the American Embassy and dictated from notes I made during our discussion.

Since then I have changed some of my impressions, but I think it significant that Khrushchev in all his speeches and impromptu debates since, has brought up no major new topic. He is now bringing into the open some of the verbal roughhouse and boasting of strength which he has given to me and others. Is this open debate healthy for the peace of mind of the world? We will soon see.

In any case, his public and private personality and manner are not remarkably consistent. In a private conference he is deliberate and composed, always probing, nearly always controlled, never raising his voice. Of course his personality—to a great extent—and his policy, to a lesser extent, seem to be contradictory wherever he is.

Yet I think there is a basic psychological pattern behind many of his reactions, and many other observers agree that it is a key to the present-day political outlook of the Russian leaders.

A competitive man

That meeting of ours gave me an indelible impression—here is a man with an almost sentimental humility at times, who will switch over to an arrogance so extreme that it seems irresponsible. Thinking it over, I concluded that some of his cockiness and threatening manner comes directly from his feelings of inferiority. He and Russia are new arrivals in the great and grim business of 20th century power diplomacy. He has some of the same swagger which you may find in the "get rich quick boys" who has just muscled his way up in society.

Like all such comparisons, it is dangerous to take this too far. We cannot even compare Khrushchev's competitive spirit with the competition that a small firm, now become powerful, might have toward General Motors. He and Russia are engaged in trade competition with us, by the way, but they are also engaged in far more serious conflict on the social, ideological—and weapons production fronts. This particular new arrival throwing his weight around, could blow up the whole town. But let me be clear, the Soviet Premier is sophisticated in his chosen profession, I am not implying ignorance when I say new arrival.

But neither he nor his people feel comfortable in their new position in the world. The Russian people admire us keenly, they almost worship such names as Ford, yet at the same time they distrust capitalists. They want greatly to equal our production, to pass us, and to truimph over us—and at the same time or at in-between times, they still feel inferior, they look up to us, and they want our help, but hate to admit it.

A very human being

These are national attitudes reflected as a matter of policy in Khrushchev's statements—and on top of that he is personally competitive. He frequently makes startling competitive statements about other Soviet leaders. If you tell a joke, he wants to top it. When I told him that I expected the Democrats would soon be in power, and then our production and our ideas "will run you out of Gorki Park" he seemed to like it. At that point his mood was such that I am confident he felt rather pleased that the great American power might extend itself to compete with Russia—it flattered him. He laughed, although I meant this seriously, that there would soon be more exertion on our part. But he immediately set out to answer my comment.

If you know how a younger athlete may admire, and complete with, and be inspired by, and at the same time resent an older athlete, I think you have a basic clue to Mr. Khrushchev and to understanding the Russians. At the time when the younger athlete has finally developed and matured, the most inflammatory thing the older can do is to be condescending. Khrushchev personally and politically wants acceptance from the United States. I say this regardless of what arrogant remark he may make the same day you read this.

In my opinion we can expect trouble in communications at any time that people dealing with Mr. Khrushchev forget that Russia today is a great power and her First Minister is an able and resourceful man. A most likely error is to underestimate him, and often in the past, our leaders have underestimated the Russians. A few years ago an American official spoke of the Russians and the "oriental mind." This implies that some human beings are just naturally different. This sort of nonsense does us a great disservice. The Russians are human

beings, like the rest of the human race. We may find the Russians hard to understand, because their value systems are different from ours, but they are human beings, they have human minds precisely like ours, and we must find humane ways to communicate and to compete.

Mr. Khrushchev in particular has a receptive mind and very human traits.

Physical appearance and manner

In physical appearance, Mr. Khrushchev is well-groomed, rotund, rosy cheeked and bubbling with vitality. His energy and his engaging smile when he cares to smile, lend themselves to political appeal.

Sometimes he seems guilty of bad manners or ignorant of good taste. But most of the time he is out-going, gregarious, and hospitable. True, we have to remember that he and his colleagues can be coldly ruthless. We remember that they ordered the bloodbath of retaliation against the Hungarian uprising, for example. But there is no use denying that he seems friendly to the Russian people when he walks through the crowds.

Since he is 65 and overweight, it is worth noting that he has tremendous physical stamina. His physician has told him to eat and drink less, and he has talked to me and to half the world about his kidney trouble.

When we first shook hands, as the Premier walked around his desk to meet me, I formed a lasting impression, this man has a lot of bounce. He was well-dressed, in a blue suit, a white shirt with simple cuff links, and two small red stars on his jacket lapel. This formality was suited to what we had both expected would be a formal interview, but he seems more fond of informal clothes, and at his summer place he receives some visitors, as he did Eric Johnston, while wearing a cotton suit and no tie. Our meeting quickly became more informal.

At no time in our lengthy interview did he appear tired, and when we ate an impromptu supper he seemed relaxed and obviously not nervous as to what this unexpected discussion was doing to his schedule. Several times he did refer to his age, as if it were quite advanced, or as if he were worried about his health. Recent pictures have showed him looking somewhat haggard. My conviction is that he has extraordinary physical energy and consequently drives himself to exhaustion—as was indicated by the report of his visit to Poland. Yet after one night of good sleep in Poland he snapped back. At the time I say him, he was rosy-cheeked, bright-eyed, and healthy.

Mr. Khrushchev is a talker

Mr. Khrushchev is a talker. He is fond of oratory and conversation and debate, and quite good at all three. Of course we hear of his making speeches 3, 4, and 8 hours in length. Pioneer America has also had a tradition of debate and also of oratory. Perhaps this has something to do with distances and the frontier. In Nebraska, in the days of William Jennings Bryan, or in Wisconsin with Senator LaFollette, a 2- or 3-hour speech was considered just par. When I was a college student in Minnesota, Gov. Floyd B. Olson, who had been ill, rallied and made a memorable speech nearly 3 hours long, which literally brought tears to the eyes of the audience, many people standing stock-still for that entire period. Perhaps when people travel 150 miles to go to a political meeting they want to get their money's worth, so to speak. Trotsky and Lenin used to make marathon speeches, the Russians respect the man who is fast on his feet, and has staying power.

In any case Mr. Khrushchev will be a hard man to interrupt. He apparently loves being with crowds, loves parties and dinners, conventions and tours, wherever he will find opportunities to talk and—sometimes—to listen.

His conversational style is quite vivid, forceful and pungent. He sometimes illustrates with gestures, or by pointing at a map, or picking up an object. Not only does he use Russian proverbs or homey sayings, but he uses vivid metaphors. "Berlin is a bone in my throat," he would say, when he was insisting to me that the only reason we would have troops in Berlin was to prepare to strike against Russia.

At another place, talking about his thesis that America should "learn to live with various kinds of economic and social systems," he said, "only the blind cannot recognize different colors." I don't know whether this is a Russian proverb or just a sentence he coined on the spur of the moment.

The use of metaphors or old proverbs may sometimes be used as evasion. Politicians in all countries know how to avoid a clear blunt statement by replying with a colloquialism that does not directly answer the question. In Moscow that evening and often since then it has occurred to me that Mr. Khrushchev is a master of the evasive tactic.

Sometimes he appears to be quite candid. There were times when he could hardly have seemed more frank. A couple of times in our conversation he said to me, "Let's not speak of that, we would only disagree."

I would believe him when he says he does not wish a war and that he is familiar with the tragedy of war. I am certain of the real emotion that he was feeling when he spoke to me of his son and of other Russian sons who were killed by the Germans. He repeated over and over that "There will be no war while I am Chairman of the Council of Ministers."

This statement itself reminds us that we cannot base our policy to any great extent on the personalities which are on top in various countries at any one time. Still it is important to seek to gauge what kind of persons is now First Minister of Russia.

Here is a trait I always consider on the plus side.

Sense of humor

Mr. Khrushchev has a keen sense of humor. Of course, like many people who find their wit amuses others, he sometimes gets carried away. This pudgy fellow, cutting capers at receptions, was sometimes rated as a clown a year or so ago. But his sense of humor is sometimes very much like ours. I think many of his jokes will be pleasing if understood by an American audience. We like humor in political leaders. I would personally like to warn his audience that Mr. Khrushchev is disarming—but he is not disarming.

Surely Americans may enjoy Khrushchev's better witticisms, and they may even appreciate it when he makes a good point, without falling into the error of underestimating him.

Although I have been appalled at some of the joking threats the Premier makes about his rockets, I must say that, all in all, I think it is a healthy thing to find some humor in the Kremlin. I believe our world today might be entirely different if Adolf Hitler had had a sense of humor.

Khrushchev and the United States

Mr. Khrushchev has shown to many, as he has to me, an intense curiosity about the United States. He has a wide range of interests, he will be meeting all kinds of Americans, and he will often show them his favorable, human, and humorous side.

The political man

If Khrushchev had been born an American and had run for office here, I think he has the rough and ready energy, speaking ability, and skills in meeting people to have been successful. He could be an old-fashioned ward boss, and he could also be a candidate. Remember that in a sense the East and West are actually campaigning for the votes of neutrals. He is a tough campaigner in this global competition.

He is a master politician and a master propagandist and he is working all the time. As the old saying has it, he gets up early and lives late, and he wasn't born yesterday.

He is as much a politician as he is a dictator. This is a new thing to the Soviets and to us. Unquestionably his regime is supported by force, but for many reasons he has to be far more flexible than Stalin. The new times have brought to the top a man who is far different from his predecessors. Khrushchev knows how to maneuver and to be adroit and not merely hammer out his position. In pugilistic terms he can sometimes be a boxer like Jim Corbett or Gene Tunney, but still rating him in boxing terms, I would say he is also a slugger. Stalin's policies were more rigid and ponderous; I think it is more dangerous for us that Khrushchev can shift and weave as he does.

He is the kind of person who calculates constantly the effects of his every action. He made some remarks to me that were somewhat startling and seemed to me spontaneous, and I still think, to some degree, they were. But they were also perfectly in line with his general purposes and with his specific purposes for our discussion. Even when he appears to be angry—and he loves to point his finger at you or shake his fist—I believe that he does most of this for effect. He has a definite streak of showmanship.

In describing him personally, it is not possible to deal adequately with the policy reasons for Mr. Khrushchev's visit and the issues which reached a stalemate at Geneva. In terms of his personality, however, I know that he is intensely curious about the United States; he has personally wanted for a long time to see us here.

Politically, I believe there is a clear reason for his visit: Not only his councilors, but his constituents now want him to come here.

Premier Khrushchev knows that during and since the World War, millions of Russians have experienced something of Western industrial civilization. To some extent the war and its aftermath may have ended Russian isolationism. Not even the Soviet monolithic state, with all its propaganda, can withstand certain world trends. Moscow listens to American jazz music, and its listens to a great deal else from the West. Khrushchev's real constituency is not the entire Russian people, but the few million who are in the Community Party. Mr. Khrushchev appears to be somewhat insecure and nervous about his council of advisors-supervisors, and about his continued leadership of Communists, in Russia and elsewhere. His basic constituents are not just reading his controlled press. In libraries they read journals of all the world.

Mr. Khrushchev speaks constantly of young people, and of today and tomorrow. You will note that he almost never refers to the old days of the revolution—his real constituents cannot really remember it. He is an old Bolshevik and he will probably be the last of that line to hold the No. 1 spot.

Mr. Khrushchev prides himself on his persuasive powers and he has spoken (to me, and to others) with apparent conviction of his distaste for the secret police. He boasted to me, "I liquidate no one." And—despite his crude violence elsewhere—the survival of Khrushchev's former colleagues, Malenkov and Bulganin, would tend to bear him out. World public opinion, which has been shocked by the barbarism of secret police, torture and purge trials, and slave labor

camps, now seems to have some moderating though not controlling influence.

It is important that Khrushchev does not seem to feel that the classic doctrines of Marxism are the beginning and the end of governmental philosophy. Of course he is completely devoted to Communist ends, but I mean that he does not regard the philosophical doctrine as complete, perfect, and applicable to every situation now and in the future. He does not believe, as some Communists have appeared to believe, that human history virtually began with the Russian revolution. He often quotes the Bible—he was brought up a Christian in the Greek Orthodox Church, but was won over to atheism and communism. To one American, however, he spoke of ancient times, and said that Greece was the age of art, Rome was the age of law, and the Christian era was the greatest, the age of the common man.

Many surprising remarks come from this complicated man.

During his visit, he will undoubtedly make many seemingly offhand comments, which appear unpremeditated. Americans should remember that he is not only speaking to his hosts and to the American people but he has in mind other countries, the neutrals, the satellites, and always the men at home in the Kremlin. Some things in America he may be delighted with, but he will know that he simply could not express great enthusiasm for them without causing repercussions at home or in the ranks of some ally, such as China. We may forget this, but he will not forget it.

The nature of the cold war creates such pressures on all sides. Americans coming home from Russia will not be as enthusiastic nor as candid about some things there, as they might be, because such enthusiasm may be criticized at home. This is part of the tragedy of the cold war. This circle has to be broken or civilization will explode.

Both of us must speak some plain truths in public and private.

In the past year, specifically with the increased travel between the United States and Russia, we are learning to speak more candidly. We have lately been saying for all to hear some of the things that lie closest to our hearts and are more important for the life-and-death realities of the atomic age.

Surely it will help clarify the situation if we can make clear to him our strength and objectivism, and if Americans can more clearly understand the strength of Russia, and the nature of Communist objectives.

Many Khrushchevs

Premier Khruschev is the leader of a worldwide political movement, the prophet of a fanatic faith. The Chinese, for one example, suspiciously peer over his shoulder to see that he remains "pure in the faith," that he does not become dominated too much by Russian national motives.

Khrushchev is also chief of a reluctant empire, the symbol of tryanny to millions of enslaved people in the satellite countries.

Meanwhile, Khrushchev is production chief of all the factories and farms of a nation which is competing with us, night and day. The title of Khrushchev's latest book, a Russian best seller, of course, is "Toward Victory in the Peaceful Competition With Capitalism."

Finally, Khrushchev comes to us as a politically sensitive leader of millions of human beings. I do not believe Mr. Khrushchev can totally ignore the average Russian, who passionately hopes, as does the average American, that the hydrogen bomb will never be used by any nation upon any other.

We should listen politely and speak candidly to all of these Khrushchevs—the prophet, the human being, the production chief, and the dictator-politician.

We should listen with caution born of experience, but greet him with courtesy born of confidence. The eyes and the hopes of mankind are upon us.

Wright's Temple To Be Dedicated

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. TOLL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of September 13, 1959:

WRIGHT'S TEMPLE TO BE DEDICATED—CEREMONY SLATED NEXT WEEK FOR MOUNT SINAI RE-CREATION IN PHILADELPHIA SUBURB

(By William G. Weart)

PHILADELPHIA, September 12.—Six years ago Frank Lloyd Wright accepted Rabbi Mortimer J. Cohen's challenge to design an American synagogue for the rabbi's congregation, Beth Sholom, in Philadelphia.

Before the architect agreed, Rabbi Cohen pointed out that there was no precedent in Jewish architecture, because Jews had accepted for their synagogues the prevailing building form of the communities in which they lived.

Eleven months later, November 14, 1954, Mr. Wright turned the first earth for the new synagogue of Beth Sholom (Hebrew for house of peace) at Old York Road and Foxcroft Avenue in suburban Elkins Park.

The groundbreaking proved premature. It took a nationwide search that lasted until May 1956, before officials of Beth Sholom could find a contractor willing to tackle Wright's design.

THREE CEREMONIES PLANNED

One week from tomorrow, the temple will be dedicated. Three ancient ceremonials will mark the service—the procession of the Holy Scrolls, the lighting of the Eternal Light, and the sounding of the shofar, the ram's horn trumpet.

Mrs. Wright will be the principal speaker at the dedication of her late husband's recreation of "Mount Sinai," the desert peak that was transformed into a mountain of light at the time of God's communion with the people of Israel.

The structure's dominant mountain effect is created in aluminum and glass. It blends the forms of a 175-foot-wide hexagon and a 100-foot-high pyramid of glass.

The edifice cost slightly under $1,400,000, including landscaping. The pyramid is supported by a tripod of three steel beams. The synagogue seats 1,051 and, on the ground floor, there is a Sisterhood sanctuary with 268 seats, as well as lounges and wedding rooms.

A RELIGIOUS TRIBUTE

In submitting the design to Rabbi Cohen in February 1954, Mr. Wright wrote:

"Herewith the promised 'Hosannah' (Hebrew for song of praise)—a temple that is truly a religious tribute to the living God. Judaism needs one America. Here you have a coherent statement of worship."

Rabbi Cohen replied:

"You have taken the supreme moment of Jewish history—the revelation of God to Israel through Moses at Mount Sinai—and you have translated that moment with all it signifies into a design of beauty and reverence. In a word, your building is Mount Sinai."

In Oklahoma City, 1,260 miles from Philadelphia, Beth Sholom found a general contractor, Haskell Culwell, willing to take on the job. At the time, he had already had experience in building Wright-designed projects that many contractors had termed "untouchable."

Mundt's Smalltown Research Commission Proposal Stirs Widespread Interest

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MUNDT. Mr. President, since introducing my bill (S. 2621) to establish a temporary Hoover-type Commission to study the problems of the American small town, I have been encouraged and impressed by the widespread interest and support developing for this proposal.

Many editorials have come in supporting the idea and letters of endorsement have come in from many States. Among the most valued of these editorials is one from the Brookings Register, published in Brookings, S. Dak. by an old and esteemed friend of mine, C. H. J. Mitchell who is widely recognized as one of South Dakota's outstanding editors. Brookings is one of the communities—a city of some 6,000 people—that this Commission would be designed to aid by the research it would undertake and the recommendations it would make.

I ask unanimous consent that an editorial, published in a recent issue of the Brookings Register, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FUTURE OF THE SMALL TOWN

Noting the continued discussion as to whether the small town is doomed or not, Senator KARL MUNDT has proposed that a commission similar to the Hoover Commission be named to make a comprehensive study of the problems which face these smaller communities.

Like most of us, Senator MUNDT does not believe the small town is doomed and neither does he believe it should. He recognizes that such towns cannot finance research projects in their own behalf but he earnestly believes that some such study should be made.

There are, of course, some small towns which fade away. There are many reasons for it. The development of transportation facilities is held to be one of the important factors. The Register likes to believe that fundamentally it is largely a matter of community leadership. If the citizens of these smaller towns are content to sit on their hands with a "so what" attitude, they are doubtless doomed. But those in which there is leadership and willingness to contribute to the general welfare are not doomed.

This newspaper has on many occasions insisted that there is a place for the small town newspaper. It is one of the institutions which can do much to rescue the small town from drifting into oblivion. But it

must be kept in mind that the newspaper must have adequate support to provide for its existence and to return a proper standard of living for those who operate it.

It is to be hoped that the legislation which Senator MUNDT has proposed will find acceptance in the Senate.

Steel Strike and Winter

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MADDEN. Mr. Speaker, the steel lockout brought on by the management of big steel is now going on its third month.

The following editorial reveals that with the coming of winter, the steel lockout may undermine the American economy for months after the long negotiations have terminated. The following editorial also reveals some facts which must be considered by big steel which could undermine our economy for the next 12 months.

[From the Hammond Times, Sept. 10, 1959]

STEEL AND WINTER

The record-breaking steel strike at this moment seems almost as far from settlement as the day it began more than 8 weeks ago, but there is one factor that may spur a serious effort to resolve the issues before long. That factor is winter.

As nearly everyone in the Calumet Region knows, most of the iron ore that is the basic raw material for steel mills is shipped by water. The practice is to ship enough ore during the spring, summer, and fall months to build plant stockpiles sufficient to maintain production during the winter when ice halts navigation on the upper Great Lakes.

When the steel strike began, the iron miners, who are members of the United Steelworkers of America, joined the steel plant workers in the walkout. The mines are shut down, like the steel plants. The ore boats that carry the raw iron from upper lakes ports are tied up for the duration of the strike.

The huge demand for steel that preceded the July 14 walkout gave the Nation's basic steelmakers little chance to build up stocks of ore to tide them over the winter months. When demand for steel is heavy ore boats may start the shipping season as early as late March, and given a break in the weather may continue hauling ore to Calumet Region and other steel ports as long as late December. But production planners realize weather is fickle and count on open water in the northern lakes only until mid-November.

Even if a break in the weather that delays the freezover of the northern Great Lakes, however, less ore can be shipped in the late fall. Chill weather tends to cake the ore, making loading and unloading of ore boats more difficult and time consuming. Steelmen agree that July and August are usually the best months for ore shipment because the ore is usually drier and easier to handle.

If the steel strike drags on to a point where not enough water-shipped ore is stockpiled, it is, of course, possible to ship ore to the mills by railroad. But rail freight adds immensely to the cost of the ore, and steelmakers usually shy away from this method of shipment unless a special type of ore is required for a special order of steel.

Conceivably, a shortage of ore next winter could result in putting the clamps on steel production and steelworkers' employment. The situation could become serious enough to result in short workweek after the strike is settled, even though the order books might be bulging.

Each day the steel strike drags on, therefore, means 1 day less that ore can be shipped out of the iron ranges of the north country to the lower lakes mills. The steel companies, the striking steelworkers, and the Federal Government all realize this fact. Each passing day builds more pressure for a settlement. Thus the threat of winter, which most of us dislike, may serve a useful purpose this year in hastening the end of the record strike.

The Remarkable Achievements of Charley Halleck

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I take pleasure to include excerpts from an editorial in the Council Bluffs Nonpariel, Council Bluffs, Iowa, which gives due praise to our great Republican leader, the Honorable CHARLEY HALLECK, as follows:

THE REMARKABLE ACHIEVEMENTS OF CHARLEY HALLECK

We have known CHARLEY HALLECK, of Indiana, ever since we started going to Washington every spring, more than 20 years ago. He impressed us as a comer the first time we met him and this impression has grown through the years.

Representative HALLECK is a down-to-earth Republican politician, from a State where politics is second nature. If there had been more Republicans like HALLECK in Congress, the Republican Party would be vastly stronger than it is in the Nation. He is a fine speaker, an expert organizer, and a fighter who never gives up.

Too many of the Republicans in both the House and Senate lack some or all of these qualities.

The Republicans in the House have taken on new life since HALLECK became minority leader at the beginning of the present session.

As one political writer put it, CHARLEY HALLECK, who not so long ago was certainly of no more than average height, is now regarded as not less than 10 feet tall.

Prior to his election as leader the Republicans almost invariably had been on the defensive and never seemed able to rise to any great opportunity. Furthermore they never took advantage of the great personal prestige of President Eisenhower.

Since he became leader HALLECK has come out of every meeting with the President with some biting challenge to the Democratic majority. Between meetings he kept needling the President to take more interest in legislative affairs.

It is not an exaggeration to say that CHARLEY HALLECK is more responsible than any other Republican for the President's aggressive attitude and his assumption of party leadership.

For the first time since he has been in the White House Eisenhower has acted like a politician and he has turned out to be a good one. One of the reasons is that he recognizes in HALLECK a master politician upon whom he can depend for action when action is necessary.

Every Republican Member of the House knows that HALLECK is watching him and if he misses an important rollcall he is likely to hear from the minority leader. And if he does a good job he is almost certain to receive HALLECK's congratulations.

HALLECK has also been quite successful in enlisting the support of the disenchanted survivors of the Democratic Party—the conservative southern Representatives.

CHARLEY's most recent and his most spectacular achievement was the recent passage of the Landrum-Griffin labor control bill. This was accomplished against the organized opposition of all the labor bosses. It was a remarkable feat, a typical all-out Halleck effort. He organized an effective nose-counting operation with an active worker in practically every State delegation. He then persuaded the President to make a smashing televised speech to the Nation in favor of the Landrum-Griffin bill.

The result was the passage of the bill and the blocking of a technical maneuver which forced an overnight recess during which the labor bosses could bring all sorts of pressure to reverse the vote. Instead of dwindling and perhaps disappearing HALLECK saw the majority of the bill increase on every ballot.

The fact is HALLECK is doing as well and perhaps better with a small minority in the House than the Democratic leaders are doing with their big majorities in the House and Senate.

It is our firm belief that the Democrats would never have elected these big majorities if HALLECK had been Republican leader during all of Eisenhower's second term.

We also believe the Republicans would have a chance to elect a President in 1960 and regain control of the House if Republican Congressmen and Republican leaders in various States would work like HALLECK works.

Next to Vice President NIXON he is undoubtedly the outstanding active leader of the Republican Party.

American Legion Policy on Education

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MUNDT. Mr. President, Miles Kennedy, the able legislative representative of the American Legion headquarters here in Washington, has suggested to me that Members of Congress and readers of the CONGRESSIONAL RECORD, generally, might be interested in knowing the attitude of the American Legion on the important matter of improving American educational opportunities. Consequently, I ask unanimous consent to have printed in the Appendix of the RECORD Resolution No. 618, recommended by the convention committee on child welfare and adopted by the Legion at its recent national convention in Minneapolis-St. Paul, August 24–27, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION No. 618, CONVENTION COMMITTEE ON CHILD WELFARE—AMERICAN LEGION POLICY ON EDUCATION

Whereas the American Legion has since its inception shown an interest in the education of American youth; and

Whereas the American Legion has, because of this interest in education, sponsored the GI bill, the junior GI bill, cosponsored American Education Week, promoted programs and legislation in behalf of education and is currently endeavoring, through the Education and Scholarship Committee, to encourage and assist students to further their education; and

Whereas the needs of our economy and our national security demand continued emphasis upon soundly conceived, universal education for our people; and

Whereas it is proper that an expression of the American Legion's viewpoints on education should be formulated and disseminated so that all American citizens may be aware of this American Legion interest: Now, therefore, be it

Resolved, That the American Legion in 41st National Convention herewith assembled in Minneapolis-St. Paul, August 24–27, 1959, adopt the following as expressing the policy of the American Legion with respect to education:

I. FUNDAMENTAL CONCEPTS

The American Legion has always strongly supported the principle that education is a necessary prerequisite to the successful functioning of a democracy. While recognizing the right of private and religious groups to maintain schools, the American Legion vigorously subscribes to the necessity of a universal publicly supported system of primary, secondary and college education to insure that every American child has the opportunity for an adequate education. The American Legion believes that popular self-government as created by the covenant set forth in the Constitution of the United States, cannot continue to exist unless there is the bulwark of a continuing system of free public education. Not only does proper national defense require trained personnel, but the daily operations of our local, State, and Federal governments, our farms, our professions, our commerce and industry, and, in fact, every phase of life today, demands that we have competent citizens, who are qualifed, willing and able to discharge their responsibilities.

Washington, Jefferson, and Madison stated clearly their beliefs that American citizenship should be based on a system of free public schools. These schools have been established and are recognized as the finest in the world. They are managed by lay boards in the most democratic tradition.

The availability of educational opportunity for every individual to pursue his own development is a prerequisite to the achievement of all other social goals. Our educational system must, therefore, be designed to provide every person the means to reach his highest potential, which in turn will provide our country as a whole with the high level of responsible citizens and specialized workers which it requires. In turn we will have greater assurance of economic growth, of sound decisionmaking, and the knowledge necessary to promote our national security.

The American Legion cannot subscribe to the European system of a small preferential system of elite education only for the classes; rather we put our faith in widespread public education for the masses. It is not meant to suggest that every student can derive the same benefits from education or that every student should go to college. Nor is it meant to convey the idea that the able or exceptional student should be held back to a group pattern.

This educational system should produce citizens who understand and who are dedicated to the principles of free enterprise, to democratic principles and processes, and whose devotion to freedom and human dignity go beyond mere lipservice.

II. BASIC STRUCTURE OF AMERICAN EDUCATION

(a) Community public school: Each community should be served by a system of public elementary and secondary schools which are sufficiently provided with modern facilities, well-prepared and adequately paid teachers, and a well-thought-out and carefully developed educational program. Education in this country should never be forced into a rigid pattern of conformance which would destroy the freedom of the individual or of each educational institution of the school system.

(b) Services for children with special needs: Adequate educational services should be available to children with special needs, including the talented, the physically handicapped, the mentally retarded, the emotionally disturbed, those with hearing, speech, language, reading, or other difficulties, and those handicapped by migratory status, in order to assist them with their special needs so that their highest potential may be achieved.

(c) Vocational education: The increasing processes of modern industry and social organizations require workers of special skill. Educational systems should be equipped to provide vocational training to all young people who do not desire higher education. Older workers who seek to advance their occupational skill or require retraining as a result of technological or other changes should also be served by a system of vocational education. We acknowledge and support the great contribution made in this field by private enterprise.

(d) Higher education: There must be maintained within this country a strong system of higher education supported and controlled by the several States. In addition to the public colleges and universities, our society must maintain and adequately support the private and church-related colleges and universities. Opportunities for a higher education should be available to all qualified persons. The processes of higher education should serve to enhance opportunities for individuals and thus benefit our whole society.

(e) Adult education: Public education systems should provide educational opportunities for adults in order to increase their cultural enjoyment, contribute to responsible citizenship, and widen the base of their knowledge.

(f) Nonpublic education: The American Legion recognizes the contributions of religious and private institutions in providing educational opportunities at all levels, and the necessity for their continued existence.

III. CONTROL AND FINANCING

The American Legion is opposed to Federal financing of schools to replace local and State financing. The genius of the American public school has been in its closeness to the people. Our structure of government in its historical development has placed the responsibility of public education upon the several States.

The American Legion advocates the proposition that under our system of government each State is vested with the authority, direction and control of public education within its borders in accordance with law. The American Legion further believes in the largest possible measure of home rule in public education and that States should delegate to local communities the greatest autonomy that is feasible.

It is recognized that conditions and needs change from time to time and the participation of the Federal Government may be desirable in times of national emergency and in certain restricted or specialized programs with minimal Federal control and direction.

IV. FEDERAL EDUCATIONAL ACTIVITIES OF NATIONAL INTEREST

(a) Armed Forces: The American Legion recognizes that the Federal Government has a continuing and justifiable primary responsibility for organizing, administering, operating, and financing educational programs of the Armed Forces.

(b) Research: The American Legion realizes that research, both basic and applied, will create the frontiers of tomorrow in economic, social, and civic life. The role of the Federal Government in research should primarily support requirements for the operation of programs of Federal agencies. The Federal Government, State public institutions of higher learning, and private agencies all have a responsibility to further the development of research.

(c) GI bill: In time of war when young men and women are required to enter the Armed Forces for extended periods of time, it is in the national interest for the Federal Government, as part of the program for the rehabilitation and restoration of these individuals to proper roles in civilian life, to provide special programs of educational benefits, and thus restore to them opportunities which they lost because of their service in time of war.

Experience under the American Legion sponsored G.I. bill demonstrates the soundness of such applied principle of rehabilitation. The education provided was not only of personal value to the millions of veterans who availed themselves of various educational opportunities, but during the present period of explosive economic development it is also supplying an augmented reservoir of trained manpower which is contributing to the national welfare. Further experience with the junior GI bill has augmented this experience.

V. ROLE OF THE AMERICAN LEGION

The American Legion maintains a tremendous program of educational and youth activities which are evident in every State in our Nation.

In addition to these Legion sponsored activities, American Legionnaires have as a responsibility the duty of serving on local school boards, and participating in community, State and national efforts to constantly improve education.

VI. CONCLUSION

The American Legion wholeheartedly subscribes to the proposition that every educational facility should be provided for the fullest development of the mental resources and technical skills of our people. It believes that curriculum study should be stimulated; that teacher preparation should be strengthened; that teachers' salaries should be improved; that testing and guidance programs should be extended and undergirded; that physical facilities for instruction should be expanded and bettered; that maximum intellectual opportunities should be provided for all students commensurate with capacity to absorb and apply irrespective of financial resources of the student or his family.

The American Legion further believes that the citizens of this country should be dedicated to the pursuance of excellence in the entire realm of intellectual endeavor; that our people should recognize and esteem those persons who have developed their intellectual abilities to the fullest extent; that teachers should enrich their knowledge and capacity particularly in the fields in which they teach and that scholarship assistance to deserving students should be expanded.

A major result of our educational process must be to provide people with the finest

training in the world in basic skills of communication, and in knowledge which will enable individuals to think for themselves, to think with facts, to think with understanding. School programs should be constantly reappraised to see that they accomplish these objectives.

Such an educational program will fulfill the dreams of the past, the aspirations of the present, and the needs of the future. The American Legion supports such a system of education, and believes that the vitality of our democratic way of life is dependent upon such schools.

Czechoslovakia and the Sudeten Germans

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MACHROWICZ. Mr. Speaker, in view of the attitudes of the Sudeten German leaders displayed at the occasion of the Sudeten annual rally in Vienna on May 17, 1959, it would appear appropriate to draw attention to the statement by Mr. REECE, of Tennessee, on the 22d of April 1958. Mr. REECE submitted to the House a lengthy account dealing with the case of the German expellees with special emphasis on the Sudeten German issue. On the whole, the statement was pervaded by unfounded charges against the Czech nation. On many points of fact and opinion, the critical reader may well wish to take issue with the gentleman from Tennessee who has seemed to disregard the obvious fact that the so-called Sudeten Germans themselves were mostly responsible for the whole sequence of events winding up with their removal from Czechoslovakia. The attempt to picture the Czechs as the villains rather than the victims of the east central European tragedy seems to make a large draft on the imagination. As some facts and various of his inferences were dubious and erroneous, attention should be directed to them. Thus Mr. REECE's position deserves careful analysis by all those who have the solution of the German-Czech problem at heart.

Mr. REECE asserted that 3.3 million Czechoslovak Germans were unjustly treated by the Czechoslovak Republic; an ill-constructed state of which the very existence had brought sufferings on millions of people. The gentleman from Tennessee went to to state that when Hitler occupied the Czech countries he only "violated the right to an independent national life of the Czech people just as the Czechs, two decades before, had violated that same right of the Sudeten Germans." Carefully disregarding 6 years of Nazi oppression Mr. REECE viewed the liberation of the Czechs by the American and Soviet Armies as the starting point of "a reign of terror" where "free elections, freedom of speech and press were abolished." The gentleman from Tennessee apparently forgot that it was Hitler, Henlein, and Frank who crushed Czech democracy in 1938–39. The innocent Sudetens were then outlawed and expelled in violation of the right of self-determination. Their expulsion helped to bring about the communization of the Czechoslovak state. The gravity of the accusation necessitates its closer scrutiny. The following remarks attempt to present a factual basis for summarizing the significance of many centuries of Czech-German relations. They are prompted by a desire to ascertain the reasons for such relatively unrestricted and far-reaching measures as the transfer of the German ethnic group from Czechoslovakia in 1945–46.

GENERAL REVIEW

The observer who tries to understand German-Czech relations out of their historical and geographical context often finds them unintelligble. For behind recent political crises lie many decades of Czech and German history which have helped create their modern forms. Central Europe has been a traditional ground of national conflicts. Despite the many economic, cultural, and geographical bonds between the two peoples, the struggle between Czechs, who lived in the Bohemian salient thrust deep into German territory, and Germans, who came into Bohemia mostly as colonists, has been one of the permanent features of the history of this area. The Czech countries formed a natural geographical unit commanding a central position in Europe which was fully recognized even by Bismarck.

Mr. REECE used the terms "the Sudeten Germans" and "the Sudetenland" regardless of accuracy and propriety. The Czech Germans were split in many areas and ethnic islands with different cultural and ethnical backgrounds. They did not form a single racial group. They had been originally related ethnically to the Central and Northern, East Franconian, Upper Saxon, and Silesian tribes. Inclusion within the same state drew together these various German groups. The term "Sudeten German" was coined only in 1902 and became popular during the Nazi era when it was used to impress international public opinion that the Czech Germans formed an independent branch of the German nation which had to be liberated by its union with the German Reich. The lack of geographical compactness split the Czech Germans into eight separate and isolated parts. Their leader Josef Seliger—so highly esteemed by Mr. REECE—stated himself in October 1918:

> The eight territorial fragments in which Germans are settled are separated from each other by broad belts of territories in which the Czech language is spoken, and they, therefore, cannot form a state or even a united administrative area. (Franz Koegler, "Oppressed Minority?" London, 1943, p. 22.)

When in 1918 the Czech Germans wanted to separate themselves from the newly founded Czechoslovak Republic they had to constitute several unconnected provinces which still contained a number of Czechs. In 1938, after Munich, Hitler again was compelled to break up the annexed Czech areas into several parts falling to Austria, Bavaria, Silesia. Only the remainder formed the so-called Sudetengau. Some 700,000 Czechs and 2,820,000 Germans were ceded to the Reich. Yet it was still impossible to draw the ethnographical line between the Czechs and Germans because many of each of them lived in the mixed German or Czech regions, in the linguistic enclaves or as dispersed individuals.

HISTORICAL REVIEW

The idyllic historical survey by Mr. REECE is contradicted by factual evidence. The Czech Slavic tribes were the first permanent inhabitants of Bohemia and Moravia-Silesia. The German settlers came into the Bohemian Kingdom since the middle of the 12th century. The peak of the first wave of colonization came in the 13th century. The Hussite Wars brought about the retreat of the Germans. Under the Hapsburg rule (1526–) the influx of the German settlers has again risen and after the end of Bohemian independence in 1620 German became the second official language —beside Czech. The Czech-German conflict was very much alive during the whole course of the Czech history. At the beginning of the 14th century the old Bohemian chronicle of Dalimil recorded the declarations of a Bohemian prince.

> A German wife would not like my people; she would have a German household and teach my children German, and that would mean a division and ruin of my people.

A Latin tract written by a high Bohemian official at the time of the Bohemian King John of Luxembourg in the first half of the 14th century stated:

> Look Thou, philosopher, and consider Thous, who are wise, how this arrogant and deceiving nation seizes the most lucrative benefits and privileges and the richest estates and how it works its way into the council of the princes.

The religious reformer John Hus said in the Bethlehem Chapel in Prague at the beginning of the 15th century:

> According to all laws * * * the Czechs should fill the foremost offices in Kingdom of Bohemia.

In 1615 the Diet of the Bohemian Estates passed a law protecting the Czech language. They made a point of reminding King Ferdinand II that in Bohemia the Germans were only guests and aliens. The emigration of a part of the Czech Protestant middle class and aristocracy, the enormous confiscations of the Bohemian Protestant estates covering some three-quarters of the surface of the country, the immigration of many Catholic German-speaking aristocrats who took over the confiscated estates and the new wave of German colonization accounted for the fact that in the 18th century German has become almost exclusively the official language. The Germanization of the Czech countries had almost succeeded.

In 1827 a prominent figure of the Czech national revival, Josef Jungmann, stated:

> Our tragic fate has been to be the witnesses and the accomplices of the definite annihilation of our maternal language.

It was peculiarly distressing to see Mr. REECE introducing the German propaganda of the past and failing to mention the predicament of the Czech nation under the German rule. The fusion of the ideals of the French Revolution, romanticism and arrival of the industrial revolution contributed to save the Czechs from extinction in the German sea. The political awakening drew the attention of the Czechs toward the defense of the Czech language as the unique instrument with the help of which they were able to grow up to cultural and political maturity. The lingual equality presented to the Czechs a protective safeguard against the age-long process of Germanization. They just could not allow themselves to be submerged by the German wave for another time. As in the Habsburg Monarchy the Germans had occupied a leading position over the Slav majority—viewed by them as racially inferior—the Czech struggle for lingual equality met with a passionate resistance of the Czech Germans. The effort of the Austrian Prime Minister Count Badeni to secure to the Czech language an equality with the German language and to introduce a bilingual administration in Bohemia in 1897 failed as many Germans from Bohemia did not realize the approaching end of their supremacy and rallied under the colors of German national superiority. Political wrangling began to take on a bitter, vituperative tone.

The rise of a more intense German nationalism brought new elements into Austrian politics. New German parties bitterly denounced Jews and Slavs, and espoused the Pan-German objectives: The invectives and denunciations affected particularly the delicate climate of the Czech territory. Here the fierce and increasingly chauvinistic approach was gaining ground among the Germans. The National Socialist Party, mostly Czech German in origin and character, was founded in 1903. When the Nazi Party started in the Reich it thus absorbed many elements from its Austrian roots. According to the historian Henry Cord Meyer—"Mitteleuropa in German Thought and Action, 1815–1945," Hague, 1955, page 315—national socialism derived the essence of its spirit of intolerance, hatred, and arrogant racial and cultural superiority from the prewar friction on the German-Slav frontier. Hitler's political views and irrational motivations were solidly rooted in the tensions and frustrations of the German borderlands in Austria. The noted German historian, Prof. Gerhard Ritter, correctly noticed that:

> The most dangerous element [of nazism], its inflamed antagonistic nationalism, came not from Potsdam, but rather from Bohemia-Moravia and the other Austrian-German borderlands with their [Austrian] Pan-German movement, unbridled antisemitism, and notions of Raumpolitik * * * through Hitler the aggressive nationalism took possession of the Prussian sword. (Ibid., p. 334.)

To sum up, it is worth recalling the conclusions of another leading expert, Prof. R. W. Seton-Watson:

> With every decade of the long reign of Francis Joseph (1848–1916), it became more evident that the Germans of Bohemia were not disposed to grant linguistic or general political equality to the Czechs, but themselves aimed at the position of "Herrenvolk" toward the inferior Slav races. It is still not properly understood, how many of the ideas today condemned by us as Nazi and "Prussian" did, in fact, originate among the Sudeten Germans, and that the latter * * * never ceased to regard the Germanization of Bohemia as the ultimate goal of their endeavor. (In Vincent Urban, "Hitler's Spearhead," London, 1945, p. VI.)

In the light of these considered views, it would seem proper that there was not a sufficient examination of the documentary evidence before the remarks were entered into the record and judgments expressed, implying that the Czechs, and not the Germans, have been obstructing the way toward the national equality and tolerance.

THE CZECHOSLOVAK REPUBLIC

The gentleman from Tennessee depicted the Czechs as dangerously nationalistic while he viewed the Sudetans as federal minded unswervingly pursuing their liberal and humanistic policies. The factual evidence, however, does not corroborate Mr. REECE's allegations.

During the war of 1914–18 the Czech Germans had been consistently demonstrating their full-fledged support of the Austrian policy. Power rested with those among them who regarded themselves as the Herrenvolk and thought the war and the coming victory as the means toward national assimilation of the inferior Slavs. Attempts to introduce German as the only official language and the punitive measures against the Czechs who were sympathetic to the West revealed national vindictiveness as a kind of policy. The Czechs sided clearly with the democratic West and those dynamic democratic forces that sprang up in Europe prior to the war. The growth of progressive ideas in Western Europe found a strong echo among the Czech intelligentsia. It created the common cultural and political background for the promotion of national aspirations. The Czech political leaders became spokesmen for the democratization of the Hapsburg empire. They pleaded—against the German leaders—for the equal rights of small nations. The victory of the Allied Powers broke the ground for favorable reception of the efforts of smaller nations for their independence. As a result, the Czechoslovak Republic was proclaimed on October 28, 1918.

The gentleman from Tennessee described the constitution of Czechoslovakia as undemocratic and devised by a mostly Czech commission at the Paris Peace Conference in 1919. Yet it was on the basis of scholarly opinion and after a thorough examination of all the factors involved that the Czechoslovak frontiers have been fixed and the Germans kept within Czechoslovakia. For example the American experts Ch. Seymour, G. Johnson, J. Kerner, J. F. Dulles had visited the Republic and examined the situation on the spot. The Committee on Czechoslovak Questions concluded that—

> Bohemia forms a natural region, clearly defined by its fringe of mountains. The mere fact that a German population has established itself in the outlying districts at a relatively recent date did not appear to the committee a sufficient reason for depriving Bohemia of its natural frontiers. * * *
>
> The chain of mountains which surrounds Bohemia constitutes a line of defense for the country. To take away this line of mountains would be to place Bohemia at the mercy of Germany. (E. L. Woodward and Rohan Butler, "Documents on British Foreign Policy, 1919–39," third series, London, 1949, I. 1938, 302. Hereafter the volume will be cited as DBFP.)

It was generally agreed that without the historic frontiers the Republic could not exist as an independent state. Thus the independent existence of 10 million Czechs and Slovaks was predicated on the presence of 3.2 million Germans within the same state.

Mr. REECE pictured Czechoslovakia as a mistake which cherished but one desire: to oppress the peace-loving and reluctant minorities. It was on the strength of this judgment that he concluded that the Czech Germans were right in having prompted the dissolution of the state in 1938. Alas, the evidence appears to suggest a far gloomier view as far as the Germans were concerned and fails to bring out any confirmation of Mr. REECE's scathing condemnation of Czechoslovak democracy.

The Czechoslovak Germans were better equipped with schools than the Germans, Poles, and Magyars in Prussia, Poland, and Hungary. So while there remained 1 German elementary school for every 862 German inhabitants in Czechoslovakia, there was 1 German school per 1,112 inhabitants in Prussia, per 952 in Poland, and per 1,191 in Hungary—DBFP, I: 191.

It was admitted by the Government itself that the German representation in the public services was inadequate in some branches, although the quota was met for ex. by the German teachers, professors, judges, and prosecutors. However, for many years the Germans preferred the better-paid private employment and therefore there was a lack of qualified candidates.

Mr. REECE pointed the land reform, and the great depression as two samples of the unjust treatment of the Germans. Yet the data proves otherwise. The land reform of 1919 was rather slow in being carried out. The Germans made complaints that some 400,000 hectares—1 ha=2.47 acres—were taken from them in the predominantly German area. This concerned, however, mainly the forest land near the frontier. The Ministry of Agriculture stressed that in the Czech territories of Bohemia and Moravia-Silesia 198,909 more hectares were requisitioned than in the mixed or German districts. Some 48,820 German families were allocated 57,270 hectares up to January 1, 1937. Elizabeth Wiskemann—"Czechs and Germans: A Study of the Struggle in the Historic Provinces of Bohemia and Moravia," London, 1938, pages 151–152—who gave the latter figures gathered on the spot, pointed out that she never heard any serious Sudeten German deny "that the German

tenants working on expropriated land were quite justly treated in being allowed to become its owners." Some 31.8 percent of the land distributed to the tenants went to the Germans. After the occupation of Czechoslovakia in 1939 the Germans endeavored to make good their complaints but the results were deceiving proving that, on the whole, the land reform was a highly successful nondiscriminatory measure. As far as the economic crisis of the early thirties was concerned Mr. REECE failed to understand that those areas with German majorities most seriously hit were industrial districts almost wholly dependent on the export trade, while those with the Czech and Slovak majorities were of a more rural character. The gentleman from Tennessee was clearly blaming the Czechs for economic conditions over which these had no control. As far as the social relief and unemployment benefits were concerned the Government came to support according to need only and not according to nationality, applying the sense of national justice and equity to its relief measures—see more in Urban, pages 57–60.

Yet the Czechoslovak nationality policy could not be entirely understood only by way of glosses on legislation or from printed matter. It was affected by the whole atmosphere of the country. The ideas of Thomas G. Massaryk, the first President of the Republic, pervaded all strata of population and were incorporated into the official ideology of the Republic. The mission of the Republic was held to be to promote democracy in its march forward. This ideological climate set the individual German as a free citizen of equal rights and gave to all minorities an opportunity of developing any political ideas they might be willing to hold and made forced denationalization impossible. President Eduard Benes outlined this conception of the Czech-German problem in his address on August 19, 1936:

Our political philosophy and morality takes the form of democracy, a democracy that provides us with the key to a solution of all our problems, since it postulates in all political negotiations a respect of the human person and complete civic equality. * * * I know that our Germans have complaints, desires and demands of a practical character. In the language and educational spheres * * * there are easy of disposal. * * * The greatest difficulties arise in the question of the state officials. A number of the German wishes are in this connection justified. Yet there is the question of confidence. A democratic state does not wish to entrust its administration to officials who profess Fascist, totalitarian, or Communist principles. * * *

President Benes concluded:

We have remained * * * a democracy which rejects all methods of violence in internal policy, the suppression of personal liberty and of the free expression of public opinion, a democracy which solves the problems of internal politics with the aid of evolutionary methods. (Czechoslovak Sources and Documents, "The Problems of Czechoslovakia. Speeches of President Benes in Northern Bohemia," Prague, 1936, pp. 15–19, 25.)

Yet the gentleman from Tennessee voiced little wonder that they—Sudeten Germans—began looking more and more for support from abroad, to understand—from Hitler. The reasons thereof were clearly put forth by Konrad Henlein, the leader of the Sudeten German Party, the largest political party of the Republic, in his secret report to Hitler:

The Sudeten Germans are today imbued with National Socialist principles and organized in a comprehensive, unitary, National Socialist Party, based on the führer concept. * * * The Sudeten German Party * * *has imbued the racial group and their sphere of life with National Socialist principles. In the face of democratic world opinion the Sudeten German Party has given proof that the National Socialist order of leadership and following corresponds with the law of the inner life of the German people, for not only has it been called into existence among the Sudeten Germans by their own free will, but in face of pressure by the Czech State. The Sudeten German Party must camouflage its profession of national socialism as an ideology of life and as a political principle. As a party in the democratic parliamentary system of Czechoslovakia, it must, outwardly, alike in writing and by word of mouth, in its manifestoes and in the press, in Parliament, in its own structure, and in the organization of the Sudeten German element, employ democratic terminology and democratic parliamentary methods. In consequence, it may appear to uninitiated German circles of the Reich to be disunited and unreliable. * * * The apparent lack of unity of the Sudeten German Party is intensified by the circumstance that at heart it desires nothing more ardently than the incorporation of Sudeten German territory, nay of the whole Bohemian, Moravian, and Silesian area within the Reich. (On November 19, 1937, "Documents on German Foreign Policy 1918–45; from the Archives of the German Foreign Ministry;" series D, 1937–45, Washington, 1949, II: 56–57.)

This fact did not prevent Mr. REECE to deplore that this party was forced to remain in opposition.

The results of the elections of May 19, 1935, gave full evidence of a popular groundswell in favor of Nazism among the so-called Sudeten Germans. The Sudeten German Party—SDP—received far greater support than the Reich German Nazis in the last relatively free German election held on March 3, 1933. The count gave Hitler, who was the Reich Chancellor, 43.9 percent of the total tally, while results in Czechoslovakia indicated that some 63 percent German voters cast their ballots to the Nazi tainted SDP in an absolutely free election. In 1938, all the aspects of Nazism were already well known. Yet the election of 1938 presented a unique event in Europe: In a democratic election more than 85 percent Czechoslovak Germans identified themselves with Nazi aims. It proved that National Socialism encompassed and expressed all the elements of the anti-Czech racial aggressive nationalism that had existed long before Henlein and Hitler rose to leadership. The SDP emerged as an instrument of a Nazi regime secretly cooperating with Berlin and plotting to destroy an independent State—a pivotal Western ally—and to wreck its democratic system. On March 16, 1938, the German Minister in Prague, Ernst Eisenlohr received from the SDP these assurances:

Course of German foreign policy as communicated by legation is to be sole determining factor for policy and tactical procedure of Sudeten German Party. My instructions are to be strictly observed. (Documents on German Foreign Policy, II: 169–170.)

In the summer of 1938 the Czechoslovak Cabinet offered to implement the most far-reaching demands of the SDP. Hitler instructed the Sudeten leaders to reject all Czechoslovak attempts of settlement and always to demand more than could be granted by Prague. The so-called Sudeten German problem was not a cause of the conflict, but a pretext. The true reason, according to the Germans themselves, was their aim to destroy the Czechoslovak Republic. Thus, contrary to Mr. REECE's claims until Munich—September 29, 1938—the so-called Sudeten Germans resolved to be a factor in the Nazi policy of the Reich, and the SDP enthusiastically followed instructions of Berlin.

Moreover, Mr. REECE failed to weigh the abuse of the right of self-determination by the Germans from Czechoslovakia who used it as an efficient instrument toward their antidemocratic aims. Despite Mr. REECE's affirmations, this abuse brought about the acknowledgement that the idea of self-determination was a limited and qualified concept which varied according to the concrete circumstances of each nation and the actual historical situation. It might be used only to establish conditions which would prevent national oppression and enable each nation to constitute its own state—see Alfred Cobban, "National Self-Determination," London, 1945. Such conception of the abusive slogans of national self-determination make enough room for the reestablishment of the Czechoslovak Republic in its historic frontiers and prevent the application of the principle to any ethnic group whose real goal was to serve as the spearhead of a foreign power.

At the time the rump Czechoslovak state abandoned by all the world was receiving democratic German and Jewish refugees fleeing the annexed Czech territories in 1938, the battlelines seemed to be clearly drawn between the Czechs and Sudetens. What for the ones was an imperialist struggle for greater living space and hegemonic position, for the others was a battle of death and life. The treatment of the Czech nation prepared by the SDP for the sake of German military victory over Czechoslovakia in 1938 displayed a degree of cruelty and violence that was rare even in the times of Hitler. It showed again that nazism was but a symptom of the truly destructive German nationalism. In its so-called Grundplanung OA, the SDP proposed a concrete plan to solve the German-Czech historical dispute—Czechoslovak Ministry of Information, "K. H. Frank on Trial Before the Czech Nation," Prague, 1946, pages 36–39. After the occupation of the Czech territories the leader of the Sudeten Germans would become their governor. The annexation would be proclaimed from Prague. After a period of military administration which would last for 5 years, the leader of the Sudeten Ger-

mans was to take over the administration. The German population would settle at certain zones, the schools would be only German, and Czech would disappear.

DISMEMBERMENT OF CZECHOSLOVAKIA

Mr. REECE was oblivious of the history of the Czech nation after Munich. We do not read one word on the anti-Jewish demonstrations directed by the SDP during the night of November 9–10, 1938. We read nothing about the persecution of the Czech minority by the Sudetens. The gentleman from Tennessee seemed to be impervious to the fact that the SDP revealed to the whole world the real value of its allegations on the right of self-determination urging Berlin to push through its own extravagant claims to the purely Czech territory. Even the German Foreign Office became incensed against the arrogant behavior of the Sudeten representatives and their exorbitant demands—the National Archives of the U.S. Records of the German Foreign Ministry, container 2444. The Sudetens were exerting pressure upon Berlin for a tougher policy toward the post-Munich Republic. By advocating the subjection of the Czech nation and through the nazification of the Sudeten territory the SDP had crossed the line between politics and adventure. The remaining part of the German minority within the Czechoslovak State faithfully reenacted the Henleinist methods of pressure with all the familiar Nazi techniques of intimidation and threats. It urged the Prague Cabinet to exclude the Jews from public positions and to grant it freedom for Nazi activities. In the fateful days of the German occupation of Czechoslovakia—March 14–15, 1939—the Sudetens staged the anti-Czech and anti-Jewish demonstrations in Prague and Brno to enable Berlin to raise protests against alleged persecution of the Germans. In the early morning hours of March 15, the special trained groups of Czech Germans assumed the police authorities, seized the Czech Police Headquarters and gave aid to the Gestapo in its first wave of arrests. In the period from March 15 to May 23, 1939, 4,639 persons were arrested.

The delirious enthusiasm and the frantic cheers of the Czech Germans welcoming the entry of the German troops into the almost purely Czech part of the Republic stirred Czech indignation to a new height. Since 1933 the Sudetens were in a state of nationalist euphoria. Their vigorous nationalism has been nourished on violent anti-Czech and antidemocratic slogans. In 1939 after the many years of the lurid Nazi campaign against Czechoslovak democracy the Czechs finally lost their freedom and the Republic became a German protectorate. Far from harboring any regrets over their espousal of the Nazi pan-German aims, most of the Czechoslovak Germans anchored their present and future within the new Nazi order. Their decision was free and spontaneous: familiar with the ideology and practical program of totalitarian Germany, they chose Hitler.

THE PROTECTORATE BOHEMIA AND MORAVIA

Mr. REECE was eloquently silent on the Nazi reign of terror in the Czech countries. German policy was guided by the conviction that the Czechs had to be shown power. Any amiable attitude would be taken by them as a sign of weakness. On November 17, 1939, all the Czech universities were closed: Some 80,000 Czechs were turned out of their lands. The colonization of the Czech land was closely connected with the gradual and systematic Germanization of the Czech properties:

If we read the decrees by which German agents were established in former Jewish commercial and industrial firms in the years 1940, 1941 and 1942; if we read the names and origins of the persons who appeared in the lists of the newly nominated and elected members of the administrative and supervisory councils of industrial firms, cooperatives and banks we find everywhere that Sudeten Germans from Liberec and Jablonec, from Ústí and Rumburk, from Cheb or As appear side by side with Germans coming from various parts of the Reich. Sudeten Germans entered the Czech districts to direct the local administration, they were given the businesses, factories, etc., of Czechs who had been carried off to concentration camps or to execution. (Urban, p. 42.)

The backbone of German occupation was the German Security Police and the SS. The German rule developed into genuine police administration, supervising every aspect of the Czech public life. The Sudeten leader, K. H. Frank, became the state secretary and SS and police leader since March 1939. In 1943 he became Minister of State and legally the supreme head of the Nazi machine of brutal repression and the chief protagonist of the Sudeten element. It was a Sudeten German who applied personally the terroristic methods. Since 1939 Frank's spirit pervaded the everyday dealings of Germany with the Czech people. His conception was to repress with strictest measures, extensive arrests, and executions what he called the Czech mob. The German regime in Czechoslovakia had only one raison d'être: to conclude the German-Czech conflict by the final extermination of the Czech nation. The awareness of this prolonged secular collision affected the everyday intercourse of the two races and was reflected in the arrogant attitude of almost every Sudeten German.

Since the establishment of the protectorate discussions developed within official German circles concerning the final solution of the Czech question. On August 31, 1940, the Reich protector, von Neurath, asked for an audience with Hitler and sent him Frank's and his own memorandums. Frank proposed the complete Germanization as the goal of the policy of the Reich in the protectorate—"Trial of the Major War Criminals Before the International Military Tribunal," Nuremberg, 1945–46, XXXIII, page 260–271. Von Neurath agreed completely with the plan of Frank. Hitler accepted their solution: to Germanize the Czech nation, half of which would be expelled or shot dead—Ibid., XXVI, pages 375–376. Thus in the fall of 1940 the fate of the Czechs was determined. The German victory would bring about its total extinction. The office of the Reich protector in Prague and the race and resettlement main office SS were entrusted with carrying out the necessary preparations for the Germanization. As Vincent Urban put it:

The extensive machinery of the German occupation authorities centered in the office of the Reich protector and acting through the SS detachments and the Gestapo carried out one of the greatest attempts at denationalization of modern times; the wiping out of a nation of 8 million people with a high degree of culture and economic development. (Urban, p. 34.)

The natural reaction of the Czech people to the occupation of their country was the broadest possible organization of a resistance movement on a national scope. The staggering terror and the imminent peril of Germanization made the Czechs determined not to risk another repetition of the Sudeten attempt to disrupt their state:

Mr. REECE errs grievously in repeating—contrary to all available documents—the Sudeten contention that the transfer of the Czechoslovak Germans was not a spontaneous reaction of the Czech people but an act planned by Czech politicians in exile or even inspired by Communists. Mass executions and terror rendered impossible the whole idea of a peaceful cohabitation between Germans and Czechs. The Czechoslovak resistance movement and the exile Government formulated and proposed unanimously the removal of the disloyal majority of the German ethnic group to Germany as a necessary measure of protection. The horror, savagery, and brutality of the Nazi regime helped to create during the war the favorable terrain for the acceptance of the principle of the transfer by all the Great Powers, Great Britain, the United States, and Soviet Union. But the impetus toward the transfer was supplied by the Czech common people at home. The transfer of the Sudeten became an axiom for all the resistance groups through the entire era of German occupation, 1939–45. The idea arose, so to speak, from the necessities of Czechoslovakia at a time when no one knew whether the Czech people would have a chance to survive.

THE TRANSFER

In May 1945 Czechoslovakia drew up the balance sheet of her losses. The loss of life was 250,000 deaths from war and occupation among Czechs and Slovaks. More than 100,000 people became invalid or suffered permanent injury to health as the result of the occupation. All larger and a great many smaller cities were badly damaged, most of the plants destroyed and the communication system completely disrupted. The material damage and loss through the German occupation amounted to 1,289,5 milliard Czechoslovak crowns: According to the confession of the representatives of the Sudeten German themselves their war gains amounted to 6 millard dollars in terms of dollar values of 1938—Wilhelm K. Turnwald, editor, Dokumente zur Austreibung der Sudetendeutschen Munich, 1951, page 557. This tremendous property increase resulted from the confiscations of the Czech and

Jewish possessions, the work of the political and war prisoners and forced labor and the economic bleeding of the Czech countries.

As the last act of the long German-Czech dispute, the transfer of the Sudeten Germans was a natural response to circumstances created by the Sudeten themselves and implicit in the Nazi war regime. Being neither Communist-nor Soviet-inspired, the removal was a natural corollary of the Allied anti-Nazi policy and the war population movements. Far from being a flagrant violation of the rules of international law as it was affirmed by Mr. REECE, the transfer presented only an extreme solution which was to be applied where other means failed. One cannot conceal, of course, the gravity of this measure which was bound to bring along with it human sufferings. Its desirability in each case can be determined best by its results. The well-known American author, Joseph B. Schechtman, appeared to grasp the complexity of the whole problem in his final assessment.

In view of all the evidence provided by past experiences it cannot be denied that the redistribution of ethnic groups is a painful operation for the persons concerned. * * * Nevertheless there may be situations when the alternatives are even less desirable and where this is the case, transfer remains as the only solution. * * * It is by no means a universal method of solving all minority problems, and should not be applied until all other agencies have been explored. * * * The transfer of populations should be decited on only in the last instance, not as an ideal solution, but as a necessary evil. (Joseph B. Schechtman, "European Population Transfers, 1939–45," New York, 1946, pp. 467–468.)

The transfer of the Czechoslovak Germans—agreed upon by the Great Powers at Potsdam in 1945—was in full accordance with this balanced assessment. Enthusiastically espousing nazism, the enormous majority of the Czech Germans embraced pan-German objectives of Hitler and wrecked Czechoslovak democracy. The transfer was designed to prevent the recurrence of the shocking events of 1933–45, to aid the Czech nation to achieve the dignity of a decent living and to serve the immediate and long-range interests of the international order and peace. It generated, indeed, much individual injustice and imposed personal charges and burdens which were strongly resented by individual victims. The irregularities which accompanied the first days of the liberation were part of all revolutionary outbursts. Yet the organized transfer was carried out decently, in a humane way. The German anti-Fascists were exempted. The American authorities expressed their thanks to the Czechoslovak Government for the efficient and humane manner in which the regular transfer was carried out.

Mr. REECE indicated that 300,000 Germans from Czechoslovakia were victims of their removal. He evidently took over the figure published by Dr. Walter Becher on June 14, 1952—in the Hamburg weekly Der Sudetendeutsche. If we put to test the allegations of Dr. Becher we arrive at the conclusion that a part of the alleged 300,000 victims never existed, a further part is still living and the remaining 26,500 Sudeten German Jews were gassed by the Sudeten Nazis themselves—the character of Dr. Becher's allegations is indicated by the fact that Dr. Becher—so highly praised by Mr. REECE—was even unable to make a correct addition and through one error in addition succeeded to "annihilate" 12,000 Germans as "victims of the unchained hatred." One would wish that the gentleman from Tennessee did not use imaginary figures based on misleading and incorrect data in the two obvious attempt to discredit the Czech nation who had fought on the side of the United States in the two World Wars.

Notwithstanding the rosy picture set forth by Mr. REECE, even the most perfunctory perusal of the press of the Sudeten expellees in Western Germany will show that their leaders—some of them former Nazis—have been violently attacking the very existence of the Czechoslovak Republic since their removal. They want to return to their lost settlements, expel all the Czechoslovak settlers and dispose with "their" land, according to their heart's desire, by asking any future German Government to take them under its protection.

CONCLUSION

It was Hitler and his Sudeten followers who brought communism into Czechoslovakia. Without the war provoked by Germany east central Europe would still be free from the Communist domination and millions of Jews, Slavs, and Germans would still be alive. As a result of the Communist inroad into central Europe the Czechoslovak Republic succumbed to communism in February 1948. The return to democracy would probably be a difficult and delicate task. Yet the ultimate settlement of the German-Czech issue created most favorable conditions for the loyal cooperation and friendship between democratic Germany and a Czechoslovakia freed from both the communism and the nightmare of the internal German peril. The future democratic Czechoslovakia without her Sudeten fifth column then will be able to become a true security factor in this part of Europe. She may make possible by her very existence the establishment of an international democratic order in Europe.

U.S. News & World Report Highlights Labor's New Bill of Rights

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. MUNDT. Mr. President, as Americans, generally, have come to understand and realize exactly what is included in the significant features of the Landrum-Griffin bill as it was finally adopted and included as the basic part of the labor reform legislation recently approved by Congress, they have come to appreciate that in reality it is a very important bill of rights for the American working man and woman, whether unionized or not.

In the September 14 issue of U.S. News & World Report, widely recognized, widely read, and highly authentic news magazine published here in Washington, the editors of that weekly magazine set out with clarity how this new labor reform legislation moves in the desired direction of giving rank and file dues paying members of America's unions the freedom of choice and powers of self-determination so dear to all red-blooded Americans in every walk of life.

As vice chairman of the so-called McClellan Labor Rackets Investigating Committee—the proper name of which is the Senate Select Committee To Investigate Improper Activities in the Labor-Management Field—I have said over and over again in committee, on the floor of the Senate, over radio and television, and in many States of the Union, that there is nothing basically wrong with the trade union movement in America that cannot be cured and corrected by giving the men and women who belong to the unions the tools and protections required to enable them to utilize full and fair democratic processes to run their own unions, to elect officers of their own choice from within their own ranks, to inspect the records, to demand and receive detailed financial reports on what is being done with their money, and to determine the contents of the contracts which provide the terms of their employment and the degree of income which they receive.

The so-called bill of rights in the new labor reform law takes trojan steps in the direction of achieving these degrees of self-government and self-determination for the fine, patriotic, hard-working men and women who pay the dues which support the American labor unions and their opulent leadership apparatus.

Our committee in its investigation in case after case has traced down as the major source of so-called union corruption or union dictatorship or union violence the sordid fact that such improper activities occur by the direction and through the planning of the type of labor leader who uses his dues-paying members as pawns and who makes it difficult or impossible for them to decide their own courses of action through democratic processes including the basic American right of a vote by secret ballot under circumstances which guarantee an honest count of the ballots cast. Here, again, this new labor reform bill contains provisions of which I am proud and happy to be the author which go a long way in the direction of extending and protecting these American voting rights for the rank and filer.

Mr. President, those interested in full particulars of how this new bill works in the interests of the rank-and-file dues-paying member in his relationships with those who lead—and sometimes run—his union should go to the nearest public library and read the full accounts contained in the September 14, 1959, issue of U.S. News & World Report. As a

sample of the information provided in this intelligent and factual magazine report, written by objective editors who are neither "prolabor" nor "antilabor," I ask unanimous consent to have printed in the Appendix of the RECORD a "box score" on this subject taken from that issue of the magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the U.S. News & World Report, Sept. 14, 1959]

A BILL OF RIGHTS FOR UNION MEMBERS—UNDER THE LABOR "REFORM" BILL, UNION MEMBERS GET NEW RIGHTS TO HELP THEM CONTROL UNIONS, KEEP RACKETEERS OUT

Voting by secret ballot is to decide all union elections.

Union meetings must be opened to all active members in good standing.

Elections of officers must be held at least once every 3 years in local unions; every 5 years in national unions. Ex-convicts can't be elected to office within 5 years of their release from prison.

Freedom of speech, including the right to criticize union officials, is to be guaranteed to every member.

Union contracts must be available for inspection by members.

Financial reports must be made to members each year, showing receipts, expenditures, reserves, and salaries and expenses paid to officials.

The right to sue union officers, to stop them from violating members' rights or misusing union funds, is expressly stated in the bill.

Strikers get the right to vote in wage-bargaining elections, even if they've been replaced by new workers in a plant.

To enforce these rights: The Secretary of Labor gets increased authority over unions. Yearly financial reports must be filed with the Labor Department, and national unions must report on any "trusteeships" over local unions.

Republican Post Office Service Finally "Gets" Walter Noreen

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Minnesota Union Advocate, June 30, 1959:

[From the Minnesota Union Advocate, June 30, 1959]

REPUBLICAN POST OFFICE SERVICE FINALLY "GETS" WALTER NOREEN

The U.S. Post Office Department, under the direction of Postmaster General Summerfield (who was given that post for his highly effective politically partisan work as Republican national chairman), has taken its latest step in what might be construed as a campaign to put the fear of GOP into postal and other Federal Government workers.

The Post Office Department has summarily fired Walter Noreen, who happens to be national vice president of the newly formed National Postal Clerks Union and president of the St. Paul local of that International.

He also is a past president of the St. Paul AFL-CIO Trades and Labor Assembly.

If all these union leadership activities give you the idea that this helped make him a special target of a Republican Party program to "get" militant union leaders who don't roll over and play dead to please Republican Party big-wigs, you aren't the only one who develops this suspicion.

Noreen's discharge was a "disciplinary" action taken by the Post Office Department for a statement he made last December in his capacity as president of the Trades and Labor Assembly.

Noreen's statement was critical of the Post Office Department's policy of hiring as temporary workers during the Christmas season rush people who already had full-time jobs.

Well, you maybe remember there were some 100,000 unemployed persons in Minnesota last winter, and approximately 5 million unemployed in the United States, so anyone with a grain of commonsense would object to hiring already employed persons at a time like this. Why not give these jobs to those who needed jobs?

Noreen spoke out in vigorous fashion against this shortsighted—he could well have called it a worse—practice, and the Department promptly accused him of bringing the postal service into "disrepute."

Well, there was "disrepute" all right, and today there is even more, but that is due to the practice initiated by the high officials of the Department, not by a criticism of a situation that should never have been created in the first place.

So the Post Office Department "disciplined" Labor Leader Walter Noreen. Was this "discipline" a suspension of 10 days or a few more, the kind of action that might be expected for a man with 16 years of service and rights as a postal employee?

Noreen was fired, dismissed summarily, with the dismissal effective immediately, and 16 years of service, seniority, rights, and what have you, gone down the drain.

When former Republican National Chairman Summerfield and his political crew set out to get a rank-and-file employee who dares to be a militant union leader and who has the courage to state his opinion of the Republican Party's attitude toward unions and toward individual workers who dare to call their souls their own, they go all the way.

Well, this suspension is being appealed, of course, and the final jury verdict is not in.

One bright aspect of the affair is that the local postmaster, Sig Bertelsen, and his staff, are not a part of what many trade unionists will classify as this persectuion of Walter Noreen.

Going back through the years, it would appear that there long has been a determined effort by high officials of the Post Office Department to "get" Walter Noreen, and get him good.

The Noreen file is pretty thick—and still is being kept, despite the fact that he was acquitted on various occasions of charges brought against him.

Doesn't an acquittal mean that the charges were false? Why weren't those who pressed false charges against Noreen investigated and dismissed?

Were they members of—or subservient to—the same political party that Summerfield served as national committee chairman? There are a lot of unanswered questions on this deal.

Texas Is a Better Place To Live Because of A. B. Tarwater's Service

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President, a great and good friend of the people of Texas, particularly a friend of the farm people, has died, but the benefits of his work live after him. I refer to the late A. B. Tarwater of Plainview, Tex., a member of the Texas Legislature from 1929 to 1941.

It can be said without exception or contradiction that Mr. Tarwater was a legislator on the side of the people. He fought fearlessly against those who would saddle Texans with a State sales tax and demanded instead higher proportionate taxes on those who were profiteering off of Texas' natural resources. He pioneered in the field of water development and soil conservation.

During the years from 1931 to 1934, when it was my privilege to serve as an assistant attorney general in Texas, I had the honor and pleasure of working with Mr. Tarwater. His remarkable ability and profound judgment commanded the respect of all who knew him. Today Texas is indebted to him for his great service on water and soil conservation laws, and for much other work.

He was courageous. I was deeply honored when he supported me in campaigns for good government in Texas. I ask unanimous consent to have printed in the Appendix to the RECORD a very excellent article from the June 10, 1959, Plainview Herald concerning Mr. Tarwater's remarkable career, entitled "A. B. Tarwater, 87, Dies Early Today, Heart Attack."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A. B. TARWATER, 87, DIES EARLY TODAY, HEART ATTACK

Death came suddenly about 8 o'clock this morning to A. B. Tarwater, 87, retired farmer and a member of the Texas Legislature for six terms, from the 41st through the 46th sessions, 1929–41.

He was the most forceful representative of the agricultural areas that ever belonged to the Texas Legislature. His thorough knowledge of parliamentary procedure, his strong reliance on statistical and factual matter, and his understanding of human nature gave him power. He had been a Government employee at Albany, N.Y., before coming here and there learned how to tap primary sources of information. Few dared conradict his statements in debate.

Gov. Price Daniel, who served in the Texas Legislature with A. B. Tarwater, sent the following message when notified of the pioneer legislator's death:

"In the passing of A. B. Tarwater, Texas has lost one of its most distinguished pioneers in the field of soil conservation and water development. I served in the legislature in 1939 with Mr. Tarwater and always had the highest respect for him. I join his friends in extending deepest sympathy to his family."

Although he was well known for his successful battles to tax oleomargarine, which was in strong competition with butter in a time that dairying was a mainstay in agriculture in this area, his greatest contribution was in the field of soil conservation.

He appeared for the oleo tax against such stalwarts as the meatpackers, bankers from packing cities, and the famous cattleman's lawyer, Dayton Moses.

The Texas soil conservation laws were drafted by the late Jimmy Guleke, of Amarillo, and revised by A. B. Tarwater, with the assistance of such men as Senator Clint S. Small, and RALPH YARBOROUGH, then of the attorney general's department. His big battle was to see that instead of U.S. domi-

nance, or State dominance that the soil conservation districts were formed through local elections and governed by boards locally elected.

During the big battle for control of oil production by the Texas Railroad Commission he fought for the market demand phase of the law, rather than economic basis. This course was highly favored by west Texas oil producers, as this area was just coming into production, and the flood of cheap oil from uncontrolled production of the fabulously large east Texas wells has demoralized the oil business. Conservation was also an aim of this law.

He favored taxes on natural resources, and fought Gov. W. Lee O'Daniel's sales tax proposals. Backed by industrialists and by major oil producers and the sulfur interests.

Tarwater's position was that the sales tax would exact $7 per year from the average citizen, to each dollar paid by natural resources.

He fought imposition of gasoline tax on farm-consumed, nonhighway gasoline, when it was a prime fuel for tractor and irrigation engines.

Irked at the inconsistency of posted prices for butterfat in this area, he urged the formation of the Plains Cooperative Creamery, which folded with the wane of dairying and liquidated a few years ago. It exerted a profound influence on prices in the area, and initiated movements to improve quality of product, feeding and care practices, and herd improvement.

Until his health impaired his strength and vision he maintained a keen and active interest in political and economic fields, and was always battling for farm people as their interests appeared to him.

Funeral services will be conducted at 4 o'clock Thursday afternoon at Edmonson Baptist Church of which he has been a member. The pastor Rev. R. L. Swanner, and Rev. E. S. Weathers, retired Baptist pastor of Plainview will officiate.

Arthur Bosworth Tarwater was born Februrary 17, 1872, in Knox County, Tenn. He later moved to Indiana and from there to Albany, N.Y., from when he and his family moved to what is now the Edmonson community northwest of Plainview.

He and Miss Mae Newgent were married December 2, 1903, at Veesburg, Ind.

Tarwater farmed and took an active part in community, area, and State affairs. He was a member of the Edmonson First Baptist Church and served his church in various capacities over the years.

He served for several terms as trustee of the former Runningwater rural school.

Survivors are his wife, two daughters, Mrs. Carl Belk, Edmonson, and Mrs. J. B. Masten, Jr., Plainview; two brothers, H. R. Tarwater, Lubbock, and B. D. Tarwater, Colvis N. Mex.; six grandchildren and five great-grandchildren.

The body will lie in state at Lemons Funeral Home. Interment will be in Plainview Memorial Park.

Struggle for Freedom in Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in the Readers' Column of the Wilkes-Barre Times-Leader of September 11, 1959:

STRUGGLE FOR FREEDOM IN POLAND

EDITOR, TIMES-LEADER NEWS:

This month marks the 20th anniversary of Chancellor Hitler's grandiose ideas to invade Poland and conquer the world. It also marks the beginning of the most destructive and bloodiest war in history.

On September 1, 1939, hordes of German armored units suddenly crossed the Polish border from the west and north. The Polish Army, lacking armored divisions and aircraft, was unable to stop the German advance. Despite the heroic fight of the Polish Army and the civilian population, Poland was overrun by the Germans.

Shortly thereafter the Russians invaded Poland from the east and northeast.

This double invasion did not break the spirit of the Polish nation. They quickly organized an underground government and a home army of 700,000. The Polish spirit was not conquered; it went underground, where the battle for liberty grew stronger and stronger. Occupation of Poland constantly required 12 German divisions, badly needed on other fronts.

Reinvasion of Poland by the Russians in 1945 raised the hope the German invaders would be defeated and driven out of Poland. This dream was short lived and eventually turned into a nightmare.

The Russian invaders proved more destructive than the Germans. Gestapo techniques seemed amateurish in comparison to the experts of the Russian secret police.

Tens of thousands of the Polish underground army and government officials were arrested and deported to Siberia for elimination. Even this added tragedy did not break the spirit of the nation.

In spite of Poland's being placed in the satellite group, the struggle for freedom continues with unabated strength. Even when dominance seemed complete, the Poznan uprising of 1956 broke the myth and resulted in partial freedom.

History proves that the spirit of the Polish nation is never crushed. At the first opportunity it will rise to complete freedom and independence and its position among the concourse of free nations. It is still the eastern outpost of our Christian civilization.

STEFAN HELLERSPERK

EDITOR'S NOTE: Mr. Hellersperk, former Polish diplomat, will speak at the mass meeting at Sans Souci Park at 6 p.m. Sunday under the auspices of the Polish American Congress of Northeastern Pennsylvania. He will give an eye witness account of the German invasion of Poland. Taken into custody in 1945 by the Russian Communists because of his activities in the Polish underground, Mr. Hellersperk was deported to Siberia where he had a harrowing experience in concentration camps and coal mines for 32 months, during which his weight dropped from 165 pounds to less than 90 pounds. He returned to America in 1948, rejoining his wife, the former Melania Kocyan, daughter of Dr. and Mrs. Joseph Kocyan, city.

Northwest Public Power Association Endorses Bill To Require Senate Confirmation of IJC Commissioners

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, recently Gus Norwood, executive secretary of the Northwest Public Power Association, forwarded to me a copy of a letter sent by his organization to the able chairman of the Senate Foreign Relations Committee, the distinguished Senator from Arkansas [Mr. FULBRIGHT], endorsing my bill, S. 2594, to require Senate confirmation of U.S. Representatives appointed by the President to serve on the International Joint Commission.

Mr. Norwood states that—

We consider the position to be a highly sensitive, policymaking function not unlike that of an ambassador. * * * The position, of course, is of much more importance than some 80 percent of executive appointments which are now subject to the advice and consent of the Senate.

I subscribe fully to Gus Norwood's remarks, and I ask unanimous consent that the complete text of his letter be printed in the Appendix of the RECORD for the information of the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEPTEMBER 8, 1959.

Hon. J. W. FULBRIGHT,
Senate Office Building, Washington, D.C.

DEAR SENATOR FULBRIGHT: This association, representing 105 consumer-owned electric systems which serve from 2 million people in Alaska, Montana, Idaho, Oregon, and Washington, is keenly concerned and is in favor of the recommendation of S. 2594 to require the advice and consent of the U.S. Senate with respect to appointments of the three U.S. Commissioners on the International Joint Commission.

Considering the growing importance of IJC we feel that it is necessary that our concept of chairmanship of this commission be raised. We consider the position to be a highly sensitive, policy-making function not unlike that of an ambassador.

The position requires specific knowledge in the field of water resources and electric power.

The Senate should review future appointments and give advice and consent only if the appointee is found to be qualified with respect to knowledge of the water resources and electric power fields and that he possess the statesmanship-like characteristics which are necessary for a person who represents the United States.

The position, of course, is of much more importance than some 80 percent of executive appointments which are now subject to the advice and consent of the Senate.

Accordingly, we urge the enactment of S. 2594.

Respectfully submitted.

GUS NORWOOD,
Executive Secretary.

"Pork" Abroad

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MOORE. Mr. Speaker, now that the tug of war is over between the executive and the legislative branches of the Government with respect to what shall be written into law in the form of the public works appropriation, I ask unanimous consent to include in the RECORD an editorial appearing in the Wheeling

News-Register of Sunday, September 13, 1959, entitled "'Pork' Abroad."

This editorial certainly points up in a comparative sense that which we are doing on the domestic front and that which we are doing under foreign aid in the field of public works. After having read the editorial, I feel some confront in my record here in the Congress in opposing foreign aid. I do not believe that two different standards should apply—one for the American people and one for foreign countries.

In voting to sustain the President's veto of both public works bills, I felt that the President was wise in these vetos because they were in the cause of sound fiscal practice. However, a double standard cannot be used in matters that deal directly with the American people, even though it is based upon sound fiscal practice. I respectfully refer this editorial to my colleagues for their consideration:

"Pork" Abroad

The cause of sound fiscal practice would have been better served, no doubt, had Congress yielded to the President in the matter of a public works appropriation. It is undeniable that the device of adding to an omnibus public works bill project not recommended by the agencies charged with the responsibility of this type of planning breeds extravagance. There is basis for the complaint that, under these circumstances, many projects may be better designed to catch votes for Congressmen than to serve a real public need. There are 67 such in the measure which Congress now has passed over presidential disapproval. Even with a blanket cut of two and a half percent, made after the first veto stood up, the measure calls for the expenditure of more than $1,185 million to start these and other flood control and other works, and to continue projects already underway. Moreover, it was charged by the President and not refuted, that the addition of these 67 projects will cost the taxpayers a total of $800 million over the years; an obligation which would not have been incurred had they not been added to the original administration recommendation.

In the light of the precarious condition of the budget, the pressure of the debt burden, the desirability of curtailing our public expenditures and putting our fiscal house in order, Mr. Eisenhower probably took the sounder position in opposing this new construction.

But there was a fatal flaw in Mr. Eisenhower's armor. While preaching economy on the domestic front, demanding the severest sort of belt-tightening to make possible a balanced budget and to pave the way for tax reduction, the President has insisted just as vehemently on a policy of openhanded generosity in the field of foreign aid. He called originally for a foreign-aid program of $3.9 billion, and has fought every inch of the way against congressional attempts to whittle it down. In the bill now pending which would appropriate the actual money to keep the foreign-aid program going, provision is made for $800 million worth of works projects in foreign countries. As Senator Allen J. Ellender, Democrat, of Louisiana, pointed out in the veto debate, it borders on the ridiculous to balk at the expenditure of $800 million over a period of years for public works in the United States while endorsing the expenditure of an equal sum of our money during a single year for like improvements in distant lands.

The American people, this newspaper is confident, believe in the exercise of economy at the seat of government. But they can't understand why it should be an exclusively domestic enterprise; why the necessity for curtailment doesn't apply to foreign aid as to activity at home; why we should be called on to keep on sacrificing at an undiminished rate for other peoples, not all of whom have displayed much enthusiasm about doing something for themselves. This is particularly true in the light of compelling evidence of waste and mismanagement in the distribution and use of foreign aid. If then, there is to be any loose expenditure of tax dollars for public works, the American people would prefer that the money is spent at home where it can do them some good, even if there is a faint odor of pork about some of the undertakings.

Henry Fountain Ashurst Can Look Back on a Long and Notable Career in the Senate and in Public Service

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President, yesterday was the 85th birthday of Henry Fountain Ashurst, former Senator from Arizona.

I desire to pay tribute to this man and his long and notable career. May he live to enjoy many more birthdays.

Mr. Ashurst, who now lives in Washington, represented Arizona for 29 years—from the time it became a State in 1912 until 1941. As a young lawyer in El Paso, Tex., from 1927 to 1931, not so far from the boundary of Arizona, I heard many legends of Senator Ashurst.

Mr. President, I request unanimous consent to have printed in the Appendix of the Record an editorial from the Washington Post and Times Herald for Sunday, September 13, 1959, entitled "Birthday Boy," and and an article by Phil Casey from the same newspaper for Monday, September 14, 1959, entitled "Ex-Senator Ashurst Vocal and Fit at 85."

There being no objection, the editorial and article were ordered to be printed in the Record, as follows:

[From the Washington Post and Times Herald, Sept. 13, 1959]

Birthday Boy

Today is the 85th anniversary of that distinguished elder statesman, Henry Fountain Ashurst, who has found our Washington climate (humidity and all) so congenial that even after his long tenure in the Senate he has never shown the slightest disposition to return to Arizona. One explanation, perhaps, is that although from the beginning of statehood in 1912, Arizona returned him for five sucessive terms, he was never quite as much appreciated by his compatriots as by his congressional colleagues and by the congressional press galleries.

In Arizona they may have already forgotten the time when he was the handsomest member of a body more distinguished for dignity than for manly beauty. Doubtless they have preferred to forget that in a day when U.S. Senators felt it incumbent to dress for the part he was the most elegantly tailored of them all. They may even have forgotten the sesquipedalian chromatic rhetoric in which he excused or justified the occasional inconsistencies of his long legislative career; and how in the matter of purple periods this prodigy among cowpokes could hold his own with such masters as Reed and Stone of Missouri, Borah of Idaho, Williams of Mississippi, and Jim Ham Lewis of Illinois.

But all this is well and gratefully remembered here, at least by those old enough to be able to contrast the mellifluent magnificos of Senator Ashurst's day with the stodgy, solemn, statistics-spouting sobersides that have inherited their places in the pages of the Congressional Record.

[From the Washington Post, Sept. 14, 1959]

Ex-Senator Ashurst Vocal and Fit at 85

(By Phil Casey)

Henry Fountain Ashurst, former Arizona Senator, hit 85 yesterday and said he feels fine and can still be heard a block away.

"I could go out on my veranda right now," he said, "speak for an hour without one throat lozenge, and you'd hear me for at least a block, distinctly."

The tall, white-haired and still vigorous Ashurst figures the voice that rang often and strongly through the Senate Chamber from 1912 to 1941 is still in great shape because he spent years developing it and quit smoking 22 years ago.

He began smoking and chewing tobacco when he was 12, gave up chewing when he got married, because his wife couldn't stand it, and quit smoking at 63.

Seated in the apartment he has lived in for 20 years at the Sheraton-Park Hotel, Ashurst gave fluent evidence that his memory is just about as good as his voice.

"I once said not a leaf yet falling from the tree of memory," he said, "but I guess some leaves are falling by now."

But he hasn't forgotten much.

" I had my first drink January 1, 1889, when I was 16," he said. "It was bourbon and I haven't found a bad one since.

"I was born in an uncovered wagon—in Nevada—not a covered wagon; they were like the Cadillacs of today, and we were poor. Ours was uncovered."

After 29 years as a Senator, Ashurst lost out in a primary race in Arizona and retired.

"I neglected my people. I didn't go home enough. I'd been in one office or another 50 years and I wanted a little freedom between the office and the grave. It's been the happiest period of my life."

Ashurst seems in great shape, and has no complaints. He's up early every day, works on correspondence until afternoon, walks a mile, rests, eats well, steering clear of heavy foods, reads 6 hours a day and goes to a party practically every night.

The reason he lost, he said, is simple.

He uses glasses only for reading and can read without them. His hearing is holding up well and his teeth are his own.

Ashurst admits to some regrets.

"I'm sorry for a lot of things," he said. "I had a hot temper. I made so many mistakes it's a wonder I pulled through. Now people call be uninsultable. You can't make me mad. It's not worth it. I'm uninsultable."

Southeastern Soil Conservation

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks I include in the Record a speech given by the Hon-

orable WILLIAM JENNINGS BRYAN DORN, of South Carolina, before soil conservation district leaders in Charleston, S.C., on August 3, 1959.

I also include an editorial from the August 7 edition of the Greenville News, published at Greenville, S.C.

The speech and the editorial are thought-provoking and are worthy of deep study but not only Members of the Congress, but by all to whom a free, dynamic economy in America is of prime importance.

The speech and editorial follow:

ADDRESS OF CONGRESSMAN WILLIAM JENNINGS BRYAN DORN

Our annual Federal expenditure for national defense is $40 billion.

We have given away nearly $200 billion in the last 20 years in various foreign aid schemes.

World War II cost us over $300 billion.

Our national debt is $285 billion and rising. Taxes are being constantly increased—local, State and national.

Experts predict foreign aid will cost another $100 billion in the next 30 or 40 years.

The great portion of this money has been spent to make the world safe for democracy, the war to end all wars, and the four freedoms. It has all led up to the present cold war with its fantastic expenditures. As a Nation we think in terms of dollars, high standards of living. We talk in terms of big deals and big things. Our leaders believe that the cold war will be won out in space with rockets, guided missiles and space ships. We stockpile atomic and hydrogen bombs in ever increasing numbers.

We could win the race to the moon and still lose this cold war in the field of agriculture. Khrushchev recently said that Russia is devoting 100 million new acres to agriculture. His people are urged and even driven to grow more and more. In the United States, with Government regulations, red tape and restrictions, we grow less and less. The income of the farmer is annually less and less and it is costing the taxpayers more and more. Russia is making a careful, calculated bid for the economic domination of the world. The cornerstone of her plan is greater agriculture production. They are sending agricultural experts into every area of Africa and South Asia. These agents are making friends and paving the way eventually for Russian agricultural and industrial experts.

On the other hand, we are, through the foreign aid program and the maladministration of our trade program, losing our agricultural markets abroad and teaching other people how to grow the things that we have traditionally grown, such as cotton and tobacco.

Not only Russia but Red China is vastly increasing her agricultural output and acres devoted to farm crops. Every country in the world is planting more and more. Rhodesia is exempting her farmers from land taxes to grow more. Turkey has exempted her farmers from income taxes to grow certain crops.

The American farmer is cultivating 27 million acres less than in 1930 and 20 million acres less than in 1945. There are 10 million less people on our farms today than in 1930. Slightly over 10 percent of our population live on the farm today. This is the smallest percentage of our total population than at any time in our history. It is probably the smallest percentage of any great nation or civilization in the history of the world. Our Constitution, Declaration of Independence, and Bill of Rights were largely written by rural men who were independent, self-reliant, believing in States rights, and local government. Our basic, fundamental, political, and social philosophy was rural. Today such a very small percentage of our people are on the farm thus adversely affecting our social, economic, and political philosophy.

Government price supports have not, cannot, and will not solve the American agriculture dilemma. Under the price-support program millions of people have been forced off the land, creating more unemployment in the cities. Farm income has annually gone down during the last few years—more than $1 billion each year. Surplus farm products are piling up in Government warehouses, costing the taxpayers more every day—over a million dollars a day storage cost alone. If agriculture is to regain its independence and be a real factor in the cold war, we must get the Government out of the farming business. In doing so, we must eliminate Government price supports and acreage controls. At the same time, we must freeze the present vast surplus in Government warehouses. This surplus must not be dumped on the market as it would bankrupt every farmer in America. We need to step up domestic consumpiton of our farm products and conduct research in order to find new uses for these products.

If the State Department were more sympathetic to this agricultural problem, we could regain our vast export trade in agricultural commodities. Our State Department represents foreign countries and, therefore, does not permit American agricultural products to really compete on the world market. The State Department is more interested in protecting the markets of foreign nations and teaching them how to grow the things we already have in surplus. We used to export 60 percent of our cotton crop. We used to export vast portions of our wheat. Export of these crops has fallen to a trickle. We were the only Nation in the world exporting tobacco at one time. Now some nations are even sending tobacco to America. The average tobacco acreage in the United States is 2.9 acres per farm. Thousands of farmers can plant only 4 to 5 acres of cotton. This is tragic. These farmers cannot possibly feed, clothe and educate their children while being held in such bondage.

Who first put the Government in the agriculture business? Who wrote the first Agricultural Adjustment Act, which was the beginning of our present dilemma? , If it had been written by Russia, it could not have served their purpose better. This program putting the U.S. Government on the necks of our farmers was initiated by Henry Wallace, Lee Pressman, Tex Tugwell, Alger Hiss, Frank Shea, notorious pseudoliberals and advocates of national socialism.

We have successfully resisted all efforts of the Farmers Union and others to put the Government in the cattle and livestock business. The cattle industry is still free. It is growing. It is expanding and bringing in the farmers more income. Why? It is totally free of Government regulations and restrictions as to how much we can raise and how much we can market. The hog market is at the present time falling off. We will hear a howl from the Farmers Union and others for Government price supports on meat. This would be disastrous as it would bring another segment of our agriculture economy under this fallacious and ridiculous program.

Likewise, the pine tree industry in South Carolina is a growing and flourishing one because it is free from Government price support programs and acreage controls.

You have been active in trying to secure for the southeastern coastal region a soil and water research laboratory. I pledge you my support and predict that next year $500,000 will be appropriated by the Congress for the construction of this much-needed soil and water research laboratory.

Much research needs to be done concerning water in the Southeast. We have only scratched the surface. Water will become more and more of a problem in the next 50 years. Water levels are changing in the United States. Water is becoming scarce in other areas of our country. Likewise, soil productivity in the Southeast is in desperate need of further research. Research is the key to the future.

States rights is most important in the field of agriculture. Now the Federal Government is threatening individual freedom and State sovereignty in the field of water rights. Recent Supreme Court decisions have had the effect of "subjecting the water and water courses to a dominant servitude invested in the Federal Government." The Court in 1955 in substance exempted all the Federal Government lands from any State laws concerning water rights granted under State water laws. Thus, in many cases usurping individual water rights formerly acquired from the States. Water is a powerful weapon. The Federal Government by control of all water could completely dominate and overwhelm the States and subjugate the individual to bureaucratic domination. We must fight centralization of the Federal Government in all segments of our economy. The alternative is complete servitude to the Federal autocracy.

The Communists in the early 1930's started their "agrarian reform movement" in the United States. According to Whitaker Chambers, they were successful in establishing a Communist cell in the old AAA program, which was the beginning of the Government agricultural program. The Communists and National Socialists realized from past experience in foreign countries that the farmers resisted socialism more violently than any other class of people. In the United States they planned to concentrate on the farmers, first getting them accustomed to Government regulations, Government restrictions, reduced acreage, and phony price-support programs.

We must get rid of these Socialist, Fascist farm regulations and controls or else in a few years America will be completely out of the farm business. We will be reduced to a third-rate power. Our farm population must be permited to expand and grow. We need the opportunity system the same as any other class of people. We cannot forever condemn our farm people to fewer acres, less opportunity, and a lower standard of living. This can only result in a weakening of our Nation in the face of an expanding, growing, Communist empire.

[From the Greenville News, Aug. 7, 1959]

REPRESENTATIVE DORN SPEAKS HIS MIND

Congressman BRYAN DORN may be a "voice crying in the wilderness" at the moment but his courage in refusing to indulge in easy demagoguery is bound to be recognized.

In his speech before the Soil Conservation District Supervisors of the Southeast, the South Carolinian spelled out in detail his conviction that the Federal policies of the past and present which are supposed to help the farmer have, on the contrary, come close to annihilating him.

The core of all those programs, the price-support system, "has not, cannot, and will not solve the American agricultural dilemma," the Congressman declared.

Rather than improving the farmers' standard of living, the net result of the price-support and crop-control program has been to force millions of people off the farms, reduce farm income, and create an overwhelming farm product surplus.

Congressman DORN pointed to the startling contrast between the farm products which are controlled by the Federal Government and those which are still free.

In conjunction with a State Department which is more interested in protecting the

agricultural economy of foreign nations than in helping our domestic farm economy, the programs have all but wrecked the once abundant foreign market for U.S. cotton, wheat, and tobacco, he declared. Much of that portion of the production of these crops which once was sold abroad is now overflowing Government warehouses where it poses a constant depressing threat on domestic prices.

On the other hand, both the cattle industry and the growing tree farm industry are expanding and flourishing, largely because it is free from Government price-support programs.

In his speech, the Greenwood native, himself a cattle farmer, traced the origin of the present farm programs back to the original Agricultural Adjustment Act.

"This program," he said, "putting the U.S. Government on the necks of our farmers was initiated by Henry Wallace, Lee Pressman, Rex Tugwell, Alger Hiss, Frank Shea—notorious pseudo-liberals and advocates of national socialism."

"We must get rid of these Socialist, Fascist farm regulations and controls," he continued, "or else in a few years America will be completely out of the farm business. We will be reduced to a third-rate power. Our farm population must be permitted to expand and grow. We need the opportunity system the same as any other class of people.

"We cannot forever condemn our farm people to fewer acres, less opportunity, and a lower standard of living. This can only result in a weakening of our Nation in the face of an expanding, growing Communist empire."

Congressman DORN's words are bound to come as something of a shock to some of his fellow South Carolinans, most of whom are more accustomed to being told that the main trouble with farming is that there are not enough Government controls and supports.

But, based as it is on his solid convictions about free enterprise and State and local rights, we cannot believe that his words will fall on fallow ground.

He has put into plain words the feeling of many of his constituents that the present farm programs are not suited to the American way of life, that they are bankrupting the Nation and that they have already come close to bankrupting the very segment they were supposed to aid—the American farmer.

A Tribute to Senator John McClellan

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, for the information of the Congress and the country, a column from the able and respected pen of Gould Lincoln, entitled "McCLELLAN Real Labor Bill Victor," published in the Washington (D.C.) Evening Star of September 8, 1959.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Sept. 8, 1959]

McCLELLAN REAL LABOR BILL VICTOR

(By Gould Lincoln)

Amid all the talk of who won the victory in the recent passage by Congress of the antiracketeering, anticorruption labor bill, two facts stand out. First, the major credit for effective legislation belongs to Senator JOHN L. McCLELLAN, of Arkansas, chairman of the Senate committee bearing as its long name "The Select Committee to Investigate Improper Activities in Labor-Management Relations." Indeed, had it not been for Senator McCLELLAN's persistent and courageous stand and his ability to keep partisan politics—Democratic and Republican—in abeyance, there might have been no legislation. Second, the victory really belongs to the American people who made their emphatic demand for reform labor legislation known to Members of Congress.

The Senate investigating committee, composed of four Democrats and four Republicans, was created in early 1957—more than 2½ years ago. It grew out of investigations by the old Senate investigating committee once headed by the late Senator McCarthy of Wisconsin and then by Senator McCLELLAN. This inquiry turned up racketeering in labor-management relations in New York of a vicious character. The select committee was set up with full authority to go thoroughly into the whole subject which the old committee did not have. What the select committee revealed shocked the entire country. Senator McCLELLAN, a modest man, gives great credit to his committee members—Senators KENNEDY of Massachusetts, ERVIN of North Carolina, CHURCH of Idaho, CAPEHART of Indiana, GOLDWATER of Arizona, MUNDT of South Dakota, and CURTIS of Nebraska—and to his chief counsel, Robert F. Kennedy, brother of the Massachusetts Senator.

INCLUDES M'CLELLAN'S IDEAS

This was the first piece of major labor legislation passed by Congress in a dozen years. It is not the Kennedy bill, originally passed by the Senate after being amended, nor is it the Landrum-Griffin bill which passed the House. It is a compromise combination of both. It also carries important elements of the five bills which were introduced by Senator McCLELLAN, including in large part the "bill of rights" for union members. Indeed, it was the adoption by the Senate of McClellan's "bill of rights" as an amendment to the Kennedy bill which cracked the tough nut of labor legislation wide open. It shed the first ray of hope that an effective law might be written. This was watered down before the bill passed the Senate. But the spirit shown in the Senate gave encouragement to those Members of the House intent on writing still stronger legislation.

The leaders of organized labor have denounced the new measure as "worse than the Taft-Hartley Act"—which they called a "slave labor bill." James Carey, a vice president of the AFL–CIO, addressed a letter to every Member of the House who voted for the Landrum-Griffin bill threatening that organized labor would work for their defeat at the polls next year. All of which sets the stage for a terrific battle in next year's elections, with organized labor working for political control of the Nation. A great deal will depend on the outcome of this struggle. But as of today, the union leaders seem to have bitten off a big chunk to swallow, when they reflect that the Senate finally passed the reform bill by a vote of 95 to 2, and the House by a margin of 352 to 52. It is true that the bill as reported from conference between the two Houses was modified and less drastic in some particulars than the Landrum-Griffin bill. But it is still a measuse with teeth, and it still represents a strong feeling that the honest union members must be protected in all the rights guaranteed him in the Bill of Rights embodied in the Constitution, and that certain practices by labor unions unfair and opening the way to hoodlum domination must be halted.

RISKED POLITICAL LIFE

Senator McCLELLAN knew that he was taking his political life in his hands when he started on the investigation of labor-management relations. He tried in vain to get help from important labor leaders in the framing of reform legislation. They turned a deaf ear. They said they could clean up the situation themselves. They wanted no legislation. They adopted a program of ethical standards. The AFL–CIO kicked Jimmy Hoffa and his Teamsters Union out when he would not comply. In the last round of the legislative fight, however, they and Mr. Hoffa were all found fighting against a strong reform measure.

The Arkansas Senator comes up next year for renomination and reelection. No one has yet announced to run against him. It has been reported, however, in Arkansas, that the union leaders are ready to spend $2 million there to defeat Mr. McCLELLAN. Certainly they will do their utmost to get rid of the man whom they most blame for the legislation now enacted. How many other Members of the Senate and House they will seek to unseat remains to be seen. It will be a fight that crosses both Democratic and Republican lines. And it will be a desperate and bitter fight.

House Joint Resolution To Provide a Program Re Federal Debt, Deficits, Inflation

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PILLION. Mr. Speaker, for the information of the Members of Congress, I am pleased to insert a recital of the critical condition of the Federal Government and a program for its correction. These matters are contained in the following joint resolution which was introduced today.

Whereas the U.S. Government has pursued a loose and irresponsible fiscal policy for the past 10 years; and

Whereas, due to this irresponsible fiscal policy, the national debt has reached the highest level in our history, $290 billion; and

Whereas there exists in our Government a lack of purpose to operate on an annual balanced budget; and

Whereas since the year 1950, the U.S. Government has incurred the following annual deficits, $3.1 billion, $4 billion, $9.4 billion, $3.1 billion, $4.2 billion, $2.8 billion, $12.9 billion, with relatively small surpluses in other fiscal years; and

Whereas since the Korean war, during a period of relative prosperity, the net operating deficit is more than $8.5 billion; and

Whereas these deficits have created a cumulative demand upon the nation's money markets thereby reducing the capital funds available for the expansion of our economy and the creation of job opportunities; and

Whereas there has been no executive or legislative policy or declaration indicating any intent to repay any part of the national debt; and

Whereas this careless fiscal policy is a major cause of our present inflation, the ever-increasing cost of living, and the reduction in the purchasing power of the dollar; and

Whereas this loose fiscal policy has generated and encouraged an insidious repudiation of debt; and

Whereas this irresponsible fiscal policy has reached such proportions that there is a rapid and increasing loss of public confidence in the will and the capacity of our Government to balance the budget, repay our national debt, and stabilize the value of our currency; and

Whereas this lax fiscal policy has created an artificial inflationary prosperity by an expansion of credit, increased circulation of currency, deficit financing, increased public spending, and an abnormal speculative and inflation anticipation buying; and

Whereas there must be an inevitable end to this type of deficit financing which even now has resulted in the resort by the U.S. Treasury of the tactic of robbing Peter to pay Paul; and

Whereas the lack of confidence in the Government's obligations is evidenced by the fact that its bonds are selling as low as 80 cents on the dollar; and

Whereas the fear of inflation on the part of the public has resulted in a net loss of more than $1 billion in the redemption over the purchase of U.S. savings bonds in the last 3 months; and

Whereas this unsound fiscal policy has resulted in a "hard" and "tight" monetary policy as shown by the following facts:

On September 10, 1959, the Federal Reserve Board raised its discount rate charged members banks to 4 percent. This rate is the highest rate since the year 1932.

This pinch in money supply will increase interest rates to 5 percent, 6 percent, and 7 percent to businessmen. It will result in the abandonment of many planned publicly financed construction projects.

Small businessmen will be particularly squeezed for operating capital.

This tight money policy will restrict and discourage the expansion of our economy and tend to increase unemployment.

In 1958, the U.S. Treasury paid 1¼ percent for 1 year money; today it must pay 4¾ percent; and

Whereas foreign countries and foreign citizens hold more than $18 billion of our short term securities; and

Whereas there is growing fear of inflation in the United States on the part of foreign investors; and

Whereas the liquidation of credits by foreign investors could create a serious fiscal crisis in this country; and

Whereas the bulk of the Nation's debt of $290 billion are in the form of short-term securities, so that they are approaching the convertibility demand of currency; and

Whereas the announced debt management policy of the U.S. Treasury to lengthen the debt maturities has been a complete failure, in fact, the debt is becoming increasingly short-term debt; and

Whereas the debt maturities are so fiscally precarious, that the U.S. Treasury will be required to raise the enormous sum of $85 billion in the next year for refunding and deficit spending; and

Whereas the combination of a loose fiscal policy and a tight money policy is the worst possible fiscal combination for a healthy and prosperous economy; and

Whereas an erroneous impression is being created that an authorization by Congress to increase interest rates will solve the Federal Government's fiscal crisis. In fact, this action would deal only with the symptom and not the cause; and

Whereas as a general rule, the loss of 50 percent of the purchasing power of a national currency within a generation is followed by runaway inflation and the loss of the balance of the value of the currency in a relatively shorter time; and

Whereas the purchasing power of the U.S. currency has dropped more than 50 percent in the last generation; and

Whereas this loose fiscal policy has created fiscal inflation, which in turn, has encouraged labor cost inflation. This situation has resulted in increasing seriously and inequitably the differential between the income for those segments of the population who have union bargaining power as against those of our working force who do not have union bargaining power; and

Whereas this fiscal disorder has encouraged the increase in some areas of costs at a greater rate than the increase in production; and

Whereas this uneconomic fiscal policy has resulted in pricing many U.S. manufactured products out of the world market, causing the import of foreign products, and thus creating unemployment in the United States; and

Whereas this Nation's loose fiscal policy discourages thrift, the accumulation and investment of capital, the risks of new industry, the expansion of present industry, and the creation of job opportunities; and

Whereas enormous wastages continue to exist in Federal spending both by reason of inefficient administration, contradictory legislative policies and uneconomic policies; and

Whereas a minimum of $5 billion per year could be saved in Federal spending without, in any way, endangering the defense program or reducing any necessary civilian program; and

Whereas, the recent history of England, France, and West Germany demonstrates that their expanding and prosperous recovery is the result of an austere, orthodox fiscal policy, after rejecting inflationary and socialistic experiments; and

Whereas many countries, today, who have allowed inflationary policies to prevail are suffering from internal dissension, stagnant economies, and unstable governments; and

Whereas loose fiscal policy and inflation unjustly wipe out and destroy cash savings, bank deposit savings, insurance savings, social security benefits, pension benefits, mortgages, and all other forms of deferred contractual benefits of the populace; and

Whereas inflation destroys the wealth of the many, it unjustly and uneconomically enriches the few; and

Whereas the United States, as the leader of the free world, is engaged in a life or death war with the Soviet on all fronts, economic, political, military and ideological; and

Whereas the continuation of unsound fiscal policies will result in inflation and its unforseeable disastrous consequences to both the safety of this Nation and to the survival of the free world; and

Whereas the Federal Government has exhausted its credit, it lacks a reserve to combat a depression or to meet any serious national or international emergency. This lack of financial reserve would require and plunge this Nation into an immediate totalitarian regime in order to wage a war; and

Whereas Congress has failed to adopt a sound fiscal policy; and

Whereas the executive department has also failed to announce a specific sound fiscal policy; and

Whereas the legislative committees in the House of Representatives that report bills authorizing expeditures, the Committee on Appropriations that recommends expenditures and the Committee on Ways and Means that recommends taxes to raise revenue, each act independently of each other, without any common coordinated fiscal objectives; and

Whereas the House of Representatives lacks the legislative machinery to cordinate the authorization, the spending of funds, and the raising of revenue; and

Whereas the fiscal condition of this country is so threatening to the welfare and safety of this Nation, that remedial action should properly be a bipartisan effort. Since fiscal policy is both a legislative and executive responsibility, remedial action should also properly be a joint effort of Congress and the President; and

Whereas the present hit or miss fiscal policies of the Federal Government are creating doubt, apprehension, and a lack of confidence in the investing public; and

Whereas the adoption of a firm, sound fiscal policy with a systematic and regular reduction of debt is an indispensable condition for the restoration of public confidence in our dollar, in the stopping of inflation, and in the restoration of a healthy, expanding economy; and

Whereas a firm policy decision by Congress and the President to pursue a sound fiscal policy, by an annual balancing of the budget, and by an annual repayment plan to reduce the Federal debt, would restore public confidence in Federal obligations; and

Whereas the restoration of confidence in the fiscal policies of the United States would, likely, reduce interest rates on Government obligations by one-half to 1 percent and thus saving $1,450,000,000 to $2,900,000,000 annually on interest rates alone: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it is hereby declared to be the policy of the Congress to annually balance the budget except in the event of war and to make a regular annual repayment of the national debt except in an emergency declared by joint action of Congress and the President.

SEC. 2. It is further declared to be the policy of Congress to coordinate expenditures and revenues so as to produce a normal surplus of $3 billion and a minimum surplus of $1 billion for the reduction of the national debt.

SEC. 3. The President shall recommend in his annual fiscal message such appropriations and taxes as will produce a normal surplus of $3 billion and a minimum surplus of $1 billion to be applied to the reduction of the national debt.

SEC. 4. (a) There is hereby established in the House of Representatives a Finance Committee which shall consist of the four senior majority party members and the three senior minority party members of the Committee on Appropriations, and the four senior majority party members and the three senior minority party members of the Committee on Ways and Means.

(b) The Finance Committee shall coordinate the work of the legislative committees, the Committee on Appropriations and the Committee on Ways and Means, and shall submit such reports and recommendations as it deems proper, to effectuate the fiscal policies set forth in this joint resolution.

(c) This section is enacted as an exercise of the rulemaking power of the House of Representatives, and as such, shall be considered as part of the rules of the House, and shall supersede other rules only to the extent that it is inconsistent therewith. The constitutional right of the House to change such rules (including those prescribed by this section) at any time, in the same manner and to the same extent as in the case of other rules of the House, is hereby expressly recognized.

Keeping Up With the Khrushchevs

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. WILEY. Mr. President, a very interesting article by Marguerite Higgins,

appeared in today's Herald Tribune. I ask unanimous consent that it be printed in the Appendix of the RECORD. It contains material that we must bear in mind during and after Khrushchev's visit.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEPING UP WITH THE KHRUSHCHEVS

(By Marguerite Higgins)

WASHINGTON.—One of the most unsettling facets of the many-faceted Mr. Khrushchev is the utter aplomb with which he rearranges the truth to suit himself.

And it's not just the fact that he frequently insists on calling a spade a typewriter. There is, additionally, the resentment he conveys to those impolite enough to insist that—no matter what Mr. Khrushchev says—a spade is still a spade.

Indeed, no matter how outrageous the distortion of the facts, Mr. Khrushchev always manages to give the impression that he truly believes himself to be in the right.

You find yourself wondering whether it is remotely possible that Mr. Khrushchev has persuaded himself at least of the truth of his declaration to the effect that the Poles freely chose their Communist government or that Russia never has and never will interfere in the internal affairs of another country. These claims are in written form under Khrushchev's byline in such a learned journal as "Foreign Affairs."

But wait a minute. It was Khrushchev himself, wasn't it, who flew to Warsaw on that crucial October day of 1956 and actually ordered the Red Army to move on the city to enforce Russia's will and the continued presence of Soviet Marshal Rokossovsky as Poland's real boss? This particularly flagrant Khrushchevian interference in the internal affairs of Poland failed, of course, because the Poles made it plain they would fight rather than back down.

But intervention it was.

And yet 10 rubles to a doughnut that a principal basis of his peaceful coexistence gambit during the American tour will be repeated unabashed claims concerning the Soviet Union's angelic posture vis-a-vis the Eastern Europeans.

In addition to the aplomb with which Mr. Khrushchev puts a false front on events in the Communist part of the world, there is the redoubtable cockiness with which he sets about rewriting even American history.

For instance, in the latest issue of "Foreign Affairs," Mr. Khrushchev writes: "Capitalism in the United States has been in existence more than a century and a half, and the history of the United States has developed in such a way that never once have enemies landed on American territory."

It may be that Mr. Khrushchev simply never heard of the War of 1812 which, as wars go, was rather boring. But the War of 1812 did indubitably take place, the enemy indubiably were the British, and the British not only landed on American territory but marched to Washington and put the torch to Government buildings.

Now nobody over here gives a balalaika whether Mr. Khrushchev gets a little careless about early American history.

But there is a serious question whether, out of a misguided sense of politeness, Mr. Khrushchev is going to be allowed to get away with his propaganda on modern times and the whys and wherefores of Communist ways.

Already, for instance, some of the American press is busy printing compilations of Mr. Khrushchev's speeches put together in book form and doing so deadpan without comment or correction. This is sometimes known as "objective reporting." But is it? Or is it simply the easiest way out?

For there are many ugly questions to be asked lest this trip be turned solely to Communist purposes, which are to make the world safe for the "peaceful" spread of communism.

The most important questions are the most obvious, relating mainly to Mr. Khrushchev's amazing claim that all Communist states are, through the mere fact of being Communist, "committed to nonagression" and bound to "desist from violating the territorial integrity and sovereignty of other states in any form and under any pretext whatsoever." After Laos, Tibet, Latvia, Lithuania, Poland, etc., have been dispensed with, Mr. Khrushchev could additionally be asked how this fine sentiment squares with the statement he made in Moscow this Saturday to the effect that Japanese-Russian relations would remain at low ebb so long as Tokyo and Washington kept their present treaty relationships. Mr. Khrushchev made the statement to Takeo Miki, of the Japanese Liberal Party, and no matter how you translate it it still sounds as if Russia was trying to tell "sovereign" Japan how to run its foreign affairs.

Mr. Khrushchev isn't sending rockets soaring to the moon and himself to Washington to help the Republican election chances. He is coming because he thinks he can turn this trip to Russia's advantage. You can't blame him for trying to make the world safe for communism. But neither can Mr. Khrushchev blame us for resisting. And the best way is always to expose his game for what it is.

Hon. Frank Walker, Former Postmaster General of the United States, Dies in New York

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following announcement of the death of the Honorable Frank Walker, former Postmaster General of the United States, which occurred on Sunday, September 13, in New York. The following announcement appeared in the Washington Post and Times Herald on September 14, 1959:

FRANK WALKER, EX-POSTAL CHIEF

NEW YORK, September 13.—Frank Comerford Walker, 51st Postmaster General of the United States, died today in his suite at the Carlyle Hotel after a long illness. He was 73.

One of the most retiring members of President Franklin D. Roosevelt's Cabinet, he was Postmaster General from September 11, 1940, to July 1, 1945.

He was Mr. Roosevelt's personal and political intimate for many years. He helped finance and organize the Roosevelt campaign in 1932, handled assorted political and administrative assignments from his chief and finally became a member of his Cabinet.

Tight-lipped and phlegmatic, he never made speeches, held press conferences or gave interviews. He believed "no publicity was good publicity," one of his friends said.

A successful lawyer and businessman, Mr. Walker was one of the wealthiest men in the New Deal. He was noted in New York for his quiet activities in Catholic charities.

He was vice president and general counsel of Comerford Theaters, Inc., a chain of moving-picture houses in New York and Pennsylvania.

Born May 30, 1886, in Plymouth, Pa., of poor Irish parents, he was taken to Butte, Mont., when he was 3 years old. His father, David Walker, later became an independent copper mine operator.

Mr. Walker attended Gonzaga University in Spokane, Wash., and received a law degree from Notre Dame University in 1909. He was elected to the Montana Legislature in 1913.

He moved to New York City in 1925 to practice law and forgot politics for several years. In 1928 he contributed $10,000 to the campaign fund of Mr. Roosevelt, then Governor of New York. He gave another $10,000 to start off the campaign which led to Mr. Roosevelt's first nomination and election as President.

Mr. Walker was chairman of the Democratic National Committee between 1943 and 1944. He also was a former treasurer of the national committee, executive secretary of President Roosevelt's Executive Council and executive director of the National Emergency Council.

Surviving are his wife, the former Hallie Boucher, whom he married in 1914, a son, Thomas J. Walker, Fort Lauderdale, Fla.; a daughter, Mrs. Laura Jenkins of New York City, and a sister, Mrs. J. J. McCarthy of Boston.

A solemn High Requiem Mass is scheduled at St. Ignatius Loyola Church here at 11 a.m. Wednesday. Burial will be in St. Patrick's Cemetery in Butte.

Visit of Premier Khrushchev

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the August 22 edition of the Sunset News and Observer of Bluefield and Princeton, W. Va.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BYRD ON KHRUSHCHEV

One voice which has consistently been raised in warning over the possible adverse affects of the impending visit to the United States of Premier Khrushchev is that of West Virginia's junior U.S. Senator ROBERT C. BYRD.

We have said in this space previously that we go along with President Eisenhower's position that it may serve to bring better understanding between this country and the Soviet Union, and that it can impress upon Khrushchev the power of America and its determination to resist Communist aggression. We still hold that opinion. But there is another side to the matter, and Senator BYRD ably stated it on the floor of the Senate a few days ago.

"While many are calling for a great show of friendship and a festive welcome for the Soviet leader," BYRD said, "I feel that our conduct toward him should be in keeping with the grim realities of the world situation, and with full awareness of Mr. Khrushchev's role in that situation."

He reminded the Members of the statement made just 25 years ago by the Communist leader Dimitri Manuilsky:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of confessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

Then BYRD recalled to his hearers Khrushchev's statement about America only a short time ago: "Whether you like it or not, history is on our side; we will bury you yet," and he continued:

"The American people have a great passion for peace, and that passion, commendable as it is, sometimes blinds them to the past. I wish that more of the Members of this body and of the House of Representatives would remind those of our leaders who are responsible for issuing the invitation, of the miserable record of broken promises made by Soviet Communists.

"I will not stand along the streets to witness Khrushchev's triumphal passage through this city," he said "Were I to stand along those streets, I would stand in silence. It would be a silence stern and cold. I have nothing but contempt for the man."

These are forthright words, strong words. We admire Senator BYRD's courage for speaking his feelings. Certainly the points he makes must be kept constantly in mind as the country prepares for and receives the man whom BYRD characterizes as "the butcher of Budapest."

The free world is in a dilemma in its dealings with the Soviet Union. Have its leaders changed in any fundamental way? Does the Communist government still aim at world domination? How reconcile the statements of the present with the demonstrated aims of the past? There is only the record to go on—and that record plainly says to America; Be wary of Khrushchev.

The President of Polish American Congress Protests Visit by Khrushchev

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the Editor of the Wilkes-Barre Record by Attorney Charles Rosmarek, president, Polish American Congress, which appeared in that newspaper on September 11, 1959:

ROSMAREK DISAPPROVES KHRUSHCHEV'S VISIT

To the EDITOR:

Twenty years ago on September 17, Russia, as Hitler's accomplice, stabbed Poland in the back, thus precipitating a worldwide conflagration, costing millions of lives and with it a chain of tragedies that just keeps on haunting the world.

It is ironical that Khrushchev's visit to this country should be time to coincide with this sad anniversary.

In my capacity as president of the Polish American Congress, representing 7 million Americans of Polish descent, I have conferred with President Eisenhower on several occasions just as I have with his predecessors, President Roosevelt and President Truman. While I have the greatest admiration for our President's dedication to peace, I would be derelict in my duty if I did not voice disapproval of Khrushchev's visit to the United States.

This is the same Khrushchev, who as a member of the Kremlin regime, shares responsibility for the mutilation of Poland, the forcible seizure of Lithuania, Latvia, and Estonia, the Communist control of Czechoslovakia and other countries in Europe and Asia, the Katyn Massacre of 15,000 Polish war prisoners, the betrayal of the Warsaw uprising, the planned starvation of millions of Ukranians, the deportation of 40 million innocent people to Siberian slave camps, the slaughter of Hungarians, the murder of American soldiers in Korea, and the shooting down of unarmed American planes. This is also the same Khrushchev who, despite the fact that America rescued Russia from Nazi enslavement when Hitler was at her throat, has threatened to "bury" us in a war of annihilation.

Although a glance at the map will show that communism is the only aggressive force, Khrushchev recently announced that he is reinforcing his army and navy "to keep them in a state of high battle preparedness."

Let Americans beware. Unless we have a strong, firm, and courageous America, ready to meet every threat, Russia will attack us without warning, just as she did Poland 20 years ago.

There is no use of pretending. The master of the Kremlin is not coming here to promote peace. He is coming here with his entourage of master spies to survey the land he wants to conquer, to capture the front pages of the press of America, and to relax our guard by telling us that communism is never an aggressor and therefore America has no need to protect herself with H-bombs or overseas bases.

Although our Government will extend Khrushchev the courtesies demanded by protocol, we are told that we also owe him a courteous reception. We owe him nothing. We are under no obligation to greet anyone dedicated to our destruction.

This is one time when Americans of all persuasions should present a united front on the side of freedom and decency. In addition to religious services in all Protestant and Catholic churches and synagogues for the victims of communism, there should be in all cities, to be visited by Khrushchev, peaceable demonstrations of people carrying signs advocating "Freedom for Captive Nations." Is there anything wrong in asking the Russians to back up their words of peace with deeds?

Moreover, such an orderly demonstration would show Khrushchev and the world how a democracy works and how fortunate we are to live in a free country where we have a right to disagree with our leaders, without fear of reprisal, and they in turn approve of our right to disagree with them.

CHARLES ROZMAREK,
President, Polish American Congress.

State of Oregon Encourages Photography as a Fine Art

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, few States have a more inspiring locale for the practice of photography than does my native State of Oregon. This is one reason that Oregon has produced some of the truly outstanding photographers of the Nation, such as Ray Atkeson, Hugh Ackroyd, H. Valdemar Lidell, all of Portland; Walter P. Dyke, of McMinnville, and many others.

In the New York Times for September 13, 1959, Jacob Deschin has written an article about efforts underway in Oregon to provide the first State-supported program in American history to promote and encourage photography as a fine art. His article also describes a statewide high school photography contest in Oregon, which has just been won by Kurt Rolfes, of Portland.

Because a good many bills pend before the Senate and the House to promote and advance the fine arts in the United States, I ask unanimous consent that the informative article by Mr. Deschin of the New York Times about these activties in Oregon be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Sept. 13, 1959]

PHOTO ART SUBSIDY—MOVEMENT ON IN OREGON FOR STATE SUPPORT

(By Jacob Deschin)

A movement is underway in Oregon for a State-subsidized program on a continuing basis to foster photography as a fine art. Believed to be the first such step in the country, the proposal was inspired by the success of the photography section during Oregon's recent 100-day centennial celebration.

A budget of $20,000 granted by the Oregon Centennial Commission to the newly formed photography section of the fine arts advisory committee, which has recommended the long-range plan, was used to cover the expenses of a diversified program of events that, it may be assumed, was characteristic of what might be expected of the suggested permanent plan.

A 149-print exhibition, "This Land—This Oregon," picked from nearly 10,000 prints in various collections, grouped the pictures under seven main themes, Oregon's scenery, the seashore, the forests, the farm, the small town, the big town (Portland), and the river and hydroelectric power. The show is now on permanent loan to the Oregon Historical Society.

A statewide high school photography contest sponsored by the committee, which offered a $1,000 scholarship for study at a photography school, was won by Kurt Rolfes, of Portland, for a photo-essay on the experiences of a racially integrated class.

WORKSHOP AND LECTURES

A photography workshop, under Minor White's direction, was the principal feature of a group of audience-participation activities handled by this native of Portland, now an instructor at the Rochester Institute of Technology. Students in the workshop group paid $35 each for a 10-day session of picturetaking and discussion of the results.

Other programs by Mr. White were free and included a public forum and a lecture on the creative aspects of photography, and a print clinic based on the work of Portland photographers, all given at the Portland Art Museum.

In addition, the program included two exhibits, one by Mr. White on a sequence theme, the other the instructive "Lyrical and Accurate," loaned by George Eastman House, which defined photography as an art by means of outstanding examples from the past and present.

In its recommendations for a State-sponsored photography-as-fine-art program, the

photography section of the advisory committee noted that photography's role in the centennial celebration demonstrated the feasibility of some continuing program of stimulating photography as a fine art in the State of Oregon; urged that the photography workshop be put on an annual basis, and suggested the appointment of a committee of qualified artist-photographers. Their function would be to advise the State in the expenditure of its funds and to assist in developing programs and activities of a culturally profitable nature.

West Hazleton (Pa.) High School First School in United States To Offer Farm Marketing Program for Youth

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Hazleton (Pa.) Plain Speaker on Thursday, September 10, 1959:

FARM MARKET CLUB WILL BE NATIONAL MODEL—PENNSYLVANIA BEING USED AS TESTING GROUNDS BY FEDERAL GOVERNMENT

West Hazleton High School today became the first school in the United States to offer "Farm Marketing for Youth," a school club program that ultimately will serve as a model for a Federal program covering all high schools in the country.

The program, according to West Hazleton Supervising Principal Julius Schneider, is one of six being offered initially in Pennsylvania, but the other five are offered through facilities other than schools, he pointed out.

Howard E. Newcomer, vocational agriculture supervisor of Luzerne County schools, said a grant from the Federal Government to the Agricultural Extension Service of Pennsylvania State University is making the program possible.

CLUB FORMED

In line with the program, a Town and Country Business Club has been formed at the high school. It is made up of 40 students—15 girls and 25 boys. They were selected from a large number of applicants.

The West Hazleton activity is being offered through the cooperation of E. V. Chadwick, county agricultural agent, and the county schools office, headed by Supt. E. S. Teter.

Various business organizations in the area are cooperating with the club's program. The business places will serve as laboratories for the program and a followup on what is done in school.

Plans are underway to have the businessmen address the students in school and conduct discussions in conjunction with tours of their business places.

EXPANDED PROGRAM

In addition to acquainting the students with farm marketing, the club's activities will afford the students opportunity to analyze the various business programs and learn about the employment opportunities offered in farm marketing.

Serving as leaders of the Town and Country Business Club are William Swinesburg, vocational agriculture teacher at West Hazleton High School; Aubrey Vose, regional marketing specialist for the County Extension Service office, and Ralph Beard, assistant agricultural agent of the county.

After the program is established in Pennsylvania, it will be made available to other States in the Nation.

LIST LABORATORIES

These business organizations will serve as laboratories for the following subjects: GLF plant, Bloomsburg, "Inspection and Grading"; Genetti's Food Market, Hazleton, "Retailing"; Farmer's Cooperative Dairy, "Processing"; Kreisl Bros., Meatpackers, "Assembling"; Sears, Roebuck & Co., "Selling"; Karns Transportation Co., "Transportation," and Thomas C. Thomas, "Wholesaling."

The program will be brought to a close May 12 with a Town and Country Club dinner.

LIST SCHEDULE

Schneider today listed the following schedule for the current school term:

September 24, What Is Marketing?: West Hazleton School.
October 8, inspection and grading: West Hazleton School.
October 21, inspection and grading: GLF, Bloomsburg.
November 4, retailing: West Hazleton School.
November 18, retailing: Genetti's Food Market.
December 3, processing: Farmer's Cooperative Dairy.
December 17, processing: West Hazleton School.
January 7, assembling: West Hazleton School.
January 19, assembling: Kreisl Bros., Meatpackers.
February 4, selling: West Hazleton School.
February 17, selling: Sears, Roebuck & Co.
March 3, transportation: West Hazleton School.
March 16, transportation: Karns Transportation Co.
March 31, wholesaling: West Hazleton School.
April 12, wholesaling: Thomas C. Thomas, Wilkes-Barre.
April 28, marketing information: West Hazleton School.
May 12, Town and Country Business Club banquet.

Tribute to Igor Sikorsky

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DODD. Mr. President, it was just 20 years ago yesterday that Igor Sikorsky developed the first helicopter in the Western Hemisphere.

We all know of the tremendous progress that has been made by the helicopters in the past two decades, and we in Connecticut are especially proud of the part played by the Sikorsky plant in Connecticut.

The September 13 issue of the Bridgeport Sunday Post carried an excellent account of the development of the Sikorsky helicopter, and I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Bridgeport (Conn.) Sunday Post, Sept. 13, 1959]

TRIBUTE TO IGOR SIKORSKY

America's most versatile aircraft, the helicopter, will be 20 years young Monday.

It was on September 14, 1939 that Igor I. Sikorsky lifted the wheels of his famous VS–300 just inches off the ground to record the first successful flight of a direct lift aircraft in the Western Hemisphere. This historic aeronautical occasion, which ranks in importance with the first flight of the Wright brothers, took place before a handful of skeptical mechanics and engineers in the factory yard of the Vought-Sikorsky plant here in Stratford.

HOPES QUICKLY FULFILLED

The fledgling helicopter came of age quickly. The unique ability to rise and descend vertically, hover in midair, or move forward or backward and to either side gave it a wide variety of military missions and commercial passenger, cargo and construction uses. It has had unmatched success as a rescue vehicle, saving thousands of lives both in battle areas and during civilian disasters and emergencies.

"Looking back to the first hopes of the modest VS–300, when we measured the endurance of flight in minutes and the altitude in inches. I can say that the progress of the helicopter has been encouraging and as much as we could expect," Mr. Sikorsky said yesterday.

"The saving of so many lives has been particularly gratifying. The increased reliability of helicopter components and the introduction of gas turbine engines, all-weather instrumentation and amphibious fuselages are providing new efficiency and comfort. With these advances we can expect the helicopter to become as important a part of our transportation system as the airplane and automobile."

USE TODAY WIDESPREAD

Today helicopters made by Sikorsky Aircraft, a division of United Aircraft Corp., are flown by all of the U.S. military services, 26 foreign countries, three of the world's four scheduled helicopter airlines, and independent operators.

Mr. Sikorsky is especially proud that the list of prominent people making frequent use of helicopters is headed by President Eisenhower, who flies from the White House lawn in the Marine and Army versions of the Sikorsky S–58. On his recent good will trip to Europe, Mr. Eisenhower was flown by helicopter to the Bonn, Germany, airport for the airplane trip to London. The President suggested to Chancellor Konrad Adenauer of Germany that he, too, travel by helicopters rather than automobiles. "They are much less wearing on the nerves," the President said.

In saluting Mr. Sikorsky on the 20th anniversary of the first flight, Lee S. Johnson, general manager of Sikorsky Aircraft, said the success of the VS–300 was ressponsible for today's thriving helicopter industry.

"Before Igor Sikorsky flew the VS–300," Mr. Johnson said, "there was no helicopter industry; after he flew it, there was."

Mr. Johnson said that while the helicopter industry is an infant, it is a lusty infant, and the helicopter has become the most efficent means of providing point to point transportation for short- to medium-range trips.

REMAINS ACTIVE IN INDUSTRY

Mr. Sikorsky, who was 70 years old last May, is retired engineering manager of Sikorsky Aircraft. He continues in an active role with the firm as a consultant, and at present is playing a prominent part in developing the helicopter crane concept. Tests of the Sikorsky S–60 flying crane indicate that turbine-powered crane helicopters of the future will have wide military and commercial applications, and will become aerial "prime movers," analogous to such ground "prime movers" as locomotives or truck tractors.

Sikorsky Aircraft also introduced during the past year the single-turbine S–62 and the twin-turbine HSS–2, the first amphibious helicopters built with flying boat hulls. The

experience that Mr. Sikorsky and his long-time engineering associates had in designing transoceanic clippers was of considerable help in producing these two aircraft. The HSS–2 was developed with the Navy as an antisubmarine warfare weapons system.

Mr. Sikorsky had two successful areonautical careers behind him when he threw his full efforts into helicopter development. He had pioneered the manufactured of multi-engine airplanes in his native Russia, and after coming to the United States following World War I produced a series of amphibians and flying boats. In 1929 his company became a subsidiary of United Aircraft.

The helicopter, however, had always retained a prominent place in his thoughts. The first aircraft he ever designed and built were helicopters. This was in 1909 and 1910, but lack of suitable engines and the general standing of the aeronautical technique prompted him to turn to fixed-wing airplanes for the next three decades.

POSSIBILITIES VISUALIZED

In 1938—after 10 years of serious study, research work, and applying for patents—Mr. Sikorsky received approval from the United Aircraft management to proceed with the construction of a direct lift aircraft.

As early as 1930 Mr. Sikorsky had written: "A flying machine capable of normally taking off and landing from an area, say, 120 feet across will offer far greater advantages for everyday use than the present airplane * * *. Such a small place of the size mentioned could very easily be built on tops of buildings, in parks, aboard large steamships, and with very little or no expense could be made available anywhere out of town. * * * The belief of this writer is that a practical, direct-lift flying machine can be developed, and that it will be possible later on to manufacture and sell them in such numbers to fully justify the expense and trouble of the development period."

The VS–300 was designed in the spring of 1939, built in the summer and flown in the fall of that year. It had a four-cylinder, 75 horsepower, aircooled engine, a three-bladed main rotor 28 feet in diameter, a welded tubular steel frame, a power transmission consisting of V-belts and bevel gears, a two-wheel landing gear and a completely open pilot's seat located in front.

By November 1939, flights up to 1 and 2 minutes' duration were made. The VS–300 was held close to the ground by men holding ropes attached to the landing gear struts. As sufficient confidence was gained, the ropes were dropped and the first free flight was made in May 1940.

By the middle of the summer of 1940, the VS–300 was able to remain in the air for 15 minutes under reasonably satisfactory control. On May 6, 1941, with Mr. Sikorsky at the controls, the VS–300 established a world helicopter endurance record of 1 hour and 32 minutes, and the helicopter had taken a major step in proving its reliability and usefulness.

Harbingers of Better Living for Our Senior Citizens: Cleveland's Low-Cost Housing Project

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mrs. BOLTON. Mr. Speaker, Life magazine is to be commended for its recent series of articles on the problems challenging our country as some 1,260,000 people each year become 65 years of age and face the changes in living which come with compulsory retirement. The articles should awaken us all to the unhappy plight of millions of older citizens who have little or no income, are ill, or have no relatives to care for them.

To quote from part II, July 20, 1959, of the series:

Today, as old age comes, millions exist on meager pensions and social security and, their life's work ended, may lose their will to live because of loneliness and idleness. They are so vulnerable that even a minor illness can end their independence and send them prematurely to the empty life of a nursing home. Many of these tragic declines could be prevented by fulfilling two basic human needs: a pleasant place to live and something to do. These are the essence of the new deals which, vastly expanded, could happily fill empty lives.

Life goes on to point up how certain cities and communities are meeting the economic and spiritual needs of the aging. Among certain of the "imaginative but sensible solutions for keeping the aged useful and self-sufficient", is the senior center in San Francisco. Supported by the United Fund, private donations, and maximum dues of $1 a month, it takes care of some 700 people. The center is open all year, 8 hours a day, 6 days a week, and "can be a reason for getting up in the morning and a place to come home from at night—a replacement for the working day."

Another significant provision for the elderly: Carroll Manor outside the District of Columbia is operated by the Carmelite Sisters, providing gentle care for some 200 residents who pay $150 a month, or $300 if they are sick.

Mr. Speaker, I was proud to see Cleveland's low-cost housing project cited in the series. Mr. Ernest Bohn, for many years director of the Cleveland Metropolitan Housing Authority, is also on the Advisory Committees of the White House Conference on Aging and the Federal Housing Administration. We Clevelanders are proud of the work he has done and is doing.

Apartment rents of the Cleveland project average $30 a month, a figure which can easily be afforded by couples whose combined income must be under $2,400 a year. Discussing our situation with Life's reporter, Ernie Bohn emphasized that older people "want more excitement than the going and coming of ambulances—that to keep the aged in the thick of things in the Cleveland project, 12 apartments on each floor are occupied by young couples with children under five." He explained that when the children grow older, the family is moved out into the Cedar Apartments public development. This arrangement has resulted in both the elderly and the very young striking up acquaintances beneficial to both. A touching story is told in pictures of toddler Roby McCoy making his daily cookie round at the homes of Mrs. Marie Sheridan and Mrs. Edna Powell. Such relationships make the older people feel very much a part of the normal human living going on at our busy Cleveland project.

Mr. Bohn pointed out that one fifth of the aged now in hospitals could fend for themselves in housing like Cleveland's. Many precautions are taken to make the development physically liveable and safe. There are elevators, nonskid floors and bars over tubs and toilets. To keep the residents' days busy, the first floor is a Golden Age Club with hobby shops and activities similar to San Francisco's Senior Center.

Mr. Speaker, preparations are now underway for the White House Conference on Aging to be held in January 1961. The Secretary of Health, Education, and Welfare, Dr. Arthur S. Flemming, and Under Secretary Bertha Adkins are responsible for the planning and administration of this important conference. Desired information may be had by writing to Secretary Flemming, HEW, Washington 25, D.C.

Polish-American Congress of Wisconsin Recognizes Hopes and Dangers of Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. PROXMIRE. Mr. President, I have just been furnished with a copy of a letter sent to the President of the United States by the Wisconsin chapter of the Polish-American Congress, Inc.

The members of this organization are loyal and dedicated Americans who have an especially deep concern over the forthcoming visit to this country of Premier Khrushchev. Many of them have relatives and friends living today in Poland, who will be very directly affected by any change in the world political climate which might result from this meeting. These fine Americans therefore have an especially ken insight into the sensitive nature of this visit and the high stakes that are inherent in this particular form of international diplomacy. I believe, therefore, that the opinions expressed in this letter to the President are particularly valid and noteworthy.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLISH AMERICAN CONGRESS, INC.,
WISCONSIN STATE CHAPTER,
Milwaukee, Wis., September 2, 1959.

Hon. DWIGHT D. EISENHOWER,
The White House, Washington, D.C.

DEAR PRESIDENT EISENHOWER: The Wisconsin chapter of the Polish American Congress—representing a large segment of people of Polish descent, now living in Wisconsin, herewith, present to you its opinions, appeals, and recommendations, concerning the pending visit of Soviet Premier Nikita Khrushchev to the United States, and his scheduled talks with you, concerning existing world conditions.

We strongly urge, Mr. President, that in your conversation with Nikita Khrushchev, you will forcefully and unhesitatingly project

to the Russian Premier, the deplorable and highly objectionable state of affairs now existing in the Communist dominated and enslaved country of Poland.

Patriotic Americans of Polish descent, particularly those who had and have kinfolk in Poland, view with justifiable skepticism Mr. Khrushchev's guise of coming to this country as a leading missionary of world peace. His feeble claims of being against war, or that his government does not want war, are like so many particles of sand—readily washed away by the despicable whims and desires of him and his regime. This warranted disbelief of Mr. Khrushchev's proposals and intentions, will prevail and continue to do so until such time as the actual sincerity of the statements and purposes are proved to be true, by complete withdrawal of Communist forces from the soil of Poland and the other countries that are being forced to bear the unwanted domination of communistic rule. Let Mr. Khrushchev—with all his doubletalk—prove to the world that he is sincere by removing the burdensome yoke of suppression from the shoulders of the people of Poland, and the other communistic subjugated countries of the world. Then, and then only, will seething unrest amongst conquered peoples cease and true peace be restored to the world.

Fully aware of the communistic philosophy, we cannot condone—nor can you, Mr. President, the tenet, "That the means always justifies the end." Yet this is the very principle that every ambitious dictator—including Mr. Khrushchev—and totalitarian regimes live by.

We sincerely hope, Mr. President, that you will unequivocally state, to Mr. Khrushchev, upon his visit to this country, that the United States is the foremost citadel of hope to these beleaguered and despoiled countries now—enduring the tyranny of Communist domination, and will continue to be—until the faith of 100 million people who unwillingly surrendered their inalienable rights—forced by Soviet control, is restored to them.

May we strongly recommend, Mr. President, that you request of Nikita Khrushchev—on behalf of all freedom-loving people of the world—that the following directives be complied with by the Government of the Union of Soviet Socialist Republics:

1. All Soviet forces to be completely withdrawn from all Russian captive European countries.

2. The establishment of free elections, conducted according to international law, and supervised by an international organization—in Poland and the captive countries of Central Europe.

May we appeal to you, Mr. President, that you stand firm in your convictions, remain steadfast in your beliefs and unfaltering and emphatically inform Mr. Khrushchev that even in this atomic age—as in the era of President Abraham Lincoln—no country could exist half enslaved and half free, so too, no world, regardless of the times, can exist peaceably under like conditions. To have peace, all people of the world must have their independence, they must be permitted to live in accordance with their inherent desires and traditions. Until this is accomplished the ominous shadow of war will always hover over the world.

Sincerely,

Dr. JOHN J. KAZMIEROWSKI,
Chairman.
EDMUND BANASIKOWSKI,
Chairman of Committee for Polish Affairs.
JAN STANISLAWSKI,
Secretary.
LEONNE D. WOZINSKI.

The Warren Court and the Executive Branch

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled, "The Warren Court and the Executive Branch," by Robert A. Horn, of Stanford University delivered at the 1959 annual meeting of the American Political Science Association, Washington, D.C., Mayflower Hotel, September 10–12, 1959:

THE WARREN COURT AND THE EXECUTIVE BRANCH

(By Robert A. Horn, of Stanford University)

Since the appointment of Chief Justice Earl Warren two appraisals of Presidential power today have received unusually wide attention. Prof. Clinton Rossiter concluded in "The American Presidency" that "the outstanding feature of American constitutional development has been the growth of the power and prestige of the Presidency," and predicted a continuation of that development. Mr. Walter Lippmann in "The Public Philosophy" declared that the "power of the Executive has become enfeebled, often to the verge of impotence" and attributed "the democratic disaster of the 20th century" to this "derangement of powers." The fact that two such eminent publicists and scholars, presumably examining essentially the same phenomena, could arrive at diametrically opposed opinions on the state of the Presidency today suggests some of the difficulties inherent in any effort to assess the effects of the Warren Court's decisions upon the Executive.

Some of the other difficulties which urge caution upon an analyst deserve mention. Neither Mr. Lippmann nor Professor Rossiter suggests that the courts have had a leading role in shaping the contemporary Presidency, whether for better or for worse. Of course major studies of the Office, and of the relations of the executive and judicial branches, cast doubt on any notion that the courts have ever played such a part, now or in the past.[1]

Great as the powers of the American Executive may be, moreover, most of them are exercised pursuant to statute or at least with regard for implicit or explicit expressions of congressional intent. At the same time executive officers possess broad discretion in statutory interpretation. Taken together these two facts make it clear that many cases involve the relations of the Court with both the other two branches, not simply with one of them. Yet to examine every case in which the validity of executive action under claimed statutory powers was challenged would carry us so far beyond our subject that we should lose sight of it. Some choice must be made, and the admittedly rough criterion of choice employed here is the amplitude of discretion felt with executive authorities. One important case in the Warren Court must serve to illustrate resultant exclusions. In form the decision in *United States ex rel. Toth* v. *Quarles*[2] directed the then Secretary of the Air Force to release from custody a civilian who, after being honorably discharged from the service, had been arrested by military authorities and returned from the United States to Korea to stand trial by court-martial for the murder of a Korean he was alleged to have killed while in service there. But Congress had provided in an article of the Uniform Code of Military Justice, against the advice of the Judge Advocate General of the Army, for the action taken by the Executive. The only discretion left to the military authorities, if it can properly be called that at all, was either to proceed as they had or to do nothing. In such a case the onus of transgression of constitutional bounds properly lies on Congress rather than the President or those who act for him.[3]

It is obvious also that the President, or even the Chief Executive plus those of his subordinates who may be called the great officers of state, is not synonymous with the executive branch of the Government of the United States. Wherever we place the "independent commissions," there is still a myriad of agencies and officials to whom Congress has by law committed more or less important types of executive authority, whatever the ultimate responsibility of the President under his constitutional directive "to take care that the laws be faithfully executed" may be. And if the President were not to rely completely upon the good faith and good judgment of others to make in his name countless decisions that the statutes in terms direct him to make, he would have no time for the important business of his office. Many decisions of the Supreme Court deal with the fairly routine exercise of these powers by bureaucratic components of the executive branch. In their sum these decisions have an important bearing on the executive branch. But the day is past when they are generally argued, let alone decided, as constitutional questions. Such cases in the Warren Court are omitted here, regardless of their cumulative importance for administrative, as distinguished from constitutional, law.

Finally, it must be remembered that although the business of the Supreme Court is largely of its own choosing, it is not of its own making. Questions of executive power must be raised by litigants if they are to be tried at all. The consequence is that the impact of judicial decision upon the executive is discreet although not entirely haphazard. The record of the Warren Court to date rests on only six annual terms. The statistical universe of its major decisions on executive power is much too small to permit that statistical elegance of which this writer is incapable were it attainable. Willy-nilly, to be other than impressionistic here is to indulge in "delusive exactness." But even if one thinks dramatically rather than statistically, its decisions on executive power are not the most controversial and exciting aspect of the Warren Court's work. Fortune has not brought it a case in this area which compares with the Steel Seizure case[4] in the Vinson Court, nor with its own action in *Brown* v. *Board of Education of Topeka*.[5] Yet it has been adding to what Mr. Justice Frankfurther has called the "coral reef of constitutional law" on executive power.

A baker's dozen of opinions concern us, but 2[6] of these 13 deal with the same question, in which on reargument the Court vacated the decision arrived at in its first opinion and decided the issue the other way. Thus an even dozen opinions[7] represent ultimate decisions of the Court. The Court was unanimous in only 4[8] of the 12, and in 1[9] of these 4 it is quite likely that only Mr. Justice Clark's nonparticipation kept it so. Two of the cases were disposed of by per curiam opinions[10] despite their importance,

Footnotes at end of speech.

and in one [21] of the two a dissenting opinion was filed. All 12 the Court took from lower Federal courts at its own discretion under its certiorari jurisdiction. Perhaps more interesting is the simple statistic that in only one case [22] did the Supreme Court affirm a lower court's decision (and on quite different grounds) and, in another opinion,[23] in which two cases were consolidated for decision, one of the two opposing decisions below was affirmed. It is this kind of record of reversals on certiorari which entitles us to be skeptical of protestations that denial of petitions for certiorari carries no intimation of opinion on the merits. One other statistic is startling, especially when seen in conjunction with these others. The Government won only 2 [24] of these 12 cases. And one [25] of these two is more properly described as a draw on the important constitutional issue of executive power presented. Clearly the Warren Court is no rubber stamp for the Executive. Just as clearly a majority of the Warren Court has been less sympathetic to claims of executive authority than the lower Federal courts.

The cases fall into two broad categories of questions. The removal power of the Executive is the overarching constitutional problem in seven cases,[26] all of which the Government lost. All but one [27] of the seven concern dismissals resulting from loyalty-security programs of the National Government. Expressed in the broadest terms, the other constitutional issue is the President's power over the conduct of foreign relations. But of the five cases in this area, three [28] are concerned with the President's authority to make executive agreements with foreign nations, and two [29] with executive power to limit through passport control the travel of American citizens abroad. Thus the Warren Court's concern with powers of the executive branch reflects the country's struggles in the cold war.

I. THE REMOVAL POWER

Of the seven cases (plus an eighth which was declared moot) on the removal power only one involves a removal by the President. Four more arose out of removals by other executive officers of employees in the executive branch. The remaining two cases break new ground, one dealing with the type of discharge papers which the military services may issue and the other with the loss of private employment as a consequence of security regulations. A majority of the Supreme Court has not yet upheld the dismissal of a single person by the National Government on loyalty-security grounds.[30]

So much has been written about the civil liberties issues in these loyalty security cases by the Justices and others that it is easy to forget that they are, after all, removal power cases. In considering questions about the removal power which they present, it is necessary to avoid the temptation to dwell upon civil liberties issues yet not to distort analysis by forgetting they are present. We can do so by keeping two facts in mind. First, either the President or Congress, and sometimes both, have repeatedly authorized and prescribed removal of those found to be loyalty or security risks. Second, the Supreme Court in passing upon such removals has never intimated that the establishment of such grounds for removal is unconstitutional; rather, it has repeatedly assumed the contrary. There can be no dispute about what "is," in these two respects, and for present purposes, there need be none about what "ought to be."

It will help keep the loyalty-security removal cases in perspective by considering first the one removal case in the Warren Court which is not a loyalty-security case, for the constitutional theory and the conception of executive power found therein also pervade and condition, if they do not determine, the loyalty-security cases. In *Wiener* v. *U.S.*[31] a member of the War Claims Commission sued to recover his salary after his removal by President Eisenhower because the President regarded it "as in the national interest" to have "personnel of my own selection" on the Commission. In less exalted language, the President thought the office was a patronage position and intended to treat it as such. And why not? In establishing the Commission Congress had been completely silent about removal, although the Rathbun case indicated that if Congress authorized the President to remove members for specified causes, a removal for any other reason would be held contrary to its intent. Congress, the President might fairly infer, had regarded the office just as he did. Indeed, if further circumstantial evidence of congressional intent were needed, there was the fact that Congress had not required a bipartisan composition for the Commission. Therefore why should not plum sauce for surfeited Democrats be plum sauce for famished Republicans?

But the Supreme Court held in a unanimous decision and brief opinion that the President had drawn the wrong inference, without even mentioning what it was or why he might reasonably have drawn it. Mr. Justice Frankfurter conceded that this is a problem in probabilities. But he concluded that "the most reliable factor for drawing an inference * * * is the nature of the function that Congress vested in the * * * Commission." That function was to adjudicate according to law the claims before it. Congress might have given this work to the regular Federal courts, whose decisions it would certainly be improper for the President to try to influence. It would be as bad for the President to attempt to influence a decision of this Commission, and "a fortiori must it be inferred that Congress did not wish to have hang over the Commission the Damocles' sword of removal by the President for no reason other than that he preferred * * * men of his own choosing. No such power is given to the President directly by the Constitution, and none is impliedly conferred upon him by statute simply because Congress said nothing about it."

Adverse criticism of the opinion may point to its admission that Congress might have exercised this function itself or vested it in an officer of the executive branch subject to the removal power of the President. (Indeed, Congress did consider giving part of the task to the Federal Security Administrator.) A sufficient answer to this is that weight ought to be given to the fact that Congress did not choose to place settlement of these claims in hands so open to political influence.

But if the nature of the function performed by the officer is the criterion for testing a claim of inherent Presidential removal power, of course many executive officers including cabinet secretaries heretofore considered subject to removal at the pleasure of the President also perform quasi-judicial functions. Will such duties be held in future to immunize them from summary removal? There is no reason to suppose so. But that is not to say that removal of such an officer solely because he refused to render a quasi-judicial decision entrusted to him according to a President's desire would be legitimate. Nor should the Court prospectively approve such a removal in obiter dicta. The question left open by this criterion of function thus seems to be more of a dialectical resource for those who are determined to find fault with the case than a practical danger to effective Presidential control of anything he is entitled to control or ought to want to control.

A more serious question left unsettled is whether the President has power, absent statutory authorization, to remove an officer performing such a function whom he believes guilty of crime or improper conduct. The Court probably had in mind Mr. Mack of the Federal Communications Commission, who resigned and thus deprived the President of the adventure of seeking an answer to this question, when it observed that here was no "removal for cause involving the rectitude of a member of an adjudicatory body, nor even a suspensory removal until the Senate could act upon it by confirming the appointment of a new Commissioner or otherwise dealing with the matter." But if "no such power is given to the President directly by the Constitution, and none is impliedly conferred on him by statute simply because Congress said nothing about it" in Commissioner Wiener's case, how, some will insist, could it have been different in Commissioner Mack's case? The short answer to this objection is that two such cases can be different because the Court can make them different, and it will if it considers wise public policy requires differentiation. Those shocked by such an answer should remember that the whole idea of an inherent power of removal is only a convenient fiction which has to be invented because the framers were as silent in the Constitution as Congress was in the War Claims Act.

Of the four cases of removal of Federal employees on loyalty-security charges, the Peters case and the Service case are relatively minor in importance, although they were the ones treated as causes celebres by the press, probably because they involved persons of prominence or notoriety in contrast to the obscure civil servants concerned in the two more important cases. *Peters* v. *Hobby* [32] was the first of these cases decided by the Warren Court, and provoked the greatest division among its members. The holding of the Court, announced in an opinion by the Chief Justice, is unusual in that not only the Department of Justice and able counsel for Dr. Peters, and the lower Federal courts, and Justices Reed and Burton dissenting, but also Mr. Justice Douglas concurring agreed that the procedure which the Court found unauthorized and therefore invalid was authorized.

Dr. Peters' principal constitutional contention had been that the use of secret evidence from unidentified informants who cannot be confronted and cross-examined invalidates such proceedings. It is not strange that it was not upheld; the Court had once before been unwilling and has twice since failed to do so. Some of the severest and most thoughtful critics of the Federal loyalty-security programs have ageed that in some circumstances the use of secret evidence and informants is justified.[33] But one must surmise that a majority of the Court were not prepared to deny Dr. Peters' contention either.

After Dr. Peters had been cleared without a hearing by the Loyalty Board of the Federal Security Agency the President's Loyalty Review Board had on its own motion reviewed his case and recommended that the Agency Board hold a hearing. The Agency complied, but the result of its hearing was a renewed clearance. The Loyalty Review Board thereupon determined again on its own motion to hold a hearing of its own, which resulted in a finding adverse to Dr. Peters and a direction for his dismissal. Executive Order 9835 provided that "The Board shall have authority to review cases involving persons recommended for dismissal. * * * Such cases may be referred to the Board either by the employing * * * agency, or by the officer or employee involved." Indisputably, Dr. Peters had not been recommended for dismissal by the Agency Board, nor had his case been referred to the President's Loyalty Review Board by himself or his Agency. On two counts the

Footnotes at end of speech.

Court held the Review Board had thus exceeded the authority delegated to it by the President.

The main question about this holding stems from another power delegated to the Review Board by the President, to wit: "The Board shall makes rules and regulations, not inconsistent with the provisions of this order, deemed necessary to implement statutes and Executive orders relating to employee loyalty." The procedure of the Review Board in this case followed a regulation it had promulgated for "postaudits" of agency boards' actions. Just as indisputably there was nothing in the Executive order which explicitly forbade the Board to adopt that regulation. And the postaudit regulation, as the dissent pointed out, had been adopted at the beginning of the program and action under it had five times been formally reported to the President, who in amending Order 9835 by Order 10241 left postaudits undisturbed. Was it nevertheless inconsistent with the provisions of the order? Reasonable men not only might, they did disagree.

Before the case was decided President Truman's order had already been revoked by President Eisenhower in Executive Order 10450. Under it the Peters case could not have arisen, nor can such cases in the future. In that light the most lasting significance of the case for Executive power may well be an observation made by Mr. Justice Reed in his dissent: [34]

"The Court in this case is reviewing a Presidential order and rules made thereunder. I do not find it as easy as does the majority to analogize such review to judicial review of congressional acts and administrative interpretation of such acts. Certain differences are immediately apparent. The executive branch is traditionally free to handle its internal problems of admnistration in its own way. The legality of judicial review of such intraexecutive operations as this is, for me, not completely free from doubt."

Of course one can reply that these "intra-executive operations" affected important private rights. But so do countless others which have nothing to do with loyalty-security programs. Would the extension to them of the type and scope of review employed in the Peters case advance the rule of law, or would it be an insupportable obstacle to effective administration?

The administrative procedures in *Service* v. *Dulles* [35] were even more long drawn out than in the Peters case. Before he was finally fired by Secretary Acheson Mr. Service had thrice been cleared by the State Department's loyalty board, the second two times after hearings and findings approved by the Deputy Under Secretary. Three times the President's Loyalty Review Board had conducted "postaudits"; twice it had ordered new hearings by the departmental board, and the last time it had held it own hearing, which resulted in a decision adverse to Service. Of course under the holding of the Peters case all these proceedings after the first clearance by the State Department Board were void and were alleged to make his dismissal also invalid. The statement in Mr. Justice Harlan's opinion for unanimous Court (Mr. Justice Clark not participating) that "we do not reach" this contention is therefore curious, on first impression.

But in the Service case the action of the Secretary did not rest alone upon a delegation under President Truman's Loyalty Order. Congress had enacted and repeatedly reenacted the so-called McCarran rider, which provided that—

"Notwithstanding the provisions of any other law, the Secretary of State may, in his absolute discretion, * * * terminate the employment of any officer or employee of the Department of State or of the Foreign Service of the United States whenever he shall deem such termination necessary or advisable in the interests of the United States."

In an affidavit concerning his dismissal of Service Secretary Acheson stated that he had acted under the powers conferred on him by both the Presidential order and this statute. But the Court found that only the McCarran rider's language "Nothwithstanding the provisions of any other law" could serve as a basis for the dismissal without a hearing before the Board of Foreign Service, which was otherwise required by law. Thus the reason for not resting the decision on the precedent of the Peters case becomes clear.

The Department of State had promulgated regulations detailing the procedures to be followed in loyalty-security cases which were made applicable to action under the McCarran rider as well as under the Executive order, and which had been appropriately reported to Congress. Under a regulation adopted in 1949, as the Court paraphased it, "the action of the Deputy Under Secretary, if favorable to the employee, was to be final, the Secretary reserving to himself power to act further only if his deputy's action was unfavorable to the employee." A regulation adopted in 1951 provided that a decision for removal should "be reached after consideration of the complete file, arguments, briefs, and testimony presented." Secretary Acheson had deposed that he "made no independent judgment on the record in this case" because he "deemed it appropriate and advisable to act on the basis of the finding and opinion of the Loyalty Review Board." Thus neither of the two regulations, whichever was applicable, had been followed.

But the decisive question was whether or not the Secretary was bound to follow them in exercising his absolute discretion under the McCarran rider. The Court, citing United States ex rel. *Accardi* v. *Shaugnessy*,[36] held that he was.

The Service case is full of ironies. From the point of view of human and political interest it is difficult to say which of the two—the finding that former Secretary Acheson had acted illicitly or the discretion to the late Secretary Dulles to make restitution—is the more delicious.

From the standpoint of precedent some irony lurks in the Court's reliance on the first Accardi case without reference to the practical reduction of the sweeping rhetoric of that opinion to shambles in the second Accardi case.[37] Especially is this so when one considers the different composition of the majorities in the two cases.

Then there is the ironical contrast with the Peters case, in which Presidential knowledge of administrative rules and practice under his order was deemed insufficient to support an inference of Presidential approval and adoption. Yet in the Service case congressional reenactment of the McCarran rider with knowledge of departmental regulations was held euivalent to legislative adoption.

Considering the phraseology of this statute, the irony becomes almost comic. If Congress intended to approve regulations limiting the Secretary's discretion and bind him to these limitations in future, language continuing to vest in him "absolute discretion" is a strange choice of words in which to manifest that intent. But there is more, although the point is not discussed in the opinion. Congress gave the Secretary this discretion notwithstanding any other provision of law. Surely the departmental regulations, if they were legally binding, as they were held to be, were in this sense law. Therefore one must try to understand that, despite this language, what Congress really meant was that the Secretary had absolute discretion "notwithstanding any other provision of law except such provisions of law as he has promulgated."

The decision in *Cole* v. *Young* [38] has more general application, although a limited practical effect.[39] While President Truman's loyalty-security program under Executive Order 9835 was in effect Congress in 1950 passed an act which notwithstanding any other law authorized the heads of 11 sensitive agencies in their absolute discretion to suspend without pay any civilian officer or employee and after notice to an employee with an opportunity to reply, and such investigation and review as he deems necessary to terminate the employment in the interest of the national security of the United States. The act also provided that the President could extend these provisions to any other agency when he deemed it necessary in the best interests of national security. By Executive Order 10450 President Eisenhower brought the entire executive branch under the act.

Subsequently Mr. Cole, a pure food and drug inspector in the Department of Health, Education, and Welfare, was dismissed under this authority. In an opinion of the Court less tortuous than those in the Peters and Service cases, Mr. Justice Harlan held the dismissal void. From his examination of the act's legislative history and relation to the Truman program he demonstrated more convincingly than the dissenters were able to argue to the contrary that, despite its sweepingly literal language, Congress had intended the act to cover only those employees in sensitive positions within sensitive agencies, at least outside the agencies explicitly included in the statute. Secretary Hobby had not found that Cole's position fell into that category, for she had no reason to believe she was required to under the President's order. Avoiding an outright declaration that the President as well as the Secretary had acted illegally, the Court assumed "for purposes of this decision" that the act had been validly extended to the Department, although the dissent aptly noted that "the reasoning of the opinion makes that extension a fortiori unauthorized."

In his dissenting opinion Mr. Justice Clark exposed two major constitutional issues which the Court succeeded in ignoring only by its rather fictitious assumption, for by striking down the President's extension the Court would raise "a question as to the constitutional power of the President to authorize dismissal of executive employees whose further employment he believes to be inconsistent with national security. This power might arise from the grandt of executive power in article II of the Constitution, and not from Congress."

Should the inherent removal power of the President be interpreted to sanction dismissals for this reason and in this manner? The Wiener case perhaps hints the Warren Court doubts that it should be. But assuming that it should be, and that Congress intended to limit such inherent power by this law, can it do so constitutionally? Probably the majority would quote Justice Jackson's statement in the Steel Seizure case: [39]

"When the President takes measures incompatible with the expressed or implied will of Congress, his power is at its lowest ebb, for then he can rely only upon his own constitutional powers minus any constitutional powers of Congress over the matter. Courts can sustain exclusive Presidential control in such a case only by disabling the Congress from acting upon the subject. Presidential claim to a power at once so conclusive and preclusive must be scrutinized with caution, for what is at stake is the equilibrium established by our constitutional system."

Footnotes at end of speech.

But was the Court justified in being so cautious in the Cole case as not to scrutinize the question at all?

Vitarelli v. *Seaton*,[21] the fourth of the Warren's Court Federal employee loyalty-security cases, was decided June 1, 1959. Mr. Justice Harlan's opinion for the Court (which was unanimous on the important questions) is refreshingly straightforward. Dr. Vitarelli was a schedule A employee of the Department of the Interior working as an education and training specialist, and therefore could be dismissed at any time by the Secretary without giving any reason. Instead he was served with charges in 1954 and had a hearing before the departmental security board, after which he was dismissed in the interest of national security. Over 2 years later, while the case was pending in the district court (and 4 months after the Cole decision), the Department issued a new document, bearing the original date, purporting to revise and replace it, and omitting mention of any reason for dismissal. The Department's theory was that it thus retrocatively fired Vitarelli for nonsecurity reasons and mooted the case. Four members of the Court, dissenting from the Court's refusal to adopt this theory, agreed that this is the commonsense of it, but it is a democratic axiom that a minority does not have a monopoly on commonsense.

Although the proceedings had been taken under the same authority as in Cole's case, and Vitarelli's position had not been found sensitive either, the Court did not relay on its prior decision, presumaby because Vitarelli, unlike Cole, had no other statutory protection. I found bigger game to shoot at, even thought it again declined to decide on constitutional grounds. The Department had promulgated procedural regulations for its security cases, and citing the service case, the Court held it was bound to follow them.

In three important respects it had violated them. The regulations required that the statement of charges * * * "shall be as specific and detailed as security considerations, including the need for protection of confidential sources of information, permit * * *" petitioner was questioned by the security officer and by the hearing board in great detail concerning his association with and knowledge of various persons and organizations nowhere mentioned in the statement of charges, * * * and the very fact that they were asked and thus spread on the record is conclusive indication that security considerations could not have justified the omission of any statement concerning them in the charges furnished petitioner.

Departmental regulations also require "that hearings before security hearing boards shall be orderly and that reasonable restrictions shall be imposed as to relevancy, competency, and materiality of matters considered. * * * These indispensable indicia of a meaningful hearing were not observed. It is not an overcharacterization to say that as the hearing proceeded it developed into a wide-ranging inquisiton into this man's educational, social, and political beliefs, encompassing even a question as to whether he was a religious man."

And the excerpts of the hearing transcript set forth in the opinion show this description to be a model of understatement.

Finally the regulations give an "employee the right to cross-examine any witness offered in support of the charges. * * * It was not contemplated that this provision should require the Department to call witnesses to testify in support of any or all of the charges, because it was expected that charges might rest on information gathered from or by confidential informants. We think, however, that [they] * * * did contemplate the calling by the Department of any informant not properly classifiable as 'confidential,' if information furnished by that informant was to be used by the board in assessing an employee's status. The transcript shows that this provision was violated on at least one occasion at petitioner's hearing, for the security officer identified by name a person who had given information apparently considered detrimental to petitioner, thus negating any possible inference that that person was considered a confidential informant whose identity it was necessary to keep secret, * * * without calling the informant and affording petitioner the right to cross-examine."

Harmon v. *Brucker*[22] involved the discharge of two soldiers (or more accurately, ex-soldiers) on the grounds of security risks. The soldiers, who conceded the "absolute right" of the Army to discharge them, were seeking not restoration to their jobs, but honorable discharge certificates. The Army review board originally found they were only entitled to undesirable discharges, the Secretary of the Army approved that finding, and the statutes say that the board's findings are final subject only to review by the Secretary of the Army. The soldiers began litigation nevertheless, and during the course of it the Army decided to move them up to discharge under honorable conditions, perhaps in the hope of appeasing them or mooting their cases. The soldiers persisted in their claim that the Army could not consider, as it had, records of their preinduction activities to determine the appropriate form of discharge, although the statutes also say that the findings of the board shall be based upon all available records.

The Solicitor General of the United States denied the jurisdiction of the courts to review the Secretary's decisions but conceded that if they had power, the Secretary was wrong. This startling desertion left, so to speak, the Army's left flank exposed. In a per curiam opinion the Court swiftly put the Army to rout. Once again the Justices demonstrated that whenever they believe an administrative abuse demands judicial correction they have little difficulty in concluding that "final" does not mean final.[23] Here the Court said that if the Secretary had "acted in excess of powers granted him by Congress * * * his actions would not constitute exercises of his administrative discretion," and that a court had power "to construe the statutes involved to determine whether the respondent did exceed his powers."

Thus, reaching the merits by what might be called Operation Bootstrap, the Court quite reasonably concluded that Congress intended that "the type of discharge to be issued is to be determined solely by the soldier's military record in the Army," and therefore that the "records" referred to in the statute means "records of military service." In this way the Court avoided passing on the question whether the statute as construed and applied by the Secretary violated the due process clause. It would be unfair to say that in dissenting alone Mr. Justice Clark either deserted in the face of the enemy or poined the Army. All too many aspects of the case tempt one to flippancy, but the result stands in the great tradition of what the English call natural justice.

The most recent case in the Warren Court has a more attenuated relation to the removal power in appearance but a far more important one in reality than the Harmon case. When the Chief Justice announced the opinion of the Court in *Greene* v. *McElroy*[24] on June 29 of this year, the future of the Defense Department's industrial personnel security program, covering roughly as many persons in private employment as the entire number of military and civilian employees of the National Government, was left in doubt. The Court decided "only that in the absence of explicit authorization from either the President or Congress" the Defense Department could not deny clearance to an aeronautical engineer with the practical effect of barring him from his work by a "proceeding in which he was not afforded the safeguards of confrontation and cross-examination." But the lengthy attack on the constitutionality of any denial of confrontation led Justices Frankfurter, Harlan, and Whittaker to concur only in the judgment "intimating no views as to the validity of those procedures," and Mr. Justice Clark, who dissented alone, to predict that the opinion "speaks in prophecy" on the constitutional question. W may leave that issue to the future, as the Court did, for the present case could raise far-reaching questions about the reciprocal participation in both initiative and responsibility for the development of public policy by the triad of President, Congress, and bureaucracy.

As the Chief Justice put it, "the question which must be decided in this case is not whether the President has inherent power to act or whether Congress has granted him such power; rather, it is whether either the President or Congress exercised such a power and delegated to the Department of Defense the authority to fashion such a program."

Thereafter he labored to prove a negative, and Mr. Justice Clark to establish an affirmative, answer. Regrettably, the two discussions do not seem quite to come to grips with one another.

For the question posed by the Chief Justice is, more precisely, two issues. First, what acts or omissions of action, or both in combination, should be taken as a legally sufficient indication that either the President or Congress has exercised the power of delegation? An Executive order or a statute respectively is the best. Some lesser document, "something in writing" is often enough. The spoken word, especially if reduced to print, may do. But if anything less were insufficient, government would be much more inefficient than it is and perhaps come to a halt. The other issue is, how specific a delegation, whatever its form, be made? This question of the requisite specificity of standards is a familiar one in case of congressional, but not Presidential, delegation.

Silence, an omission, presents the difficult problems under either issue. As a legally sufficient indication, silence with knowledge of the delegate's action must often import consent, although it is necessarily the least certain form of indication. But knowing silence as a form of delegation is also necessarily the least specific, and the most generous delegation that can be made. Silence thus poses two questions. Does it indicate any delegation? And if it does, what has been delegated? Perhaps it is a legal fiction that silence can delegate authority, and then it is piling fiction upon fiction to add that the scope of that authority can be drawn out of silence. If these are fictions they are necessarily generated by constitutional government, which requires that all authority establish its legitimacy on demand. Judicial appraisal of the meaning of silent approval is a task in discounting the magnitude of a delegation by its uncertainty.

What various acts or omissions could be a legally sufficient evidence of delegation to the Defense Department to carry out this program in all its details? The Commission on Government Security correctly stated that: "It is clear that there is no statute (or Executive order) which expressly authorizes the Department of Defense to establish an industrial security program."[25] All of the evidence "in writing" which might establish an "implicit delegation" by either the President or Congress is, to borrow the Chief Justice's words from another opinion, "at best, inconclusive."[26] That is, it does not justify the confidence with which he denied or Mr. Clark found im-

Footnotes at end of speech.

plicit delegation in the documents. We are left with silence, 18 years of silence, and of knowing silence. For it would be preposterous to assert that both Congress and the President did not know of the program, and not just constructively as all men are presumed to know the law, but actually, as anyone knows what he sees and hears. And they knew that the program included denial of confrontation."

The Chief Justice acknowledged that the ambiguous documents and the knowing silence were a sufficiently certain indication of a delegation, for he declared: "Even in the absence of specific delegation we have no difficulty in finding, as we do, that the Department of Defense has been authorized to fashion and apply an industrial clearance program. * * *" Without stopping there he continued: "* * * which affords affected persons the safeguards of confrontation and cross-examination," for the next question is, How generous a delegation shall the silence be taken to confer? The general principle is that whatever has been done is assumed to have been delegated, particularly, and for good reason, if the delegation is within the executive branch.

It is precisely at this point that the Court articulates an emerging, if not new, principle, as an exception to the general principle: "If acquiescence or implied ratification were enough to show delegation or authority to take actions within the area of doubtful constitutionality, we might agree * * * that delegation has been shown here." But the Court does not agree. Instead it holds—at least for this doubtful area—that: "It must be made clear that the President or Congress, within their constitutional powers specifically have decided that the imposed procedures are necessary and warranted and have authorized their use. * * * Such decisions cannot be assumed by acquiescence or nonaction."

The citations of authority for the point indicate its novelty. The oldest is Ex parte Endo.[8] Another is a case in the 1958 term.[9] The Watkins case,[10] the Peters case, and the Kent case are others. There are many fields within "the area of doubtful constitutionality." Will the new principle be applied in them all? And if it should be, what would be the impact on the bureaucracy acting in reliance on presidential delegations through silent consent?

II. THE CONDUCT OF FOREIGN RELATIONS

Executive agreements

When the Warren Court agreed to review the decision of the Court of Appeals for the Fourth Circuit in *United States* v. *Guy W. Capps, Inc.*[11] there was anticipation that a pronouncement on the President's power to make executive agreements which would rank with the Pink[12] and Belmont[13] opinions would be forthcoming. The case was a curious one. In the Agricultural Act of 1948 Congress had provided for price support of potatoes at 90 percent of parity. It becomes profitable to import Canadian potatoes, but to provide for this contingency Congress had authorized the President, after investigation and hearing by the Tariff Commission at his direction, to proclaim a quantitative limitation on such imports, not to exceed a restriction of 50 percent of such imports in a specified previous period. The President did not utilize this method to reduce imports of Canadian potatoes. Instead an executive agreement was concluded with Canada by which Canada agreed temporarily to refuse to permit the exportation to the United States of potatoes for consumption and the United States agreed to permit under license importation of Canadian potatoes for seed purposes under specified conditions, one of which was that the American importer would guarantee that such seed potatoes would not be sold by him as "table stock," that is, eating potatoes. The Capps firm imported about $150,000 worth (in terms of American support prices) of Canadian seed potatoes, and after some complicated sales, repurchases and resales to various firms most of these potatoes apparently found their way to consumers' stomachs instead of farmers' potato patches. The Government sued Capps for damages equal to the cost of buying up at support prices an equivalent amount of American-grown potatoes, on the theory that the Capps firm's assurance constituted a contract with the United States and that Capps had breached it.

Assuming that these novel circumstances constituted a contract and that the Government could sue for breach, the district court decided that the course of conduct of the importer did not amount to negligence or breach of contract. When the Government took the case to the court of appeals it lost again, but for a very different reason. Chief Judge Parker, citing particularly the Steel Seizure case, held that "the executive agreement was void because it was not authorized by Congress and contravened provisions of a statute dealing with the very matter to which it related." The opinion added:

"It is argued, however, that the validity of the executive agreement was not dependent on the act of Congress but was made pursuant to the inherent powers of the President under the Constitution. The answer is that * * * the power to regulate interstate and foreign commerce is not among the powers incident to the Presidential office, but is expressly vested by the Constitution in the Congress. * * * Whatever the power of the Executive with respect to making executive trade agreements regulating foreign commerce in the absence of action by Congress, it is clear that the executive may not through entering into such an agreement avoid complying with a regulation prescribed by Congress."

It appeared that the Vinson Court's chickens had come home to roost in the Warren Court's potato patch—and at a most embarrassing time, when acrid controversy was raging over the Bricker amendment. But Senator Bricker's predecessor shooed them away for a unianimous Court. Prof. Arthur Sutherland had observed that Judge Parker's opinion had strangely neglected another provision of the Agricultural Act: "

"Section 22 of the Agricultural Act of 1948 includes this clause: '(f) No proclamation under this section shall be enforced in contravention of any treaty or other international agreement to which the United States is or hereafter becomes a pary.' Quite clearly Congress seems to have expressed its expectation and approval of subsequent efforts to adjust Canadian-American differences by agreement, rather than by unilateral proclamation of import fees or embargoes."

Mr. Justice Burton did not avail himself of this rebuttal. Instead he held that "the district court was not clearly in error in making the findings it did or in directing the verdict for respondent on the ground that no breach of contract was shown." When he concluded that "there is no occasion for us to consider the other questions discussed by the court of appeals. This opinion does not rest on them." Capp's seed potatoes lost the distinction of going down in constitutional history with Schecter's sick chickens.

In contrast, the opinions on rehearing in *Reid* v. *Covert*[14] contain probably the most important interpretations of powers of the executive branch that the Warren Court has yet made. The constitutional issues in the case are various and complex, like the worldwide military activities of the U.S. Government which provide their setting. Unfortunately, so are the four opinions, none of which represents a majority of the Court. Since both Justices Frankfurter and Harlan in concurring opinions agreed only that the trial by court-martial in capital cases of civilian dependents of American military personnel overseas in time of peace, as provided by an article of the Uniform Code of Military Justice, is unconstitutional, and the vote of at least one of them must be added to those of the Chief Justice and Justices Black, Douglas, and Brennan to make a majority, this is all the case can be said to hold.

Members of the Court disagreed on these important constitutional questions: whether these were cases arising in the land or naval forces, whether, if they were not, Congress might nevertheless provide for trial by court-martial under the necessary and proper clause in conjunction with its power to make rules for the government and regulation of land and naval forces, and whether all or only some of the guarantees of the Constitution etxend to American citizens subject to the jurisdiction of American officials on foreign soil. These are all important, and the different interpretations by the Justices are interesting, but they are questions of executive power only tangentially or not at all.

But in part II of Mr. Justice Black's leading opinion the question of the President's power to make executive agreements is placed squarely in issue. At the time an Air Force wife killed her husband in England and an Army wife killed her husband in Japan, the jurisdiction of the United States flowed from executive agreements with the respective countries, which provided for trials of such cases by U.S. military tribunals in return for cession of primary jurisdiction by the foreign nation. The Government had contended that even if otherwise unconstitutional the provision of the UCMJ in question "can be sustained as legislation which is necessary and proper to carry out the United States obligations under the international agreements with those countries." To this contention Mr. Justice Black replied:

"The obvious and decisive answer to this, of course, is that no agreement with a foreign nation can confer power on the Congress or on any other branch of Government, which is free from the restraints of the Constitution. * * * The prohibitions of the Constitution were designed to apply to all branches of the National Government and they cannot be nullified by the Executive or by the Executive and the Senate combined."

Since Justices Frankfurter and Harlan agreed that the statute in its full coverage was unconstitutional, it is clear that they also agreed in rejecting the Government's contention. Although Justices Clark and Burton based their dissent entirely on the power of Congress to legislate for the government and regulation of the military forces and therefore did not need to consider the question, they did not give the slightest intimation of support for the Government's argument that the statute could be sustained as legislation necessary and proper to carry out the executive agreement. It thus seems correct to say that on this question the Court was unanimous.

Thus was laid to rest, insofar as any Supreme Court decision can ever finally dispose of any great constitutional problem, a question that had been troublesome at least since *Missouri* v. *Holland*.[15] Indeed, Mr. Justice Black took pains to make this clear even to the most ardent supporters of the Bricker amendment by stating:

"There is nothing new or unique about what we say here. This Court has regularly and uniformly recognized the supremacy of the Constitution over a treaty. * * * There is nothing in *State of Missouri* v. *Holland* * * * which is contrary to the position taken here."

Footnotes at end of speech.

Another portion of Mr. Justice Black's opinion appears less successful, especially when compared to the action of the Warren Court in *Wilson* v. *Girard*.[47] For four members of the Court he took the position that "the Constitution in its entirety" applies to American officials dealing with American citizens abroad, rejecting the contention that "only those constitutional rights which are 'fundamental' protect Americans abroad" and insisting that "when the United States acts against citizens abroad * * * it can only act in accordance with all the limitations imposed by the Constitution." The parallel to his stand on total incorporation of the first eight amendments in the due process clause of the 14th amendment against State action is obvious.[48]

The Girard case is too recent and too well publicized for its facts to need or bear extended recital. While on guard duty during maneuvers in Japan the soldier had fired from a grenade launcher on his rifle a cartridge case which struck and killed a Japanese women gathering brass nearby. Under our treaty and executive agreement with Japan primary jurisdiction to try Girard, by court-martial, was in the United States if Girard's act was done in line of duty, and in Japan if it was not. It is important to bear in mind that from start to finish the United States maintained that Girard had acted in line of duty and that we therefore had primary jurisdiction. But like our other international agreements on the subject, those with Japan provide that the state with primary jurisdiction shall give sympathetic consideration to a request to waive its jurisdiction to the other state in any case which is of particular importance to it. Typically, of course, the United States makes rather than receives such requests, and typically they are granted. When Japan claimed primary jurisdiction over Girard we resisted until international tension became severe. Eventually, for what the Secretaries of State and Defense obliquely admitted in their joint statement to be "reasons of state" we waived jurisdiction. A district court then enjoined Secretary Wilson from surrendering Girard to Japanese authorities, and amid even greater tension the Supreme Court agreed to extend its regular term to review this decision immediately.

Three days after the case was heard, the Supreme Court (Mr. Justice Douglas not participating) gave its unanimous decision, reversing the district court and holding that there was "no constitutional or statutory barrier" to our waiver of jurisdiction. The decision was no doubt wise, and an impressive argument to support it is not unduly difficult to construct. The circumstances imperatively demanded its construction and presentation. But there is no other honest way to describe the brief per curiam opinion than as a pathetic failure to measure up to the Court's responsibility.

The Court simply declared that since "a sovereign nation has exclusive jurisdiction to punish offenses against its laws committed within its borders, unless it expressly or impliedly consents to surrender its jurisdiction" and since "Japan's cession to the United States of jurisdiction to try American military personnel for conduct constituting an offense against the laws of both countries was conditioned" by the provision for waiver of primary jurisdiction, the "issue for our decision is therefore narrowed to the question whether * * * the Constitution * * * prohibited the carrying out of this provision authorized by the treaty for waiver of the qualified jurisdiction granted by Japan." And the Court found nothing in the Constitution which did prohibit it. We may agree that it should not have found anything even if it had looked, but it did not bother to look.

Footnotes at end of speech.

Because of this failure to examine the relevant constitutional provisions, the Court put itself in one of two equally awkward positions. It was either begging the very question it posed or it was reasoning in a circle to reach an answer. The circular reasoning may be put thus. If there were no agreement with Japan, she would have primary jurisdiction to put Girard on his trial, in which he would have no constitutional rights. Therefore, an agreement by which the United States gained primary jurisdiction, even though with a qualification under which it waived jurisdiction and thus left him without the constitutional rights which he would have had under American jurisdiction, does not deprive him of these rights, since he would not have had any rights without the agreement anyway. In short, he was deprived of nothing by the agreement because he had nothing without it.

Consider how easily *Reid* v. *Covert* could have been disposed of under this formula. There, too, the foreign nations in the absence of an agreement had primary jurisdiction to put the American wives to trials in which the Constitution would not protect them. There, too, we obtained by agreement primary jurisdiction also conditioned by a qualification, namely, that we would try them by court-martial. But since without the agreement they would not have been entitled to the jury trial to which they would be entitled if subject to American jurisdiction, why should they be heard to demand, contrary to the agreement, what they could not have without it anyway? In short, they were not deprived of the right to jury trial by the agreement, because they had no right to trial by jury without it.

Now let us examine the opinion as a form of petitio principii, especially by the Chief Justice and Justices Black and Brennan in light of their conclusion in *Reid* v. *Covert* that the Executive could not validly negotiate away the specific (and absolute) constitutional rights of American citizens, there particularly to jury trial. The question in the Girard case was also whether the treaty and agreement deprived him of whatever specific (and absolute) constitutional rights he had. To be sure, since he was a soldier, he did not have the same specific constitutional rights as civilians. But if we read the Bill of Rights with absolute literalness, the only right civilians have that he did not is the right to indictment by grand jury. Let us concede, however, that Congress has from the beginning claimed the power to provide for trial of military personnel by court-martial instead of by jury and that the courts have consistently affirmed that claim. If one is sufficiently literal-minded he may insist that Girard therefore had, by statute, by executive practice, and by adjudication, a constitutional right either to trial by jury (which Congress not only can but does provide for some cases) or to trial by U.S. court-martial, nothing less and nothing more.[49] If that claim be correct, how can anyone deny, in view of their application to Girard, that the Executive through an agreement and the Executive and Senate combined through a treaty had negotiated away his constitutional rights? Yet we have it on good and current authority that the "prohibitions of the Constitution were designed to apply to all branches of the National Government and they cannot be nullified by the Executive or by the Executive and the Senate combined."

The dilemma with which the Warren Court has thus confronted itself takes this form: either all the Constitution follows a command post flag or none of it does. There is only one logical way out of this dilemma. Fortunately that way is as just as it is logical. We can illuminate this path of escape by moving Girard's case in our imagination back to an Army post in the United States, say Fort Belvoir, Va. Congress could certainly provide for the trial of the same offense committed there by court-martial. There seems no reason why it could not provide for his trial by the regular U.S. courts of the State and district where the offense was committed although it has never done so. Or Congress could provide for his surrender to the Virginia authorities for trial in a State court. What Congress could not do constitutionally is just as clear. It could not subject Girard to any trial, civil or military, State or Federal, of a kind which amounted to a legalized lynching, made a mockery of due process of law, and violated "those fundamental principles of liberty and justice which lie at the base of all our civil and political institutions."[50]

This is the true and full measure of an American citizen's constitutional rights as a soldier at home. It ought to be, and in fact it is, the same measure of his rights overseas. The President in negotiating executive agreements, the President and Senate in making treaties, the Congress in legislating, and American executive authorities abroad have scrupulously preserved these fundamental rights.[51] Why, in freedom's name, could not the Court have said as much in Girard's case? For one reason, it did not take the time,[52] but more is involved. One must surmise that at least some members of the Warren Court mistakenly thought they must appear either illogical or unjust, and chose the lesser evil. For if the measure of the American citizen's rights as a soldier overseas is only that "subjective" "natural law" concept of due process, is the measure different—and greater—because he is a civilian overseas? And if so, why? To make it so would truly degrade the soldier to a second-class citizen and justify the deep suspicion of and bitter hostility to all executive-military jurisdiction which so unnecessarily inflames many pages of the leading opinion in *Reid* v. *Covert*. Would not all members of the Warren Court have been wiser to accept the advice of Professor Sutherland?[53]

"The basic decencies of the Bill of Rights should be guides for our officials everywhere. This does not mean that all details of the first eight amendments are mandatory procedure for every American official abroad. * * * We are necessarily remitted to some such standard as that imposed on State officials by the 14th amendment."

Passports and travel control

In *Kent* v. *Dulles*[54] and its companion case, *Dayton* v. *Dulles*[55] the Warren Court adopted as narrow a view of Executive power as it has yet expressed, largely by ignoring it. The position adopted by the Court and set forth by Mr. Justice Douglas had the support of a bare majority. The cases were brought by three citizens whose applications for passports had been denied; those of Kent and Briehl because they refused to submit non-Communist affidavits which were required of them under the State Department's regulations, though each had been given a hearing. Dayton had submitted an affidavit, had had a hearing, and ultimately was refused a passport on review and findings by the Secretary himself; these findings made clear that confidential information had been considered. The *Kent* case was made the vehicle of decision and the *Dayton* case was settled on its authority.

Until 1856 the Secretary of State issued passports in his discretion wholly as an exercise of inherent executive power. In that year Congress adopted an act which is still in effect, forbidding anyone else to issue a passport. Its language appears carefully chosen to recognize an inherent executive power and discretion rather than to delegate power: "The Secretary of State may grant and issue passports * * * under such rules as the President shall designate and prescribe."

Mr. Justice Douglas could hardly deny that there is "a large body of precedents" and massive official and scholarly opinion which hold issue of a passport is a "discretionary act." He appears not to disagree, but opines in the Kent opinion that "the key to that problem * * * is in the manner in which the Secretary's discretion was exercised. * * *"[55] This suggests that it was the procedures for such cases which, on insistence of the courts, the Department had established by regulation, that were in question. Since Kent and Briehl had been refused passports for failure to supply a non-Communist affidavit, and the Court did not claim that this requirement itself was invalid, and scarcely could have without overruling a parcel of its recent decisions, the mystery deepens.

In 1952 Congress passed an act which provides that in time of war or national emergency on Presidential proclamation it is "unlawful for any citizen of the United States to depart from or enter * * * the United States unless he bears a valid passport." President Truman had so proclaimed. Normally a passport has not been required to enter or leave the country, but the exceptions made by Congress and characterized as "minor" in the opinion of the Court include the War of 1812, World War I, and the entire period from 1941, prior to Pearl Harbor, until the present. In addition, the Executive had enforced the same rule under his independent power during the Civil War. The power to refuse a passport and the power to forbid exit without one are distinct, although discretion to refuse a passport becomes more important when one is required for foreign travel.

The Government acknowledged that a citizen has a right to travel abroad, which he cannot be deprived without due process. The Court proclaimed this to be a constitutional "liberty" for the first time. Again it would appear that the question therefore becomes the reasonableness of the procedures by which the Secretary exercised his discretion, but no so.

Instead discussion turns to the grounds upon which rather than the procedures by which discretion has been exercised to refuse passports. Mr. Justice Douglas holds that the only two grounds in the Department's peacetime practice are noncitizenship, in accordance with statutory provisions, and criminal activity. Mr. Justice Clark rightly states in the dissenting opinion that this is one of the two propositions "vital to the Court's final conclusion" and that it is "contrary to fact." The Court's opinion admits that ever since the Russian Revolution the Department at times denied Communists passports but states its practices had not "jelled" this into a third ground by 1926. One may wonder why the date in the Coolidge administration appears. In that year Congress had reenacted the 1856 statute in the United States Code. Mr. Justice Douglas, without discussion, treats this statute as delegating power to rather than recognizing power in the Secretary and as also limiting the grounds for refusal to the two already "jelled." Without explanation he shifts over to a denial sub silentio of any inherent power in the executive.

Worse, from the standpoint of intellectual honesty, is to come. Granted after 1926 passports were frequently denied on grounds of Communist membership. (And of course when the policy was to grant them, that was equally an exercise of discretion.) Admitted also, that in the Internal Security Act of 1950 Congress had made criminal both application for and grant of a passport if the applicant is a member of a "registered" Communist organization—a provision which may yet become effective. True, although unmentioned in the opinion, the legislative history of the 1941 statute forbidding travel without a passport clearly shows Congress recognized the Secretary's discretion to deny passports on security grounds. Indeed, any such law is essentially meaningless otherwise. True also, the provision in the act of 1952 was designed to replace and put on a permanent basis the emergency legislation of 1941, which was about to expire, and in passing it Congress knew that the Secretary did and expected that he would continue to exercise his discretion to deny passports to Communists.

Still, the Court hesitates to impute to Congress, when in 1952 it made a passport necessary for foreign travel and left its issuance to the discretion of the Secretary of State, a purpose to give him unbridled discretion to grant or withhold a pasport from a citizen for any substantive reason he may choose.[57]

It takes real skill to pack so many errors into a single sentence. First the 1952 act forbidding foreign travel without a passport is treated as a law regulating denial of passports. Further, the idea that the Secretary no longer has any discretion in grounds for denial except that which Congress gives him is reiterated as self-evident. Finally, despite the fact that the departmental regulation prescribing Communist membership and activity as the ground for denial is alone in question here, the hint is subtly conveyed that to concede this to be a rational exercise of discretion is equivalent to allowing the Secretary to keep at home people with red hair or blue eyes if the fancy strikes him.

Such performances, whenever the Court indulges in them and however lofty the ideals that motivate them, are bound to revive Justice Jackson's mot: "We are not final because we are infallible, we are infallible because we are final." In this way, however, the Court reached the conclusion that the stautes "do not delegate to the Secretary the kind of au-authority exericsed here."

III. CONCLUSIONS

No less an authority than Max Weber pointed to the conflict always potentially present betwen a modern bureacracy and the judiciary, particularly in Anglo-American jurisdictions: [58]

"For the field of administrative activity proper, that is, for all state activities that fall outside the field of law creation and court procedure, one is accustomed to claiming the freedom and paramountcy of individual circumstances. General norms are held to play primarily a negative role as barriers to the official's postive and "creative" activity, which should never be regulated. * * * Yet the point that this "freely" creative administration * * * does not constitute a realm of free, arbitrary action, of mercy, and of personally motivated favor and valuation * * * is a very decisive point. The rule and the rational estimation of objective purposes, as well as devotion to them, always exist as a norm of conduct. In the field of executive administration, especially where the "creative" arbitrariness of the official is most strongly built up, the specifically modern and strictly objective idea of "reasons of state" is upheld as the supreme and ultimate guiding star of the official's behavior."

But he observed the judicial process:

"American adjudication of the highest courts is still to a great extent empirical; and especially is it adjudication by precedents. * * * Formal judgments are rendered, though not by subsumption under rational concepts, but by drawing on analogies and by depending upon and interpreting concrete precedents. This is empirical justice. * * * It postulates substantive justice oriented toward some concrete instance and person; and such an ethos will unavoidably collide with the formalism and the rulebound and cool matter-of-factness of bureaucratic administration."

No words could be found more prophetic of the problems faced by the Warren Court as it attempts to provide substantive justice in concrete instances and for concrete persons affected by the efforts of an Executive necessarily guided by cool, rational, objective consideration of what reasons of state require to protect the security of the country in the cold war. It is a measure of the wisdom of that great scholar that he did not denigrate the vital purposes of either the bureaucracy or the judiciary when such conflict occurs. His wisdom certainly deserves the attention, and may we add, the emulation both of those members of the legal profession who recently accused the Warren Court of invoking technicalities against the protection of our Nation [59] and of that considerable number of political scientists who have regularly, and dare one say, monotonously denounced efforts of the executive branch to protect the Nation's security under both Presidents Truman and Eisenhower as merely irrational and viciously unjust. How petulant many of these demands that our Chief Executive and our Supreme Court apologize for sincere efforts to protect the Nation and to render justice sound.

The impact of the Warren Court's decisions on the executive branch can be summed up only tentatively. What the record makes clearest is the willingness of the Court to place limitations on executive power. There is a concept of executive power which tempts its holders to regard at least any new legal restriction upon what a President may do as somehow a subtraction from and diminution of his power. Apparently some critics, out of their rightful concern for the maintenance of a strong Presidency in today's world, have adopted that concept. The Warren Court has rejected it, for good reason. For this concept of power is a logical fallacy, perhaps alluring because it seems scientific. The President's power is not a quantum which will eventually be amenable to expression in mathematical terms when the calculus in which to compute it has been perfected. The analogy of executive power to horsepower it fatally misleading. The power of a President rests ultimately upon public confidence that he cannot lawfully do some things and will not try to do them. Thus a rule that the President may not arbitrarily remove an officer performing quasi-judicial functions, invoked in the Wiener case, or a rule that he cannot by an executive agreement deprive American citizens abroad of their fundamental right to due process, which is the likely meaning of the Covert and Girard cases in combination, or a rule like that enforced in the Vitarelli case, that in removing an official on security grounds the executive must observe the procedural regulations which he has proclaimed in an effort to meet constitutional requirements may each ulitmately enhance rather than diminish the power of a democratic executive.

In some cases, particularly *Peters* v. *Hobby* and *Greene* v. *McElroy*, there appears a tendency which, if it were to become more dogmatic or be given general application, would be a serious and unjustifiable judicial encroachment on executive authority. That tendency is to insist on an unrealistic and undesirable formalism in the relations between the President and his assistants in the executive branch. Mr. Justice Reed's admonition against analogizing these relations between superior and subordinates to those which obtain between coordinate legislative and executive branches is a wise one. It may seem the more remarkable that these analogies have been drawn by a Chief Justice who has had important and substantial experience as an executive head of a great government.

Footnotes at end of speech.

If these are the main results of the Warren Court's interpretations of executive power, what is to be said of the technique by which it has characteristically achieved them? Prof. Herman Pritchett in "The Political Offender and the Warren Court" has described it as follows: [40]

"Where the Court has contrived to invalidate official action, which it has done rather often, it has typically been for rather narrow reasons * * * certainly the starting point * * * is recognition of the caution the Warren Court has shown in taking new constitutional positions as to the rights of political offenders. The libertarian effects which the Court has recently achieved have been secured for the most part through the interpretation of statutes, not through the interposition of constitutional barriers."

When the issues facing the Court are so novel and so grave there is certainly much to commend in the gingerly tentativeness with which the Court has approached their resolution. But in speaking of the Court's obligation to judge Professor Pritchett added: [41]

"If the Supreme Court's primary obligation is to avoid taking a position on matters of acute public controversy or where the interests which the Court is protecting are not substantial enough to give the Court a reasonable measure of support if a hue and cry is raised by the decision, then this recent experience suggests that this self-restraint doctrine needs to reformulated."

The Warren Court has frequently avoided prematurely final decision of constitutional questions only at the price of appearing, even if it be not, disingenuous. At times, especially in *Greene* v. *McElroy* and *Kent* v. *Dulles*, the Warren Court has almost seemed to create an irrebutable presumption of presidential and congressional ignorance, and its versions of the process of government have taxed credulity. The worst damage wrought by such opinions is likely to be upon the Court itself. Men who begin to suspect, even wrongly, that their judges are less than candid in appraising the facts are likely to end by distrusting their statements of the law. Such a consummation is not to be wished for, and both the Court and its critics need to take thought promptly about how it may be avoided.

There are of course canons of propriety that control what may be said in a Supreme Court opinion. But would they have been breached if the Court had spoken to the President and Congress in some of these cases in words like these? When we say that you did not know and did not intend that those in the executive branch would do what they have done, we do not mean that you were unaware of their probable or subsequent action, or that you did not in some more or less casual way approve their acts. What we do mean is that we are not sure that you were aware of the full consequences that your intention or approval carry with them, and what we ask of you, before we must pass upon these consequences, is your reconsideration of them and your renewed assurance that in full knowledge of them you have concluded that pro bono publico they must be borne.

Some may hold that such candor would have been wrong, for undoubtedly it would express a far-reaching claim for the judicial power. The Court would thus have at its command a kind of suspensory veto as an adjunct to the possibility of wielding as final a veto power as it now possesses. But it has long been a truism among constitutional scholars that the only kind of veto which the Court has ever held over governmental action that public opinion persistently supports as "a felt need of the times" is a kind of suspensory or delaying power. At least, an admission that a greater freedom of action is justified in the Court's use of its suspensory veto power than older versions of the function of judicial review suggest would be an interesting parallel to the Warren Court's invention in the public school integration decisions of the novel and socially useful principle that actions admittedly less than constitutional may under appropriate circumstances be given temporary judicial sanction. Some of us might believe that both principles represent constitutional relativism at its best.

Something should be said about the basic jurisprudence, as distinguished from technique, which underlies these decision of the Warren Court. There is a type of legal theory which promotes the kind of constitutional construction that yields propositions like the following three. First, the President's inherent removal power must extend to all officers if it extends to any and may be exercised for any reason if it may be exercised for some. Second, if denial of confrontation and cross-examination is invalid in some governmental proceedings it is unconstitutional in all. Third, if any provision of the Constitution follows the American citizens in his relations with his Government overseas all of them do. The Warren Court rejected the first of these in the Wiener case. A majority has never accepted the second, suggested a reasonable substitute for it in the Vitarelli case, but then came perilously close to embracing it in the Greene case. The third was rejected by a majority explicitly in the Covert case and implicitly though silently by the Court in the Girard case.

The legal theory that animates constitutional construction which in turn produces such propositions of law is what has long been called "a jurisprudence of conceptions" or mechanical or conceptual jurisprudence. In another day it was attacked by scholars who saw in such decisions as those in *Adkins* v. *Children's Hospital* [42] wrongful judicial interference with orderly social adjustments to the problems of their time. Quite apart from the "value preferences" of those who attacked this "slot machine" theory of law are the logical objections to it. For in terms of logic does not all such mechanical jurisprudence come down to a manipulation, knowingly or ingeniously, of the twin fallacies of composition and division? [43] Any court, especially when confronted with novel and difficult questions, must be under a strong temptation to fall into them, because the psychic comfort they provide though illusory may be comfort nevertheless. Justice Sutherland may sometimes seem to have on the Warren Court his logical descendants, who can be identified by similar polemical style despite their rebellion against his taste in "values." But fortunately most members of the Warren Court most of the time deserve and are here given credit for a wise and courageous refusal to resort under great tension to the use of that judicial tranquilizer pill once so popular.

A Visit to the Federal Aviation Agency

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, for the information of my colleagues, an interesting article entitled "A Visit to the Federal Aviation Agency," recording the impressions of Swiss aviation authorities who recently visited the Federal Aviation Agency.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VISIT TO THE FEDERAL AVIATION AGENCY

The formation of the Federal Aviation Agency marks yet another step in both the history and the development of American aviation. The writer recently had the opportunity of visiting the headquarters of the new Agency and was given considerable insight into its development and current progress. To fully appreciate the reasons for its formation and the requirements it fulfills, it is perhaps necessary to retrace some of this past aviation history to obtain a clearer picture of the background from which the Agency was developed.

The speed of development and expansion of the aviation and air transport industries over the past 30 years has greatly exceeded the most optimistic forecasts. This is particularly marked in the United States of America where the air transport of passengers and mail has long been accepted as a necessary and permanent part of the American transportation picture. The recognition by the Federal Government of the need to provide a centralized control for the regulation and promotion of civil aviation dates back to 1926 when the first Air Commerce Act was passed. This act established an Aeronautics Branch of the Department of Commerce, whose function was to regulate the newly developing business of air transport. The Department was authorized to license pilots, develop air navigation facilities, promote flying safety, map airways and to furnish flight information.

By 1938 the ever-increasing popularity of air travel, together with the increasing numbers of aircraft of new types and higher speeds, began to complicate the movement of air traffic in the airways. An exhaustive study of commercial aviation was made by a Presidential Commission which paved the way for the writing of the Civil Aeronautics Act of 1938. This act created the Civil Aeronautics Administration and the Civil Aeronautics Board and allocated specific responsibilities to the two branches. The Civil Aeronautics Administration was made responsible for air safety, air traffic control, operation of airways, aviation communications and the improvement of airports. At the same time the Civil Aeronautics Board was charged with writing civil air regulations, investigating accidents and regulating economic aspects of air routes and civil aviation. In 1940 certain amendments were made to the act and under the resultant reorganization the Civil Aeronautics Board remained independent while the Civil Aeronautics Administration was placed within the Department of Commerce.

At the end of World War II, it was in this framework that American civil aviation recommended its activities. The enormous advances made by aviation during and following the war rapidly became manifest. Larger and faster aircraft in steadily increasing numbers crowded into the airways and it became apparent that the air traffic control capabilities of the CAA were not designed to handle the situation. As early as 1948 the Air Coordinating Committee which had been established by the President 2 years previously in 1946, observed that "the existing techniques of air traffic control and tools available to CAA are marginal even by the pre-World War II standards." During the 1950's yet another factor arose which compounded the existing difficulties. This was the advent of jet-powered aircraft with their extremely high speeds, and requiring new techniques in air traffic control to enable them to be fitted into the overall airways traffic plan.

In order to resolve the growing problems of this crowded airspace, the first step was the creation in 1957 of the Airways Modernization Board, with the express purpose of speeding the necessary improvements.

In the terms of the act which created the Board it was also specified that Congress would establish an independent Federal Aviation Agency, and in 1958 legislation was passed which brought this into being. To direct this organization the President appointed Mr. E. R. Quesada to be the first Administrator of the new Agency on November 5, 1958.

Mr. Quesada had previously served as special assistant to the President for aviation matters and had been Chairman of the Airways Modernization Board. To assist him in the task of directing the new Agency, Mr. James T. Pyle was appointed Deputy Administrator. Mr. Pyle had previously been Administrator of the CAA, a body which was absorbed in its entirety in the structure of the new FAA.

This powerful and comprehensive organization is an independent Agency reporting directly to the President, and the Administrator has been given the broad powers necesary to promote the interests of American aviation, both civil and military at home and abroad. The formation of the FAA was commenced by the transfer of the Airways Modernization Board to its control as the Bureau of Research and Development, followed by the Civil Aeronautics Administration and the safety rulemaking section of the Civil Aeronautics Board complete with personnel, funds, and functions. Once established, on January 1, 1959, the FAA at once commenced to operate on a five-point plan described in the following principles.

1. To regulate air commerce so as to promote its development, safety, and requirements in national defense.

2. To control the navigable airspace and to regulate civil and military flight operations in the interests of safety and efficiency.

3. To develop and operate a common system of air traffic control and navigation for both civilian and military aircraft.

4. To develop a plan for the Agency's function in the event of war.

5. To prescribe minimum standards for design, materials, and workmanship in aircraft construction and construction of other elements of aviation.

The breadth of policy embodied in this five-point plan gives an indication of the magnitude of the problems with which the administrator and his staff are faced. It should be emphasized that the FAA concept is one of integration of services and facilities for both civil and military aviation so that it can safely and fairly apportion the use of the available airspace to both users. There is also the necessity to both expand and modernize the Federal airways system and to control the ever-growing volume of traffic. This has become even more urgent with the introduction of high performance aircraft into the traffic patterns, requiring more airspace than ever before.

In a recent interview Mr. Quesada explained to me how the FAA is attacking these problems. The first task is to maintain and operate facilities already in existence and by reducing the size of restricted areas to restore large tracts of airspace to public use. This was being achieved by complete derestriction of certain areas, and in certain other cases by allowing the use of restricted areas to civil aircraft when military operations were not being conducted. This was now possible owing to the closer integration between military and civil control in the FAA system. To achieve this integration new methods have been evolved. Military personnel are transferred for employment with the FAA rather than being attached for liaison. During the period of employment with the FAA the man is regarded as being an FAA employee even to the extent of being paid by the Agency and not by his parent service. By absorbing this personnel into its own structure rather than establishing liaison officers from the various services and commands, the FAA is assured of a closer cooperation without the tendency for interservice priorities to arise. Similarly the controllers on military airfields will eventually be replaced by civilian FAA employees to insure a greater continuity. In consequence military aircraft will use the airways under civilian control and with exactly the same degree of priority as civilian aircraft.

The second and largest part of the program is that of modernization of the airways; increased installation of radar and other electronic equipment, training larger numbers of traffic controllers, improving communications and developing new control procedures. This intensive research and development program is being undertaken with the target date of January 1, 1963, as the deciding factor. Mr. Quesada explained that this date represents the completion of the first stage in the modernization program and any new developments are judged on their availability for employment by that date. Any systems or ideas which may arise but which cannot be developed for employment in that time will be relegated to a long-term research program. By making this rule the FAA is assured of concentration on the present problem without being sidetracked on possibilities rather than certainties.

The third and last part of the overall program, and representing only a small proportion of the effort at the moment, is that of investigation of future developments and planning for the more distant future. This is being done with the next generation of high-speed aircraft in mind and has little bearing on the immediate modernization of the airways and facilities.

To undertake the responsibilities with which it is charged, the FAA anticipates employing nearly 40,000 personnel when fully staffed. More than 90 percent of this figure will be stationed in hundreds of FAA facilities throughout the United States and the world. Mr. Quesada went on to describe the main features of the organization and the main departmental responsibilities which have ben established throughout the Agency. Four major Bureaus constitute the operational strength of the FAA and their functions and interdependence can best be understood by describing their activities separately.

BUREAU OF RESEARCH AND DEVELOPMENT

This was the first part of the FAA to be brought into existence and consolidated the research programs of the Airways Modernization Board and the Civil Aeronautics Administration. The Bureau operates the National Aviation Facilities Experimental Center in Atlantic City, N.J. to evaluate ground navigation and traffic control equipment and procedures.

This Center is the FAA's proving ground and has been established in one of the busiest traffic areas of the United States to provide a "real life" environment of air traffic management studies. At the same time traffic free areas over the Atlantic Ocean provide a safe area for testing experimental devices. The development of semi-automatic air traffic control systems is one of the major tasks of this Bureau.

BUREAU OF FACILITIES

Is responsible for the installation and maintenance of all aids to navigation, both visual and electronic, in the air traffic control and navigation system. It is also the enginecring, construction and procurement authority of the FAA. The navigation aids for which it is responsible include VOR, VORTAC, ILS, high intensity approach lights, long range and surveillance radar installations, radio ranges, air route traffic control centers and airport control towers, data processing systems and communications. The Bureau installs these facilities and establishes the technicians to ensure their continued performance and reliability. One specialized responsibility is that of planning and developing the International Airport for commercial jets, now being constructed near Washington at Chantilly, Va.

BUREAU OF FLIGHT STANDARDS

The key word of this Bureau's activities is "safety." Its activities include establishment of the standards for use by manufacturers in the design and construction of aircraft, flight testing and airworthiness certification of all civil aircraft and maintenance standards and practices for civil aircraft. It tests and certificates the competence of all flight personnel, mechanics and dispatchers and sets the standards for mechanics training schools. Safety inspectors of the Bureau continually check the actual operation of commercial aircraft and their crews on routine flights. It also has the responsibility for flight checking the navigation aids, landing aids, radars and communication systems throughout the Federal Airways Systems.

BUREAU OF AIR TRAFFIC MANAGEMENT

The function of this bureau is the control of air traffic, writing, and enforcing air traffic rules and regulations and determining the division and use of the airspace available. It operates the 35 Air Route Traffic Control centers and over 200 airport control towers. It is also responsible for the network of communications which interlink the control stations throughout the airways system.

To coordinate and supervise the work of the FAA throughout the United States and overseas possessions, regions have been established under the control of regional administrators. These regional offices are situated in New York, N.Y.; Fort Worth, Tex.; Kansas City, Mo.; Los Angeles, Calif.; Anchorage, Alaska; and Honolulu, TH. Over 90 percent of the personnel of the FAA are employed in the facilities operating in these regions.

Apart from the work of the bureau and regional offices a number of departments exist for the planning and administration of FAA policy and for coordination with other authorities. One of the most important of these is the Office of International Coordination. Mr. Quesada is very keenly aware of the necessity of maintaining as close relationships as possible with other governments and air traffic authorities. In his view the mandate of the FAA is world wide and any aviation developments in the USA are bound to affect aviation throughout the world. Similarly the USA cannot afford to ignore aviation developments abroad as only through the interdependence of this technical effort can the maximum mutual benefits be obtained.

The extent to which the FAA is working to obtain this exchange of technical and operational information can be judged from the work of the International Coordination Office. Apart from supporting the aims of the International Civil Aviation Organization, ICAO, the FAA is strongly supporting the civil aviation activities of certain NATO groups and provides a full-time officer for this purpose. Another FAA officer sits on the Air Navigation Commission of ICAO and is alternate to the U.S. representative on the ICAO Council.

In order to strengthen the liaison and cooperation with civil aviation administrations of other countries a number of overseas offices have been established. There is an aircraft engineering office in Paris which assists foreign manufacturers in obtaining U.S. airworthiness certificates for their aircraft. Eight field offices in as many countries perform the necessary safety surveillance of U.S. flag operations in overseas areas and consult with and advise foreign flag operators flying to the United States in the promotion of air safety. There are also two flight inspection groups with flight check aircraft for the operational evaluation of various air navigation aids in cooperation and under agreement with other governments.

The establishment of the National Aviation Facilities Experimental Center (NAFEC) at Atlantic City, N.J., is another illustration of the Agency's global thinking in terms of aviation development and safety. This modern airport is being equipped for experimental purposes with all types of new systems for evaluation by a large staff of scientists and engineers. It is the hope of the Administrator that engineers from other countries will visit this proving ground and that they will work alongside the FAA staff for as long as they are able in the development of equipment and systems.

The recent visit of a Swiss delegation to FAA headquarters in Washington, D.C., was yet another example of this international cooperation. The delegation consisted of representatives from the Swiss Federal Air Office and from the Air Traffic Services of Geneva and Zurich airports, which are operated by Radio-Switzerland. In the course of a visit lasting a week they were shown the structure and functions of the FAA and were given considerable information on the developments which were in hand for the modernization of the Federal airways system. The value of such collaboration is particularly apparent in the case of a small country such as Switzerland, whose airports are used by a large number of foreign-flag carriers, and where the geographic nature of the country necessitates an extremely accurate air traffic control system. From this visit to the FAA the Swiss delegation were able to obtain operational information drawn from a highly complex and crowded air transport system. At the same time this exchange of information is not entirely one-sided. The experience gained in Switzerland of air transport operations in a mountainous country of small area is of value and is welcomed by the FAA. The problems encountered in the siting and performance of radar, VOR's, and other navigation equipment and the methods employed to overcome these difficulties are of importance throughout the world and not only from a national standpoint.

In an age when no two points on the world's surface are more than 40 hours' traveling time apart, it is encouraging to see such strenuous efforts being made to expedite air transport internationally, and to bring its advantages within the reach of the greatest number of people. As the two most powerful "air traffic controllers"—if they will forgive the term, in the free world today, Mr. Quesada and Mr. Pyle are to be congratulated on the vigor and enthusiasm with which they are directing the efforts of the FAA to achieve this result.

Seventy-fifth Anniversary of the First Church in Jersey City for Italian Families

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. GALLAGHER. Mr. Speaker, under leave to extend my remarks, I would like to include the following article which appeared in the Jersey Journal of September 11, 1959, commemorating the 75th anniversary of the first church in Jersey City for Italian families, Holy Rosary.

The 75th anniversary celebration will be a yearlong jubilee. Rev. Gerard M. Santora, pastor of Holy Rosary Church, plans a year of spiritual and social renewal. Father Santora has scheduled many outstanding events to commemorate this celebration. Father Santora said, "A parish is a family of families." I would like to add that the parish of the Holy Rosary in Jersey City is very fortunate in having as the head of its family of families Rev. Gerard M. Santora.

[From the Jersey (N.J.) Journal, Sept. 11, 1959]

HOLY ROSARY R. C. CHURCH TO CELEBRATE ITS 75TH ANNIVERSARY—FIRST IN JERSEY CITY FOR ITALIAN FAMILIES

(By Edward J. Sullivan)

Holy Rosary Church, mother church to Jersey City's big community of people with Italian lineage, will celebrate its 75th year with a year-long jubilee beginning next month.

The Reverend Gerard M. Santora, pastor, will announce plans for the diamond jubilee Sunday at masses in the Sixth Street Church.

Tens of thousands of North Jersey Catholics whose families can trace their American beginnings through Jersey City's first Italian-language church, are expected to participate in the jubilee events beginning October 7, Feast of the Most Holy Rosary, with solemn high mass.

"We plan a year of spiritual and social renewal," said Father Santora.

Next big event will be a family communion breakfast October 18 at the Jersey City Garden.

Michael Esposito, jubilee Jersey City, numbered only a coordinator, is marshaling a 168-member committee to organize the calendar of events culminating in a dress jubilee ball in October 1960.

Also planned are commemorative publications including an ambitious attempt to trace the history of every family which has had ties with Holy Rosary.

Another aim of the jubilee year will be to slice in half the parish's $420,000 indebtedness, so it can proceed with its building program.

The debt piled up in the past 9 years as the parish met its needs for a school addition, a new convent and a new rectory.

Next on the agenda, once the debt is halved said Father Santora, is a new youth center to provide wholesome guidance and recreation for the downtown youngsters.

Holy Rosary traces its beginnings to the 1880's in the Italian-speaking community of a few hundred dock and railroad laborers. For years they had traveled each Sunday to churches in New York. Then Italian-speaking priests were assigned to a little chapel alongside the railroad on Sixth Street.

The parish grew to meet the turn-of-the-century tide of immigrants who turned to their church for both spiritual and practical help in adjusting to the American environment.

From their clergy, and in their parish school they learned English and raised an English-speaking second generation that has long since burst out of strictly Italian-speaking neighborhoods and has become interwoven with Jersey City's social fabric in all economic directions.

Beside saluting Holy Rosary's historic role in the development of the Jersey City of today, Father Santora said, the jubilee year will also be a year of reunion.

Said Father Santora: "A parish is a family of families."

World Not Dueling Ground for Russia, United States of America

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, a very thoughtful editor, Edward J. Meeman, of the Memphis Press-Scimitar in Memphis, Tenn., has written an article which was published in his and other Scripps-Howard newspapers, pointing out that the time has come when we should pass to the other free nations of the world their fair share of the responsibility and the cost of the defense of their freedom and ours. Mr. Meeman points out that one of the best ways to work toward this end is by passage of the Humphrey-Morgan resolution, recommended by the Atlantic Congress, which would call together not more than 100 of the leading citizens of the NATO nations to study means of obtaining better unity, and report on these studies to their governments. The Senate Foreign Relations Committee and the House Foreign Affairs Committee have set this resoluttion for hearings next January, and during the recess I hope that Members of Congress will be giving it their thoughtful consideration.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORLD IS NOT A DUELING GROUND FOR RUSSIA AND THE UNITED STATES OF AMERICA

(By Edward J. Meeman)

Some hope too much, some fear too much, from the talks between Eisenhower and Khrushchev.

The great middle ground of opinion is aware of the dangers involved but convinced that the risks must be taken in order to avert the greater risk of nuclear war; that it is well for us to be fully alert to the dangers so as to avoid them as far as possible.

One danger of the talks is that the impression will be created that the conflict between East and West is a duel between Soviet Russia and the United States, the two strongest military powers on earth, a struggle for world power.

It's false. America wants no world power. We only want to assure that we can live in peace.

If we act like a world power, it is because World War II left us as the only strong nation in the free world, and if we did not protect ourselves, nobody would, and the other nations of the free world looked to us to protect them.

But the other free nations are getting stronger all the time—thanks to our Marshall plan and to their own remarkable efforts.

The time has come when we should pass to them, their fair share of the responsibility and the cost of the defense of their freedom and ours. The only difference between us and them is that we're just a little bigger—not so much richer as supposed, when you consider our unbalanced budget.

One of the best things that came out of the recent Atlantic Congress in London was the evidence that forward-looking citizen leaders of Western Europe are saying that Europe not only can and should assume more of the costs of NATO defense, but also of help for underdeveloped nations outside of NATO.

That is the path of progress. We need to move along that path.

One way to move is to pass the Humphrey-Morgan resolution which provides for a convention of leading citizens of democratic nations—the Atlantic Congress said it should be 100—to work for greater unity.

It's not a struggle between two giants, Russia and the United States, in which other free nations are only half involved or neutral. It's Communist tryranny versus freedom, and every free nation is as involved, and should be contributing as much, as the United States of America.

Let's look at the Ike-Khrushchev talks with that ever in mind.

And Laos, too.

The Launching of the Good Ship "James Lykes"

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. COLMER. Mr. Speaker, on last Saturday, September 12, another splendid ship was added to the American merchant marine when the *James Lykes* was launched in my hometown, Pascagoula, Miss. This modern addition to our fleet was built by the Ingalls Shipbuilding Corp. This beautiful ship glided down the ways into the Pascagoula Harbor in a perfect launching. Thus, the Ingalls Shipbuilding Corp., which has built so many splendid vessels, both for our national defense and our struggle to maintain the American flag on the high seas, made another worthwhile contribution to our national defense and commerce.

The *James Lykes* was christened by Mrs. Herbert C. Bonner, the gracious wife of our distinguished colleague, the Honorable HERBERT C. BONNER, chairman of the Merchant Marine and Fisheries Committee of the House of Representatives.

On that occasion our able and efficient colleague, Chairman BONNER, made a most appropriate address. Administrator Clarence G. Morse of the Maritime Administration also made some brief, but very appropriate remarks. Other distinguished people, including Mr. Solon Turman, president, and Mr. Joe Lykes of the Lykes Brothers Steamship Corp., and Mr. Frederick J. Mayo, president of Ingalls, made brief remarks. Mr. Monro Lanier, vice chairman of the board of Ingalls, acted as master of ceremonies.

Congressman BONNER's remarks follow:

Mr. Lanier, my devoted friend and companion, our most gracious sponsor, Mrs. Bonner, Mr. Morse, "Mr. Joe" Lykes, Mr. Turman, and all the other splendid members of the great American clan of Lykes, distinguished guests, ladies and gentlemen, I am most happy to have the honor and privilege of visiting this great shipyard again on this especially auspicious occasion—the launching of the SS *James Lykes*, the newest member of the greatest family of ships under the American flag. It is a personal pleasure to be in the Sixth Congressional District of Mississippi and in the city of Pascagoula, the home of my fine and able friend, Hon. WILLIAM M. COLMER, who represents this district in the Congress with distinction.

The Lykes fleet has to be big.

It started off from small beginnings, back in the 1880's, when the founder of the present Lykes family, Dr. Howell Tyson Lykes, shipped cattle to Cuba on a 109-foot schooner, named for himself. The precedent started by Dr. Lykes in the naming of his vessel naturally had to be followed as the tribe increased through seven sons and a daughter of his own, followed by the proliferation of subsequent generations.

Blood ties are strong in this remarkable family. Fairplay and equality of treatment bind the Lykes tribe together. So, over the years they have had no choice but to create a large fleet of ships to take the names of the numerous members of the family. The commerce of the United States, and particularly the economic welfare of our gulf coast, have been the benefactors of this curious compulsion to have ships named after every baby that was born in the family.

On this occasion, when we honor the name and memory of James McKay Lykes, who founded the present Lykes Bros. Steamship Co. in 1906, it is thrilling to think of the family unity and solidarity exemplified by the presence of so many members of the generations of Dr. Lykes here today. It is indeed difficult to separate Lykes people from Lykes ships. And it is therefore logical that among those in attendance today are Mrs. James McKay Lykes, widow of the energetic and farsighted man for whom this ship is named; Mr. Lykes' eldest son, James McKay Lykes, Jr., senior vice president and director of the steamship company in charge of west gulf operations; his younger son, Charles P. Lykes of Tampa, a director of the steamship company and president of the Florida corporation of Lykes Bros., Inc.; and his two daughters, Mrs. Ben F. Thompson of Houston, and Mrs. Cameron Duncan of San Antonio.

But this is far more than just another large-scale family get-together.

Over the many, many years that this country has sought to maintain its essential place in the field of international commerce through strength upon the seas, numerous methods have been tried. Each time the formulas have been found wanting, until the enactment of the Merchant Marine Act of 1936.

The launching of this fully modern cargo ship, specially designed for the needs of today, gives us firm proof of the sound and farsighted principles and policies of the 1936 act, just 20 years from the launching of her namesake, prior to World War II.

The launching of this new ship is proof of more than simply the soundness of the 1936 act. It is proof of the human perseverance, loyalty and faith of its operators and its builders, in their partnership with the Government in service to our national interest.

The new *James Lykes* comes into being as the first of a whole new generation of cargo ships for the American merchant marine under a program to be carried out over the next 15 years. Through this program of orderly replacement of our war-built fleet the Federal Maritime Board and the participating American operators will at last overcome the difficult problem of block obsolescence which has plagued us in the aftermath of two World Wars.

The new *James Lykes* has been designed with the greatest of care and thoughtfulness for the trades she will serve. She carries out the concepts expressed recently by her great Naval Architect, Mr. William Francis Gibbs, in speaking of our maritime competitiveness, that American ships should be designed for the future, should be able to do any job that any competitor can do with his ships, and should be able to do it better.

The *James Lykes* will be a vessel of 11,300 deadweight tons, 495 feet in length, with a 69-foot beam. She is specially designed to carry—efficiently—bulk, as well as general cargo in two of her five holds. She will be able to travel at a sustained speed of 17.5 knots at 80 percent use of power. She will be fitted to carry 12 passengers in air conditioned comfort. All of her crew quarters will likewise be air conditioned.

I somehow feel very strongly that the spirit of James McKay Lykes is with us today, looking approvingly on the handiwork of those who have carried on after him toward the greater glory of the name of Lykes and the American flag on the Seven Seas.

May I finally also add very sincerely my highest congratulations to Mr. Morse for his vision and persistence in carrying the Government's end of this great exercise in cooperation forward, and to the Ingalls Shipbuilding Corp. for another outstanding example of the highest quality of American shipbuilding.

Thank you.

The remarks of the Honorable Clarence G. Morse follows:

Mr. Joe Lykes, Mr. Turman, Mr. Lanier, Mr. Ingalls, Members of Congress, distinguished guests, representatives of the Army and Navy, friends of the American merchant marine, and our most gracious sponsor, Mrs. Herbert Covington Bonner.

It is indeed an honor to be here today, and to join with you in the ceremonies marking the launching of the SS *James Lykes*.

We in Washington who have labored to see our shipbuilding and ship-replacement program become a reality take great pride in this particular achievement.

First, it is always a pleasure to do business with Lykes Brothers Steamship Co., and it is certainly not amiss on this occasion to say that we admire and respect Lykes Brothers for their courage, their progressive attitudes, their contributions to American shipping and their willingness to put their faith and their fortune on the line on the future of the American merchant marine.

Another factor of special note on this occation is the careful and appropriation selection of our lovely sponsor.

The christening and the launching of a ship is a ceremony of deep significance, and the picking of a sponsor is a serious responsibility. In the selection of Mrs. Herbert C. Bonner to perform the honors for the SS *James Lykes*, the selection is an affirmation of basic American justice, for this great ship and the other great ships poised on the ways of shipyards throughout our land have been built because the Honorable Congressman HERBERT C. BONNER, of North Carolina, as chairman of the Merchant Marine and Fisheries Committee of the House of Representatives of the U.S. Congress, has worked and achieved, and inspired his colleagues to work and achieve, to assure that there shall be an American merchant marine, composed of the best equipped, safest, and most suitable types of vessels, constructed in the United States, and manned by Americans to serve our present and our future trade, commerce, and defense.

Mrs. Bonner, we have been with you on many occasions of note to American shipping but none more significant than the one in which we are today participating. This launching marks a most important step in Lykes Brothers Steamship Co.'s agreement with the people of the United States that calls for the construction of more than a half billion dollars worth of new ships over the next dozen years.

Your ship, Mrs. Bonner, expresses our faith in the future of American shipping.

Your ship redeems in part a 20-year agreement between Lykes Brothers Steamship Co. and the Government of the United States to assure six services on five essential U.S. foreign trade routes from U.S. ports in the Gulf of Mexico.

Your ship is evidence in steel of our resolve to remove the shadow of the phantom of block obsolesence that in past years has darkened the outlook for the American merchant marine.

Your ship means employment and benefits for people everywhere. It is a demonstration that we seek trade and not conquest, that the aim of our Nation is the mutually profitable commerce between people of good will everywhere which enhances the general welfare of our free world.

The Ingalls Shipbuilding Corp. has built yourship with strength and beauty, a tribute to the arts and crafts and skills of the growing industry of this great gulf area.

May your ship ever sail in peace and prosperity.

America's University Professors Give Selflessly of Their Time and Energies for a Better Tomorrow

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President, the university professors of America and our country's other teachers are some of the greatest philanthropists in the world.

These dedicated people give generously of their time and energies to prepare our young people not only to meet, but to improve conditions in our world. The 40-hour week is an unknown quantity to teachers. They perform a labor of love at a job which is never done. For this they are paid less than some unskilled workers receive.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by George W. Albee, chairman of the department of psychology at Western Reserve University and for the past 3 years also Director of the Task Force on Manpower of the Joint Commission on Mental Illness and Health, published in the Progressive magazine for September 1959 under the title "The Greatest Philanthropist."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREATEST PHILANTHROPIST

(By George W. Albee)

Within a relatively few years our American system of higher education will have crumbled and disintegrated completely. As is so often the case with destruction from erosion, the ultimate appearance of a desert usually indicates that the destructive process has reached a state that it almost irreversible.

It seems fitting, therefore, at this time to pay a moment's tribute to a worthy hero. Unsung, unheralded—on the contrary, vilified, insulted, and harassed—there is one among us whose philanthropic financial contribution to the youth of our Nation has far exceeded the contribution of any other.

I speak, of course, of the American college professor.

How much does this philanthropist contribute each year to higher education? Let us see.

According to the President's Commission on Education Beyond the High School, college faculty salaries should be, on the average, 80 percent higher than at present to bring them up to a level comparable to their

pre-World War II value. (Let us forget for the moment that college professors were underpaid before World War II.) In order to avoid any possible criticism that our figures are inflated, let us deal only with full-time faculty members in degree-granting institutions. The median salary of faculty members is approximately $5,300 for the academic year. A conservative estimate of the number of full-time faculty members in the country is 200,000. If these teachers are working for salaries that ought to be raised 80 percent, they are contributing more than $800 million a year to higher education.

This is real philanthropy. It makes the contribution of other groups seem paltry indeed. According to the President's Committee, the amount contributed by business and industry both to educational institutions and to student assistance programs in 1957 totaled approximately $110 million. It will not escape the reader that the college professor is giving more than four times as much as business, industry, and alumni combined.

I should pause at this point to allow editorial writers across the country time to dry their tears of gratitude and take up their pens for the purpose of righting the record. Somehow the fiction has gained currency in the minds of the public that our colleges and universities are largely supported by generous gifts from industry and alumni. The fact that less than 7 percent of all current income of colleges and universities comes from private gifts and grants, and that endowment earnings add only another 4 percent to current income, may come as a surprise.

For those who find some fault with this line of reasoning, I am prepared to offer alternatives. Beardsley Ruml, who as a businessman and former Federal Reserve Bank Chairman hardly qualifies as a radical, has suggested, in all seriousness, that the average salary of the professor in the liberal arts college should be $15,000 a year and that top salaries of $30,000 should not be so infrequent as to evoke any surprise. The reader inclined to multiplication will find these figures bring current contributions of the college professor to higher education to roughly $2 billion a year.

A few hardheaded realists will argue at this point that one of Ruml's conditions was an increase in the ratio of students to faculty in order that these improved salaries might be more easily supported. He argues that there should be 20 students in our colleges for each faculty member, and he guesses that there are at present only 10. This argument would be more convincing were it not for the fact that somehow the Soviet Union manages to pay its college professors top salaries while maintaining a student-to-faculty ratio variously estimated at somewhere between 10 to 1 and 12 to 1.

The Russian professor is paid eight times the salary of the average Soviet factory worker. The American college professor averages approximately 33 percent more income than the American factory worker to show for his 10 extra years of expensive education. According to the U.S. Department of Labor, the annual income for all full-time American workers over 14 years of age was $3,800 in 1955. If the American professor were paid eight times this figure he would reach the $30,000 bracket that Ruml found himself thinking about as equitable. The difference between what the American college professor is earning and should be earning, according to this yardstick, comes close to $5 billion a year.

Philanthropy, anyone?

Committee on Interstate and Foreign Commerce—Major Legislative Accomplishments, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HARRIS. Mr. Speaker, pursuant to section 136 of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, and House Resolution 56, as amended, 86th Congress, I should like to submit a statement of the major legislative accomplishments of the Committee on Interstate and Foreign Commerce for the 1st session of the 86th Congress.

Over 545 bills and resolutions were referred to the House Committee on Interstate and Foreign Commerce during the 1st session of the 86th Congress. Of these, 20 bills and 2 joint resolutions were reported to the House. As of this date, 14 have been enacted into public law, 3 have been approved by the House but not yet considered by the Senate, and 1 remained on the House Calendar upon adjournment of the first session.

The first bill of major importance which the committee considered and approved—H.R. 5610—provided increased railroad retirement benefits and placed on a sound self-supporting basis the railroad retirement and unemployment insurance systems. This was accomplished by eliminating the present long-range actuarial deficit in the railroad retirement system; by eliminating certain inequitable features of each system; by extending unemployment benefits; and by providing for the financing of the increases, changes, and extensions. The legislation was approved by the President on May 19 and became Public Law 86–28.

In the closing days of the 85th Congress, a bill which proposed to continue the Federal Airport Act at an increased level of $100 million a year through fiscal year 1963 failed to receive the President's approval. Accordingly, early this year the committee held further public hearings on the subject and reported H.R. 1011 to the House, which authorized Federal aid to airports totaling $297 million, to become available over a 4-year period, beginning with the fiscal year ending June 30, 1960.

The Senate bill—S. 1—provided a total of $465 million over the same period of time. It passed the Senate on February 6, and on March 2 the committee reported H.R. 1011 to the House. Subsequently, the House passed S. 1, amended to include the amended language of H.R. 1011. The Senate bill went to conference, and after considerable deliberation the conferees were unable to reach agreement. New language was then incorporated in S. 1 to simply extend the provisions of present law—$63 million for 2 years—without any substantial changes, except to recognize the statehood of Alaska. The Senate bill, so amended, was agreed to by the House and signed by the President on June 29—Public Law 86–72.

A further amendment to the Federal Airport Act to make Alaska and Hawaii eligible to receive allocations from the discretionary fund—S. 2208—has passed the House and Senate.

A bill granting the consent of Congress to interstate compacts for the development or operation of airport facilities—S. 2183—cleared both Houses and received Presidential approval on August 11—Public Law 86–154.

At the request of the Civil Aeronautics Board, the chairman of the Subcommittee on Transportation and Aeronautics—Mr. WILLIAMS, of Mississippi—introduced a bill to authorize free or reduced rate air transportation for certain additional persons. The amendment to section 403(b) of the Federal Aviation Act would expressly permit such transportation for retired airline personnel; the parents of employees and retired employees; and members of the immediate family of persons injured or killed in an aircraft accident for travel in connection with the accident.

The proposed legislation is permissive. It would permit appropriate carrier action subject to Board control. The bill passed the House and it is presently pending before the Senate Committee on Interstate and Foreign Commerce.

Legislation was also approved to amend the Federal Aviation Act so as to permit the recording of security interests in specified aircraft propellers, as well as in aircraft engines. The purpose of the legislation is to facilitate the leasing or separate financing of propellers and aircraft engines needed to modernize the Nation's civil aircraft fleet. The bill—S. 1368—became Public Law 86–81 on July 8.

Another bill, introduced at the request of the Civil Aeronautics Board—H.R. 7112—authorizes the Civil Aeronautics Board and the Federal Aviation Agency to use certified mail for service of notices, processes, orders, rules, and regulations. The legislation is permissive in nature. It was approved by the President on August 25—Public Law 86–199.

The committee reported a bill to preserve the historic Sully mansion buildings near Chantilly, Va., on property now being developed for a second Washington airport. This measure was signed by the President and is now Public Law 86–220.

As a result of a Federal Communications Commission interpretative opinion to the effect that the appearance by a legally qualified candidate in a newscast must be considered use of a broadcasting station within the meaning of section 315 of the Federal Communications Act, and that other legally qualified candidates for the same office must, therefore, be granted equal time, a bill was introduced—H.R. 7985—to provide

certain exemptions from the equal time requirement of the Communications Act.

A similar bill passed the Senate on July 28. On August 18 the House amended the Senate bill to include the language of H.R. 7985, as amended, by the committee. A conference committee met to resolve the differences between the House and Senate proposals. The conferees agreed on a compromise bill and the Congress approved the amendment. It is now on the President's desk at the White House.

Amendment to the Federal Trade Commission Act, authorizing resale price maintenance—fair trade—received further consideration of the committee this year. The primary purpose of the bill—H.R. 1253—is to enact a Federal fair trade law to protect the small individual businessman from unrestrained competition and retaliatory price cutting of larger retail establishments and discount houses which have been flourishing as a result of the breakdown of State resale price maintenance laws.

After extensive public hearings and executive consideration, the committee on June 9, reported the amended bill to the House. The Rules Committee held one public hearing on the granting of a rule and it is anticipated that the proposed legislation will be the subject of further hearings by that committee.

In the field of public health, H.R. 6325, providing for a 5-year extension of traineeship programs for public health personnel and professional nurses, was enacted—Public Law 86-105. These programs were authorized by titles I and II of the Public Law 911 of the 84th Congress, which expires June 30 of this year.

The Department of Health, Education, and Welfare recommended legislation to strengthen the Commissioned Corps of the U.S. Public Health Service by providing for improved retirement benefits for members of the Regular Corps and the Active Reserve Corps. H.R. 6324 and a companion measure, S. 2220, were introduced as requested. The Senate bill has already passed that body and has also been approved by this committee and reported to the House.

Under the provisions of S. 56, the Surgeon General was authorized to construct, improve, extend, or otherwise provide and maintain essential Indian sanitation facilities—Public Law 86-121.

A 4-year extension of the Air Pollution Control Act was approved by both Houses. The present law expires on June 30, 1960. The extension continues the authority of the Surgeon General and the Secretary of Health, Education, and Welfare to conduct a program of research and technical assistance relating to air pollution.

Another measure dealing with the air pollution problem directs the Surgeon General to conduct a 2-year study of the effects on human health of substances discharged into the atmosphere by the exhausts of motor vehicles. This proposal—H.R. 8238—has already passed the House. It is now before the Senate Committee on Labor and Public Welfare.

Early in the session the Federal Food and Drug Act was amended by the enactment of S. 79—Public Law 86-2—to permit the temporary listing and certification of citrus red No. 2 for coloring mature oranges. The Department of Health, Education, and Welfare has already recommended general legislation for the listing and certification for food color additives, and it is the intention of the committee as soon as feasible to study these suggested amendments to the Food and Drug Act.

Legislation was introduced to establish reasonable safety standards for passenger-carrying motor vehicles purchased by the Federal Government. The committee expects that if certain known safety features are provided on Government vehicles it will hasten the day when such safety features become standard equipment on all passenger-carrying motor vehicles offered for sale to the public. The bill, H.R. 1341, passed the House on August 26.

Congressional consent was given to the extension and renewal of the interstate compact to conserve oil and gas, which was entered into originally in 1935. Under the compact, the several oil-producing States are better able to effect conservation of this important natural resource, prevent its waste, and give aid to the petroleum industry in its effort to achieve a relatively stable situation. The joint resolution—House Joint Resolution 280—was approved August 7 and is now Public Law 86-143.

A bill to provide for equal treatment of all State-owned hydroelectric power projects with respect to the taking over of such projects by the United States—S. 114—was enacted—Public Law 86-124. This act repeals an exception contained in Public Law 278 of the 83d Congress, which expressly stated that "the provisions of section 14 and section 4(b)—of the Federal Power Act—shall continue to be applicable to any license issued for a hydroelectric development in the International Rapids section of the St. Lawrence River." This legislation will enable the Power Authority of the State of New York, as the licensee of the St. Lawrence project, to come within the general language of the law exempting all State and municipal licensees from the recapture and original cost provisions in sections 4(b) and 14 of the Federal Power Act.

In addition to the important legislative proposals reported from the committee, which are summarized above, public hearings by the four standing subcommittees were held on such diversified subjects as freight-car shortages; amendments to various securities acts; serving alcoholic beverages on airplanes in flight; regulation of D.C. Transit; amendments to War Claims and Trading With the Enemy Acts; providing reimbursement for damage to the Ryan-Hemet Airport, Calif.; the Public Health Training Act of 1959; motor vehicle safety, and educational television.

In the closing days of the first session, H.R. 4815, to more effectively regulate D.C. Transit; and H.R. 6462, to amend the Trading With the Enemy Act re successor organizations, were ordered reported from the committee. An interim report on D.C. Transit was filed in the House on September 12—House Report No. 1185.

An investigation of the very complex problem of the allocation of the radio spectrum was begun by the Subcommittee on Communications and Power. This study will continue, and further consideration will be given to the other subjects mentioned above in the next session of the 86th Congress.

Senator Symington Opposes the Administration's Tight Money Policies

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release containing excerpts of a speech made by the Senator from Missouri [Mr. SYMINGTON] before a large group of Democrats in Nashville on last Thursday night.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

SYMINGTON HITS ADMINISTRATION'S TIGHT MONEY POLICIES

NASHVILLE, TENN., September 10.—Senator STUART SYMINGTON, Democrat, of Missouri, said today that "the administration's tight money policy has increased the tax burden and slowed down desirable growth in the economy."

In a speech prepared for delivery before a statewide Democratic dinner here, the Missouri Senator stated:

"Right now there are two big strikes in this country. In the steel industry, workers are on strike. The administration refuses to help settle that strike.

"In the money market, capital is on strike. This strike the administration is eager to help settle by increasing interest rates on Government bonds.

"The cost of this settlement will be paid by you and me, as taxpayers.

"We have already paid $10 billion more in Government interest than we would have paid had interest on our debt stayed at the level of 1952. But the Republicans want us to pay still more.

"The fiscal mismanagement of this administration is responsible for most of this increased tax burden. Moreover, by pushing up the cost of borrowing, this policy has raised costs for all businesses, and dealt especially severely with small- and medium-size enterprises."

SYMINGTON also said that in the present session of the Congress "the Republican Party has returned to its historic mission of retrenchment, obstruction, and delay."

"They would appear to be happy in their knowledge that, with control of more than one-third of the Congress, plus the power of the Presidential veto, they can hold up progress for all the people in favor of privilege for the few. They can hold up the investments America should make, and must make, if we are to insure prosperity for our ever-growing population."

Senator SYMINGTON cited as an example the fact that the "Republicans in Congress voted almost to a man against any TVA financing plan which did not deliver control of the revenue bond program into the hands of the Bureau of the Budget—an agency not known as TVA's greatest friend."

Passage of a self-financing bill without such a provision, SYMINGTON said, "was a magnificent tribute to the representation in Congress from this section who have dedicated so much of their time to defend the principle and practice of TVA against Republican attack."

State Investigation of Chemical Corn-New York Trust Merger Called For

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release issued by me on Monday, September 14, 1959, calling for investigation by the State Attorney General of the Chemical Corn-New York Trust merger:

Representative EMANUEL CELLER, Democrat, of New York, chairman of the House Committee on the Judiciary and of its Antitrust Subcommittee, today described the action of G. Russell Clark, State of New York superintendent of banks, in approving the merger of the Chemical Corn Exchange Bank and the New York Trust Co. as "profoundly disturbing" and "in shocking derogation of the public interest." He called for an immediate investigation of the merger by the State attorney general under the Donnelly Act, the New York State antitrust law.

In a five-page letter to Gov. Nelson A. Rockefeller, Representative CELLER reviewed the merger approval action in light of a recent finding by the Antitrust Division of the U.S. Department of Justice that the merger falls within the precise language of the Clayton Act, in that its effect "may be substantially to lessen competition and tend to create a monopoly." Criticizing the manner in which the decision was made, Mr. CELLER said: "A $4 billion merger of banking facilities is authorized as being in the public interest, not only in total disregard of an authoritative warning as to its effect upon competition and antitrust policies, but also without even a semblance of a public hearing."

The Clark ruling, Representative CELLER declared, disregards "the considered conclusion of the Nation's highest antitrust enforcement officer," and also "discloses such fundamental errors in applying the standards of section 7 of the Clayton Act as to raise a serious question of the superintendent's good faith."

In his letter, Representative CELLER charged that Mr. Clark's holding is characterized by a "startling misinterpretation" of the recent Bethlehem Steel decision, the leading decision construing section 7 as amended by the Celler-Kefauver Act of 1950. After enumerating similarities between the effects of the proposed bank merger and those of the steel company merger disapproved in the Bethlehem case, Mr. CELLER stated that the ruling "casts grave doubt upon the ability of the banking superintendent to exercise the duties of his office impartially and objectively in the public interest."

Mr. CELLER urged that, should investigation reveal that the merger runs afoul of the Donnelly Act, prosecution should promptly be instituted by the State attorney general to set the transaction aside.

The text of Mr. CELLER's letter is as follows:

SEPTEMBER 10, 1959.

The Honorable NELSON A. ROCKEFELLER,
Governor of the State of New York,
Executive Mansion,
Albany, N.Y.

MY DEAR GOVERNOR: The action of Mr. G. Russell Clark, superintendent of banks of the State of New York, in approving the proposed merger between the Chemical Corn Exchange Bank and the New York Trust Co. is profoundly disturbing. As you know, the Antitrust Division of the Department of Justice has studied the effects of this proposed merger and has concluded that, in the language of the Clayton Act, its effect "may be substantially to lessen competition and tend to create a monopoly." Coming as it does on the heels of the recent Morgan-Guaranty Trust merger, this new combination brings together two more giant banks into another supergiant, greatly accelerates the trend toward concentration of the banking business, and undermines the very foundations of free enterprise competition.

The manner in which Mr. Clark reached this decision is no less unfortunate than the potential economic effects of the ruling. A $4 billion merger of banking facilities is authorized as being in the public interest, not only in total disregard of an authoritative warning as to its effect upon competition and antitrust policies, but also without even the semblance of a public hearing.

These factors combine to render Mr. Clark's action in shocking derogation of the public interest. Let me particularize. On June 8, Mr. Clark wrote to me that he had not consulted the Antitrust Division with respect to the merger in question and had decided "not to seek the Justice Department's written views as to antitrust questions arising under existing Federal laws," but would give careful consideration to such views if submitted. On August 19, I sent to you and to Mr. Clark a copy of a letter I had received from the Justice Department's Antitrust Division stating that the Division had studied the competitive consequences of this transaction and had concluded that "it may substantially lessen competition and tend to create a monopoly." Thus in the Justice Department's opinion this merger ran afoul of the standards of section 7 of the Clayton Act. Nevertheless, the New York banking superintendent has seen fit to disregard the considered conclusion of the Nation's highest antitrust enforcement officer.

Furthermore, the Clark statement justifying the merger discloses such fundamental errors in applying the standards of section 7 of the Clayton Act as to raise a serious question of the Superintendent's good faith in this matter. For one thing, the opinion is characterized by a rather startling misinterpretation of the case of the *United States* v. *Bethlehem Steel Company*, the leading decision construing section 7 of the Clayton Act as amended by the Celler-Kefauver Act of 1950.

As an example, the Clark statement fails to mention that the degree of concentration among New York City banks is similar to that which in the steel industry was an important factor in the Court holding the Bethlehem-Youngstown merger illegal. According to the Clark statement, the 4 largest banks in New York City would control, after the merger, 62.2 percent of all commercial bank assets in the city; the 2 largest, 44.2 percent; and the 10 largest banks in New York City, 93.1 percent. I would point out that this degree of concentration is strikingly analogous to that in the Bethlehem case where the 6 largest integrated steel companies had approximately 68 percent of ingot capacity; the 2 largest approximately 45 percent; and the 12 largest about 93 percent.

It is equally significant that the Clark statement in its analysis of the bank merger neglected to consider that phase of the Bethlehem Steel case concerned with the appropriate lines of commerce. More specifically, Mr. Clark did not consider all the lines of commerce and sections of the country in which the Bethlehem merger was held to violate section 7. In the Bethlehem Steel case there were 12 separate lines of commerce within which the effects of the acquisition were found to be in violation of the statute, 8 of them in the United States and 4 more limited sections of the country. The following table sets forth some of these lines of commerce together with the market shares, separately and combined, of the merging companies:

Line of commerce	Area of the country	Bethlehem	Youngstown	Combination
		Percent	*Percent*	*Percent*
Iron and steel industry	Michigan	11.8	3.1	14.9
	Ohio	5.2	9.4	14.6
	Michigan and Ohio	9.1	5.7	14.8
	Michigan, Ohio, Pennsylvania, and New York	17.3	4.4	21.7
	Northeast quadrant	14.8	5.5	20.3
	United States	14.4	4.9	19.3
Seamless pipe	do	4.1	8.0	12.1
Electricweld pipe	do	1.3	6.9	8.2
Cold-rolled sheets	Michigan and Ohio	8.8	6.0	14.8
	Michigan	11.7	2.7	14.4
	Ohio	3.9	11.3	15.2

In each of the above-listed lines of commerce the combination of the two companies' market shares was held to be violative of the statute.

You will note that in the following lines of commerce involved in the Chemical Corn-New York Trust merger, as Mr. Clark himself found, market shares are combined to a degree that parallel those upon which a violation of section 7 of the Clayton Act was predicated in the Bethlehem case. This is shown by the following table:

Line of commerce	Area of country	Chemical Corn	New York Trust	Combination
		Percent	*Percent*	*Percent*
Voluntary and court trust	New York City	4.5	4.0	8.5
—the total share of the 9 largest trust companies would be increased from 86.9 to 90.9 percent.				
Agency and custody accounts	New York City	6.5	6.0	12.5
—the total share of the 8 largest city trust companies would rise from 70.1 to 83 percent.				

Line of commerce	Area of country	Chemical Corn	New York Trust	Combination
		Percent	*Percent*	*Percent*
Trustee for bond issues	New York City	5.0	5.2	10.2
—the share (based on the number of bond issues) held by the 7 largest New York City banks would rise from 81 to 86 percent.				
Stock transfer agents	New York City	6.9	3.7	10.6
—the share held by the 7 largest banks in the city would rise from 80.5 to 84.2 percent.				
Registrar accounts	New York City	6.1	4.2	10.3
Dividends disbursing agents	do	8.5	4.2	12.7
—the share of the market served by the 5 largest city trust companies would rise from 66.4 to 70.6 percent.				

Beyond that, the Clark opinion gave no weight to the legal significance of prior acquisitions by the merging banks. The Court in the Bethlehem decision by contrast emphasized the importance of the prior acquisition history in determining the legality of a proposed merger. It is interesting to note that 26 percent of Bethlehem's growth and 20 percent of Youngstown's growth had resulted from acquisitions. According to Mr. Clark's statement nearly 55 percent of Chemical's asset growth since 1935 has been contributed directly by mergers.

In the Bethlehem case the Court gave careful consideration to the increase in concentration in an existing oligopoly framework, stating that "tend to create a monopoly" clearly includes aggravation of an existing oligopoly situation. In the banking field a similar oligopoly situation has come about by means of a long series of bank mergers in New York City. However, Mr. Clark apparently regarded this history of mergers as of little or no relevance despite the fact that, as the congressional committee reports make clear, one of the primary reasons for congressional enactment of the Celler-Kefauver Act of 1950 was to curb the increase in concentration and lessening of competition due to a trend of merger activity.

More than that, in considering the effects of this merger in the banking field, Mr. Clark failed to consider that there have been no new entrants in this field in New York City in recent years and that such entrants appear unlikely in the future. This factor was considered by Judge Weinfeld in the Bethlehem case to be of particular importance since it means that the competition lost by reason of the merger will not be supplied by any new entrant in the field.

Another basic error in the Clark opinion is that it considers banking competition only as it relates to all New York City banks and neglects to mention the very substantial competition between Chemical Corn and New York Trust which will be eliminated by this merger. Based on data which is readily available, there can be no doubt that such preexisting competition represents a most substantial amount of business.

These considerations cast grave doubt upon the ability of the banking superintendent to exercice the duties of his office impartially and objectively in the public interest. They also underscore the need for further action to undo the grevious error made by the superintendent in approving the Chemical Corn-New York Trust merger.

In all the circumstances it would seem essential that you, as the chief executive of the State, instruct the State attorney general to institute immediate investigation to determine whether this merger constitutes a violation of the State antitrust law, i.e., the Donnelly Act. Should such investigation indicate that the transaction runs afoul of this statute, the public interest would require that prosecution be instituted by the State attorney general at the earliest possible date to set aside this merger.

The people of New York State have the right to expect that their Governor be constantly and alertly sensitive to the compelling public need for maintaining a competitive system of banking in the State. I am sure that they will await your further actions in this matter with the greatest degree of interest.

Sincerely yours,

EMANUEL CELLER, *Chairman.*

Khrushchev's Visit to the United States

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. BYRD of West Virginia. Mr. President, it is now too late to prevent Khrushchev's visit to the United States. The invitation has been made; it has been accepted. Khrushchev will be in the United States within a few weeks. He will see America and Americans for the first time. We have no other alternative now but to make the best of his visit. We must, therefore, maintain our dignity as a people during his visit. In a sense Khrushchev will be as a guest in our house; and though we all may be revolted by what he stands for, still propriety—indeed the honor of our Nation—requires a courteous reception.

I have never objected to exchange visits as such. Much can be gained by a mutual exchange of visits, for example, between American and Soviet scientists, technicians, and agricultural specialists. But I question the wisdom of inviting Khrushchev and indeed have many misgivings about his coming here. For this reason I want to inject a word of caution.

It is tempting, I know, for many Americans, who are by nature prone to view the world through the prism of rosy optimism, to expect that Khrushchev's visit together with bilateral negotiations with President Eisenhower can dissolve the problems plaguing Soviet-American relations. Possibly the press may inadvertently give the impression in the weeks to come that Khrushchev and the President can themselves set things right where others have failed. The fact that Khrushchev, as supreme ruler of the U.S.S.R., has the power to dissolve these differences, should he wish, and the fact that President Eisenhower heads the Nation which in turn heads the anti-Soviet coalition may well lend some credibility to this view.

But, it is a dangerous misconception of international relations, I believe, to assume that the visit of the leader of one state to another can solve deep and fundamental differences. To be sure, the differences that loom so large in Soviet-American relations are partly psychological and emotional. And, I do not doubt that a visit can act as a corrective to some of the misconceptions Khrushchev may have of the United States. But such a visit can only affect the general climate of relations. It may correct distorted images of the United States; but it cannot solve the great and overriding political problems. For the basic differences between Russia and the United States are political by nature. Only by political agreements that reflect realistically the power relationships between both states can these differences be totally eradicated. It is naive to expect that a visit by Khrushchev can result in such political agreements. If history can be our guide, it is reasonable to expect that only after the Communist regime in the U.S.S.R. has been replaced by a regime that is not dedicated to the subversion and overthrow of free governments will it be possible to dissolve political differences now dividing East and West.

This raises another serious implication of the Khrushchev visit. Whether intended or not, private talks between the President and the Soviet Premier can give the impression abroad of bilateral negotiations. Even to convey this this impression could, if widely accepted, dangerously weaken the Western aliance. I do not believe that it is a workable procedure for the President to act as an agent for the Western allies in such a negotiation, even if acceptable to the allies under certain conditions. Suspicions are bound to arise within the allied camp that could widen the fissures that already exist. Such an arrangement rests upon two assumptions: First, that the interests of all nations in the Western coalition are unitary; and second, that the United States can in fact negotiate objectively and disinterestedly for other powers when the vital interests of those powers are at stake. Recent negotiations in the Berlin crisis brought to light the wide range of differences within the allied camp on the very problems that would likely be on the agenda for an Eisenhower-Khrushchev conference. Moreover, it would be exceedingly difficult, indeed almost impossible, for the United States to negotiate a settlement of the German problem and satisfy the disparate interests of, let us say, both Britain and West Germany. Indeed, it would be imposing too much of a burden upon the United States. This would be particularly true in a situation where American interests may conflict with those of its Allies. Nations often act with the highest motives, but more often their actions and motives are related directly to their vital interests and are rationalized and moralized accordingly. It would be inconceivable that, in a given situation, during negotiations with the Russians, the United States would act contrary to its interests while attempting to oblige one of its allies.

Serious observers of the current international scene have long contended that one of Russia's primary objectives is to divide the Western coalition and destroy

NATO. For the past few years, Khrushchev stated very pointedly that the way to settle world problems was for the United States and Soviet Russia to confer bilaterally. As recently as the Vice President's trip to Moscow, Khrushchev repeated the same assertion. No doubt, when Khrushchev arrives in Washington he will do his utmost to create the impression for the benefit of world opinion that bilateral negotiations can be an effective device for insuring world peace. It is gratifying that the President is giving personal assurances to the allies of American intentions. But this shall not deflect Khrushchev, and there is no doubt that in the coming weeks Mr. Eisenhower's statesmanship will be put to a supreme test.

In addition to these two points I have discussed—that is, first, the doubtful effects of a visit in solving outstanding political problems, and second, the danger of bilateral negotiations—there is a third point, and that is the adverse effect a visit by Khrushchev may have on world opinion. Here, actually, I have two points in mind. First, there can be little doubt that the morale of the resistance movements behind the Iron Curtain will be severely shaken by press reports and pictures of Khrushchev visiting Washington, which in the mind of the anti-Communist Eastern European has been a symbol of world democracy and freedom. It will be difficult, I am sure, for many Eastern Europeans to reconcile this public demonstration of acceptance of a man who was responsible for crushing the Hungarian revolution and destroying freedom and democracy in Eastern Europe, with claims by the United States that it will not acquiesce in Soviet insistence on Western acceptance of the status quo in Eastern Europe. It seems to me that in this instance we cannot have our cake and eat it too. It is arguable that Khrushchev's visit here may well convey the impression that we are writing off Eastern Europe. In which case, the captive peoples, having no other alternative, may well acquiesce in permanent Communist control. What has heretofore been passive acceptance of Communist rule will now be total acceptance, and thus we will have lost a vital and vigorous force for freedom. Henceforth, at best the Communists could probably rely on the loyalties of the captive peoples; at the very least, they would be relieved of a serious problem of control.

The second point I wish to make is the effect the Khrushchev visit may well have on world opinion. Whether intended or not, the Eisenhower-Khruschev conference will convey the impression that great decisions are impending—decisions that will ease international tensions and insure world peace. Whether the visit will yield such grandiose results is high questionable. But, the hopes of humanity cannot be suppressed sometimes even in the face of hard reality. Should world opinion be inordinately optimistic about the results of the visit, no doubt, disillusionment on a grand scale will set in when the tallies are finally added up. Soviet Russia may well receive many assets in propaganda, while the United States, lacking the facility, as most democracies do, for cynical, tactical maneuver, may well incur serious liabilities. This happened after the Geneva summit conference in 1955; it can happen again. Summitry, to be successful, requires a symmetry of intentions and obligations. So far, the Russians have not obliged, and it is doubtful whether they ever will.

In setting forth these ideas, it is not my intention to be a doleful pessimist, and I hope that what I have said will not be taken in that spirit. My principal concern is that the American people will look at the impending visit of Khrushchev realistically and with thoughtful judgment. It is not prudent to allow one's expectations to rise too high in the coming weeks. Sober calculation ought to be our watchword, for reliance upon emotionalism is a poor substitute for sound, rational judgment: It can only lead to disillusionment when once the mists of emotionalism have been dispelled by the cold winds of reality.

Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an article by Thurman Sensing which appeared recently in the Wheeling (W. Va.) News-Register.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wheeling (W. Va.) News Register, Aug. 11, 1959]

CONSEQUENCES OF CONSORTING WITH COMMUNISTS

(By Thurman Sensing)

Though it was undoubtedly motivated with the best sort of intentions and expectations, we must confess a considerable amount of revulsion with the invitation to the dictator of the Russians and the head of the Communists, Nikita Khrushchev, to visit this country as an honored guest of our Government.

While it would seem almost superflous, it is still in order to refresh our memories with some observations on communism and Communists.

The avowed purpose of communism is to overthrow the existing order in the world, to abolish private ownership of property and destroy freedom of the individual, to give the state complete control over the people and the people no control over the state, to make the individual simply a cog in a machine and a pawn to be moved at will. Such a philosophy is communism's only excuse for existence. Is there any reason to believe that anything will change it?

We know the threats and the boasts of this Communist leader that they can destroy us militarily, that they will "bury us" economically, that our grandchildren will live under a socialistic (he means communistic) form of government. Though whether these things come to pass is up to us and not up to the Communists, though they cannot happen unless we allow them to happen, still that is their firm belief and intention—and there is no reason to believe visits to this country will change it.

We know the past actions of the Communists. We know that they consider treaties as something with which to delude the opposition and something to be ignored and disregarded. We know that they talk out of both sides of the mouth at the same time, pouring water on a troubled spot at one end and setting a brush fire at the other. We know that theirs is a godless philosophy and that they recognize no Divine Being.

We know that Communist Russia financed the war against us in Korea (while remaining in the United Nations)—the only war this country ever lost, due to relinquishing our sovereignty over the war to the United Nations and to some timid leaders. We remember the butchery of the Hungarians when they again strove for some measure of freedom. We know that these same Russian Communists are the spiritual leaders of, and work hand in glove with, the Communist dictators of China, with all their crimes against humanity and especially including their recent ravishing of the old and honored nation of Tibet.

Can a visit to this country by this Communist leader and his subordinates change any of these things?

We also remember other times when our leaders sat down and talked in person with the Communist leaders at Teheran and Yalta and Potsdam—with terrible and irrevocable consequences. Of course, we don't have the same President now that we had then—not by any means—but these shadows will lie athwart this visit.

There is no question but that Mr. Khrushchev has been angling, both with threats and cajolery, for this visit for a long time. He knows it will give him prestige among his subjects back home and will offer him a wonderful soundingboard for propaganda. What else are the peoples of Asia and Africa and Central and South America and the islands of the sea to think than that we are now fraternizing with the Communists and receiving them as equals? Is that any way to preserve our standing in the world as the champions of freedom?

As more or less of a postscript, we notice Senator KEFAUVER has written the President a letter urging him by all means to have Mr. Khrushchev include a survey of the TVA in his tour of the United States. Well, if the thought is to make him feel at home, we should say that is a pretty good idea—because he will certainly find no free enterprise there! But what is Mr. Khrushchev himself to think when we parade the TVA before him with pride, than that we are already aping his philosophy of state ownership and state control—and that we are already on our way toward making his prophecy about our grandchildren come true?

We all want peace, yes, but must we obtain it at the expense of consorting with Communists and by the loss of our self-respect?

Why Is Khrushchev Coming?

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, "Why is Khrushchev Coming?" by William J. Conyngham, which appeared in the September 12 issue of America:

WHY IS KHRUSHCHEV COMING?

(By William J. Conyngham)

In the jagged and sometimes incomprehensible line of East-West relations since the death of Stalin, there is surely no more remarkable indication of the drift of events than the Eisenhower-Khrushchev exchange.

Nothing more clearly illustrates the momentous changes in popular and official opinion than the fact that—3 years after the Hungarian bloodbath—its perpetrator is invited to the Nation which, in 1953, said the liberation of Eastern Europe was a basic element of its foreign policy.

The causes of this phenomenon are unquestionably complex; but, in one of its dimensions at least, it points up the deep and continuing struggle for a peace which is equated with survival. Related to this, of course, is the sharp impact on public opinion of the new Soviet power revealed by sputnik. Fear of Communist imperialism, which was the core tension of the early years of the cold war, has been gradually replaced by a fear of Soviet national power.

There is a naive confusion at work in those who see in the Eisenhower-Khrushchev exchange a hope for fundamental rapprochement between the two systems. The tendency here is to see the Soviet Union as simply another nation-state, conducting its policy solely under the conditions and objectives of the Western family of nations. It assumes that the Soviet Union has essentially limited goals, which offer opportunities for negotiation, compromise and settlement within commonly assumed outer limits. The dual nature of the Soviet complex and, by extension, the Communist camp is conveniently ignored, and the role of ideology in the formation of the ends and means of Soviet policy is dismissed from the calculation.

It seems necessary to restate, in view of the Khrushchev visit, that the Soviet pursuit of world domination and a radical transformation of human society not only precludes a peace based upon commonly existing norms of justice, but substitutes for it a condition of struggle, by various means and at various levels of intensity, for as long as the two worlds are in existence.

There is the widely held belief that Khrushchev has been misinformed about the nature of the American class structure and the capabilities of our armed power. That he has very serious misconceptions of our society is undeniable, but they are notions which a rapid tour through a steel mill, powerplant, or cornfield will hardly touch. His ideas are not those of fact, certainly not those of private impression; they are in the order of moral and intellectual interpretation and stem directly from his commitment to the tenets of Marxism-Leninism.

The nature of that commitment has been described by recent visitors to the Soviet Union like Governor Harriman and Vice President NIXON. Khrushchev himself said last winter before the 21st party congress:

"We are united by the great teaching of Maxism-Leninism and by the struggle to put it in practice. We shall always preserve the purity of the Marxist-Leninist ideology. We shall fight against opportunists, against revisionists of all shades, and we shall be loyal to the working class. It is in this that we see our duty to the world Communist and workers' movement.

As a Communist, Khrushchev, of course, believes that all history develops in the conflict between those classes which own the means of production and those which do not. Further, he believes that since matter is the only reality and thus shapes all aspects of social existence, every social and political institution is drawn into the struggle on one side or the other. The American Government, he is certain, is merely an instrument of capitalism, using its monopoly of physical coercion to aid in the exploitation of the working class. In the class war, Khrushchev professes to see a series of contradictions or internal conflicts which carry the seeds of destruction for capitalistic society. The Soviet Premier has nullified in advance practically any impression that he might receive of the United States. This was evidenced last winter when he replied to those Marxist revisionists who held that capitalism had entered a new era, free of the crises of overproduction and mass unemployment. He said at that time:

"In postwar years there has been much talk in the United States and other capitalist countries about prosperity and the advent of a crisis-free epoch in capitalist development. But what is the real state of the postwar capitalist economy? In some 12 years the United States has had three critical production slumps—in 1948–49, 1953–54, and notably in 1957–58."

And Khrushchev continues:

"The continuous alternation of critical slumps and feverish uptrends speaks of the instability of the capitalist economy. Neither the arms race, nor any other measure, will ever rid the economy of the United States or the other capitalist countries of overproduction crises. Whatever the capitalist countries do, they will never eliminate the cause of crisis. Capitalism will never break the death grip of its own contradictions. They keep growing in size and scope, holding the threat of new economic upheavals. There is every evidence of a further deepening of the general crisis of capitalism in consequence of the radical shift in the balance of forces between the world socialist system and the world capitalist system, the disintegration of the colonial system and the exacerbation of social antagonism in the capitalist countries."

To hope that Khrushchev is open to spontaneous impression in the face of such an ideological formation is, to me at least, to presume that he is on the road to Damascus.

Khrushchev views the United States not only as an isolated national society, racked by conflict and internal decay, but also, according to Lenin's theory of imperialism, as an integral part of the world capitalist system and its mainstay.

Central to Khrushchev's purpose is visiting the United States is his grasp of the fact that the United States stands at the heart of the free-world system. And because it is a system, a functioning unit of integrated parts, Communist ideologists assert that the total power of the free world is not only being continuously reduced by national revolution in its weaker and remoter parts, but also that the power of the system can be materially reduced at its center, which—since the decline of Great Britain and France—is the United States. Thus, if the viability of the American economy weakens, the economies of those nations dependent on it will weaken to an even greater degree, and the total power of the system will be effectively lessened.

Of vital importance in the context of the Khrushchev visit is the ideological element which links Marx to Lenin. It was Lenin's thesis that capitalism achieved a measure of internal stability only through imperialism, militarism and the arms race. Without the aid of the cold war and of expenditures for defense, it is asserted, the American economy would be unable to escape the "contradiction" of overproduction and mass unemployment, thus aggravating the internal antagonists of the class struggle. In these terms, to achieve a unilateral reduction of arms would not only reduce America's capacity for military action, but would result in a further weakening of its social structure.

IN MR. K'S OWN WORDS

It should be pointed out that Marxism-Leninism is not only a way of understanding the meaning of the processes of history. It is also a method of changing it. The method itself is an integral part of the dialectical approach. Perhaps its most direct statement was expressed in the February 1959 issue of International Affairs, an English-language monthly published in Moscow. The classical principle of power politics—exploiting differences between allies to weaken them through division—was developed by the authors in this way:

"The Socialist foreign policy takes correct account of and utilizes the contradictions of the capitalist system. The most cynical example of the use of such tactics [divide and conquer] under contemporary conditions is the diplomacy of American imperialism, which attempts to sow discord and conflicts everywhere, to incite one people against another in order to divide and weaken the workingmasses, to enslave them to U.S. monopoly capital and to prepare for war."

The Communist leadership, on the other hand, uses the same tactics, but for different purposes:

"Socialist foreign policy makes use of such contradictions in order to consolidate peace, to prevent war not only between the Socialist and capitalist countries, but even between the capitalists states, to foil the aggressive designs of the imperialists, to systematically use the discord between them in order to consolidate peace and to secure an ally, "even through this ally," as Lenin said, "be temporary, vacillating, unstable, unreliable, and conditional."

"Ever since the Soviet state his existed its foreign policy has been supremely skillfull in making use of the contradictions of the imperialist camp for the benefit of the struggle for peace. This was demonstrated both between the two World Wars and during the Second World War."

The authors continue by listing the sources of conflict among the nations of the free world which it is the business of Soviet diplomacy to exploit.

"Since the war the contradictions between the capitalists have become considerably more acute. There are the contradictions between the big imperialist States and the smaller countries; between the United States, which aspires to world domination, and its NATO partners, who feel the pressure of American monopoly capital; between the imperialist States and the countries which have freed or are freeing themselves from colonial dependence; class antagonisms in each capitalist country; and also contradictions in the camp of the bourgeoisie itself between its aggressive elements and the more sober-minded businessmen who have an interest in extending economic contacts with the U.S.S.R. and the other Socialist countries."

The authors conclude:

"The correct use of these contradictions is one of the necessary conditions for success in the struggle for peace, for the creation of favorable foreign policy conditions for the all-out building of communism in the U.S.S.R. and the successful building of socialism in the people's democracies."

What, then, in view of the foregoing, are we to conclude as to the meaning of the Khrushchev visit? Rather baldly, Khrushchev's mission is meant to promote the basic objectives in the struggle between the two camps: one one hand, to increase the unity and power of the Communist world system; and, on the other, to weaken the cohesion and power of the West.

Let us examine a few of the contradictions which Khrushchev might hope to exploit. There is the matter of the "contradictions between the United States, which aspires to world domination, and its NATO partners, who feel the pressure of American monopoly capital." Possibly the single most important objective in the Soviet foreign policy has been to disrupt the Western alliance. To halt the rearmament of the West and the political and economic integration of Western Europe would be a major, perhaps decisive, victory in the conflict of the two

systems. And while Khrushchev could have little hope of getting a "Big Two" deal which would seriously weaken the Western defense by a withdrawal or heavy reduction in the American commitment, he might very well hope to stimulate the already potent conflicts of interest in the Western community.

SPEEDING UP THE U.S. DECAY

Khrushchev may well have in mind increasing the social antagonisms within the United States by alienating American public opinion from the antipopular foreign policy of its Government. He may stress the relaxation of tension through increased trade and cultural contact and the burdens and dangers of the arms race. By reiterating that the Soviet Union is interested only in competing with the free world in terms of standards of living and human betterment in general, Khrushchev may hope to increase popular pressure on Washington to decrease, if not eliminate, defense, foreign aid, and related expenditures.

The prospect of alienating public opinion from Government policy, however, is only part of the possible gain. There remains the possibility of exploiting "contradictions in the camp of the bourgeoisie itself, between its aggressive elements and the more sober-minded businessmen who have an interest in extending economic contacts with the U.S.S.R. and the other Socialist countries." Both Mikoyan and Kozlov have expressed interest in expanding trade relations. The Soviet Union is interested in securing credits to import heavy chemical equipment for its 7-year plan; its political effect would also be, over a time, to build a pressure group around the interests that would profit most from Soviet trade. In addition, it would weaken the U.S. embargo of strategic goods to the Soviet Union—which has been among the primary objectives of Soviet policy. To increase trade, therefore, not only strengthens the Communist camp economically, but also punches a few holes in the dike of containment.

There is little question that Khrushchev is convinced that victory over the West is historically inevitable, and that shifts in the world balance of power will increasingly favor the Communist bloc. The Bolsheviks, however, have never been conspicuously patient with history. Indeed, one of the chief characteristic of bolshevism has been its almost totall absorption with questions of power. To wage the struggle solely by methods short of war—political subversion, psychological warfare, or economic penetration—is to rely on methods which are uncertain and which require a high degree of instability in the target country.

It is, therefore, not inconceivable that part of the Khrushchev mission is to probe the will and the capacity of the American leadership, particularly of the President; to evaluate for himself whether the Western threat to wage nuclear war over Western Berlin is credible—he has to date remained adamant on his ultimatum—or to pursue some other, future objective, limited in itself and peripheral in a physical sense to American survival. If Khrushchev can secure a series of limited concessions through the threatened use of unlimited violence, then a fairly rapid advance can occur without his paying the price of nuclear war. As he undoubtedly is aware, rocket rattling has its uses.

In one sense, the visit of Khrushchev to the United States is an indication that the threat of massive retaliation seems more and more to lack credibility. And this, in turn, calls into question the permanence and stability of the nuclear stalemate which many have presumed to be a strategic factor in the East-West balance of power.

If, for example, Soviet technicians should develop an antibomber defense capability which would cut its losses to an acceptable level, then to threaten the use of force against force would be meaningless. Even in the contingency of full effectiveness, the balance of terror operates with varying pressures on different nations. The vital question, which many have asked, is whether the United States, vulnerable to nuclear devastation and unable to fight wars of restricted intensity, is prepared to suffer nuclear holocaust to prevent Communist encroachment in areas remote from immediate American interest. The stability of the nuclear stalemate and the political status quo have depended on the absolute effectiveness of the weapon and the certainty of its use. There is now some reason to question both.

It may be Khrushchev's task to find out how deeply the evidence of sputnik has modified our will to resist limited expansion. Or, in the language of the trade, to test the gap between military capability and political intention. Khrushchev will not (just as we cannot) identify the two as we did in the period of atomic monopoly.

The visit of Khrushchev, then, is nothing more or less than a weapon in that protracted struggle between East and West which will end, from the Communist point of view, only with the elimination of the free world. In this long struggle our best hope of avoiding both the evils of nuclear war and the triumph of communism lies in decreasing our vulnerability, increasing our capability and maintaining a firm intention to resist. If, as some would assure us, Khrushchev desires to gain time by reducing the intensity of that struggle, then we should be deeply grateful. For time may bring those changes that are necessary for human survival and that are undreamed of in the philosophy of Marxism-Leninism. Such a day is not yet with us, however; it would be the deepest folly to assume that it is. Moreover, such measures as the Eisenhower-Khrushchev exchange are not likely to bring it about.

Mrs. W. A. Whatley, of Sinton, Tex., Looks Back Over Her 77 Years

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. JOHNSON of Texas. Mr. President, time flies by so quickly that it is often difficult for us to recall just exactly what life was like 30, 40, or 60 years ago. An enlightening article appeared in the Corpus Christi Caller-Times of August 30, 1959, entitled, "I Remember: Mother of 10 Had 'Easy Life' in 1900's," in which Mrs. W. A. Whatley, of Sinton, Tex., looked back over her 77 years and recalled some of the experiences of her life.

I ask unanimous consent that this article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Corpus Christi (Tex.) Caller-Times, Aug. 30, 1959]

I REMEMBER: MOTHER OF 10 HAD "EASY LIFE" IN 1900's

(By Madeleine Greene)

SINTON.—Despite all our modern conventions, raising 10 children was a much easier task at the turn of the century than it is now, insists Mrs. W. W. Whatley.

"The reason is simple" she explained. "In 1902 a woman could be a mother full time while today she often tries to combine an outside job with her household chores."

After listening to Mrs. Whatley's description of life in the "old days," however, it is a moot point whether even the busiest of career mothers would agree with her.

As the wife of a farmer who owned land near Prairie Hill, her working day was a long, full one. The fact that each of the children was taught to do specific chores around the farm as they grew up lightened her load only slightly.

UP AT 4

"Rain or shine we were up at 4 every morning of the year," the mother of 11 said. "My husband thought that even if it was raining so hard you had to spend the day indoors you should get up at that hour for if you slept late even one day it would be too difficult to get up the next."

Breakfast out of the way, her husband in the fields, and the older children ready to start their 3½-mile hike to school by the time the sun rose, Mrs. Whatley was ready early in the day to to turn her attention to household tasks.

Preparing food for her large family took up much of the day. A large peach orchard and wild blackberries nearby kept the farmer's wife well stocked with new raw materials for canning.

"We canned our fruit in glass jars, and having no such thing as a Deepfreeze around in 1905 we stored them on shelves which lined the kitchen walls," she said.

OWN DAIRY

Milk from their own cows was poured into a cooler with a cloth around it and placed in the wind.

"We had no basement to use as a cooler, and the storm cellar was too small to store things in," she remembered.

In addition to milking the cows there was corn to be shucked and meal to be ground. The Whatleys grew almost all their food with the exception of the wheat from which to make flour for bread and pastries.

"I set aside Fridays for fancy baking," Mrs. Whatley recalled. "Using pure Jersey butter instead of shortening, I would make at least one big cake and a large supply of small 'tea cakes'—we didn't call them cookies in those days."

Washing and ironing for a family of 13 was another major operation. In the summer the clothes were washed in a pot of water set to boiling over an oak fire built outdoors. In the winter the fire was laid in the smoke house.

"I couldn't leave the little ones in the house alone while I scrubbed the clothes, so I lined a large box with an old quilt, put the children in it and carried them around with me in that," Mrs. Whatley said.

Ironing required five flat irons and sturdy walking muscles. "During the summer months my husband would keep a fire going behind an oak log, and when the wood had burned to charcoal, the irons were stood in the embers to heat."

She continued, "I alternated five irons, running from the house to the fire in the yard to trade a cold iron for a hot one every little while."

SOME PLAY

Life was not all work and no play for the Whatleys and their neighboring farm families. Sunday afternoon and evening were often spent at nearby homes singing and visiting.

All-day picnics were a holiday treat. "Oh the chickens I fried, the cakes I made for those outings," said Mrs. Whatley with a smile. "The only damper on the picnics were the flies which the children had to take

turns shooing away with limbs cut from the trees."

One of the most eagerly awaited events was the revival meeting held in brush arbor tabernacles. "We put the children on pallets on the floor while we listened to the preacher preach sermons that sometimes lasted an hour and a half."

Church activities took up much of the family's leisure time. Sunday morning services occasioned the rare trips to town the Whatleys made.

The first thing Mrs. Whatley did when they moved to their new farm near Sinton in 1923 was to join the church circle of the Methodist Church. Not long ago the circle was renamed in her honor.

Today, Mrs. Whatley, who celebrated her 77th birthday 2 weeks ago, is far from content to "just sit with my hands in my lap." The church continues to play an important role in her life.

Her still-nimble fingers are busy with needle and thread, making aprons which she has no trouble selling. And although she says with great emphasis "I am not a poet," the Sinton Evening News often publishes the verses she turns out.

Mrs. Whatley continues to do her own cooking—on a modern stove instead of the woodburning one from which she fed her growing family.

And she counts herself a fortunate woman for her children all live near enough to drop in during the week with her grandchildren and great-grandchildren.

The children are Walter W. Whatley and Mrs. Margaret Ellen Stanwood of Corpus Christi, C. C. Whatley of Robstown, C. W. Whatley of Banquete, Mrs. F. B. Hickman of Sinton, Mrs Pearl Wilson of Abilene, Mrs. F. E. Grupe of Mathis, A. A. Whatley of McAllen, Mrs. George Patterson of Taft, and James Leo Whatley of Gardendale, Calif.

Col. Loren W. Olmstead—St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PILLION. Mr. Speaker, I could not permit this session of Congress to end without making this public acknowledgment of the extraordinarily fine public service that Col. Loren W. Olmstead rendered to the Buffalo area during his assignment as district engineer for the Buffalo district.

Colonel Olmstead served in Buffalo from August 1954 to July 1959. He is presently assigned to the Office of the Chief of Engineers, U.S. Army, in Washington, D.C.

During his stay in Buffalo, Colonel Olmstead compiled a most distinctive record of achievement. He earned the gratitude of the citizens of the Buffalo area for his kindness, patience, thoroughness, and his ability to get things done.

Colonel Olmstead was one of the main supporters of the development of Buffalo as a world seaport.

While stationed in Buffalo, Colonel Olmstead supervised and coordinated the successful completion of the American portion of the St. Lawrence Seaway.

The large volume of traffic on the St. Lawrence Seaway justifies the hopes and expectations of those who actively participated in its authorization, planning and construction. This project is one of the world's great engineering and construction achievements. The U.S. Army Engineers are to be congratulated upon a tough job well done.

Colonel Olmstead deserves special mention because if any person can be singled out as the builder of the St. Lawrence Seaway it would be Colonel Olmstead.

During his short but productive stay in Buffalo, the U.S. Army Corps of Engineers rendered substantial service to the port of Buffalo.

The relocation of the north channel is now under contract. This work was strongly opposed by many interests in Buffalo. Colonel Olmstead insisted upon this relocation of the channel in spite of strenuous opposition to the delay in the deepening of the Buffalo Harbor.

The model tests proved Colonel Olmstead to be right. By avoiding the deepening of the present channel which is in rock, the city of Buffalo will have a better, more safe, all-weather entrance. This relocation of the entrance will also save the U.S. Government between $8 and $12 million.

Plans for the Ohio Street Bridge have been processed and approved. An appropriation is contained in the 1960 budget.

The Niagara Falls redevelopment project was completed under the direction of Colonel Olmstead. This project was designed to perpetuate the beauty of Niagara Falls and to prevent continuing erosion.

Ellicott Creek was improved to eliminate recurring floods.

Smokes Creek was authorized and the planning completed under Colonel Olmstead's tour of duty in Buffalo.

The port of Buffalo is assured of a program of deepening that will allow utilization of the maximum depth of the St. Lawrence Seaway at the earliest practical time.

Colonel Olmstead was chosen 1958 Great Lakes Man of the Year in recognition of his distinguished service.

The Buffalo Evening News named Colonel Olmstead as one of the 10 outstanding citizens for 1958. Their citation of his accomplishments follows:

[From the Buffalo Evening News, Jan. 3, 1959]

COL. LOREN W. OLMSTEAD

Although not a Buffalonian except through assignment here as head of the district office of the U.S. Army Corps of Engineers, Colonel Olmstead has both endeared himself to the residents of the area with whom he has come in contact and has earned the city's gratitude as one of the best informed boosters of Buffalo as a world seaport.

As the man in charge of supervising construction of the American portion of the St. Lawrence Seaway, Colonel Olmstead succeeded brilliantly in holding the construction schedule to its rigorous timetable. After the seaway had been opened to limited operations last summer, he canceled previous plans and joined the Buffalo Evening News-sponsored seaway cruise as its guide, briefing passengers on what they would see en route and providing them with background which made the trip a significant success.

In diligently pressing the studies and engineering work looking to the deepening of Buffalo Harbor, and in supervising such projects as the remedial works at Niagara Falls, Colonel Olmstead has lived up to the finest traditions of the Corps of Engineers in all the work affecting the Buffalo district.

What makes him an honorary outstanding citizen, however, is the interest he has shown, beyond the call of duty, in alerting Buffalo's citizenry to the area's potential as a seaway port, and in keeping the public informed regarding its harbor requirements.

Colonel Olmstead's modesty, coupled with effective accomplishment, has earned for him the respect and gratitude of this community.

He is a credit to the U.S. Army Corps of Engineers.

The following is a summary report of the problems involved in the construction of this great project, the St. Lawrence Seaway:

One of the greatest facelifting jobs of all times is now completed—the St. Lawrence Seaway. Deep-draft vessels are now able to ply the waters of the St. Lawrence from the Atlantic Ocean into the lower Great Lakes. Massive structures were erected to harness the fast-flowing St. Lawrence for power and navigation purposes. Water elevators were constructed to literally carry ships from one level to another. Many islands were tied together making one large island and extensive excavations were dug to provide depths for future seaway traffic. Most concentrated portion of this work was between Ogdensburg, N.Y., and Montreal, Quebec. But all this was only made possible through the joint efforts of the United States and Canada. A billion-dollar improvement will soon become a fact. No attempt will be made in this article to discuss features of this gigantic undertaking in detail. Rather, it is desired to point out the role the Corps of Engineers played in this tremendous project.

Development of the St. Lawrence River was under consideration for over 100 years, but it was not until May 13, 1954, after long years of resolving the problems of legislation and finance, that it became a reality. On this date President Dwight D. Eisenhower affixed his signature to congressionally approved Public Law 358 creating the establishment of the St. Lawrence Seaway Development Corporation. This agency was given the responsibility of constructing the U.S. portion of the seaway project consisting of two locks, extensive dredging and appurtenant works in that area known as the International Rapids section, between Ogdensburg and Massena, N.Y. The St. Lawrence Seaway Authority of Canada, the Canadian counterpart, was responsible for the construction of the navigation features in Canadian waters.

Development of the power features was undertaken by the Power Authority of the State of New York and the Hydro-Electric Power Commission of Ontario, representing the United States and Canadian interests respectively.

On September 17, 1954, the Seaway Development Corporation appointed the

Corps of Engineers as their design and construction agents. Within a week the Buffalo district was directed by the Chief of Engineers to initiate work on this multimillion-dollar project. Recruitment of specialized technicians was begun immediately. Surveys and subsurbace explorations, together with the construction of models, were started promptly.

As rapidly as the field data was collected and compiled, structures were designed and engineering estimates were computed. On January 13, 1955, the Buffalo office was given the final decision on the size of the locks which are 800 feet long, 80 feet wide, with 30 feet depth over the sills. Twelve hundred and fifty-three days later the corps had completed for operation the principal segments of the U.S. portion of the seaway.

In the interim a myriad of problems arose and were resolved. Probably the greatest of these was time. What was originally scheduled as a 6-year program, then reduced to 4½, had been accelerated to 3½ years.

Close on the heels of time followed the contractors biggest nightmare, the excavation for the two locks—one in marine clay and the other in glacial till. Overburden at the site of the Bertrand H. Snell Lock consisted principally of marine clay. As one nationally known commentator put it:

> This purple chewing gum when dry was hard as rock. When wet, it resembled soupy mud.

Government specifications required that the foundations of each lock rest on bedrock. The problem was to remove millions of cubic yards of this material before actual lock construction commenced. The nature of the material was such that to excavate to the required depth, it was necessary to develop an area having a saucer-type appearance. Excavations were made on the basis of for every 1 foot dug vertically, a corresponding 2 to 10 feet of material was removed horizontally. At times the contractors' equipment chewing away at the clay appeared to be getting nowhere. In spite of these and many other perplexing problems the contractors met the nearly impossible construction schedule. Excavation for the Dwight D. Eisenhower lock was equally harassing. The overburden to be removed consisted of glacial till—when compacted it had the density of concrete. It consisted of fine gravel and boulders embedded in dense clay. This required the heaviest types of equipment for loosening and removal, and in some instances even had to be blasted prior to excavation. In addition to the excavation for the two locks, a 10-mile man-made canal, 450 feet wide, was dug through both types of material to carry ships around the power development. Over 39 million cubic yards of earth was removed. If this material was placed in 50-ton hopper cars, the train would extend nearly one-third the distance around the world.

While excavation of the two locks was underway near Massena, N.Y., engineers in Buffalo were working desperately to complete design features for lock construction. Plans and specifications for 51 major contracts were completed in a minimum of time. In this connection the Buffalo office solicited help from other districts in solving what might be called the third outstanding problem—that of hydraulics. The St. Paul District, at their St. Anthony Falls Hydraulic Laboratory, was requested to construct a model of the Eisenhower lock and conduct tests for the filling and emptying system that was installed in the lock. The corps' model makers at the Waterways Experiment Station in Vicksburg, Miss., were requested to construct a model of a section of the river in the South Cornwall area. Results of tests conducted on the Vicksburg model were used to develop methods to slow down the river velocity and eliminate crosscurrents. Such action would enable deep-draft vessels to safely navigate without loss of control. The corps' district in Buffalo was not alone in building the seaway. The Nashville district contributed materially in designing the machinery for the lock gates. Soil samples were transported to the laboratories of the north central division office in Chicago, Ill., for analyses and to the Ohio River division office in Cincinnati, Ohio. In the early part of the project the U.S. Lake Survey and the district office in Detroit, Mich., furnished men and equipment to assist in hydrographic surveys in the Messena area and Thousand Islands section, respectively. The Chicago district completed arrangements for the transfer of the giant dipper dredge *Paraiso* to the seaway site. In addition to the contributions made by the various district offices, the north central division office in Chicago, and the Chief of Engineers Office in Washington, D.C., was of inestimable value in the overall supervision of design and construction. It was because of the corps' extensive facilities and their ability to mobilize their resources that this project was accomplished in the unbelievably short time. It was a fine example of teamwork.

Any summarization of the corps' accomplishments on the seaway project would be incomplete without a brief mention of the aids to navigation that play such a prominent role to vessel operators. All during construction, navigation of the old canal remained uninterrupted. As improvements were made for the new channel it was imperative that ships transiting the St. Lawrence be able to find their way along new routes. The solution to this intricate problem was accomplished through the planning, programing, and construction of a comprehensive system of navigation aids for marking U.S. waters of the seaway by the joint efforts of the corps and the U.S. Coast Guard.

Although there still remains considerable dredging in the South Cornwall Channel by the corps, this work will not affect the opening of the seaway this spring for deep draft vessels. As the design and construction agent for the St. Lawrence Seaway Development Corporation, the Corps of Engineers is proud of the safety record established on this project. Two national safety awards and three special merit awards by large insurance companies were presented seaway contractors for an exceptional record of only 7.17 disabling injuries per million man-hours of operations.

The two locks in operation since July 1, 1958, are considered among the most efficient in the Nation and will long remain a monument of outstanding achievement by the Corps of Engineers.

U.S. Foreign Policy and an International Health Program

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JAVITS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by me, on August 31, 1959, before the inaugural banquet of the American Podiatry Association at the Starlight Roof of the Waldorf-Astoria Hotel, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

U.S. FOREIGN POLICY AND AN INTERNATIONAL HEALTH PROGRAM

The cold war has ushered in an era of personal diplomacy requiring a maximum amount of foot power by the free world leaders—a lot of it is being exercised right now by Presidnt Eisenhower on this trip abroad and will be again when he visits Russia later on. Our President's trip is a convincing demonstration that we are prepared to make every effort, every sacrifice, and set foot when invited in any country on earth if it will prevent the world from exploding into the holocaust of atomic war. Also, great foot power is needed in the effort and sacrifice of Americans to hold the free world's own in the cold war. There is something symbolic therefore about your profession in terms of the present grave international tensions and their focal point at the moment in the impending Eisenhower-Khrushchev conversations here and in the Soviet Union.

In order not to be lulled into complacency by the latest Soviet peace drive so artfully promoted by Premier Khrushchev's visit here, we have to understand clearly our objectives. In addition to disarmament under United Nations inspection and control, the rule of international law, a strengthened United Nations, self-determination for the captive peoples and an end to Communist promoted international subversion of free world governments, we also have as a major objective the raising of living standards and therefore of health standards for the peoples of the world. Indeed, we are convinced in the free world that as the world's people are healthy and prosperous so the cause of freedom will triumph. We do not need to indoctrinate healthy and prosperous people with the concepts and ideals of freedom and individual dignity—they will indoctrinate themselves.

Therefore, high on the agenda for the discussions between President Eisenhower and Premier Khrushchev later this month should be a renewal of the proposal by the President that the U.S.S.R. join forces with United States in spearheading a full-scale assault against the killer and crippler diseases which ignore national borders to ravage entire pop-

ulations and limit the average life span of 1,800 million people in the world to under 50 years of age.

In his state of the Union message in 1958, President Eisenhower suggested a coordinated drive to stamp out malaria on both sides of the Iron Curtain, but this invitation was not accepted by the U.S.S.R. Today, it would be far more difficult for Premier Khrushchev to turn down an offer to work side-by-side with us in the life and death fight against cancer, heart disease, yellow fever and tuberculosis, as well as malaria and other tropical diseases. Indeed, the blueprint for massing the medical resources and research skills of the United States and other nations to cooperate in a global assault against the major diseases has already been formulated in our health for peace plan. The core of the plan is the International Health and Medical Research Act of 1959 authorizing $50 million for the purpose which passed the Senate on May 20, 1959, but which to this very day is still languishing in the Committee on Education and Labor of the House of Representatives. It is imperative that this bill be passed by both Houses of Congress before adjournment so that the President will have it before him for signature upon his return from Europe and as he prepares for the Soviet Premier's visit.

The health for peace program establishes an Institute of International Medical Research within the National Institutes of Health which would administer grants for research into the causes, diagnosis, treatment, control, and prevention of mental as well as physical diseases, for rehabilitation of the handicapped, and with provision for aid to hospitals, universities and laboratories furthering such programs; it would also assist by loaning equipment, improving facilities and cooperating with world health groups, including the exchange of medical personnel with all participating countries—in such exchanges the U.S.S.R. and other Communist countries are included.

Since 1958 when the Soviet Union refused to lend any of its medical personnel or resources to the President's suggestion for a joint international medical effort against malaria, it has missed few opportunities to boast of the gains it has made in its national health record. The U.S.S.R. wishes us to believe that its budget for public health and physical culture has been increased 75 times in the last 30 years—that the average life span has jumped from 44 years in 1926 to 67 years today—that currently, 16,000 physicians are being graduated yearly (compared with fewer than 7,000 in the United States) that pioneer research work unattempted so far in the West is well underway in Soviet laboratories.

If in the face of these efforts to impress us with the Soviet health effort President Eisenhower should propose and Premier Khrushchev again refuses to participate in an international medical peace mission to benefit all peoples, then what more positive proof can the newly independent nations receive which will testify to the genuine concern of the free world for their welfare in contrast to the callous disregard of the Communists for any but purely political advantages. If on the other hand, Premier Khrushchev agrees to participate, then a truly historic and dramatic opportunity exists for us to raise health standards throughout the world, and to add years onto the lifespan of the baby born today in India where the average lifespan is 31 years, or in China where it is 40 years. The end result should then prove to be a material lessening of the causes for chronic poverty that threaten the stability of society in the newly developing nations and a new surge forward in the living standards of mankind.

Let me reiterate the absolute necessity for Congress to act now on the health for peace bill, so that the President will be fully prepared to back up immediately any proposal for international health he may decide to put to Khrushchev.

Just as there has been growing support for U.S. leadership in the health field abroad, it is becoming increasingly apparent that leadership at home may develop congressional action on a national health program open to members of all groups—too frequently not the case now under our regular health insurance or voluntary plans. The problem of health coverage by voluntary means is twofold: one, the inadequacy of coverage under existing plans and premiums; and two, the lack of coverage for the aged, the indigent and the unemployed. Both of these inadequacies will require some help from the Federal Government. This help may be through the voluntary health plan network now already covering 121 million Americans in some fashion, or by relatively direct Government action like that in the Ewing plan rejected during the Truman administration. I favor the former. This major issue will very likely have to be resolved in the next Congress. A Federal Health Study Commission such as I have proposed, which would appraise the scope and sufficiency of existing voluntary health plans and suggest some type of national health program in which the Federal and State governments may participate but in which voluntary cooperative organizations will give the coverage, could give us the best leadership. I believe Senator LISTER HILL, chairman of the Labor and Public Welfare Committee, before which this bill is pending, and a leader in this field will give the bill a hearing soon.

The private relationship and free choice between doctor and patient should be preserved, and we should utilize the foundation we have already in existing voluntary cooperative health plans. The great attention paid last week at the convention of the American Hospital Association to proposals to reevaluate and broaden coverage presently available under voluntary health and hospital plans indicates an awareness by those within the profession that if improvement does not come from within, it may well have to come from Government.

A prime cause for concern, is, of course, the staggering increase in the cost of medical care today. A study by the Bureau of Labor Statistics of the U.S. Labor Department shows that in the period from 1936 to 1956, hospital room rates increased 265 percent, general practioner's fees rose 73 percent, and surgeon's fees went up nearly 60 percent. Today, the cost of medical care continues to rise faster than any other component in the cost-of-living index—it was up 4.4 percent in July over a year ago and is now more than 50 percent higher than it was 10 years ago. Although premiums for hospital care coverage have been steadily rising since they were first included in the Consumer Price Index in 1950, the Blue Cross plans reported a $40 million deficit after paying out some $1.4 billion in benefits for 1958.

The sizable increase in the number of people who have joined voluntary cooperative health plans in recent years indicates that these plans have won popular acceptance as the soundest available way to meet the unpredictable cost of medical and hospital care. However, the fact that more than 121 million people held some sort of health protection leads to a very misleading diagnosis—the harsh counterweight to that large enrollment figure is that less than one-quarter of our total medical bill for 1957 was covered by prepaid hospital, surgical and medical insurance plans. With less than $3.6 billion of the $15 million total accounted for by these plans, that is symptomatic of the inadequacy of the protection held, to say nothing of the financial burden which must have been borne for the 50 million or more Americans who have no health coverage whatsoever.

One of the most discussed and one of the most controversial approaches to caring for the health needs of the aged is incorporated in H.R. 4700, the bill introduced by Representative AIME J. FORAND, Democrat, Rhode Island, which would extend health insurance to everyone eligible to receive social security checks, an estimated 9.3 million people, according to the Department of Health, Education, and Welfare. However, desirable as is the objective of extending health coverage to the aging, the estimate of the Department of Health, Education, and Welfare that the budget would have to provide an additional $1 billion annually under the Forand bill has discouraged so far the possibility of any final action by Congress this year.

I am more convinced than ever that the best middle-of-the-road approach at this point is the creation of a Health Services Study Commission such as I have proposed which would conduct a 2-year study to determine (1) what, if any, legislation on the Federal level is needed, (2) whether existing voluntary private and nonprofit programs are meeting current needs, and (3) whether our overall responsibility in making sure adequate health protection is available to the aged, indigent, and unemployed can be met by private agencies. This kind of national inventory of our health services is imperative. It will provide the truest assessment of not only the Social Security health insurance plan, but of alternatives to it including Federal reinsurance for private health insurance companies, direct Federal assistance to persons unable to finance their own medical costs to obtain coverage through voluntary cooperative health protection plans. One thing is certain, there is growing national sentiment for Congress to enter the practice of preventive medicine in the field of national health insurance before the condition becomes acute and medical costs reach a fever pitch.

Role of Africa in World Affairs

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DADDARIO. Mr. Speaker, I would like to bring to the attention of my colleagues the script of a radio speech which the Honorable WILLIAM T. MURPHY, of Illinois, had occasion to present over radio station WIND in Chicago, Ill., on Sunday evening, September 13, 1959.

Mr. MURPHY, who is a member of the Foreign Affairs Committee has worked hard and diligently on that committee. His knowledge of Africa is far reaching and his comments deserve the attention of every Member of the House of Representatives.

Mr. MURPHY's speech follows:

ROLE OF AFRICA IN WORLD AFFAIRS

At the start of this session of Congress, I was fortunate to be assigned to the Committee on Foreign Affairs. As a member of this committee, I requested and received a place on the Subcommittee on Africa. My interest in Africa as a continent, and in the people of this area, goes back many years.

Africa, with its huge area, has great variety. The continent's 11,693,000 square miles range from the parched flatlands of Timbuktu in French West Africa, to the uplands near the Congo Basin. Its climate is scorching hot near the Equator and temperate at Cape Town, South Africa.

Prior to World War I, most African countries were controlled by European nations—the British, Belgians, French, Portuguese, Germans, Spanish, and Italians. Only two independent nations existed—Ethiopia, a mountainous land in northeast Africa, has been an independent kingdom since ancient times; Liberia, on Africa's West Coast, was settled in 1822 by freed slaves from the United States. It declared its independence in 1847. The Union of South Africa, at the continent's southern tip, was settled by the Dutch in 1652, but was later taken over by the British. In 1910, the Union of South Africa was set up as an independent land within the British Commonwealth of nations.

In the period between the two world wars some important changes were made in the political status of several European-African possessions. The following German possessions were mandated by the League of Nations after World War I—South-West Africa to the Union of South Africa; Tanganyika to the British; the Cameroons divided up between the French and British; and Ruanda-Urundi to the Belgians. In 1922 Egypt gained its independence from the British.

After World War II, and in the past decade, Africa's nationalism and desire for self-government has been especially strong. As a result, six additional lands gained their independence—Libya, Sudan, Morocco, Tunisia, Ghana and Guinea. In 1960 the Cameroons and Togo, now United Nations Trust Territories under French Administration, the Federation of Nigeria, a British dependency, and the former Italian Somaliland, will achieve their independence. The principal remaining British dependency, in West Africa, Sierra Leone, is progressing toward self-government with no date as yet set for independence.

The French territories of West Africa have continued to evolve politically. With the exception of Guinea, they have chosen the status of autonomous republics in a French Community as a result of the constitutional referendum held on September 28, 1958. The French Community Executive Council retains jurisdiction over such matters as defense, foreign affairs, and currency. Members have been given the right to negotiate their withdrawal from the Community at any time.

Last January, Belgium announced its decision to revise its policy toward its dependent territories and to proceed with the liberalization of the political system in the Belgian Congo. Belgium had already created economic and social conditions in the Congo in advance of those of other African territories, while refraining from encouraging the growth of political parties and political life. The new Belgian program will change this significantly as representative legislative bodies are set up in the Congo and Africans are elected to them by universal suffrage.

In West Africa the trend toward regional association has been growing, although it is still too early to say confidently which pattern of association will evolve. So far, the new states have sought to retain most attributes of their sovereignty while recognizing the advantages which can accrue from cooperative planning in such fields as trade, transportation, communication, science, and culture.

The regional association of West African States began with the proclamation of the Ghana-Guinea Union in November 1958. This was reaffirmed in early May, this year, during the State visit of the Prime Minister of Ghana to Guinea. At that time the announcement was made of the founding of a Union of Independent African States which would welcome membership of other States. This Union envisioned a common defense council, flag, a Union bank of issue and currency, a customs union, and Union citizenship, in addition to citizenship in each member State.

Without modifying this Union of Ghana and Guinea, the heads of these States met in Sannequiellie, Liberia, in late July. They proposed a special conferance to be held in 1960 of independent African States as well as those with fixed dates of independence, to explore suggestions for a Community of Independent African States. Suggested for review at this conference would be resolutions specifically calling for retention of the principal attributes of national sovereignty and noninterference in the internal affairs of other members. Other proposed resolutions would enjoin the adherents of this association not to adopt policies contrary to the interests of the freedom and independence of the African people, but would urge efforts to build a free, prosperous continent, accelerating achievement of independence where possible. Finally, establishment of common councils for economic, cultural, and scientific research would be discussed.

Historically, our interest in Africa dates back to the early days of our independence. In 1786 Thomas Barklay of Pennsylvania negotiated a Treaty of Friendship, Commerce, and Navigation with Morocco. In 1822 President James Monroe dispatched the U.S. Navy schooner *Alligator* to escort free American Negro colonists to the shore of West Africa. They founded what was finally proclaimed in 1847 to be free and independent Republic of Liberia. In the east, the American consul in Zanzibar arrived on that exotic island in 1833, actually preceding the first British consul. It was under the auspices of the old New York Herald that the journalist Henry Morton Stanley, proceeding from Zanzibar, undertook his historic journey into Tanganyika and Nyasaland in search of Dr. Livingstone.

Over the years American missionary activity on the African Continent has been extensive. Beginning in the early 19th century, it has grown until today more than 6,500 American missionaries representing scores of home offices, boards and orders in this country, are at work throughout Africa.

U.S. trade with Africa, which began in the days of the New England clipper ship, has grown to total about $1,200 million annually, and our direct investment to total more than $600 million. Sub-Saharan Africa today provides the United States with many of its most important raw materials such as uranium, cobalt, diamonds, columbite, gold, and manganese; minerals of strategic as well as commercial importance.

From the strategic point of view also, the continent of Africa, particularly North Africa lying as it does along NATO's southern flank, is important to the defense of Europe. To deter aggression and strengthen overall free world security, the United States maintains important naval and air bases in Morocco, an air base in Libya, and communication facilities in Ethiopia. Furthermore, the closing of the Suez Canal in 1956 demonstrated the importance of friendly African ports along the Cape of Good Hope route as an alternative for oil shipments from the Persian Gulf to the free world and for uninterrupted contact with the Middle and Far East.

In addition to these historical and strategic interests of the United States in Africa, Americans have a keen and natural popular interest in this continent to which 10 percent of our population can trace its ancestry. In the past year, for example, American educators, businessmen, Government officials, newspapermen, and tourists have played an increasingly sympathetic and constructive role in African development.

The interests of the United States in Africa constitute a very natural and logical basis for our policies and objectives there. The United States seeks to demonstrate to the African peoples a friendly interest in their welfare for their own sakes. We seek to encourage the sound and orderly development of the continent in a manner consistent with free world ideals.

We recognize that membership in the 20th century family of nations carries with it responsibilities; that the interdependence of the world community is an established fact, which must be appreciated in Africa, too; and that all peoples permanently resident in Africa have legitimate interests for which they can rightfully demand fair and just consideration.

The African people look to the United States for assistance in achieving social, economic, and political progress. They look to us for moral leadership and for a sympathetic understanding of their aspirations, and they expect us to apply our historic ideals to our foreign policy. This is a challenge to which the United States must successfully respond.

Our response to this challenge is governed in the last analysis by the reaction of the American people. For, in contrast to a totalitarian power, the policies of the United States are indeed influenced by public opinion.

In living up to our ideals, an institution deserving our continued and wholehearted support is the United Nations Trusteeship Council for its unique role in the sound and orderly political development of many African States. Of the four territories scheduled for independence during 1960, three—Cameroon, Togo, and Somalia—are United Nations' trusteeships.

In addition, the United Nations has provided a sounding board through which the views of the emerging African States can be made known to the rest of the world. Furthermore, participation in deliberations of the United Nations helps new nations play responsible roles in the community of nations. Six African States have joined the United Nations during the past few years—Libya, Morocco, Tunisia, the Sudan, Ghana, and Guinea—thus bringing the total African membership to 10. It is to be expected that the number will continue to grow during 1960 and the next few years.

Second only to the desire for political independence in the minds of the African leaders today is the enormous task of economic and social development confronting them. The need is too great for any one nation to cope with. The major share of the burden is and should continue to be borne by the European powers already closely associated with the various African nations and territories. Europe is now devoting more than $600 million yearly to African development. Other aid, such as that supplied by the United Nations and the specialized agencies, and that provided by the United States, should remain essentially supplementary.

The United States has set up programs by means of the press and radio, cultural presentations, libraries, films, lectures, the teaching of English and the exchange of persons,

we seek to develop appreciation for our history and institutions, and support for our foreign policies. There are 13 national or territorial programs devoted to this work cufrently operating in Africa under the U.S. Information Agency. In addition, Department of Commerce trade fairs and missions have contributed significantly in Morocco, Tunisia, Nigeria, and the Union of South Africa to the understanding of our country.

The response of American business is impressive. Direct private American investment totals more than $600 million and is continuing to grow. A large portion of this investment is in mining, with other undertakings including the operation of an airline in Ethopia, the manufacture of consumer goods, and the assembly of automobiles in South Africa.

In the period between 1946 and 1957 our trade with Africa—excluding Egypt and the Sudan—increased by 60 percent. The major share of our exports went to the Union of South Africa but our imports come from all over the continent. Parenthetically, the fact that the major share of our exports goes to the Union of South Africa, the most highly developed African nation, dramatically demonstrates one of the principal arguments for our continued contribtuion to the economic development of other parts of Africa, for the higher the degree of economic development, the greater our trade becomes.

The Communistic activities in Africa have increased to such a point that they have become a threat and a challenge to the free world. The people of the United States have always responded to a worthy challenge. Responsible African nations are emerging rapidly. We must stand prepared to contribute to their social, economic, and political progress. We must also endeavor to provide spiritual leadership in order that aid may be given them to withstand this communistic threat.

We can succeed only if we apply our historic ideals both in our foreign relations and in our relations with one another here at home.

"Tom" Tellepsen's Success Story

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JOHNSON of Texas. Mr. President, "Tom" Tellepsen's story is a story of success and achievement against great odds. Mr. Tellepsen came to this country from Norway in 1892, and as the president of the Texas Heritage Foundation said in honoring him recently, "Tom Tellepsen is an excellent example of what an immigrant with character and determination can accomplish in America under our form of government."

I ask unanimous consent that an article from the Houston Press of August 27, 1959, entitled "Tellepsen Made Dream Come True" be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston (Tex.) Press, Aug. 27, 1959]

TELLEPSEN MADE DREAM COME TRUE—CHAIRMAN OF BOARD OF BUILDING FIRM RECEIVES MEDAL—CAME TO AMERICA AS A CABIN BOY

When Torjus "Tom" Tellepsen left Norway in 1892 as a cabin boy on a sailing ship bound for America, he had only dreams of the success to come.

But with determination, the young Norwegian who worked as a carpenter here in Houston clung to those dreams and started making them come true.

This week Tom Tellepsen, chairman of the board of Tellepsen Construction Co., was honored by the Texas Heritage Foundation for the qualities which led to his outsanding success.

RECEIVED CITATION

He received the Texas Distinguished Service Medal and Citation, authorized by Congress to be presented to the person who has given outstanding service to Texas and the preservation of her heritage.

Maj. Gen. Paul L. Wakefield, Heritage Foundation president, said:

"Tom Tellepsen is an excellent example of what an immigrant with character and determination can accomplish in America under our form of government. Only in a land like ours could a man use his ability, genius, and knowhow to such great advantage. This Nation and Texas could use more Tom Tellepsens."

Mr. Tellepsen has built such Houston landmarks as the Shamrock Hilton, the Melrose and Medical Towers buildings, several hospitals in the Texas Medical Center, a number of Rice Institute buildings, as well as numerous Houston schools and churches.

HELPED BUILD DAM

The Tellepsen Construction Co. was one of the seven major contractors in the building of the Falcon Dam on the Rio Grande, and also did important work on Ellington Air Force Base and other large defense contracts during World War II.

Chairman of the board of East End State Bank, which he built, the bank frequently is referred to as "Mr. Tom's bank." Mr. Tellepsen also built and is one of the chief supporters of the Episocopal Church of the Redeemer.

Ralph E. Pearson

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GALLAGHER. Mr. Speaker, as a member of the Committee on Foreign Affairs, I am interested not only in the present-day activities and problems, but in the history of the past. Many people, including the veterans of World War I, World War II, and of Korea, have had an opportunity to learn a great deal about other countries, peoples, and customs. Each of us has so little time to acquire knowledge of the world generally, but these people have at least been exposed to some of the world and conditions.

While we hope we will not be involved in another war, there is even in peacetime, and during cold wars, a definite need for even more knowledge in this area, if we are to prepare coming generations to cope with the increasingly complex problems and a world in which the speed of communication and transportation is bringing almost daily changes.

One of the big problems, at present, is the size of the Armed Forces. But whatever the size, our forces must be well trained and have esprit de corps. The Army according to a recent news article about moving a division museum from Fort Riley, believes that a knowledge of the proud history of the unit in which he serves makes a man a better soldier today.

I should like to pay special tribute to Col. Ralph E. Pearson, U.S. Army, for writing the history of the 318th Regimental Combat Team. He has entitled this remarkable history "En Route to Redoubt." He is deserving of the thanks and praise of all who served with this great regiment for his splendid and untiring efforts in compiling and writing this history. His outstanding ability, patience and understanding has reflected great credit to the U.S. Army. Unit histories such as "Enroute to Redoubt" are major contributions to our total history of World War II and a source of much pleasure to those who served in the 318th Regiment, their families and friends.

I believe that by giving a man a record of his wartime activities we make for greater solidarity and build a stronger nation for the future. We also give his children some world history with a personal tie-in. This is important in getting their interest.

One unit history, with which I am familiar, has brought pleasure to many former servicemen and some information about loved ones to many families who could find little comfort in the official records available to them. This report on where the unit was and what it did, also contains considerable information about many countries, peoples and activities in Europe from 1919 to date. I am sure it is typical of many other such histories, although more detailed and longer. This information, such as is contained in "En Route to Redoubt," a five-volume history based on the 318th RCT in World War II not only means a great deal to the parents, widows and children of the men who lost their lives but also is a permanent record and source of information for historians and former members of the unit and their children as well. Many hundreds of letters, to the author, from people, in all walks of life who are mentioned, or whose sons, fathers, or husbands are mentioned attest to the desirability of this kind of history. These histories tell about the men in company, battery battalion and regiment.

Buildings, streets and monuments at Army posts have been named for the heroes of our wars. A monument has been erected at Bastogne, and in many other places, here and abroad, as a tribute to the American soldier, but it

seems to me that more of the larger libraries should have unit histories, as well as the professional histories on how the wars are fought and where. Smaller libraries can profit by having the histories of units in which there was a sizable representation from the village, town or city. These unit histories tell much of the details about individuals, and of day-to-day happenings that usually do not even come to the attention of the commander of larger units. People who were there, or had members of their family there, can know more about what happened by reading such detailed accounts, not normally included in histories covering a theater of action, and political problems.

Usually these histories are the result of years of work by a consecrated individual, or a small group, members of an association. Normally, they do not get very wide circulation. It would seem a small, but probably beneficial assist in our overall problem of educating America and Americans, on global problems, if we could bring these intimate volumes by our amateur and professional historians to the attention of more Americans, especially those who have not had an opportunity to travel or who may, by reason of their generation, be involved in solving some of the increasing problems of the world of the future.

It is a product of our age that we leave no time to reflect our traditions and how this can guide our future. Colonel Pearson illustrates the look of wisdom in this course. For that I salute him.

The New Critique of the Regulatory Agency

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Louis J. Hector, a member of the Civil Aeronautics Board, before the administrative law section of the American Bar Association in Miami, on August 25, 1959. The title of the address is "The New Critique of the Regulatory Agency."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEW CRITIQUE OF THE REGULATORY AGENCY

(By Louis J. Hector, member, Civil Aeronautics Board, section of administrative law, American Bar Association, Miami, Fla., Tuesday, August 25, 1959)

Gentlemen, lawyers these days find themselves engaged in many different occupations. At its meetings here in Miami, for instance, the ABA administrative law section has not been discussing law at all. We have been engaged rather in a management engineering project—trying to figure out how to get certain administrative jobs done with greater dispatch, wisdom, and responsibility.

This is a project which it is particularly important for lawyers to handle. For the problem is much broader than mere efficiency; it is rather the problem of achieving simultaneously maximum speed, maximum effectiveness, and maximum due process. Since this is a very delicate balance, and of vital concern to lawyers, we must tackle the job ourselves and learn what management engineering we need as we go along.

A good way to start a management survey is to take a typical transaction of the organization under study and trace it from beginning to end. This will often at one stroke show up most of the basic problems. Let me take, therefore, a recent case before the Civil Aeronautics Board—the seven States area investigation.

The purpose of the investigation was to formulate a plan for Federally subsidized, local air service for the Dakotas, Nebraska, Iowa, Illinois, Wisconsin, and Minnesota. By the midfifties, railroad passenger service was being pulled out of this area at an alarming rate. Air service was supplied by the trunklines only to the larger cities. The smaller cities and towns faced a serious transportation crisis. On December 14, 1955, therefore, the Board ordered an investigation to develop a program for the area.

The Board started by asking the communities, the air carriers, and other groups for general statements of their desires. A large number of documents came in—161 in all. The processing of these took some time because it was all done by one man, the hearing examiner, but he was eventually able to recommend to the Board what proposals should be considered, and the Board on March 20, 1956, entered an order setting the scope of the proceeding.

The Board, however, didn't give the examiner any policy guidance at this time, or indeed for the next 2 years. They merely stated that the purpose of the investigation was "to review the local air service pattern in the area covered by the States involved and develop a sound patern of service to meet the needs of the entire area."

It was not that members of the Board did not have strong views on local service policies. But there was no custom of discussing general policy by the Board, and no machinery for conveying any such policy to the examiner.

The record in the Seven States case is 6 feet 2 inches high and by now we have covered 5 inches. It is at this point that the record begins to swell rapidly, and the built-in inefficiency of the process begins to take hold.

One man, the hearing examiner, will henceforth do all the work with no personal assistance of any kind. For the next year and 9 months, every fact, every statistic, every argument, every objection will go to him and to him alone. He is surrounded by hundreds of lawyers, economists, statisticians, mayors, presidents of chambers of commerce, and airline executives. But he cannot delegate any part of his job to anyone. He must personally listen to the witnesses for days on end, and then read for further months the mountain of written material they submit.

Even though most of the direct testimony was documentary the hearings in Omaha, and later in Washington, went on for 20 days. By this time there were almost a hundred parties, and 194 witnesses testified. They introduced over a thousand exhibits which added another 3 feet and 2 inches to the record.

Many of the witnesses represented cities and towns which desired air service, but a number of these did not provide very much useful information. This was not really surprising, for neither the Board nor the examiner had specified just what sort of information they wanted. In other words, the Board never went out and actively sought the facts; anyone who was interested just came in and brought whatever data he thought might be useful.

One party was the Bureau of Air Operations, a division of the Board, whose job it was to represent the general pubic interest. They participated actively in the case. It might be thought that the Bureau would consult with the members of the Board whose job it is to formulate aviation policy in the public interest, but under the rules, this was forbidden.

The hearings finally concluded on October 5, 1956, and the examiner then sat down all alone to work up a plan. By this time he had five and a half feet of pleadings, transcripts, exhibits, and briefs. It is small wonder that it took him another year and 2 months to finish the job, for he was still working all alone.

Finally on December 13, 1957, the examiner's plan for air service appeared—two volumes totaling 658 pages.

Of course, nobody was completely satisfied, and almost everyone filed exceptions and briefs saying what they liked and what they did not like about the examiner's report and why.

And now at last the five members of the Board, who for 2 years had sat in complete isolation from the matter, entered the picture. They tried to read the examiner's report, the exceptions, and the briefs, but since this was only one of many cases before the Board, since there were dozen of minor matters coming to their offices every day, since they spend a large part of their time in Board meetings and hearings, it was hard to get around to all this reading.

The grand public climax of the case came with 4 days of oral argument before the Board late in February of 1958. First there were 16 Senators, 22 Representatives, 3 Governors, and 1 mayor who took up a lot of the first day. Then the airlines got their chance. They were desperately pressed for time, because each one of them had only 30 minutes to talk about the case, but they did their best. Then each town and city came on for 10 minutes each—65 in all.

By 4:30 on the afternoon of the fourth day everyone was dazed from 21 hours and 35 minutes of steady talking, and the argument ended.

The Board met first to discuss the case a month later. They quickly decided that the examiner had been too restrictive in his award of routes, and that the proposed route pattern would, therefore, have to be substantially revised. So the Board sat down and did a large part of the examiner's job over again. In 15 sesisons totaling over 30 hours the Board drew up a new plan.

This was a difficult job because the Board members could not make any use of the Board's technical staff. They were assisted only by the general counsel's office. At one point, indeed, the Board considered sending the whole case back to the examiner, but it was quickly realized that this might well delay the decision for another year. So the members did the best they could and redrew the routes themselves.

By May 19, 1958, the Board had redone the plan and announced its general outlines in a press release. Then a special staff known as the "opinion writers" set to work and prepared another long document—157 pages—explaining and justifying the Board's new plan. No member of the Board participated in the drafting of this document although it purported to be a statement by the Board members of their reasons for the decision. This document was finally published on December 8, 1958, with an order that the new service could commence 60 days later—

well over 3 years after the need first became apparent.

Gentlemen, I think most of us agree that this kind of thing can't go on much longer. If a private business tried to conduct its affairs this way it would go broke. If we tried to make our foreign policy or plan our national defense this way, we would still be a third rate power. And if we keep on trying to plan our national transportation system this way, we will wake up in a national emergency one day and find that it won't do the job. Clearly these procedures must be overhauled.

Let us try applying some of the basic principles of management engineering. One of these is that any man engaged in a job must have a clear and definite concept of what he is trying to accomplish. Objectives and policies will change, of course, but at any given moment, they should be clearly defined.

Now it is clear that the examiner in the Seven States case had only the remotest idea of what the Board wanted him to do. True he had some miscellaneous Board precedents to go on, but no real policies to guide him in the formulation of a major new local service plan. So he floundered around for 2 years formulating his own plan only to have the Board disagree with him on basic policy and do the whole job over.

We all do a pretty good job, of course, on our procedural regulations, and on regulations dealing with technicalities such as inspections and accounting reports. But on the matters that really count, such as licensing and all the host of problems involved in rate regulation, the agencies have from the beginning preferred to stay in a sort of pragmatic flux where every case stands on its own feet. And the criticism has continued to grow.

There is another important management engineering principle dealing with policies: Almost any policy or plan, no matter how general, is a part of a larger policy or plan. Thus, in the Seven States case, one must assume that the plan for new subsidized air service was somehow coordinated into an overall transportation policy under which this was deemed preferable to continuing the rail service at a loss. One must assume also that the increased subsidy bill was a part of the overall budget and fiscal plan of the President. These assumptions are quite incorrect. The Board acted completely independently—without coordination with anyone. This is another characteristic of the administrative agencies which is today being closely questioned.

Let's take a somewhat different principle of management engineering and apply it to the Seven States case—the principle that after a man is told what his objectives are, he must be given the necessary tools to achieve them.

One thing that strikes us immediately in the Seven States case is that the examiner was brutally shorthanded. I am convinced that if our examiners are to perform any function other than keeping order at hearings, they must be given a great deal more assistance. Except in the most unusual circumstances, the examiner is the only man who ever really knows the record. While he must be given clear and definite policies and objectives from the commission which he serves, I believe that the commissions in turn must place greater reliance on his factual findings. That being the case, we have no alternative but to give our examiners the greatly increased measure of assistance they need to do a more thorough and efficient job.

Let us apply just one more management principle to the Seven States case, one first enunciated by Vilfredo Pareto, the Italian economist. It is stated with a succinctness which we lawyers can well emulate: "In any series of elements, a selected small fraction, in terms of numbers of elements, always accounts for a large fraction, in terms of effect." In other words: If you can find the main cause of a difficulty you don't have to worry about the other causes; if you can't find the main cause, then you can worry about the other causes forever without accomplishing anything.

I certainly don't purport here to isolate the main cause of our administrative difficulties, but one thing seems clear about the Seven States case: There was not too little judicial process here, there was too much.

The only critically controverted problem in this case was which subsidized, local service carriers were to get which routes—a licensing problem. Possibly even that need not be litigated. We do not let Federal contracts for highways or submarines by holding a trial. But even assuming, as I personally do, that in contested license applications, full due process and judicial procedures are required, certainly a great many irrelevant aspects of these could be eliminated, and then the agencies could concentrate with full judicial process on the basic issues in controversy.

The agencies have worked themselves into an odd position in recent years. Under a steady barrage of criticism, they have tried to judicialize larger and larger areas of their work. The paradoxical result has been not a greater amount of real judicial process but a lesser amount—more judicial trappings perhaps but less of substance.

Here one more principle of management engineering comes into play—the managerial counterpart of Gresham's law: "Bad administrative practices drive out good." As an organization tries to give the appearance of full judicial procedure in every matter, both big and small, inevitable compromises and subterfuges are required to get all the work done. These compromises inevitably spread throughout the organization and in the long run, there is less true judicial process in any matter, big or small.

Now we must face the growing body of opinion that these changes and improvements will never take place within the existing agencies. And this brings me to the "New Critique of the Regulatory Agency." By this I mean the belief in many quarters that the combination of rulemaking, policy formulation, planning, administration, adjudication, investigation, and prosecution in one agency simply does not work.

Last spring I gave a talk on the administrative agencies at one of our foremost liberal arts colleges. I surveyed the problems of the present agencies and how they might be solved. The reaction from the economics and political science faculty was startling. Many were old friends, and they spoke with great candor. In effect what they said was this: "Why don't administrators realize that one man can never do all these different jobs properly at the same time. Most of the inefficiency, the delays, and the ethical problems of the agencies result from the fact that they are each trying to do a number of jobs which should be split up among several agencies."

Gentlemen, this is not idle chaff. These are straws in the wind. These are a small sample of countless expressions of opinion, many of them from men with experience in Government who have thought long and hard about the problems of administration.

Administrators and judges have such completely different codes of ethics that a commissioner who tries to act like a judge is accused of trying to regulate in an ivory tower, while one who tries to act like an administrator is accused of becoming too friendly with the litigants.

So you get a kind of institutional schizophrenia, it is said, where men try to carry out duties and live by standards which are basically incompatible, and end up in a sort of amorphous procedural mish-mash which gets neither the administrative, the policymaking, nor the judicial job done properly.

The most devastating attack of all is: The administrative agencies are not responsible to the will of the people or for that matter to the will of anybody. As one commentator put it recently: "They are not independent, they're just irresponsible"—which I like to think referred not the character of the commissioners but to the fact that in truth we do not report to anybody. The decisions of the agencies are so technical that only a few people understand them. Congress steps in only intermittently and then usually in specific cases. The courts have little control because of our "expertise." The President under present thinking is not supposed to exert any influence at all. How can we expect then, it is asked to have the kind of coordinated national transportation policy or national economic policy that the public interest and the national defense require.

All the critics agree, I think, that adjudication must be performed by men occupying basically the position of judges, and that the Executive and Congress must keep their hands off. But policymaking is a different thing. This should be made by the Executive, it is increasingly felt, within the broad policy determinations of Congress.

The remedy proposed by the new critique is quite simple and familiar: Give to the Executive the functions of rulemaking, policy formulation, planning and routine administration. Give to a special expert tribunal or group of tribunals the task of deciding major litigated cases and of hearing appeals from administrative decisions. If there is a job of prosecution, give it to a separate executive agency.

Let me close with one more general principle which is my favorite of all of those propounded by the management engineers. It is this: Improvement in any situation comes in one of two ways: (1) Numerous small changes in the old plan of operation or (2) a few basic changes and a new plan of operation. Most of our thinking about the regulatory agencies in recent years has centered about numerous small changes in the present plan of operation. Now it is being suggested that the time has come for a few basic changes and a new plan of operation. Whether we agree with such proposals or not, the administrative agencies and the friends of the administrative process, cannot resent them. After all, the administrative agencies as we know them today are the result of a few radical sweeping changes in Government operations not so many years ago. Surely we cannot now in middle age object to others proposing new radical changes in Government. We cannot stand as epigoni of the old order merely repeating the old battle cries and saying that everything is just fine. We must face the many diverse proposals now in front of us, with the open minds, the realism, and the sense of dedicated responsibility which lie at the heart of all sound thinking about administration in the public interest.

Our Foreign Competition

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BECKER. Mr. Speaker, I am taking the liberty of inserting in the RECORD an article written by the famous colum-

nist, George E. Sokolsky, in the Long Island Press of September 12, 1959. The heading of the article is just about as factual as anyone could write on this subject. I commend this article to all Americans who have a real interest in the future of our Nation:

OUR FOREIGN COMPETITION

(By George E. Sokolsky)

It is not often that an industrial company uses its advertising space to sell not its product, but its thinking. Every American producer is being forced to consider the danger of foreign competition in the American market. The automobile industry never favored a high tariff for automobiles because it did not need protection. There was no foreign competition in the American automobile market, but that is not true today.

The Union Oil Co. of California has been using its advertising space to discuss its economic thinking. The product will take care of itself if the country's economic thinking is right. The advertisement that attracted my attention is entitled "Charlie Perkins—How wage hikes and taxes threaten your job." Charlie Perkins is, apparently, a real person.

This is the body of the advertisement and whoever wrote it knows his economics:

"Walk into nearly any store today with the idea of buying something.

"You'll see products from abroad right alongside our American made ones. Nails, woolen, and cotton fabrics, dinnerware, sewing machines, cameras, cars, bicycles, and watches are some of them. And practically in every case, the imports cost less.

"Foreign manufacturers now compete sharply with our own industries. And they do so without two handicaps every American business faces today.

"1. Wage hikes not based on increased productivity. These result in continually rising prices for U.S. consumers and ever-mounting production costs for our manufacturers.

"2. Growing taxes. Each year taxes take more of industry's dollars. This, too, is reflected in higher prices to the consumer.

"It makes you wonder. If we price ourselves out of world markets, what's next? If we don't stay competitive, isn't that the same as pricing you and me and all of us right out of our jobs?"

The issue herewith presented is correct. The contrary argument is: Many manufacturers are mighty eager to sell some of their output in other countries. Are not American-made sewing machines, typewriters, and farm machinery sold abroad?

Both arguments have some merit. However, we face a very frigid fact, namely, that if low-waged, low-taxed, low-priced, subsidized goods come into the United States to compete with high-waged, highly taxed, high-priced goods made with less efficiency than is possible because of labor union rules, we face the danger of a kind of competition which can throw 10 million to 15 million Americans out of work. That raises very serious social problems.

It used to be sound economics to say that if an American-made product could not compete with a similar product made elsewhere, it was the fault of the American manufacturer. He lacked efficiency. He lacked sound financial principles.

However, that is not true today. The United States, by a generosity unknown in the history of man, has rebuilt and rehabilitated industries throughout the world and created new ones with the result that American industry, which pays high taxes to aid its competitors find the subsidized competition tough going.

Second, American labor unions, fighting automation, have instituted various featherbedding arrangements to slow up production. These arrangements increase inefficiencies, raise the cost of production of American goods.

I recently watched an advertisment for electrical equipment used in connection with a television show. We tried quickly to figure what the cost would be if we purchased every household device in that commercial. Our guess ran to about $50,000 which, of course, is not necessary because nobody requires all the devices.

The dilemma that the United States faces is this: In order to maintain our standard of life which is based on the social assumption that this Nation will not have a proletariat, we must have full employment at good wages. The other side of the dilemma is that we cannot compete even in our own market with goods identically made by machinery tended by laborers who receive less pay, work longer hours, and use fewer featherbedding devices.

This problem will not be solved by demagogic speeches in or out of Congress. It requires profound study of the entire economic structure of this country. The proof of the peril is that the old free-trade unions in the textile and garment industries have suddenly become conscious of the danger to their industries by the flood of as good but cheaper goods from Europe and Asia.

The Hometowner in New Hampshire—A State With Two Faces

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. JOHNSON of Texas. Mr. President, last week the Fort Worth Press published an article entitled, "The Hometowner in New Hampshire; A State With Two Faces." I think all Members of Congress will be interested in reading this excellent piece of journalism.

In the interests of promoting even greater bonds of unity than now exist between the great New England region and the magnificent area known as the Southwest, I ask unanimous consent that this article, by Walter Humphrey, editor of the Fort Worth Press, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Fort Worth Press, Sept. 2, 1959]

THE HOME TOWNER IN NEW HAMPSHIRE—A STATE WITH TWO FACES

(By Walter R. Humphrey)

JEFFERSON, N.H.—New Hampshire has two faces. One looks out on the sea; the other looks down from the mountain top.

This is a luxuriously green State, covered with forests of pine and maple and birch.

The birches, with their white, naked bark, often look like ghosts in the forest, intruders that don't belong there.

Here and there are spots of red and orange, where maples are jumping the autumn season, which still is 2 or 3 weeks off.

It makes you wish you could stay for the show, for the autumn display of color in the forests of New England is one of nature's genuine spectaculars.

Here at Jefferson we are in the high country, in the heart of the grandeur that is the White Mountains.

We dropped in on the 99-year-old Waumbek resort hotel late on a warm afternoon. What a spot this is.

Out of sight, far down below in the Israels River, named for two brothers of the famed Rogers Rangers, lost in this area.

South of us, in a sort of filmy majesty, stretch the Presidential Range, topped by the Northeast's highest mountain, Mount Washington.

Already a haze was settling in the distant valleys. Then it slowly spread over all the range. First, the peaks farthest away became robed in white, then the nearer ones. Only our nearest neighbor, Cherry Mountain, remained green until darknes took over.

Half the year these mountains are white with snow. For me, the White Mountains put on their summertime white and the style was becoming.

In the early days of the Waumbek, Boston and Maine trains came right up to where the hotel putting green now is.

But a revolution occurred in the resort business. The automobile and the depression pulled the railroads out, broke many of the fine resorts.

But they have come back because the restless American traveler keeps looking for new places to go. K. P. Kenyon, owner of the Waumbek, has made it blossom again.

So it is through much of New England. And these same people who are stanch New Englanders through the summer you'll find operating hotels in Florida for the winter.

We haven't seen another Texas car in New England, which proves that Texas is far away and that Texans have yet to discover this wonderland.

It's very much worth the long ride.

For New England, this has been a hot summer. But the weather has been capricious; whenever we have stopped for the night, showers have welcomed us.

Perhaps we brought them from Texas.

We broke the warm spell and the drought as well when we first invaded New Hampshire for a look at the short stretch of it that faces the sea.

We touched the Atlantic at Portsmouth, one of the old and glamorous towns of the New England coast.

Fishing ships for many generations have sailed from its harbor, and today the atomic submarines of the U.S. Navy put out from its naval base.

From the long veranda at James Barker Smith's Wentworth-by-the-Sea, I surveyed the bleak Atlantic through a cold drizzle which brought the temperature down to 54.

Out there on the horizon were the fuzzy outlines of the Isles of Shoals, of which there are eight at high tide and nine at low tide.

The two largest of these rocky islands are owned and used by the Unitarians and Congregational churches, one of the oldtimers told me. And there church groups rough it during the summer season. It's rough, too.

Wentworth-by-the-Sea is a busy place, where there's talk of fishing and clambakes and golf and the stock market * * * and can Rockefeller beat NIXON in New Hampshire?

Beginning here and going on upstate into Maine and back down into the White Mountains, we found Yankee hospitality.

New Hampshire is an easygoing State. No rush. You see mills on its clear rivers, logs floating down to be made into pulp and paper.

Its farms are small, just right for corn and apples and produce and poultry and small dairy herds. And its great winter crop is maple syrup.

But until the red and yellow maple leaves turn to brown and are blown to the ground

by the ocean and mountain breezes, tourists are a mighty big crop.

Mostly, they seem to come from New York and Jersey and Philadelphia. But others are dropping in, too.

It's a quiet land, with a Yankee personality that's both modest and proud.

We didn't see a dozen brick houses crossing New Hampshire * * * they like their frame houses and buildings built of their own lumber, and it's thrifty. And they don't mind keeping them painted.

Airport Nuisance

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the September 10 issue of the Newark Evening News. This editorial, I believe, concisely and accurately sums up the present dissatisfaction with the record of Government agencies and commercial airlines in living up to their responsibilities to the people who live in the neighborhoods of Newark, LaGuardia, and Idlewild Airports.

The editorial follows:

AIRPORT NUISANCE

Rising complaints about airplane noise in the New York metropolitan area, stimulated by distressing experience with jet aircraft at Idlewild, have produced a congressional hearing and unsatisfactory testimony by the air industry and Government supervisors.

The Port of New York Authority is trying, with limited legal power, to suppress the nuisance. It reports an airline conformance with suggested noise reduction standards of just under 75 percent of all jet takeoffs during August. It is this 25 percent margin of noncompliance which is mainly causing the protest. And the port authority charges that one airline is making no effort whatever to comply.

Port authority consulting engineers have recommended standards which reduce the screams of the jets and the thunder of piston-engined aircraft to tolerable limits. But to meet these standards some takeoffs must be made with less than capacity fuel loads, requiring a refueling stop which cuts into profits. The airlines ought to know from history that when the profit motive conflicts with public convenience and necessity, the public usually wins out.

Remedies for the nuisance are available to public agencies. Its general counsel advises the port authority it can withdraw permission for jet operations at its airports. This, of course, would be an "extreme sanction" which the authority is reluctant to impose. The new Federal Aviation Agency claims full power to deal with the situation, but its administrator says noise abatement regulations cannot be issued until technical and legal studies have been completed.

In view of the exhaustive research undertaken for the port authority, the public will want to know precisely what other studies are needed and when they will be completed and what will be done about them.

Representative DWYER, of Union, says neither the airlines nor the regulating agencies are making any determined effort to lessen avoidable noise and low flying. With the exceptions noted by the port authority, this appears to be generally true. It is a shabby reward for the taxpayers who have provided millions for airline subsidies and for the construction of tax-free public airports.

Report of the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report to the people of Tennessee on the activities of Congress during the 1st session of the 86th Congress. This has been an extremely active session, and a lengthy one. Many of the bills considered here have been of direct concern to the people of my State, and I want them to know of our efforts.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: Now that Congress is approaching adjournment, I want to write you about some of my impressions of this 1st session. And I also want to take this opportunity to thank you for the comments, observations, and recommendations many of you submitted which have been so helpful to me in these past several months.

THE LEGISLATIVE AND THE EXECUTIVE

Before elaborating on specific measures, it should be pointed out that it is the responsibility of the Congress to consider the merits of each proposed piece of legislation and then vote according to the individual conscience of its Members. By the same token, it is the responsibility of the President to consider the merits of each piece of legislation reaching his desk, and sign or veto each measure according to his own conscience.

This session has been marked by many Presidential vetoes.

The President vetoed a measure which would have given the Rural Electric Administration a more independent voice in the making of loans to REA cooperatives. He vetoed a wheat program bill which would have offered price supports of 90 percent of parity in exchange for 25-percent cuts in plantings. The President vetoed a tobacco program bill which would have stabilized and frozen price supports.

The first two housing bills were vetoed, as were two civil works appropriations measures before Congress overrode his veto.

THE TVA SELF-FINANCING BILL

After a long and arduous fight, a TVA self-financing bill was approved by the Congress and signed by the President after minor changes were made at his request.

This was a piece of must legislation. TVA now may borrow money at interest from private sources as a means of increasing its production and distribution capacities.

A total of $750 million may be borrowed by TVA. This money will be repaid by the Authority from revenues received from the sale of electric power in much the same manner as a merchant borrows money from his local bank to modernize his store or enlarge his stock of merchandise.

It also means that TVA is in a position to adopt a long-range program of expansion, without having to press for annual appropriations from the Congress.

The TVA self-financing bill was important to everyone who lives and works in the Valley.

ECONOMY IN GOVERNMENT

The Congress took a sharp knife and cut $1.4 billion from the President's budget.

LABOR LEGISLATION

In the field of labor-management, the first major piece of legislation since the original Taft-Hartley Act was approved by this session of Congress.

Passage of the measure ended a long drawn out and often bitter controversy in Washington and throughout the United States.

During the peak of the debate, all Members of Congress received hundreds, if not thousands, of letters and telegrams. Some persons wanted a "killer" labor bill, one which would do harm to the average working man by destroying his collective bargaining rights. Others wanted no bill at all. But all in all, the average citizen wanted a measure which would rid labor unions of racketeers and protect the rank and file workers without injuring the legitimate union movement.

The approved labor-management law provides that unions must file regular financial reports, bar former convicts from office, and disclose administrative procedures. It also guarantees freedom of speech, periodic secret elections, and similar rights to members of unions.

The measure gives States the authority to handle certain no man's land cases not now handled by the National Labor Relations Board.

The bill outlaws the hot cargo clause with certain exceptions for the garment and construction industries. It also closes other secondary boycott loopholes.

Another provision outlaws organizational and recognition picketing if the employer has validly recognized another union, or if the employer has held an NLRB election within the preceding 12 months. But such picketing might be considered legal if the employer had engaged in unfair labor practices during the election or in the process of recognizing the other union.

There are 18 million union workers and nearly 60 million nonunion workers in the United States. Good wages built the Nation and made it great. Workers, whether organized or not, are entitled to a decent share of their productivity. They are entitled to fair and honest treatment.

All of us will watch with interest, now that the bill has become law, to determine whether the measure lives up to the intent of Congress. If changes are necessary, the next Congress will have every opportunity to make them.

NATIONAL DEFENSE

We live in an age of pushbutton warfare and we are one of the great powers on earth. Another great power, Soviet Russia, through her leaders, has said on numerous occasions that it has the thermonuclear power to destroy the United States within half a day.

Members of Congress, even before this session, have made every effort to determine whether this Nation is adequately prepared to deter Soviet aggression.

The Gaither report, which was kept secret longer than it should have been, said in part:

"The United States is moving in a frightening course to the status of a second-class power."

The Rockefeller report said:

"Unless present trends are reversed, the world balance of power will shift in favor of the Soviet bloc. If that should happen

we are not likely to be given another chance to remedy our failings."

Adm. Hyman G. Rickover stated: I think it is almost too late. This is what I worry about. * * * Some of my money for fiscal 1958 which was appropriated by Congress several months ago has not yet been made available to me."

Secretary of Defense McElroy said: "By 1962 the Russians may lead the United States in guided missiles by as much as 3 to 1."

General Thomas Power, Air Force Strategic Commander, stated: "I think you are just risking the whole country. That is how important I feel it is. The force which is now programed is not adequate because it is not coming fast enough."

Faced with these grim facts, the Congress approved a measure to create a new National Aeronautics and Space Administration with nearly $500 million to spend; extended the draft to 4 years; extended the Renegotiation Act under which the Government recovers excessive profits on defense contracts, and in general did its best to overcome the administration's avowed intention of lagging behind the Soviet Union in long-range missiles and other thermonuclear instruments of war.

National defense is a continuing struggle between those who would economize to a point of national risk and those who recognize the need for a first-class defense even if it means tightening belts.

In January, Members of Congress once more will examine the Nation's defense structure with an eye toward further improvements.

NEW FEDERAL JUDGES

A bill creating two additional Federal judgeships for Tennessee was reported out of the Senate Judiciary Committee. I am hopeful of immediate action once Congress meets again in January.

THE NATIONAL DEBT

Congress, at the request of President Eisenhower, raised the legal limit of the national debt to $295 billion. The national debt in 1952, when President Eisenhower assumed office, was $265 billion, or roughly $30 billion less than the present amount.

ALOHA

A 50th State was born this session of Congress with the admission of Hawaii. The borders of the United States now extend northward to within a few miles of Soviet Siberia and into the strategic Pacific.

HOUSING

Two housing bills were vetoed by the President, and a third measure was on his desk as Congress prepared to adjourn.

The need for a sound housing bill was obvious from the start. Millions of Americans live in areas which either have become, or soon will become, slums.

It is necessary for the Government to insure private mortgages if the great postwar building program continues for the benefit of citizens in Tennessee and throughout the Nation.

In addition, hundreds of colleges are hard pressed for classrooms and dormitory accommodations for their mushrooming enrollments.

A key section of the third bill extended the authority of the FHA. The Federal Housing Authority, assuming that such a provision would be approved, already had issued almost $5 billion of "letters of intent" to keep construction moving at a fair and honest pace.

The bill also established minimums of 3 percent on the first $13,600 of a house's evaluation; 10 percent on the value between $13,500 and $18,000; and 30 percent on all over $18,000.

Maximum interest on rental housing and management type mortgages insured by the FHA would be raised to 5¼ percent from 4½ percent with the interest ceiling on sales-type cooperatives raised from 5 to 5¾ percent. The maximum insurable mortgage would be raised from $20,000 to $22,500 for one-family units.

The bill also contained authorization for 37,000 new units for low-rent public housing to be built by local agencies as a stopgap step toward helping cities rehabilitate blighted areas.

Unfortunately the provision authorizing direct loans to colleges for classroom construcction and equipment was not included in the third bill. This provision was contained in the first two bills and it was criticized by the President as objectionable.

CIVIL WORKS

The President vetoed two civil works appropriation bills, but the Congress overrode his second veto.

Civil works measures long have been termed "pork barrel" by cynics of Government. Actually, civil works provides money for flood control and reclamation projects.

There is nothing "pork barrel" about a flood. More than 1,000 urban communities in the United States have been classified as flood-endangered areas. The flood threat is increasing with the expansion of suburbia.

During the tragic floods of 1955, damage in the United States was estimated at $1 billion, or approximately the total amount of the civil works measure which was approved over the President's veto.

We certainly must protect our industrial, commercial, and residential areas from floods.

Included in the measures was one designed to bring relief from the continual flooding of farm lands and highways in the Forked Deer and Obion River areas of the west Tennessee drainage area.

Another approved measure calls for a new channel for the Wolf River to help alleviate the flooded Shelby County bottomlands and to remove the somewhat famous unpleasant smells from the north and downtown Memphis.

The approved appropriations bill included 67 new projects, but the total appropriation was less than the amount requested by the President.

INTERNATIONAL AFFAIRS

In this continuing struggle between the free world and the Communist bloc it is necessary for the United States to bolster the economic and military strength of our Allies.

This Congress established a new Inter-American Development Bank to finance projects in Latin America. Congress also boosted U.S. subscription to the World Bank.

A Foreign aid measure was approved which included $2.1 billion in military assistance and another approximately $1 billion in economic assistance.

NATO

An important meeting was held in London in June. It was called the Atlantic Congress and it was sponsored by the North Atlantic Treaty Organization. NATO is composed of 15 free world nations who have pooled their military strength to deter possible Soviet aggression. The organization has been most successful in its continuing efforts to keep the Communists behind their Iron Curtain.

The Atlantic Congress was approved by NATO parliamentarians on a resolution which I submitted as chairman of the Political Committee. Some 650 citizens from the NATO countries attended the Congress. Means of strengthening economic, political and cultural ties were discussed and in many ways this was the most important international meeting of the year.

Following the Atlantic Congress, the Senate approved a resolution authorizing the NATO nations to meet again for the same purposes, but this time on a more official basis. The Senate Foreign Relations Committee will hold hearings on the resolution when it convenes in January. The State Department has given a "green light" to the proposed plan.

TAXES

Congress extended for 1 year the Korean war corporation taxes and certain excise taxes. The transportation and local telephone taxes were reduced.

New levies were imposed on life insurance companies which will return the Government another estimated $215 million annually.

HIGHWAY PROGRAM

It looked for awhile as if the Federal highway program would be faced with a financial roadblock. As a final resort, Congress increased the Federal gas tax from 3 to 4 cents. This tax becomes effective on October 1, 1959, and continues for 21 months.

Passage of the highway financing act assured by an amendment introduced by Senator GORE and me, construction of a highway bridge over Pickwick Dam near Savannah. This will add another vital link in our highway system.

RAILROAD WORKERS

The Congress approved a measure increasing pension and jobless benefits under the Railroad Retirement and Unemployment Acts.

VETERANS

Provided $100 million for direct housing loans to veterans. Readjusted non-service-connected disability pensions and provided new pensions for widows.

AGRICULTURE

Extended the surplus farm products law. Introduced a Federal food stamp plan for needy families in a few trial areas of the country.

Put a ceiling of $50,000 on price support benefits.

POSTAL AND BOND INTEREST RATES

Congress declined to increase postage rates or interest rates on long-term Government bonds but did increase rates on E and H series savings bonds to a maximum interest of 4¼ percent.

AIRPORT PROGRAM

A $63 million matching Federal aid to States was approved this session for airport improvements for the fiscal years of 1960 and 1961.

WILD HORSE BILL

A bill prohibiting mechanized roundups of an estimated 20,000 wild horses in Western States was approved, much to the gratification of humanitarians everywhere.

HIGH PRICES

As chairman of the Senate Antitrust and Monopoly Subcommittee, we turned the spotlight once again on the high cost of living. Hearings of the subcommittee have brought out the fact that once an industry obtains near-monopolistic control of a product, prices are increased far and beyond the worth of the product.

Nobody is against profitmaking, but price gouging is something else.

Upon subcommittee recommendation, this Congress passed a bill to tighten the Clayton Act so as to give speedier relief to small businessmen damaged by monopolistic practices, such as price discrimination.

The Senate passed a bill to make more effective antitrust enforcement by the Department of Justice by empowering the Attorney General to compel the production of documents in civil antitrust suits.

The subcommittee also held hearings and reported for consideration by the Judiciary Committee two important proposed bills: S.

11 (equality of opportunity bill), and S. 442 (premerger notification bill).

Hearings also were held in the administered price field in the bread industry, as well as administered price inflation and the public interest.

CIVIL RIGHTS

The right of every qualified American citizen to vote is basic and sacred. Any intelligent investigation of voting privileges is worthwhile. I hope that the Civil Rights Commission will get back on the track of investigating the matter of voting, and, at the same time, it will get out of some of the other fields into which, unfortunately, it has wandered.

As Commissioner Battle, a distinguished former Governor of Virginia, has said, we need to have considerably more discussion of the problems of human relations before legislative action is taken.

While I am highly displeased with much of the Commission's report, especially its inaccuracies, I believe that continuation of the study with a revamped Commission may be the best defense against more drastic or even punitive legislation. While the study is going on, a telling argument can be made against the enactment of any punitive legislation. Therefore, I believe extension of the Commission's life is the best way to prevent legislation which could be harshly unfair to the South.

For these reasons, I voted for extension of the Commission. I was joined in this vote by 71 other Senators, including my colleague from Tennessee, Senator GORE, and the Democratic majority leader, Senator LYNDON JOHNSON.

CONCLUSION

Now that the Congress is about to adjourn, it is my intention to visit every county in Tennessee as a means of reporting to the people, and at the same time obtaining advice and recommendations for use when the Senate convenes next January.

In addition, the Senate Antitrust and Monopoly Subcommittee will hold hearings during the next few weeks on such important questions as matched Government bids, the promotion of professional boxing, and administered prices in the drug industry.

I want to express my appreciation for all the letters and suggestions I have received during this session. Be assured that I welcome your continuing interest and recommendations for new legislation.

Sincerely,

ESTES KEFAUVER,
U.S. Senator.

Invitation to Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news editorial from the Concord Free Press of Concord, Mass., for Wednesday, September 9, 1959. This news editorial is entitled "Invitation to Mr. Khrushchev." This news editorial is written by Mrs. Edward J. Bander, of West Concord, Mass., a constituent and friend of mine. It illustrates many basic qualities in our free way of life. Certainly Mr. Khrushchev and the Russian people would profit by a visit to West Concord, Mass., as well as Concord, Mass., and to experience the happiness and contentment and peaceful living of free human beings living in a Nation under God:

INVITATION TO MR. KHRUSHCHEV

WEST CONCORD, MASS.,
September 1, 1959.

DEAR MR. KHRUSHCHEV: I see in the big newspapers lately how a lot of people in this country are being asked where they would take you and what they would show you if they had the chance during your impending visit to the United States of America. Well, Mr. K., I've been asking myself that question and I thought you might like to know what I decided.

I guess I should made it clear first, though, that I'm no high Government official or big political theorist or atomic scientist, or anything like that. In fact, I'm not even what you might call a "leading citizen" here in my home town. To be perfectly honest with you, Mr. K., I'm just one of the millions of little people you can see anywhere you go in America. Don't get the wrong idea, though—I'm very proud to be one of them and I share with all of them a conviction which you may have a little trouble understanding when you get over here: a conviction that my opinion is just as good as the next fellow's, no matter who he is. So that's why I don't feel the least bit hesitant about writing you this letter.

Now, if I could take you anywhere I wanted to in America, I'm sure I couldn't do much better than to start out by showing you all the famous landmarks in Concord, Mass., the town that has often been called the "Birthplace of American Freedom"—and believe me, you'd get a very generous sampling of the historical and cultural starch that has gone right into the backbone of this country from its earliest days right up to and including the present.

However, knowing what a busy schedule you'll have—if I could take you to only one spot, I'd have to give up all that and bring you, instead, to West Concord, Mass. Because there's a little flower garden that grows right behind the shanty at the railroad crossing here in West Concord, and that's the one thing I'd like most of all for you to see.

I suppose you're entitled to know why I'd bring you all the way over here to show you a flower garden, so let me try to explain.

You see, Mr. K., this little garden—which doesn't cover an area much more than 8 feet by 10 feet—involves a lot of those little people I mentioned earlier. Of course, it involves a few who are kind of big in their own way, too, but I wouldn't be surprised if they'd just as soon be counted among the little people I'm talking about.

Now about this garden. You understand, of course, that the land itself is owned partly by the town of Concord and partly by the Boston & Maine Railroad (which is a pretty fair-sized outfit in these parts), but the flower garden was started by a man from Concord named George Mulcahy. Mr. Mulcahy was one of the gate tenders for the railroad here in West Concord, and he really loved flowers. I guess maybe he thought pretty well of this country, too, because he set up a flagpole right at the edge of his garden.

Well, Mr. Mulcahy died a few years ago and anyone might have expected his little garden to be long gone by now. There are two main reasons why it isn't and they are, one Mr. George Turnbull, of Littleton (formerly of South Acton), and one Mr. Tony Garceau, of West Acton, and I'd like very much for you to meet both these gentlemen, Mr. K. You see, they were two of Mr. Mulcahy's fellow crossing tenders and after he passed on, they sort of agreed to try to keep his garden going between them. And it has worked out very well. Mr. Turnbull works the 7-to-3 shift and Mr. Garceau takes over on the 3-to-11, and between them they've really kept the garden flourishing. It's quite a bit of work for them, of course, but they don't mind. In fact, they've added a lot of new powers as they went along, some grown from seed (which Mr. Turnbull bought himself—we have no commissar for this sort of thing, you understand), some transplanted from Mr. Garceau's private garden—and others that have been donated by friends. For instance, Mrs. Aida Macone (who lives right across the street) donated the pansies which Mr. Turnbull set out together with a small square of marigolds right in the middle of the garden (in front of the signal box), and they look upon this particular spot as a kind of little personal memorial to their old mutual friend, the late Mr. Mulcahy.

Then there's the row of glads that runs the length of the fencing at one end of the garden—they were donated by Mr. Charles Lombardo, the local barber whose shop is across the street. Speaking of the fencing—it was freshly painted this year, compliments of Mr. John Damon (he's one of our town selectmen and also one of the present owners of the long-established and very successful Damon family business, the Concord Woodworking Co.—I suppose you'd call him a capitalist). Then there's the flagpole—completely repainted this summer with paint donated by Mr. Al Soffritti, of Concord.

Now you might figure that a long dry spell would raise havoc with the garden, Mr. K, inasmuch as there's no water in the shanty and there's no bureaucracy around to handle the problem—but if you did, you'd figure wrong. The boys can always get water, even thought it has to be carried by the bucketful—there's Lena's Launderette right across the way and then, heading down Church Street and Commonwealth Avenue from Lena's, there's Maguire's Town Taxi and Condons' Package Store, and the owners of all these establishments have a standing agreement with the boys to provide water anytime it's needed.

I'd certainly like for you to meet and talk with every one of the people I've mentioned, Mr. K. And then, if you have a few more minutes, I'd like for you to sit back and relax on one of the benches or old chairs just beyond the garden, underneath the big maple tree which shades the whole area. Maybe Miss Olive Hosmer will come by on her way to the library and stop to chat with you. Miss Hosmer is a member of one of Concord's oldest and proudest families but she never passes by without stopping to admire the garden—and she knows every flower in it.

Then, too, this is a spot where all the boys; young and old, get together to swap stories and opinions, and maybe you could listen in. Of course they don't always see eye to eye, and you might even get to hear them criticizing the Government—ours or yours or anyone else's, for that matter. But don't be alarmed if a policeman should come along and stop to listen—the area's just part of his beat and he's not going to haul anyone off to jail, because (strange as the practice may seem to you, Mr. K.), criticizing governments is quite a pastime in this country, as well as a privilege guaranteed every one of us from the moment we're born, along with the right to express honest differences of opinion on any matter.

So now maybe I can explain why I did so much talking earlier about the little people in this country, Mr. K. It was because I was going to tell you a lot of things about a pretty representative group of little people here in West Concord, representative of all the little people in America that you seem

to spend a lot of time talking about over there in Russia. You always sound as if you really feel quite sorry for us, because you figure that the big people over here don't give a hoot about the little people and that big and little alike, we're only interested in making money, so that we poor little people really don't have much of anything worth living for. And you seem to be saying lately that you think we little people are going to wake up one of these days and realize how superior your way of life is to ours, and then we'll switch over to yours voluntarily. I'd just like to say to you, Mr. K., don't hold your breath waiting for that to happen.

And if you are sincerely interested in the welfare of the little people of the world (and I think maybe in your own way you are), and you just can't make it out to West Concord this time 'round, could you still give some thought to the little people I've been telling you about? Because if you think about them enough you may realize one very important fact that it seems to me you're overlooking at the moment, and that is that even if we little people over here are as miserable and materialistic, with as little worth living for as you seem to think—we just don't realize it, Mr. K., and it's going to be a long time before we do.

So someday when you're sitting over there in the Kremlin feeling sorry for us, would you do me one small favor? Ask yourself, Mr. K., if the story of the little flower garden here in West Concord, exactly as I've told it to you (and every word of it was true)—ask yourself if it could all happen in your country today? Or could it happen—as our great American journalist-philosopher Harry Golden would say—"Only in America."

Sincerely,

F. W. B.

UNICEF: An Outstanding Example of International Cooperation

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mrs. BOLTON. Mr. Speaker, the United Nations International Children's Emergency Fund is one of the best demonstrations we have of international cooperation on basic common responsibilities. What is more basic than children everywhere in the world? What is more important than that the countries and the people of the world work together in their behalf?

Focusing on the needs of sick, starving, and crippled children, UNICEF serves as the world meeting place where all governments, regardless of political ideologies, can unite in common cause against mankind's greatest scourges—disease, starvation, and ignorance. The vicious circle formed by these mass enemies of the human race is the natural breeding ground of war, and none of its victims can suffer more hopelessly than helpless, innocent children, who are, after all, the only hope for the future of the world.

As a longtime member of the Committee on Foreign Affairs, I have tried to keep abreast of such organizations as World Health and UNICEF and have had opportunity to see at firsthand some of the work they do in the outposts of the world. I do believe that not until you have seen starving mothers and children drink the milk furnished them, not until you have seen literally thousands of penicillin injections given that will definitely cure yaws, or the sulphones that are slowly making inroads on leprosy, and other such, can you evaluate the work done. To see, further, as I have seen, the far-reaching results of malnutrition, of lack of sanitation, all of it unnecessary, gives one a deep sense of responsibility and obligation to the less fortunate, as well as a sense of gratitude that there do exist such organizations as WHO and UNICEF.

Whatever work is good, of necessity reflects the quality and capacity of the man at the top. UNICEF's stature today certainly tells the story of what Maurice Pate, its executive director, has brought to it. Associated with former President Herbert Hoover in the relief work in Europe following the First World War, he has applied his training and his knowledge with ability and wisdom.

Few people have any concept of the many problems there are in the day-to-day direction of an organization obliged to cope with differences of nationality, religion, customs and attitudes on the part of the staff itself. These same problems exist in the various governments so eager to gain the benefits of UNICEF aid for their own people. These difficulties are very clearly and sympathetically given in "Half the World's Children" written by Spurgeon M. Keeny, of Pennsylvania, the director of UNICEF's Asia regional office. I commend it to you.

The following information, prepared by the U.S. Committee for UNICEF, which has offices in the U.N. Building in New York City, has been prepared to furnish answers to some of the questions most often asked about the work of UNICEF by organizations, publications, and individuals:

INFORMATION ON UNICEF

1. For "all the world's children": The United Nations Children's Fund (UNICEF) is the world's largest international agency devoted exclusively to the welfare of children. Its aid is completely outside the realm of politics; it is given without regard to race, nationality, creed or political belief.

2. Promotes self-help: UNICEF helps the governments of underdeveloped countries that request assistance (child population: about 750 million) to initiate or strengthen comprehensive measures to better the welfare of their children. The Children's Fund, in cooperation with U.N. agencies such as the World Health Organization (WHO), Food and Agriculture Organization (FAO) and Technical Assistance (TA) provides equipment and technical skill—however, the full responsibility for running the health and welfare programs is assumed by the governments themselves. Eventually, the governments take over the entire responsibility for the programs started with UNICEF's aid; these often provide a model for permanent health services, and in this way the benefits of UNICEF's assistance are permanent.

3. How it works: The governments that request assistance provide an average of $2.50 in internal matching expenditures for every dollar spent by UNICEF for supplies not available within the assisted countries and to help the training of national personnel in the fields of health, nutrition and child welfare. Specifically, UNICEF provides basic medical equipment for maternal and child health centers; insecticides, drugs, and transport to initiate and run campaigns against endemic diseases usually affecting children, such as trachoma, malaria, yaws, leprosy, and tuberculosis; UNICEF also provides powdered milk and vitamins for child feeding; equipment for dairies and milk-drying plants and for the processing of high-protein foods; and UNICEF sponsors nutrition education programs carried out through schools and maternal and child health centers.

4. UNICEF Board: UNICEF operates under the direction of a 30-nation executive board which meets once a year (see list of members for 1959 hereafter). Its decisions are implemented by an Executive Director, New York Headquarters staff and a small staff of representatives in country, area and regional offices in many parts of the world.

5. Financial aspects: UNICEF is entirely supported by voluntary contributions. About 90 percent comes from governments and the rest from organizations and individuals. In 1958, 87 governments contributed 20 million dollars. UNICEF funds are allocated to programs according to need and only 6.8 percent go toward administrative costs.

6. U.S. contribution: The U.S. Government is in large part responsible for initiating the idea of a United Nations agency for assistance to the world's children. It has been the largest contributor since UNICEF was organized. The U.S. Government contribution in 1958 was $11 million. In recent years the U.S. contribution to UNICEF has represented a decreasing percentage of the budget of the Children's Fund since contributions from other governments have been on the increase. The U.S. percentage in 1957 was 55 percent, in 1959 it will be 50 percent.

7. Financial aid: Assisted governments do not receive money. UNICEF provides supplies and equipment to strengthen child health, welfare and nutrition programs on a basis which is worked out between the Children's Fund and the aided government concerned; technical advice comes from WHO, FAO or other UN agencies. Each project has to be approved by UNICEF's 30-nation Executive Board. UNICEF field workers see to careful dispensing of all supplies; training aides and stipends are closely supervised. Records are kept and audited by UNICEF and by the Board of External Auditors of the United Nations.

8. Citizen support: Citizens in both donor and recipient countries voluntarily support UNICEF work. UNICEF welcomes the interest and support of all responsible nongovernmental organizations and individuals. Its Executive Board has granted consultative status to 59 international nongovernmental organizations including all the major religious, civic, professional and service groups. In a number of countries, as in the United States, national UNICEF committees have been formed with the approval and cooperation of the governments concerned. UNICEF gratefully acknowledges the help it receives from these citizen organizations, and believes their record of supporting their governments' policies relative to the children's fund provides their best endorsement.

9. The U.S. Committee for UNICEF, a nonprofit organization incorporated under the laws of New York State, was established to stimulate interest in "all the world's children" and promote a channel for U.S. citizen participation in the work of the United Nations Children's Fund. The U.S. Commit-

tee is authorized by its certificate of incorporation to receive tax deductible contributions for the Children's Fund. Financial records are carefully kept and are audited by an outside accounting firm. The audited accounts are registered annually with Dun & Bradstreet, National Information Bureau, National Better Business Bureau and are available to other recognized accrediting agencies.

10. Committee projects: The U.S. Committee's primary purpose is to help more people become aware of UNICEF—why it is needed, whom it helps, and the result of its aid. This aim is promoted by three major annual projects:

(a) Trick or treat for UNICEF: This is a Halloween program which enables young Americans to contribute to the welfare of their less fortunate contemporaries around the world. The program has grown from a small, spontaneous beginning in 1950 to one in which millions of boys and girls take part each year. In donating their "treats" of coins to UNICEF, children not only enjoy all the traditional fun of Halloween, but derive pride and pleasure from the knowledge that they are helping UNICEF's vital work. At the same time, communities find the project an opportunity for wholehearted cooperation to convert a former "problem day" into one with a constructive purpose.

(b) UNICEF greeting cards: First brought out 10 years ago, they benefit the work of the Children's Fund. Each year since 1949, world famous artists have contributed paintings as designs, making possible a unique greeting card which does more than convey wishes for happiness—it actually brings happiness, in the form of milk and medicines, to many of the world's needy children.

(c) "Hi Neighbor": A book which annually describes five UNICEF-aided countries in terms of children's interests, supplemented by a record of songs and dances from the same lands.

13. UNICEF executive board members for 1959: Australia, Austria, Belgium, Brazil, Chile, China, Colombia, Czechoslovakia, Dominican Republic, Equador, El Salvador, France, Germany (Federal Republic of), India, Indonesia, Iran, Israel, Italy, New Zealand, Pakistan, Philippines, Poland, Sweden, Switzerland, Union of Soviet Socialist Republics, United Arab Republic, United Kingdom, United States, Yugoslavia, Tunisia.

14. Countries and territories receiving UNICEF aid:

Africa: Algeria (French departments of); Cameroons under French administration; Central African Federation, Northern Rhodesia, Nyasaland, Southern Rhodesia; French Community, Central African Republic, Republic of Chad, Republic of Congo, Republic of Dahomey, Republic of Gaboon, Republic of Ivory Coast, Mauritanian Islamic Republic, Republic of Niger, State of Senegal, Republic of Sudanese, Republic of Voltaic, Gambia; Ghana;[1] Republic of Guinea; Kenya; Liberia;[1] Malagasy Republic; Mauritius; Morocco;[1] Federation of Nigeria; St. Helena; Sierra Leone;[1] Tanganyika under British administration; Togoland under French administration; Tunisia;[1] Uganda; Zanzibar.

Asia: Afghanistan,[1] Burma,[1] Cambodia,[1] Ceylon,[1] China (Taiwan),[1] Gilbert and Ellice Islands, Hong Kong,[1] India,[1] Indonesia,[1] Japan,[1] Federation of Malaya,[1] Netherlands New Guinea, New Hebrides, North Borneo,[1] Pakistan,[1] Philippines,[1] Sarawak,[1] Singapore,[1] Solomon Islands, Thailand,[1] Vietnam.[1]

Eastern Mediterranean: Aden,[1] British Somaliland,[1] Esthiopia,[1] Iran,[1] Iraq,[1] Israel,[1] Jordan,[1] Lebanon,[1] Libya,[1] Somaliland under Italian administration, Sudan,[1] Turkey,[1] United Arab Republic,[1] Egypt,[1] Syria.[1]

Europe Austria,[1] Greece,[1] Italy,[1] Poland,[1] Spain,[1] Yugoslavia.[1]

The Americas: Argentina,[1] Bolivia,[1] Brazil,[1] British Guiana,[1] British Honduras,[1] British Virgin Islands, Chile,[1] Colombia,[1] Costa Rica,[1] Dominican Republic,[1] Ecuador,[1] El Salvador,[1] French Guiana (Department of France), Guatemala,[1] Haiti,[1] Honduras,[1] Mexico,[1] Nicaragua,[1] Panama,[1] Paraguay,[1] Peru,[1] Surinam, Uruguay, West Indies Federation: Antigua,[1] Barbados, Dominica, Grenada,[1] Jamaica,[1] Montserrat, St. Kitts-Nevis-Anguilla, St. Lucia, St. Vincent, Trinidad and Tobaga,[1] Turks and Caicos.

[1] Denotes those which also contribute to UNICEF's central fund.

How Hungry is "Toothy" Labor Law?

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. COHELAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article that appeared in the September 13, 1959, edition of the Washington Post by the distinguished staff writer and labor economist, Mr. Bernard D. Nossiter. In light of the recently passed labor reform bill, the remarks of Mr. Nossiter are timely and pertinent to the question of the immediate future for industrial relations in the United States:

HOW HUNGRY IS "TOOTHY" LABOR LAW?

(By Bernard D. Nossiter)

Postnatal examinations of the labor bill, as thick last week as the cigar smoke at a gathering of union business agents, agree on only one central conclusion:

Congress has spawned a two-headed baby with its "Labor-Management Reporting and Disclosure Act of 1959."

One head sinks some infant teeth into the corruption dramatized by Senator JOHN L. MCCLELLAN'S Rackets Committee. The other nips at union organizing and strike weapons.

Ironically, the bill's sections dealing directly with corruption were written with comparatively little argument. The Teamsters Union complained loud, long, and vainly against powers given the Secretary of Labor to investigate reports. The AFL–CIO and a large minority of the Senate took a gloomy view at first of the "bill of rights" for union members grafted onto the measure by MCCLELLAN.

But the real struggles came over the bill's title VII—amendments to the Taft-Hartley Act which touch on union power. The differences between "strong," "moderate" and "soft" bills turned essentially on how they treated union boycotts and picket lines.

A SIZE-UP

The experts are neither sure in their own minds nor do they agree with one another about the economic consequences of the measure Congress finally passed. Obviously, much depends on interpretations by the National Labor Relations Board, its independent General Counsel, and the courts. Sections of Taft-Hartley, particularly in the picketing and boycott area, are still unsettled 12 years after the bill was passed.

But, in a very tentative sort of way, the new law is expected to yield these results:

Organizing of the unorganized, which has not kept pace with the growth of the labor force since Taft-Hartley, will be slowed even further. This means that the largely nonunion South and the great mass of unorganized whitecollar workers will stay outside union ranks until organized labor comes up with new techniques and fresh appeals.

Craft unions like the plumbers and sheetmetal workers will be much harder hit than the mass-production industrial unions like Walter Reuther's Autoworkers. But industrial unions in migrating industries, like the textile workers and chemical workers, will also find it more difficult to organize or back up demands.

New crimps have been put in the economic and organizing power of the Teamsters, despite President James R. Hoffa's cries to the contrary.

WEAPONS SYSTEM

For the most part, industrial unions in steel, coal, and autos have organized the production worker in their jurisdiction. They back up wage demands by withdrawing these workers and shutting down production. They rarely rely on boycotts or on picket lines to sign up nonunion plants.

But both these latter weapons are important to the crafts, the Teamsters, and whitecollar unions .

The Taft-Hartley Act appeared to outlaw secondary boycotts and union pressure on an employer aimed at getting him to stop dealing with another firm, the primary firm with which the union had a dispute. Taft-Hartley prohibited a union from discouraging the secondary firm's workers' handling of the primary firm's goods. But it said nothing about direct pressure on, or agreements with, the secondary employer.

So the Teamsters slipped through this ban with "hot cargo" agreements. The Teamsters, for example, might be trying to organize a grocery chain's warehouse. Under the "hot cargo" pacts, truckers normally carrying goods in and out of the warehouse would agree not to transport the struck cargo. This pressure could persuade the warehouse operators to sign up.

DEPLETED ARSENAL

The new law, however, specifically prohibits such agreements with two exceptions: garment workers and, in a very limited way, building trades workers.

Moreover, the new law includes a section outlawing secondary boycott pressure against any person, not just workers of the secondary firm.

The boycott provisions also strike at many unions which depended on Teamster aid to enforce their organizing and economic demands. The retail clerks, for example, often have trouble winning a strike against a department store unless Teamster drivers refuse to pick up and deliver merchandise. Now, individual drivers may still decide on their own not to cross a clerks' picket line. But the Teamsters as a union can't make truckers agree not to send their drivers out with goods for the struck store.

A big, open question is what will happen to drivers who refuse to cross picket lines at struck shops. The Teamsters will attempt to write contracts with truckers providing that workers can't be fired for such refusals. If these contracts are upheld, the boycott provisions may not have nearly as much bite as has been expected.

Another feature of the boycott section prohibits workers from picketing stores selling goods coming from a struck plant. This is a marginal weapon, billed as an advertising device. Actually, it is a technique aimed at getting employees working in or servicing the store to bring pressure on the struck manufacturer through their employer.

SAGGING PICKETS

The new curbs on organizational picketing—lines set up around nonunion shops to bring workers into unions—will compel labor organizers to sell these workers on the advantages of the union before the union turns on economic heat. In the South and in white-collar offices, where suspicion and hostility toward unions is common, this won't be easy.

Unionists frankly admit they often set up organizing picket lines where many workers haven't been sold on the union. The picketing has been justified as necessary to protect the standards of organized shops. It was aimed at pressuring holdouts into the union and, in some cases, pressuring the employer by shutting off his deliveries.

Now, these lines can't be maintained for more than 30 days unless the union asks the NLRB for an election in which the union must win a majority of the votes to be certified. Moreover, unions can't picket an unorganized shop where an election has been held within a year or in which another union is the recognized agent.

Curiously enough, this last provision could seal racket unions into a shop. An employer could agree to recognize a crooked local which then might get certified by the NLRB. A legitimate union could picket this plant only if it could prove that the employer had connived with the racket local. Such proof is hard to come by.

But if this gives the crooked union leader any comfort, the bill's other six titles will send him scurrying to lawyers and accountants. In general, these sections rely on disclosure to prevent union officials from treating members' dues as their personal property.

All unions, down to the smallest local, will be required to report in detail how they got their funds and how they are spending them. A special fiduciary section requires union officers to spend and invest solely for the benefit of the organization.

Moreover, officials must report any side ventures they engage in or gifts they get from employers with whom their union bargains. This is designed to expose to public and members' views the kind of generosity some truckers have shown toward Hoffa and his predecessor, Dave Beck.

Employers and their union-taming middlemen, like Nathan Shefferman, are also required to report gifts to unionists and report expenditures to steer workers away from a union or into a favored organization.

But middlemen-lawyers need not report matters arising from a legitimate attorney-client relationship" and this could be a large escape hatch.

Hoffa's program to rehabilitate former convicts by putting them on Teamster payrolls may also be overhauled. The law prohibits erstwhile burglars, arsonists, embezzlers, and certain other felons from holding union office for 5 years after their conviction. However, some lawyers think that this section's ban against Communists in union office may be unconstitutional.

Another antihoodlum section requires officials handling union funds to be bonded for up to $500,000. Bonding companies don't like to write guarantees for men with records.

Perhaps the biggest and least-charter departure in the new law are sections aimed at breaking union autocrats stranglehold on their offices. Periodic, secret-ballot elections are now required. Union members are also guaranteed within some limits, the right to vote, caucus, pass on dues, sue their union, or speak against its policies without fear of retaliation.

It is still far too early to tell whether these sections will stir a prosperity-number membership; whether they can be used by employer agents to harass a union, or whether they will encourage a militancy in some timid unions that employers who fought so hard for the "bill of rights" never foresaw.

Gold, Foreign Aid, and Trade

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, since this excerpt is pertinent to several recent speeches and remarks I have made in the House, under unanimous consent to extend my remarks in the RECORD, I include therein a very provocative article by Edwin L. Dale, Jr., in a recent edition of the New York Times entitled "Big Trade Deficit Is Sparking Move To Cut Aid Funds."

Understandably, thoughtful Americans should be deeply concerned by the marked and steady decrease in the U.S. gold stock pile and by evidence and signs of waste, inefficiency and mismanagement in the administration of foreign aid.

The substantial shift in the balance of international trade and our steadily depleting gold stock pile can be viewed in no other way than with deep concern.

I have felt for sometime past that Congress should very carefully reevaluate and reshape our current monetary policies as well as our mutual security policies and reciprocal trade policies. Current trends are alarming and the growing evidence of maladjustment in these fields requires our immediate and most penetrating attention.

I appeal again to the executive department to exercise its authority and powers under current laws to stop the outflow of gold, eliminate waste and improvidence in foreign aid, and expeditiously check cheap foreign imports which are now threatening American workers, American industries and the American standard of living.

The article follows:

BIG TRADE DEFICIT IS SPARKING MOVE TO CUT AID FUNDS—UNITED STATES WORRIED BY DECREASE IN GOLD STOCKPILE AND RISE IN FOREIGN ASSETS HERE

(By Edwin L. Dale, Jr.)

WASHINGTON, September 5.—The big deficit in the U.S. balance of international payments, with its resulting outflow of gold and buildup of foreign assets in New York, has begun to have a major impact on administration thinking about foreign aid.

Powerful voices, centering in financial agencies, have begun to argue that the flow of Government capital abroad in the form of aid is too large for the continued strength of the dollar.

The underlying belief in top administration financial circles is that there is an entirely new situation in the world economy, with European currencies gaining strength while the dollar is showing the first faint signs of vulnerability.

EMOTIONS IN CONFLICT

The immediate results of this view came in President Eisenhower's trip to Europe, during which he urged that European nations undertake a far greater share of the burden of helping underdeveloped countries.

In a sense, the administration is torn between two powerful emotions. One stems from acceptance of the basic idea that the underdeveloped countries must be helped in the interest of the United States as well as for the good of those nations that get aid.

The other is a growing fear for the future stability of the dollar unless two related things happen: domestic finances are controlled and the balance of international transactions is righted. The U.S. deficit in international transactions was $3,400 million last year and will probably be even larger this year.

FUTURE SEEMS GLOOMY

As financial officials see the situation, it will do no good to anyone if there is a larger outflow of aid dollars but the dollar becomes of dubious value. This could happen, it is believed, if U.S. payments deficits continue on a large scale for many more years.

Such a deficit means that foreign countries as a whole obtain more dollars than they spend to buy American goods. They can take the difference in gold or can keep it in dollars and invest them in the financial markets in New York. These invested dollars are potential claims against gold. Already they total $15,651 million, not far below the gold reserve, which has dwindled to $19,524 million.

As the claims grow and the gold stock declined, U.S. short-term liabilities might eventually exceed assets. Even that would not necessarily mean a run on gold or some other crisis. But U.S. officials do not like to contemplate even the remotest possibility of such an event.

Besides, some of them, looking ahead, are unhappy at the thought of potential pressure on the United States from what, in effect, would be its foreign creditors. The United States, which has been exerting the pressure for years, does not want to be on the receiving end.

Foreign countries are already substantial creditors of the U.S. Government. They have invested about $6,200 million in New York in short-term Government securities. Thus, as one high official put it, "we're borrowing short from foreigners at home and lending abroad long."

The recent deterioration in the U.S. balance of payments has come about mainly because of a drop in exports and a rise in imports, not because of an increase in foreign aid. But as financial officials view the situation, foreign aid is the one element in the total balance over which the Government has considerable control.

It is regarded as certain that the new line of thought in the administration will be a major theme in conversations with foreign finance ministers at the annual meeting here later this month of the International Monetary Fund and the International Bank for Reconstruction and Development.

European countries have been running strong surpluses in their balance of payments while the United States has been in deficit. To U.S. officials this means only one thing: Europe should become a much bigger exporter of capital and the United States a smaller one.

NEW VIEW ON INVESTMENTS

Officials worried about international-payments deficit are even beginning to take a less enthusiastic view of investment abroad by American business. Up until very recently, this was welcomed on every count, by conservatives and liberals alike.

Now, with the payments deficit uppermost in many minds, an investment abroad is fre-

quently seen as a double blow—first an immediate outflow of dollars, and, second, a probable set-back to American exports. The export loss occurs when an American manufacturer, for example, builds a plant in Europe to share in the common market rather than try to sell goods made in the United States.

This feeling accounts for the Treasury's opposition to a bill to provide new tax incenetives for foreign investment unless its benefits are limited to investments in underdeveloped countries.

A reflection of the growing concern about the international payments position of the United States came in the administration position on the Development Loan Fund in the foreign-aid bill. The President refused to support a Senate move to put the fund's financing on a long-term basis, increase its lending authority and get around the appropriations committees, even though the President's original position backed all three ideas.

Another reflection of the new line of thought, paradoxically, is U.S. support for the new International Development Association, even though this will cost the United States $330 million. Such a new institution has several merits in the eyes of an official worried about the U.S. payments deficit and the problem of the underdeveloped countries

It puts Europe in the lending picture for the first time on a formal, multilateral scale.

Because it will be equipped to make soft loans—loans with easy terms and repayable in the currency of the borrower—it should eventually ease the pressure for a larger and larger Development Loan Fund in the United States. The loan fund also makes this type of loan.

State Investigation of Chemical Corn-New York Trust Merger Called For

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release issued by the Honorable LESTER HOLTZMAN on Monday, September 14, 1959, calling for investigation by the State attorney general of the Chemical Corn-New York Trust merger:

Representative LESTER HOLTZMAN, Democrat, of New York, member of the House Committee on the Judiciary, and of its Antitrust Subcommittee, today called for a full-dress investigation by the attorney general of the State of New into the merger of the Chemical Corn Exchange Bank and the New York Trust Co.

The New York lawmaker joined Representative EMANUEL CELLER, Democrat, of New York, chairman of the House Judiciary Committee, in deploring the decision of New York State Superintendent of Banks, G. Russell Clark, to approve the merger.

"This decision flies in the face of our antitrust policies," he said, "and ignores the authoritative finding of the Antitrust Division of the Department of Justice that the merger's effect may be substantially to lessen competition, and tend to create a monopoly."

Mr. HOLTZMAN stated that failure of the responsible officials promptly to remedy this situation would reflect adversely on the administration of Governor Rockefeller. "The people of the State of New York," he said, "have a vital and continuing interest in a healthy, competitive banking system. They will not lightly accept the erosion of free enterprise in banking."

The text of Mr. HOLTZMAN's statement is as follows:

"The decision of Mr. G. Russell Clark, New York State superintendent of banks, to approve the proposed merger of the Chemical Corn Exchange Bank and the New York Trust Co. marks a trend in the concentration of banking facilities that must be stopped. This decision flies in the face of our basic antitrust policies and ignores the authoritative finding of the Antitrust Division of the Department of Justice that the merger's effect 'may be substantially to lessen competition and tend to create a monopoly.' What is more, it misconstrues the clear holding of the Bethlehem case, which disapproved a similar merger of steel companies, and will bring together two of the largest New York City banks into another banking colossus.

"I agree with the distinguished chairman of the House Judiciary Committee, Representative CELLER, that an immediate investigation should be instituted by the State attorney general under the Donnelly Act, New York's antitrust law. If violation is found, the merger should be set aside.

"Failure of responsible State officials promptly to remedy this situation will reflect adversely on the administration of Governor Rockefeller. The people of the State of New York have a vital and continuing interest in a healthy, competitive banking system. They will not lightly accept the erosion of free enterprise in banking."

Whose Ox Is Being Gored by Whom?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, some Members of Congress who voted for the Landrum-Griffin bill have complained about the type and tenor of some of the letters they have received. They are not alone in the assaults on their integrity. Those who voted against the Landrum-Griffin bill are receiving letters of the same type though from different sources.

The following letter from Mr. Sydney N. Coates, dated September 4, 1959, is typical of the correspondence I have received since voting against the Landrum-Griffin bill. My reply of September 10, 1959 is also set forth:

SEPTEMBER 10, 1959.

Mr. SYDNEY N. COATES,
Seattle, Wash.

DEAR MR. COATES: I have your letter of September 4, 1959.

I have not been threatened by any representative (unscrupulous or otherwise) of any section of organized labor.

For your information, I have received threats and insolent letters from people who assume that only those who voted for the Landrum-Griffin bill voted their consciences rather than the pressures, threats and emotions of their constituents, while all those who voted against it have no consciences but bow to the whim or the will of the unions.

On behalf of the 200 colleagues who joined me in voting against the Landrum-Griffin bill in the first instance, and on behalf of the 51 colleagues who joined me in voting against it in its final form, I resent such conduct and remind you that threats against legislators are un-American regardless of what prompts them.

I am happy to note that you will support every Senator and Representative who "is not biased by pressure from any group." Does that mean that those who think as you do will withhold their support from every Senator and Representative who submitted to the pressures of the U.S. Chamber of Commerce, the National Association of Manufacturers and every other big business representative?

Very truly yours,
ABRAHAM J. MULTER.

SEATTLE, WASH., *September 4, 1959.*

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D.C.

DEAR MR. MULTER: You as our elected Congressman have been threatened in your position to legislate for the welfare of the country as a whole by an unscrupulous representative of one section of organized labor.

A threat of this kind cannot be left unchallenged by the people of our country. The enclosure is my personal answer. I have challenged Mr. Carey to step down as per my letter, and the cartoon from the Seattle Post Intelligencer supports the public's attitude toward this type of uncalled-for threat.

I will support every Senator and Representative in his right to exercise his judgment as he sees fit, provided he is not biased by pressure from any group.

Let me say in closing, that I know the people of our country have confidence in you as our leaders to fulfill the obligation of doing what is best for all. Our thoughts and prayers are with you constantly.

Very truly yours,
SYDNEY N. COATES.

Tribute to a Great Test Pilot

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HECHLER. Mr. Speaker, I rise to pay tribute to an outstanding son of West Virginia who lost his life in the service of his country.

I refer to Comdr. Jon Edward Thomas, a native of Spencer in Roane County, W. Va., a distinguished officer of the Navy whose loss will be keenly felt by the Nation and his home State of West Virginia. Commander Thomas was one of the Navy's leading test pilots and testing-unit commanders. He was killed in line of duty at Moffett Field, Calif., on December 11, 1958.

Commander Thomas was in the 42d year at the time of his death. His naval career was one of great brilliance and reflected his fine qualities as an officer.

Attending Marshall College in Huntington, W. Va., Commander Thomas enlisted in the Navy a full 9 months before Pearl Harbor. During the same month that the United States was attacked at Pearl Harbor, he was commissioned an ensign and assigned to naval aviation.

In combat operations, he demonstrated the highest qualities of courage aboard various carriers and carrier escort vessels. The Navy depended heavily on his bravery and ingenuity in both war and peace.

After World War II, Commander Thomas was assigned as a liaison officer and test pilot with the British, French, and Netherlands navies from August 1948 to January 1951. This was during the period when the United States and its Allies were striving to forge a strong defense against Communist aggression through the North Atlantic Treaty Organization.

He later was assigned to test pilot training at the Patuxent River Naval Air Test Center. Then he was a project engineer and pilot in the fight test center at this vital installation.

In 1955, Commander Thomas was designated as air operations officer on one of our most important vessels, the U.S.S. *Forrestal*. A year later he was promoted to project coordinator for special weapons at Kirkland Field, N. Mex. At the time of his death he was serving his country as commanding officer of squadron 125.

Among the decorations awarded to Commander Thomas for his faithful and heroic service were the American Campaign Medal, Asiatic-Pacific Campaign Medal, World War II Victory Medal, Navy Occupational Service Medal—European Clasp, National Defense Service Medal, Philippine Liberation Ribbon, Order of the British Empire, and Netherlands Order of the Orange Nassau.

The loss of Commander Thomas is felt keenly by the Armed Forces of the United States, by his many friends and relatives in West Virginia throughout the world, and by all who respect and admire honor and devotion to the service of one's country.

Fifty-Acre Fair Celebrates the First 50 Years of Tel Aviv

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BOYLE. Mr. Speaker, dramatic changes have taken place in Israel during the last 50 years. The city of Tel Aviv is now celebrating its 50th jubilee. Tel Aviv has become a great center, not only for the government of this bastion of democracy, but also it is now a main artery in Middle East industry and commerce. Francis Ofner of the Chicago Sun-Times has done a special report on the celebration of the first 50 years of Tel Aviv, and I commend this article to the attention of my colleagues:

FIFTY-ACRE FAIR CELEBRATES THE FIRST 50 YEARS OF TEL AVIV

(By Francis Ofner)

TEL AVIV, ISRAEL.—A gaily laid out, 50-acre fair is commemorating the jubilee of Tel Aviv, the first all-Jewish city in modern history.

Fifty years ago a handful of pioneers moved out of the winding alleys of age-old Jaffa to found, amid the sand dunes to the north, a suburb they called Tel Aviv, meaning Hill of Spring. It has become a metropolis of nearly 400,000 and is Israel's biggest single agglomeration of commerce, industry, arts, newspapers, and traffic jams.

WORLD MESSAGES

Its exciting history is told in plastic models, pictures, and diagrams at the Tel Aviv municipal pavilion, the heart of the fair. How the shaky summer huts of 1909 survived wars and riots to grow into a world landmark is symbolized by the nearby cities of the world pavilion.

Thirty-two cities in 20 countries have sent token exhibits, many with Hebrew inscriptions, greeting Tel Aviv.

There are spacious amusement parks, a heliport and commercial pavilions. The organizers intend that after a 2-month jubilee show the fair will become the site of regular international fairs and help to boost Tel Aviv's position as one of the Middle East's main centers of commerce and industry.

A DRAMATIC CHANGE

When the State of Israel came into being 11 years ago, the site of the exhibition on the north bank of the Yarkon River was a place for weekend picnics by those willing to hike far afield. By now it lies practically in the center of northern Tel Aviv, with fashionable hotels and modern shopping arcades surrounding it.

The main driving force behind this rapid growth has been the immigration that trebled the country's population since 1948. On a miniature scale, Tel Aviv has become to Israel what New York is to the United States. Neither is its country's capital, yet each is the biggest single concentration of both old settlers and new immigrants.

Like New York, Tel Aviv does not bear the stamp of any particular group. Its inhabitants, originating from more than 70 countries—with a strong core of native-born Israelis—have given it a distinctive character.

IDEALISM AND NECESSITY

Tel Aviv's vitality stems from idealism and necessity. The city was never a boomtown spurred by a gold rush or oil strike, or by sudden industrialization. The founding fathers' dream of a town where the mayor, policemen, and street cleaners would all be Jews simply brushed aside such obstacles as orthodox economics or the sweltering climate.

The need to take in ever-growing waves of refugees from Czarist Russia, Nazi Germany, the African, and Asian states rising under the hostile banner of Arab nationalism, and Communist-dominated Eastern Europe provided the impetus for the city's development and expansion.

Like many cities of Asia and Africa, Tel Aviv is a pattern of contrasts—but not the sharp contrasts of wealth and misery as in many older cities.

Here a company director may share a block of flats with a veteran bus driver, while more recent immigrants, highly qualified lawyers from Poland or former hawkers of the Moroccan bazaars, struggle alongside one another to strike roots in identical asbestos huts to which they were taken straight from shipboard.

Senator Scott Is Hailed Freshman of Year

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Philadelphia Inquirer of Friday, September 11, 1959:

SENATOR SCOTT IS HAILED FRESHMAN OF YEAR

(By John M. Cummings)

HARRISBURG, September 10.—The Republican half of the TV act of Clark and Scott has been designated freshman Senator of the year.

In recognition of the honor bestowed on this distinguished Philadelphian, silver-tongued EVERETT DIRKSEN, the minority leader of the Senate, gave SCOTT a bearlike hug while the cameramen recorded the touching scene for posterity.

HUGH SCOTT, nimble witted and aggressive, was elected a U.S. Senator from Pennsylvania last fall. A former chairman of the Republican National Committee and at the time of the election a Member of the House, Mr. SCOTT defeated the then Governor of the Commonwealth, George Michael Leader.

In the same election and, like Leader, running on the Democratic ticket, Dave Lawrence won the governorship. HUGH SCOTT, in point of fact, was the only winner on the Republican ticket in the statewide balloting. His victory stands as testimony to his own strength and the weakness of Mr. Leader.

The new honor bestowed on Mr. SCOTT comes at a time when some folks are pondering the likelihood of his being nominated for Vice President at next year's Republican National Convention. It is contended that a bloke capable of carrying Pennsylvania when the State, otherwise, was going Democratic, could be a wheelhorse of no little drawing power.

Pennsylvania ranks next to New York and California in the number of convention delegates and votes in the electoral college. The disposition, to which SCOTT certainly would offer no objection, is to link his proposed candidacy with the presidential prospects of Vice President NIXON.

Mr. NIXON, at this early stage of the proceedings, seems destined to win the presidential nomination of his party. To be sure, forces are at work promoting Governor Rockefeller, of New York, whose sensational defeat of Averell Harriman last year was a really outstanding achievement from the Republican standpoint.

Beyond New York, however, Rockefeller is an unknown quantity. Mr. NIXON, on the other hand, has been in the public eye for a number of years. His recent journey to Russia boosted his stock immeasurably, and contributed to the growing feeling that his nomination for the top spot on the Republican ticket is inevitable.

Senator CLARK, who teams with SCOTT in a political slackwire act on television, missed being designated freshman of the year after his debut in Washington.

It seems that the Democratic neighbor of Senator SCOTT in the Chestnut Hill section of Philadelphia talked his way into disfavor with a number of important lads in the Sen-

ate, including Majority Leader JOHNSON. And, by the way, JOHNSON's trial kite as a presidential prospect seems to be trailing its tail.

The new honor which has come SCOTT's way should be of substantial help in the billing of the team. Up Scranton way CLARK and SCOTT still is a brand of tobacco. They chew it.

My Report to the District on the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. COAD. Mr. Speaker, it is my practice to keep the people of the Sixth Iowa District informed on the legislative work accomplished by the House of Representatives and to report on my activities each year through a year-end report. The following summary sets out the high points of the legislative work of the 1st session of the 86th Congress.

ECONOMY

The underlying theme of this eventful session of the Congress has been "hold the line on Government spending." The Congress not only held spending within the President's budget requests but actually shaved further reductions in appropriations of the tax dollars.

I supported the House Committee on Appropriations in their efforts to cut the overall budgetary appropriations and voted for appropriation bills which contained these spending cuts. My philosphy is that we must appropriate every cent we need for the necessities of our people at home, including all the necessities for defense, but not one red cent for waste.

AGRICULTURE COMMITTEE APPOINTMENT

Although this has not been an altogether productive year for farm legislation, it has been most gratifying to me to serve the farmers of Iowa and the Nation as a member of the House Committee on Agriculture.

The Presidential veto of the wheat bill dampened hopes for major revisions of the farm programs. My omnibus farm bill was one which was shelved by continued veto threats. Mr. Benson, speaking on behalf of the administration, frankly stated that he would not let any legislation pass which raised the parity supports even so little as 1 percent, no matter how much production was reduced. This attitude created a complete stalemate as these views are not shared by the majority of the membership of the Agriculture Committee.

OFFICE ACTIVITIES

During this session I have introduced 33 bills and resolutions which can be divided into 4 main categories as measures to assist or otherwise to be of benefit to the farmer, the small businessman, the laborer, and the elder citizen. I have spent a great deal of time writing letters, testifying, and working for these measures as well as other legislation which you have urged me to support. Items, other than farm measures, which I have given particular stress include transmission lines for western Iowa, amortization deductions for small business, reduced interest loans for small businesses which build facilities to process surplus farm products into new industrial products or uses, raising income limitations of the Social Security Act, pensions for veterans and their widows, extension of rural mail routes, creation of food storage program for national emergencies, wildlife and conservation programs, education and scholarship loans to students, extension of GI bill, establishment of Great White Fleet, and a program for the annual reduction of the national debt.

The following list of the important issues which came before the House of Representatives during this session of Congress provides you with my voting record and the current status of the legislation:

How I voted	Issue	Status
For	Admission of Hawaii as our 50th State	Became law.
Do	Continuing direct loans to veterans	Do.
Do	Extending Federal aid to airports	Do.
Do	Removal of REA from total control of Secretary of Agriculture	Vetoed.
Do	Self-financing authority for TVA	Became law.
Do	Federal program to improve housing	Sent to President.
Do	Extension of water pollution control program	On Speaker's desk.
Do	90 percent price support and acreage reduction for wheat	Vetoed.
Do	Strengthen wheat marketing quota and price support program	Do.
Do	Mutual security for world peace	Became law.
Against	Lower reserve requirements for Federal Reserve banks	Do.
For	Labor reform legislation (S. 1555 on final passage)	Do.
Do	Extending Public Law 480 with food stamp amendment	Sent to President.
Do	Health benefits program for civil service employees	Do.
Do	Public works appropriation (veto overridden)	Became law.
Against	1-cent increase in Federal gasoline tax	Sent to President.
For	Research program for industrial uses of agricultural commodities	Awaiting conference.
Do	Small business research and counseling grants	Sent to President.
Do	Veteran's pension program	Became law.
Do	Increasing savings bonds interest rates	Sent to President.

The following is a reprint of the very generous remarks of the Honorable JOHN MCCORMACK in connection with my activities in this Congress and on my part in the passage of the labor reform legislation which appeared in the CONGRESSIONAL RECORD on September 3, 1959.

Will Bicarbonate Be Necessary?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Wall Street Journal:

THE SECRETARY'S HAT

Like a lot of other people, the Secretary of Labor is becoming increasingly restive about the continued steel strike. Not only is the strike more and more troublesome to him officially, Mr. Mitchell has a very personal stake in an early settlement. The longer it drags, the closer the Secretary comes to losing his hat and to a possible case of temporary indigestion.

Last spring, when certain Members of Congress wanted to go on a vast spending spree to prevent unemployment and certain labor leaders were predicting dire days for the economy, Mr. Mitchell also made a prediction. He said that unemployment would be less than 3 million during October, and he also said that if it weren't he'd eat his hat on the steps of the Labor Department Building.

Now the latest figures show that for the period from mid-July to mid-August, employment was at an all-time August high of 67.2 million and unemployment dropped some 318,000. But because of the continuing steel strike, the unemployment reduction was less than normal. While steelworkers on strike are not considered unemployed, the men laid off in other industries certainly are without jobs. And at least 145,000 in the rail, coal, and construction industries are idle because of the steel strike.

If all these men had been at work during that time, the total unemployment as of September 1 would have been 3,281,000 or thereabouts. And if unemployment were to continue to decline in the same ratio as it has for the past 2 or 3 months, there's not much question Mr. Mitchell would be wearing his hat where he should come November.

As it is, he still has a fighting chance, for both the Commerce Department and the Securities and Exchange Commission report new—and considerably higher—estimates of over $33 billion in business expansion for all of 1959. Since expansion makes jobs and jobs create less unemployment, a steel settlement before October might find the Secretary just under the wire.

But even if he has to eat his hat, he won't be the only one on a distasteful diet. For a great many Congressmen and labor leaders who were predicting calamity for the country unless the Government opened wide all the spending spigots have a great many wrong predictions to eat.

Establishment of a National Fuels Policy

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following address by Walter F. Schulten, vice president, Consolidation Coal Co., on September 10, 1959, to the Chamber of Commerce of the United States, meeting at Spokane, Wash.:

The idea of a national fuels policy, one which would take into account the most efficient and constructive use of our national resources in this field, is not new.

Back in the Roosevelt era Secretary of the Interior Ickes headed a committee which suggested such a plan. It was again proposed by the so-called Paley committee, which studied our national resources, and as late as 1954 by a Presidential advisory committee.

Now, with the formation of the National Coal Policy Conference, it has been put forward again. Resolutions are now pending which would set up a joint congressional committee, composed of eight members from the House and eight from the Senate, to study and make proposals for such a policy. There are few dissenting voices; the suggestion has had the hearty approval of leading congressional and governmental officials. Any such policy will involve the highly competitive fuel industries and a determination upon their claims and counterclaims.

One primary reason for formulating and executing a national fuels policy is national security.

One of the primary questions which has been raised is the extent to which our country should be dependent upon foreign imports of fuel. This question also looms large in the case of other minerals and products.

Yet, it is important in this instance also, even though a subject for controversy. Imports of residual oil have risen sharply since the end of World War II. In 1945, they were the equivalent of 10 million tons of coal; in 1957 and 1958, they approximated slightly more than 40 million tons. These imports have displaced coal for industrial uses.

Last spring the President put restrictions in the form of quotas on the imports of petroleum, including residual.

This action was taken after a petition to the Office of Civil and Defense Mobilization which alleged that petroleum imports threatened national security. The basis of the claim was impairment of the ability of domestic industries, including coal, to meet wartime demands upon them.

Evidently the President felt the claims were justified. Otherwise, he would not have taken action in the face of the opposition of powerful interests.

In the case of coal, some of the reasons for his concern are evident. The displacement of bituminous coal by its competitors, oil and and gas, has been a post-World War II phenomenon, although the trend had started before the war began.

Even so, in 1940, coal accounted for 61.3 percent of the fuel energy consumed; oil, 18.1 percent; gas, 8.8 percent.

By 1958, the changes were startling. Coal's share of the total had declined to 33.4 percent, a los of 27.9 percent; oil's share was 27 percent, a gain of 8.9 percent; and natural gas had 32.4 percent of the fuels energy market, a rise of 23.6 percent. Only hydroelectric power had remained comparatively static, moving from 5 percent to 5.5 percent in the 18 years.

Some of coal's losses must be put down to technological progress. Once upon a time all railroad locomotives were fired by coal. Along came diesel oil which pushed coal almost completely out of this market, a loss of 100 million tons. The change from coal to oil and gas for household heating has hit coal hard also. There are no accurate statistics on this loss, but we do know that between 1940 and 1958 retailer deliveries declined by more than 60 million tons. Undoubtedly a great part of this loss was in home heating.

Substantial declines also have taken place in the industrial field, coal having lost more than 25 million tons in manufacturing since 1940. These losses have taken place during a period when the overall energy output was increasingly under the powerful stimulus of war and a rapidly expanding economy. Consequently, the measure of coal's loss actually is a good deal greater than the figures indicate.

In 1958, coal's production totaled 405 million tons, approximately 88 million tons below 1957 and 225 million tons below the record production of 1947. The f.o.b. value of 1958 production was about a half billion dollars below 1957. In all probability, the industry as a whole lost money in 1958, just as it did in 1954 when production was slightly less than 394 million tons.

In all likelihood also, there are individual oil and gas companies whose total earnings since 1945 have been a good deal bigger than those of the entire bituminous coal industry. I doubt that any other major industry has made less money than coal since the end of the last war.

This might not seem too important were it not for several factors not generally understood. For example, the so-called man in the street, the average individual, lost contact with our product with the decline of coal home heating and the disappearance of the railroad market. He knew that he had stopped using coal and he read story after story about its displacement on the railroad. Even the change in the diesel whistle, or siren tone, from the melodious blast of the steam engine dramatized coal's defeat. He thereupon drew the natural conclusion that coal was going the way of the oxcart and the farm wagon. Unfortunately, the coal industry has not altogether disabused him of that idea.

When the coal industry complains, then, of what it considers unfair competition from other fuels, when it urges a slowdown in the vast amounts of money being spent trying to develop civilian atomic energy, the average man pays little attention. To him, it seems that a dying industry is trying to stave off the inevitable and to stick around as long as it can. Even many newspaper editors, ordinarily well informed, think along the same lines. It makes no difference at the moment that coal, despite its difficulties, is our basic energy source. We have it in abundance, enough to last for all purposes for hundreds of years. It is efficient, stable in price, and serves many purposes. With respect to oil or gas, various estimates have been made of the domestic reserves of these two valuable products. In the case of gas, some say 15, some 20 years. A known fact, however, is that consumption increases. Some authorities say there is enough oil on hand to last 30 years, some say 40. The exact number may be of little moment since our domestic production is likely to become increasingly inadequate insofar as domestic needs are concerned.

It is coal then that we must turn to for the future and, as the President's action in imposing quotas on petroleum imports indicates, it is coal we must turn to in the event of an all-out war.

There comes the question immediately: Could the coal industry, as it is today, meet the demand which would be put upon it if we had an all-out war?

I am afraid that answer would be "No."

Why do I make that statement? During the study by the Office of Civil and Defense Mobilization, which resulted in the curtailment of oil imports, the coal industry submitted some very pertinent figures to the Government agency.

The existing productive capacity of the industry was estimated at 520 million tons annually.

But, in the light of past experience, demands for more coal in the event of war probably would be increased 120 million tons annually to a total of 640 million tons or more.

How quickly could the industry gear itself to produce 640 million tons, the estimated wartime demand? That is a real question. Since 1948, more than 1,800 bituminous coal mines have gone out of production. Most are out completely. They are flooded, or have deteriorated in other ways, until it would cost more to bring them back than it would to build new mines. (NOTE.—Easily accessible strip coal not available as in World War II.)

To build a new mine, a deep mine that is, in these days of high cost and mechanization, is not easy nor cheap. The best estimates are that it takes from 2 to 4 years, or a 3-year average, to put one into production. Today, over 75 percent of our production comes from these below surface operations.

Our experts estimate that to maintain existing capacity of 520 million tons annually requires the expenditure of between $120 million to $200 million yearly. I doubt very much that this amount of money is being spent this way. In other words, with production and earnings as low as they are at present, I think, and others who know coal agree with me, our production capacity is declining.

How much would it cost to add the 120 million tons additional which would be needed if war came? It probably would take somewhere between $600 million and $1 billion. With conditions as they are now, where is that money coming from? Where is the incentive to attract venture capital?

Let us assume that the estimates of additional production needed are high. Nevertheless, I think we will all agree that—barring a knockout of one side or the other very early—there will be a greatly increased demand for coal. The Russian submarine menace may be even greater than the German one during the last war. Then, as you will recall, many oil tankers and other ships were sunk along our coastline before we got matters under control. Oil imports were cut 65 percent or more. If the same thing happens again, the Nation will again have to turn to coal.

No one knows what will happen during ah H-bomb war, but we cannot afford to take unnecessary chances. National security should dictate that we cannot afford to let the coal industry decline further. The industry must be permitted to restore its stability and prosperity if it can.

This brings us back to the National Coal Policy Conference, a unique organization. Cooperation between labor and management to help an industry is not new, although by no means common. But the Conference goes beyond that. It brings in the railroads, which are greatly dependent on the freight revenue from coal, their single best customer. It includes the coal-equipment manufacturers and the utilities which consume coal. What does the organization propose to do? As I have indicated, it has put forward once more the proposal for a national fuels policy.

In the case of coal, such a policy would fall outside the home heating and railroad areas. Coal thinks it is going to recapture, or at least be a larger factor in, that home market through the use of electricity which will be powered by coal. As for the railroad market, we do not know. As conditions are at present, a diesel engine powered with oil probably is more efficient than the coal-fired steam engine and certainly the oil is cheaper.

Specifically, coal feels that a constructive and sound fuels policy would put a stop to

what it considers the dumping of imported residual oil and also the dumping of natural gas.

I mentioned the sharp rise in oil imports previously. The importers of residual do not agree with our claims. If coal is wrong, we should stop complaining. But if we are right, the dumping of cheap residual should stop. It is not only unfair competition, it is competition which weakens an industry whose stability is necessary for national security.

Similarly, we feel that natural gas is being sold too cheaply to heavy industry and utilities at the expense, not only of coal, but of the home user of gas who pays several times the prices which the utilities and heavy industry pays.

This subject is complex. However, not long ago coal's arguments received substantiation from a very impressive source. The Federal Power Commission granted the application of the Midwest Gas Transmission Co., a subsidiary of the Tennessee Gas Transmission Co., to enter the Chicago market. One of the Commissioners, Arthur Kline, dissented, saying, in effect, that residential customers and other comparatively small users would be charged in order that steel companies and utilities in the Chicago area would get gas at very low prices. Actually, the evidence indicates that some of the utilities and big companies in and around Chicago will get gas from the Midwest Co. at less than the price Midwest pays Tennessee Gas for the product.

The Federal Power Commission follows the practice of granting so-called temporary certificates which permit the extension of natural gas pipeline service into new areas. Sometimes the expansion projects involve the expenditure of millions of dollars. As a practical matter, such a situation means that the temporary certificate is misnamed. It is a permanent certificate, coal's protests to the contrary notwithstanding.

The Federal Power Commission does not have jurisdiction over direct sales of natural gas. It cannot control the price at which a pipeline company sells its product to an industrial consumer. The gas company is then free to negotiate the best price it can. Where there is competition with coal, this best price ordinarily is enough to undersell our product.

With the passage of time, however, the price advantage at the wellhead which natural gas once had over coal has vanished. If gas was not sold at dump rates, coal, in many instances, would get the business. Most gas companies have a two-part rate system. Under this system, there is a service or demand charge, plus a commodity charge for gas purchased from the pipeline company.

To meet coal's competition in the industrial field, the pipeline companies are increasing the service charge, thus increasing the cost to the residential consumer and other consumers of comparatively small quantities of gas, individually speaking.

This is known as "tilting the demand charge." Coal regards it as rigged competition. Moreover, we must not lose sight of the fact that gas reserves are limited to a few years and that, if the product is dumped in the utility and industrial markets, in order to provide the pipeline a balanced load, someday the householder will seek it in vain.

There is a wide variance in charges paid by the users of gas.

For instance, in 1957 the residential consumer of natural gas in New England averaged a price of 211.6 cents per thousand cubic feet. The average of electric utilities was 41.1 cents per thousand cubic feet.

The natural gas industry defends the disparity on the grounds that it is necessary to have some market for gas in slack periods in order to maintain a balanced pipeline load. Otherwise, it is said, residential consumers might have to pay still more.

Coal replies that the use of any considerable quantity of natural gas for heavy industry and utilities at low prices is highly questionable as a matter of national policy in view of the limited reserves of gas.

Joseph E. Moody, president of the National Coal Policy Conference, made the statement not long ago that enough coal was being displaced by the dumping of residual oil and natural gas to make the difference between an unhealthy and depreseed coal industry and a healthy and prosperous coal industry.

All the experts agree that coal has a bright future. I have seen predictions that coal consumption in 1975 is almost certain to be about 800 million tons, twice 1958 consumption. Some say it will be much higher.

Perhaps those long-range forecasts may be proven true but we live in the present. We cannot afford to sit by and wait for time to solve our troubles. If war comes, national policy must be such that the bituminous coal industry will be in a position to meet the demands which the emergency would generate.

Thus, we as a Nation must carefully examine the situation today and act in accordance with what we find.

Obviously, such an inquiry should be a thoroughly objective, nonpartisan, and impartial investigation with all viewpoints of each segment of the fuels industry given equal opportunity to be presented, analyzed, weighted, and considered in arriving at final conclusions.

It must not be forgotten that there are many points on which the fuels industries might agree and make common cause. For example, the depletion allowances for oil and gas today are under heavy attack. I am no expert in this field, but judging from my experience with coal, I doubt very much that the depletion allowances for oil and gas are too high. If there were no incentives to explore and take risks, the discoveries in this country and elsewhere which have added so greatly to the reserves of oil and gas might not have been made.

It should mean freer competition with no advantages to any fuel. It should mean private operation of the civilian atomic energy industry. It should mean conservation of resources for national security. It should mean assurance of adequate fuel for civilian and military use during peace and war.

Such a fuels policy will provide a fuels stability for the citizens, the fuels industries and the Nation.

National Association of Wool Manufacturers Urge Reexamination of Our Textile Foreign Trade Policy by the President

---

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter sent to President Eisenhower by the National Association of Wool Manufacturers with reference to British wool textile exports to the United States:

NATIONAL ASSOCIATION
OF WOOL MANUFACTURERS,
New York, September 3, 1959.

The Honorable DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: American wool manufacturers are deeply disturbed by Prime Minister Macmillan's injection of the wool cloth tariff-rate quota into your recent televised chat and particularly by Mr. James C. Hagerty's reported comment: "The United States is reexamining its entire policy of limiting imports of wool textiles."

We are aware of your 1958 directive to your trade policy committee to seek alternates for the Geneva reservation as we know you are aware of our efforts to resolve complaints from our clothing manufacturers and importers and British and other exporters. We supported the suggestion of the British Wool Textile Export Corp. for country-by-country allocation of the tariff-rate quota and the Clothing Manufacturers Association of the United States of America's proposal calling for a constant year-round rate of duty for certain high-priced fabrics. We understand the allocation proposal was considered impracticable. However, you, while not adopting the Clothing Manufacturers Association plan, did proclaim special treatment for the high-priced fabrics for 1959.

That your trade policy committee has, as yet, been unable to discharge its obligation should not open it to criticism. The committee is defeated by circumstances as were we in a like quest. In July of 1958 we reported to Secretary Weeks that formulation of alternate proposals for the Geneva reservation appeared an impossible task in the absence of quantitative limitations on Japanese imports of wool textiles and clothing.

The 1947 duty reductions on wool textiles should not have been made in the first place. Your implementation of the Geneva reservation in 1956 and thereafter should stand as sufficient proof of that. But, even had the reductions not been made, we would be confronted today with grave import problems.

Even at pre-GATT rates we would be vulnerable to (1) Unfair low-wage competition from the resurgent Orient; (2) unfair competition arising out of mislabeled goods from certain European sources; (3) unfair competition from imports subsidized at the source through multiple rates of exchange and other devices.

More than the personal fortunes of manufacturers, suppliers, distributors, and their employees are at stake. Your office, in January 1958, through ODM Director Gordon Gray, recognized "past experience in national emergencies has established beyond reasonable doubt that an adequate wool textile industry is essential to national security."

Under such tenuous circumstances and in a matter of such vital public concern we seek assurance that Mr. Hagerty's reference was to the measures encompassed in your directive to your Trade Policy Committee and in your recent establishment in the executive branch of a Textile Interagency Committee and a Textile Advisory Committee to the Secretary of Commerce.

We believe, Mr. President, that reexamination of our textile foreign trade policy, through these channels, will reveal the need for stronger measures to assure fair competition in our home market.

Respectfully,

EDWIN WILKINSON,
President

J. H. STURSBERG,
Chairman, Executive Committee NAWM; President, Livingston Worsted Mills, Inc.

Unions Weigh Impact of Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MULTER. Mr. Speaker, I comment to the attention of our colleagues the following article by A. H. Raskin, which appeared in the New York Times of September 6, 1959:

UNIONS WEIGH IMPACT OF LABOR REFORM BILL—SOME ACTIVITIES WILL BE CURBED BUT HOODLUMS MAY BE AIDED

(By A. H. Raskin)

This is organized labor's gloomiest Labor Day since the passage of the Taft-Hartley Act over President Truman's veto 12 years ago. The swift approval given by Congress last week to a stiff union reform bill and the certainty of its signature into law by President Eisenhower has brought from union leaders the same doleful forecast of imminent destruction that marked the swing from the old Wagner Act to Taft-Hartley.

Labor made no secret then of its belief that the labor-management relations act, sired by Senator Robert A. Taft, of Ohio, and Representative Fred Hartley, of New Jersey, represented the first ugly thrust of fascism in this country.

THE LAW STAYS

It was castigated as a law conceived in sin and its promoters were called "diabolical men who, seething with hatred, designed this ugly measure for the purpose of imposing their wrath upon the millions of organized and unorganized workers throughout the United States."

Labor's political energies were rallied for repeal of this "slave labor act." The Congress of Industrial Organizations threw new effort into its Political Action Committee; the American Federation of Labor created its first political arm—Labor's League for Political Education.

Labor did well at the polls, but the law stayed on the books, largely through the same coalition of Southern Democrats and Northern Republicans that was responsible for the surprise victory of the Landrum-Griffin bill in the House of Representatives this year.

The damage inflicted by the act never lived up to its advance billing. The outlawing of the closed shop necessitated only minor revision of closed-union practices in such traditional strongholds of compulsory unionism as the printing and construction trades.

The law did open the way for enactment of "right to work" bills prohibiting any form of union security in 18 States; it complicated the task of new organizing, especially in the South; it circumscribed labor's right to refuse to work on materials produced under nonunion conditions; it permitted the exclusion of economic strikers from voting in representation elections if they had been permanently replaced during the walkout and it increased the scope of injunctions in labor disputes.

The unions that suffered most were generally those that were weakest, particularly in such lightly organized fields as textiles, chemicals and retail trades. Well entrenched unions like the United Steelworkers of America, the United Automobile Workers, and the International Brotherhood of Teamsters continued to move forward in membership, wealth and economic gains for their rank and file.

The union that was the special target of the Taft-Hartley advicates—John L. Lewis' United Mine Workers—attained its best contracts and its greatest acceptance in the industry after the law was passed.

The passage of the new labor control bill has been marked by union charges that it is "killer legislation" enacted at the behest of big business to weaken, if not destroy, unions. One union official calls the new law "a hundred times worse than Taft-Hartley." Another says it makes the 1947 statute look like a Magna Carta for labor.

Less emotional analysts in labor's ranks are inclined to believe that their experience now will be much the same as it was when the original shift from the Wagner Act took place. The powerful unions will be only mildly affected; the weak ones will find it even harder to get ahead.

THE IRONIC SIDE

On the ironic side is the almost universal expectation among top unionists that the law will not curb the organization Congress was primarily interested in checking—James R. Hoffa's Teamsters. Most employers are so fearful of the truck union's economic muscle that they are more likely to knuckle under to the exactions of Hoffa's lieutenants than they are to avail themselves of the new law's remedies against coercive union tactics.

Equally ironic is the possibility that the law, for all its emphasis on stamping out union rackets, will prove a legal umbrella for hoodlum-infested paper unions. The bill prohibits picketing for union recognition where an employer has lawfully entered into an agreement with another union. This provides a strong incentive for deals by unscrupulous employers and racketeers who go into the union business by the simple expedient of printing a fistful of independent charters. Contracts with such complacent outfits can serve as insurance against recruiting drives by bona fide unions. Proving that there is anything sour about the arrangement is always difficult. With the added vigilance the crooks have learned as a result of the McClellan committee investigation, it is going to be even harder to establish collusion in the future.

BILL OF RIGHTS

The most substantial revisions in union practices will flow from the rules against picketing to force union recognition and the virtual ban on secondary boycotts. With the spread of subcontracting in many major industries, the prohibition on union action to compel the sending of work to unionized contractors or even to unstruck shops may mean a significant decline in the automatic extension of organization in the mass production fields.

To a considerable extent, the secondary boycott ban accomplishes one of the chief aims of those who have been trying vainly for many years to bring unions under the antitrust laws. It makes it illegal for unions to put pressure on employers not to do business with other employers as a means of influencing their labor standards.

The biggest uncertainty is over the impact of the new bill of rights intended to make unions better custodians of the democratic rights and cash of their dues payers. Some unionists are fearful that they will be subject to harassment for union gifts to political or charitable causes. Thus, they envisage suits by southern members in southern courts to punish international union officers for making grants to the National Association for the Advancement of Colored People.

Others worry about the prospect that crackpots or Communists will paralyze normal union processes by overindulging their rights to speak and to insist on votes at membership meetings. Still other fear that leaders will be so dependent on the favor of the rank and file that demagoguery will replace responsibility in their approach to their duties.

In the end, most union leaders expect that the Federal courts will establish a rule of reason on the application of the bill of rights so that it protects the individual without stultifying the will of the majority. Nevertheless, in this and other sections of the bill, there is anxiety that the States will be encouraged to adopt even more stringent laws of their own.

"This bill is as running over with States rights as the constitution of the Confederacy," one lawyer commented wryly.

Memorandum of the Lithuanian American Council to the President of the United States

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. KELLY. Mr. Speaker, I wish to bring to the attention of the Members of Congress a memorandum sent to me by the Lithuanian American Council which was sent to the President of the United States:

MEMORANDUM OF THE LITHUANIAN AMERICAN COUNCIL TO THE PRESIDENT OF THE UNITED STATES

In view of the forthcoming visit of Nikita S. Khrushchev, the Prime Minister of the Soviet Union, to the United States for informal talks with President Dwight D. Eisenhower, the Lithuanian American Council, comprising numerous organizations of American citizens of Lithuanian descent, considers its duty to state:

First, that it is evident that Premier Khrushchev did not abandon the policy of aggression and expansion which had been practiced by his predecessor Joseph Stalin, but, on the contrary, continues the same policy with the same ultimate aim, Communist domination of the world.

Second, that Nikita Khrushchev comes to this country not to prepare the way for international understanding and eventual peace, but to further his new aggressive campaign against the Western democracies which he started on November 27, 1958, by submitting to the great powers of the West his ultimatum concerning Berlin. This has been clearly demonstrated by the attitude of Soviet Russia's Foreign Minister Gromyko at the recent Geneva Conference, and by the numerous pronouncements of Mr. Khrushchev himself threatening to destroy countries that will reject his terms for peaceful coexistence.

Third, that his absolutely unyielding attitude and aggressiveness has again been most clearly shown in the article "On Peaceful Coexistence," under his onw signature, in the recent issue of Foreign Affairs.

These facts, in the opinion of the Lithuanian American Council, indicate that the present ruler of the Soviet Union seeks by his visit to Washington and his talks with the President of the United States to enhance his prestige in the world Communist movement, to propagandize his program for the expansion of power of the Communist empire, and to tighten the Kremlin's stranglehold on the enslaved and subjugated nations in Europe and Asia.

The Lithuanian American Council is deeply convinced that this arrogant challenge by the

leader of the Soviet empire cannot be left unanswered—or an impression might be created of weakening of the leading power of the free world in its stand against aggressors. The reply to Mr. Khrushchev's claims and assertions should be firm and clear, and should be given as wide publicity as possible.

The Lithuanian American Council, therefore, suggests:

1. That the claims by Mr. Khrushchev of the exclusive right of Soviet Russia to control the destinies of the former free and independent nations which have fallen under the rule of Moscow, should be rejected; as a matter of fact, all of them were deprived of their rights and liberties by force or the threat of force and deception, against the will of the overwhelming majority of the people of those countries and in violation of international treaties and obligations.

2. That the Government of the United States should officially rectify, point by point, the gross distortions of historical facts which have been perpetrated by Mr. Khrushchev. Though the Government of this country does not fight Soviet Russia's Communist regime, as such, or any other type of political system in foreign lands, yet the obvious untruths concerning the establishment of the so-called Socialist Republics should be corrected. As a matter of fact, even the Communist regime in Russia itself has been introduced by a small minority using armed force against the overwhelming majority of Russian people—as was conclusively proven by the results of the election to the Constituent Assembly of Russia—and maintains itself by brutal coercion and bloody terror.

3. That, specifically, the Soviet Premier's lying statements concerning Lithuania, Latvia, and Estonia when he baldly asserts that these Baltic States are in a similar position in the Soviet Union as Texas, Arizona, and California in the United States should be refuted. It is a well-known fact established by the select congressional committee that the Baltic States have been overrun by the Soviet Red army and forcibly and illegally incorporated into the Soviet Union, in consequence of the Stalin-Hitler conspiracy.

4. That attention should be drawn to the fact that while Mr. Khrushchev is demanding that the Western democracies do not interfere in the internal affairs of any part of the Communist empire, at the same time, he reserves for himself the indisputable right to organize, subsidize, and direct subversive Communist activities in the countries of the free world including the United States. The Lithuanian American Council suggests that this double-faced policy should be emphatically condemned as one of the main factors disturbing international relations and creating a constant menace to world peace.

The Lithuanian American Council sincerely appreciates President Eisenhower's unceasing efforts in search of a just and lasting peace, and has full confidence that he will not be swayed from his belief, repeatedly and publicly expressed that a durable and just peace must be based upon freedom of all nations.

The Lithuanian American Council hopes that the forthcoming talks with Soviet Russia's Premier will be used by the President as an opportunity to reiterate these principles and thus encourage the peoples of the free world and those behind the Iron Curtain to join their forces in the common struggle for the ideals of freedom and democracy.

LITHUANIAN AMERICAN COUNCIL,
LEONARD SIMUTIS,
President.
DR. PIUS GRIGAITIS,
Executive Secretary.

CHICAGO, *September 10, 1959.*

The Volunteer Fireman: His Brother's Keeper

EXTENSION OF REMARKS
OF
HON. STANLEY A. PROKOP
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PROKOP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before the delegates of the 29th annual convention of the Northeastern Pennsylvania Volunteer Firemens' Federation at Archbald, Pa., on Friday evening, September 11, 1959:

Mr. Chairman, Father McGinley, Burgess Flanagan, distinguished guests, officers, delegates, and friends of the volunteer fireman, this is indeed a happy occasion.

I would be ungrateful if I failed to recognize the generous spirit that prompted your capable and genial president, Leo O'Hearn, to give such a laudatory introduction.

At the outset may I express my deepest thanks to your convention chairman, Dick McHale, and his committee for their gracious invitation for giving me this opportunity to address this group—a desire that I had since I became a member of this association many years ago.

During the past 11 years it has been my privilege and my pleasure to become closely associated with the members of our own Jefferson Township Community Volunteer Fire Company and the members of the other volunteer companies in our region.

Among other things, I found the Volunteer Firemens' Federation of Northeastern Pennsylvania to be highly educational. As a member of our own volunteer fire company, I today have the greatest respect and admiration for all you fine people who are associated with this unselfish activity of helping your fellow man. I have firsthand knowledge of your duties and responsibilities and a much fuller recognition of the value and importance of volunteer fire companies to our way of life in this great Nation.

At the same time, I have learned, as president of our local fire company, of the many problems with which you as officers and members are confronted.

The people of your community owe you, the volunteer firemen, a great debt of gratitude.

I also wish to emphasize the great value of the unselfish citizens who comprise our volunteer fire companies in time of local or national emergency. Their training and their skill and their knowledge can always be counted upon to counter the effects of an emergency of any scope. And while on this subject may I say that the members of the various committees that have worked so hard to make your organization such a great success also deserve congratulations for a job well done.

It is inspiring and encouraging to meet and speak to so many people who are interested in the welfare of their neighbor.

Yours, indeed, is a noble profession. A fireman's life is a dangerous one at times. Firefighting must often be carried on under severe weather conditions. The hours for volunteer firemen are unpredictable. It has been my observation that every fireman needs steady nerves, considerable physical strength, and enough stamina to enable him to maintain an intense degree of effort, over long periods, under almost unbearable conditions. A fireman has to be ready for anything, because he never knows what he may encounter next.

When speaking of firemen, one must say a few words about our able and courageous fire chiefs and their capable assistants—a fire chief or his assistant, who is in charge of the company, especially during a fire, needs all the qualities of a good general. He must know where to put his men and be prepared to lead them; he must know where to put his screens of water vapor to prevent the spread of fire by radiated heat; he must realize when a building is about to collapse, and bring his men out in time. He must be able to think and act quickly.

I need not tell you that speed is the essence in firefighting; a few minutes wasted in the early stages of a fire, or a wrong decision, can make the difference between a medium fire which can be easily mastered or a conflagration which will burn dozens of buildings.

I do not make these comments to remind you, the volunteer firemen, of the hazards of your job. Rather, I say these words as witness to the unselfish elements necessary for your vocation. You are, indeed, the epitome of the phrase—"my brother's keeper." Each of you deserves a vote of confidence and the wholehearted thanks of the people of your community.

Controlled fire is useful to man, but uncontrolled fire is one of man's worst enemies. Fire, my dear friends, is the world's greatest paradox. It is at once man's worst enemy and his best friend. At some time during the prehistoric ages man learned to make fire, and he learned how to use it. This discovery might properly be considered among the most important achievements in civilization. By day, we all know, that man roasted the meat of slaughtered beasts over his fire. And by night the glow of the flames at the entrance to his cave held prowling things at bay. His fire kept him warm, gave him security, and its lively glow served as a focal point for the nightly gathering of his clan.

Yes, fire became man's most useful companion, while at the same time it became his worst enemy. The pages of history hold many tragic accounts of fire. In our own country we think of the San Francisco fire, the Cocoanut Grove nightclub fire in Boston, the Chicago fire, the circus fire in Hartford, Conn., the fire of the *Morro Castle* beached at Atlantic City, and the flaming crash of the zeppelin, *Hindenburg*.

These are but a few of yesterday's tragic fires.

Today more than 300,000 well trained men throughout America stand ready to answer the fire-alarm tappers and gongs. You, as a portion of that great group of 300,000, know the enemy fire. You well know how patiently fire waits for some proper carelessness. And you also know how fast one must work, once the tiny spark has given life.

Volunteer firemen down through the history of our great Nation have been willing to take risks—very considerable risks—to save life and property. And I say again that many of our people fail to give you men credit for the great job that you are accomplishing for your community and for your people.

Let's go back a little in our early history in the colonial times, for instance, city householders and business owners were by law required to keep a specified number of leather buckets on hand for fire emergencies. Some of the larger cities owned hooked ladders. Smaller towns had no protection at all.

In 1730, New York City imported from Holland two fire engines—hand-pumping machines, of course, the only type known for a century thereafter. During the early years of fireifighting, companies were all of the volunteer sort, the members running at the sound of the alarm from their homes and offices—just as today—where you people leave

your work to join your fire company to help save life and property.

I am reminded that the Father of our Country, George Washington, was a volunteer fireman, an enthusiastic supporter of his local fire company, Friendship, in the Commonwealth of Virginia. Once, while on a visit to Philadelphia, in 1764, Washington purchased a fire engine which he presented to his volunteer company in Alexandria. Although it has never been established that he engaged in battling a fire, we can rest assured that Washington's ideals as illustrated in his life and character were synonymous with those high ideals of the volunteer firemen—courage, duty, and unselfish public service, dedicated to God and country.

History records that in Philadelphia the volunteer firemen were unusually well entrenched there in the early days of our Nation, due primarily to the fact that Benjamin Franklin had organized America's first fire company in Philadelphia.

We recall that the steam fire engine was invented in 1829–30, and began to supplant hand pumping about two decades later. With it came the professional salaried fireman and horse-drawn machines.

Late in the 19th century fireproof or fire-resistant buildings began to appear, the chemical fire extinguisher was invented, and was followed by the sprinkling system. With the development of the gasoline engine early in the 20th century, fire departments were motorized. Horses and many of the steam engines then disappeared.

Although efficiency in firefighting has increased each year, our annual fire losses in the United States have been on the increase during the past few years. In 1955 the National Board of Fire Underwriters reported fire loss in the United States to be $885,218,000; in 1956 losses totaled $980,290,000; and in 1957 they amounted to $1,023,190,000.

A recent statement also indicates that "fire takes annually in the United States over 11,000 lives."

I do not need to tell you that fire prevention becomes increasingly important. Your duties as preservers of lives and property are not limited to putting out fires. They also cover the area of fire protection and fire prevention. These require constant study.

In our towns and cities we need more responsible, dedicated citizens to back up our fire departments—citizens who will serve on fire prevention committees. The public should learn more about respecting fire and less about fearing it—more about controlling it and using it safely.

A more educated citizenry in the details of fire prevention will mean more lives saved, more property preserved, and less risk for you, the brave and honorable men, who comprise our volunteer fire departments.

A volunteer fire department is more than a group of men with shining red equipment. A volunteer fire department is an example of two qualities that have made America great—individual initiative and concern for the welfare of others.

One public service which seldom is recognized in full light of its performance is that of the volunteer firefighter. For he is more than just a fireman. Unpaid, he must make his livelihood by other means, therefore, he must be proficient in both.

Operating without the substantial funds which fully paid municipal departments have available, these volunteers also have to be enterprising businessmen, in that they frequently have to raise funds for their firehouse facilities and firefighting equipment by every ingenious method possible, such as picnics, social parties, membership drives, donations, envelope drives, dinners, ad books and selling chowder.

The volunteer fireman is virtually on call around the clock and so must ever share his home life with the task of helping and protecting his neighbor. Truly his brother's keeper.

As the trend of homes and industry is from congested cities into the open fields of rural areas, the role of the volunteer firemen has become most significant. With the increased burden of helping to protect these properties, business places, homes and farm buildings, many with severe hazards of considerable magnitude which were not anticipated when the volunteer fire departments in numerous communities were organized, it has been necessary for these men to further increase the strength of department both in personnel and equipment.

Therefore, every effort should be made by industry, businessmen, the volunteer fireman, and the people in the community to work closer together as times goes on in order that all may enjoy the fullest that each provide to the community.

A Welcome to the Harry S. Truman Library

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

A WELCOME TO THE HARRY S. TRUMAN LIBRARY, INDEPENDENCE, MO.

THE HARRY S. TRUMAN LIBRARY IS A DISTINGUISHED INSTITUTION

The Harry S. Truman Library was established to preserve the papers, books, and historical mementos of former President Truman; to make them available to the people in a place suitable for study and research; and to provide a center to stimulate public interest in American history and government. It is administered by the National Archives and Records Service of the General Services Administration as an integral part of the Nation's recordkeeping system.

The building was built and furnished by the Harry S. Truman Library, Inc., without cost to the Government, from funds, amounting to $1,750,000 donated by thousands of individuals and organizations in all parts of the country. It was dedicated July 6, 1957.

Adjacent to Slover Park in the city of Independence, the crescent-shaped, Indiana limestone library building crowns a knoll facing U.S. Highway 24. A one-story, full-basement structure of modern architectural design, the library is 525 feet long, wing to wing, and has 70,000 square feet of floor-space. In addition to providing facilities for the preservation and use of papers and other historical materials, the building contains offices for the library staff, several large exhibit rooms, a photographic laboratory, an auditorium with a seating capacity of 250 persons, and a suite of offices for former President Truman and his staff.

For 166 years there was no systematic provision for the preservation of Presidential papers. Many have consequently been lost, dispersed, or destroyed. The papers and other historical materials of Presidents form an immensely valuable part of the historical and cultural heritage of our Nation. They are of public interest and the Nation has a special responsibility for seeing them properly protected, preserved, and, under proper policies, made available for research use. The tremendous increase in volume of Presidential papers in recent years has made it difficult, if not impossible, for ex-Presidents to assume personal responsibility for the care of their papers. Furthermore, the Presidents also accumulate thousands of printed items—a library, in effect—as well as countless gifts, many of which are of great artistic, cultural, and commemorative value. It is important that these materials be kept intact and administered together so that scholars and the public can arrive at an understanding of the President's career and the history of the period in which he lived.

The papers of former President Truman comprise an estimated 3.5 million documents. To insure their preservation they are housed in specially equipped, steel and concrete stack areas in which temperature, humidity, and light are scientifically controlled. Personal papers of Mr. Truman's associates and contemporaries that may be donated to the library from time to time and microfilm copies of original research materials in public or private custody that bear significantly on the Truman period and on the history of the Presidency will also be preserved in the library.

Adjacent to the stack areas is housed a collection of printed reference works, the nucleus of which is the body of books and pamphlets given to the library by President Truman. Emphasizing works on the Truman era, the history of the Presidency, and the history of American foreign relations, this collection will facilitate the work of the library staff and scholars as well.

The papers and books in the library will not be open for research until the latter part of 1958. Meanwhile, plans to enhance the usefulness of the library as a research institution are being developed by the Harry S. Truman Library Institute for National and International Affairs, a corporation established for that purpose.

The museum collections

An outstanding feature of the library is the museum, providing for the effective exhibit to the American people of the gifts of historical and commemorative value that were received by Mr. Truman. The location of the several exhibit areas and a suggested tour plan for visitors is given in the accompanying sketch. Although exhibits are changed at intervals, those described below are usually on display.

As visitors enter the main lobby, attention is focused on the table on which the United Nations Charter was signed at San Francisco in 1945. A copy of the charter and a bust of Franklin D. Roosevelt, father of the United Nations, by Sculptor Jo Davidson rest on its blue cloth-covered surface. Among other features of the lobby are, in full color, the Presidential seal as redesigned during the Truman administration; large oil portraits of Presidents Truman and Eisenhower by Artists John Slavin and Thomas E. Stevens; costly jeweled swords and daggers from the King and Crown Prince of Saudi Arabia; autographed photographs of Winston Churchill of England and other world-famous authors along with presentation copies of their books personally autographed for President Truman.

To the right of the main lobby, in a two-level, balconied foyer specially designed and illuminated for its displays, hangs a large and priceless Persian rug, given to President Truman by the Shah of Iran. Exhibited before it on a dais is a massive dining suite presented to him by the Philippine Government in gratitude for his support of Philippine independence. In this foyer is a case containing exhibits from President Truman's extensive collection of Bibles.

In the large museum room beyond this foyer are presented two exhibits designed to carry out President Truman's desire to make the Presidential Office more clearly

understood. The first deals with the six jobs of the President as Mr. Truman himself has often spoken of them—as Chief Executive, ceremonial head of state, legislative planner in dealing with Congress, head of his political party, commander in chief of the Armed Forces, and director of foreign policy. It includes such famous documents as the Truman fair deal message to Congress; color photographs of historic events, including the Potsdam Conference and the signing of the United Nations Charter; interesting mementos of the Democratic National Convention of 1948, the whistlestop campaign, and the Truman inauguration of 1949; valuable gifts from foreign statesmen and people, including a 2,500-year-old vase presented by the Greek nation in gratitude for American aid; historic flags and models of famous ships and planes; and many unique and colorful items that reflect the nature or significance of the President's role in domestic and foreign affairs.

The second exhibit in the museum room, which deals with the Presidency in the light of the provisions of article II of the Constitution, displays pictures of all the Presidents and a historic Federal document signed by or closely associated with the administration of each President. On loan from the National Archives in Washington, the exhibit includes such famous papers as John Adams' first inaugural address; the Jefferson request to Congress for funds for the Lewis and Clark Expedition; the Monroe Doctrine message; the Jackson bank bill veto message of 1832; pardons issued by Lincoln during the Civil War; the Alaska Purchase Treaty of 1867; Wilson's 1917 declaration of war against Germany; Franklin D. Roosevelt's Pearl Harbor message (from the Roosevelt Library at Hyde Park, N.Y.); and Truman's V–E Day proclamation.

In this room are also displayed the Bibles on which President Truman took his oaths of office; objects associated with his World War I service; a guest book bearing the signatures of Stalin, Churchill, and others who attended the Potsdam Conference; and early 19th-century building materials removed from the White House during its renovation in the 1950's.

In the garden room are seen Jerry Farnsworth's portrait of President Truman's mother; Kitt Sapp's paintings of the Truman home in Independence and the Grandview farm; color portraits of the five-star generals and admirals who served under President Truman; and a selection of original cartoons given to him by the artists who drew them. Among other items exhibited in this room are beautiful Satsuma vases from Japan; part of the silver service of the U.S.S. *Missouri*, lent by the State of Missouri; sculptor Felix de Weldon's original plaster model of his inspiring monument depicting the flag raising on Iwo Jima; and a Torah and a bust of Chaim Weizmann, first President of Israel, presented to President Truman in gratitude for his prompt recognition of the new State of Israel.

Directly back of the main lobby is a replica of the President's office in the west wing of the White House. The furnishings are exact reproductions of those in the White House, while the pictures, statuary, and the objects on the Presidential desk are the ones that decorated the room when President Truman occupied it.

In the west foyer leading to the auditorium a stately mantel, which of necessity was removed from the state dining room of the White House during its renovation, is exhibited. It bears as an inscription, carved on its stone front in the 1940's, these fitting words once written by President John Adams: "I pray Heaven to bestow the best of blessings on this house and all that shall hereafter inhabit it. May none but honest and wise men ever rule under this roof." Also in this foyer are exhibits relating to labor leaders and organizations in the United States, and items from President Truman's Masonic collection.

"This library will belong to the people of the United States. My papers will be the property of the people and be accessible to them. And this is as it should be. The papers of the Presidents are among the most valuable source materials for history. They ought to be preserved.

"HARRY S. TRUMAN."

HOURS AND FEES

The museum areas of the library are open daily from 9 a.m. to 4:30 p.m., and from 2 p.m. to 5 p.m. on Sundays.

The library will be closed on Thanksgiving, Christmas, and New Year's Day.

The admission fee is 50 cents for all persons over 12 years of age, except students in organized school groups for which application is made in advance, persons in the care of charitable institutions, and uniformed members of the Armed Forces, who are admitted free.

The money from admission fees is set aside for such purposes as the purchase of historical material and equipment for the library or the preparation and publication of guides to or reproductions of materials in its custody.

A trust fund account, authorized by law, enables the library to receive and expend any additional funds given by private donors for the benefit of the library, its collections, or its services.

The admission fee pertains only to the museum area. The offices, research room, and Mr. Truman's suite are not open to the public.

International Cooperation: A Prerequisite of Survival

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, it is my privilege to call to the attention of the Members, under leave to extend my remarks, a very fine analysis of the road to insure survival in our time.

Brig. Gen. Hugh B. Hester, retired after a career of 34 years of service, prepared this analysis for a lecture to the advanced management course at the General Electric Co. on June 15.

Holder of the Distinguished Service Medal and Legion of Honor, General Hester is well known in recent years as a lecturer and writer on international relations. I commend his views to the thoughtful study of all Americans:

The central problem of our time is the survival of the human specie. This is a problem, according to Gen. Omar N. Bradley, which society has placed upon itself through the forging of military weapons of indescribable destructiveness. This view was dramatized by Gen. Douglas MacArthur on his 75th birthday, January 26, 1955, Los Angeles, when he characterized war between the great powers as a Frankenstein which could only end in mutual suicide and possibly destroy all human life on this planet. The President—Gen. Dwight D. Eisenhower—epitomized this in political terms by saying at Geneva, 1955, that "there is no alternative to peace."

The first and almost unanimous reaction of military leaders to the explosion of the uranium and plutonium bombs over Hiroshima and Nagasaki, August 6 and 9, 1945, was that war could no longer be used as an instrument or adjunct of diplomacy; that it, therefore, was outmoded because of its destructiveness: 20,000 tons of TNT. Since that time, the hydrogen and super bomb—the fission-fusion-fission bomb—have been created the latter with a power a thousand times greater than those used over Hiroshima and Nagasaki. And this is not the end, for the scientists claim that even the power of these can be expanded almost indefinitely.

The magnitude of this new monster can be comprehended, if at all, only in terms of the explosive power released by all military forces during World War II (1939–45), estimated as 3 million tons of TNT. The superbomb which unexpectedly caused the disappearance of the Bikini Atoll is estimated to have contained six times the power exploded in that war, or 18 million tons of TNT.

Despite this, the physical power apologists, far from accepting the first spontaneous reaction to the now relatively feeble atom bombs exploded in 1945, are advocating more and bigger bombs along with multiple missile systems of unlimited range and power. They, of course, appeal to the strange logic of the deterrence of terror and limited warfare as though an overpowering fear produced rational action and agreed limitations could be placed upon war after the experience of a century of unlimited wars for unlimited objectives. And this time with an opponent whom they label in advance as completely untrustworthy. In truth, they use this alleged fact as the reason for their unwillingness to negotiate an end to the unlimited arms race.

This, of course, is the refutation of all modern history. If it were possible to limit war once the propaganda dogs were unleased, would it not be much simpler to negotiate a permanent peace instead? How do they hope to force a limitation upon an opponent, every agreement of which must kept step by step or thermonuclear war will be unleashed, when they cannot trust him under any circumstances? Does not the illogic of such an approach suggest that the advocates or limited war are either naive or dishonest?

War between the great powers, limited or otherwise, is, I repeat, irrational because of the power of modern weapons and the uncontrollable nature of war propaganda. The control of the latter was not possible even in the First and Second World Wars. How much less so must it prove in the electronic and television age?

Simply stated, this means that the present leaders of the world are faced with a completely new situation. For the first time in history man has the power to destroy the human specie. This makes it necessary to negotiate an agreement in advance of the conflict instead of at the conclusion as formerly; otherwise there may be no one to negotiate. Unless this stark truth is grasped; that is, that international cooperation must be substituted for conflict, there can be no future for man.

This hard fact becomes more acceptable once it is recognized that our opponents are not monsters, but, like ourselves, are people with the same faults, virtues, and hopes. A careful study of the history of different economic, political, and social systems, and extensive travel within the Iron Curtain countries should make it relatively easy to negotiate this hurdle. Certainly this has been my experience and is increasingly the experience of others as they travel to the other side.

One of the first things that a study of the history of relations between the so-called capitalist and Communist systems develops is that the cold war did not start in 1946 or 1947 as a consequence of Stalin's intransigence, but in 1917, sometimes intense as now and earlier, and at other times less so, as during the war period 1941-45. It even erupted into a hot war in 1918, when 12 former allies and the United States, an associate power, made war upon this new revolutionary regime now called the U.S.S.R.

A second fact disclosed by such a study is that there is nothing new about the present cold war, except the possibly improved communications system which makes it easier to spread rumors, half-truths, and falsehoods. This, of course, makes all three more dangerous. Basically, the same propaganda was used by the parties to all previous conflicts of an imperial, national, and ideological character—the Egyptians and Jews, Greeks and Persians, Athenians and Spartans, Romans and Carthaginians, Christians and Mohammedans, Catholics and Protestants, ad infinitum ad nauseum. It's an old, old story which all people should know about.

The above disclosures are not intended to assess blame in equal portions, or even to assess blame at all. It is a fact, nonetheless, that these conflicts have been led throughout history by the two-dimensional minded; that is, by those who believed that all colors were black or white and all conduct good or evil—the God and Devil concept of human life and international relations. The Russians and Chinese obviously are not all slaves and their leaders not totally evil and all of the West are not wholly free and their leaders not completely good. It is vitally important to recognize that all societies and human relations are gradations of gray. Naturally, most of us think our gray is of a little lighter shade, but certainly not pure white.

It is encouraging that most of those reporting on recent travels through Iron Curtain countries believe that both the people and leaders want a brighter future: That is greater quantities and better quality of supplies, improved medical care, better education, more culture, leisure and security. Certainly they have more of all of these than they have ever had before. And it is equally certain that their material standard of living is not nearly as high as that in the United States. The Russians and Poles, including their leaders, freely and frankly admitted this to me during my 12,000-mile 5-week trip through their countries in 1957. On the other hand, they know they are making progress and have confidence in the future.

For these reasons, there is no mass movement, nor is there likely to be in the near future, for the overthrow of the government in either Poland or Russia. No recent traveler to these countries, or careful student has reported more than usual gripes by the people common to all countries. This suggests that both governments are stable and not likely to fall as a result of subversion, external or internal. If this is so, then both sides should agree to discontinue subversion as unprofitable.

While I have visited China since the present regime achieved power almost all objective observers from Canada, England, France, India, and elsewhere report great progress has been made in agriculture, industry, education, and medical care. Regardless of how Mao-Tse-tung and his followers achieved power, or retain it, responsible observers report no serious challenge to that power and most agree that if there should be such a challenge at some future date, it would not be likely to come from Chiang Kai-shek. In the opinion of more then 600 million Chinese and much of the rest of the world Chiang and his supporters are stooges of the United States and this in itself, they believe, is enough to prevent his or his followers return to power.

If these conclusions, particularly about the U.S.S.R. and Red China, are correct, and the available evidence is overwhelming, a reevaluation of our foreign policies is imperative. And the disengagement of the military forces of the the East and West around the world should be made the first order of business. This should start in Europe, and the Rapacki plan offers a useful point of departure. The fact that Mr. Rapacki is the Polish Foreign Minister should not prejudice its study by the West. The Polish interests are not necessarily the same as those of Russia, or we would not now be giving Poland aid.

While the Berlin crisis is dangerous, it is not the cause of present tensions in that area, and even if it were possible, which it is not, to separate it from the German problem nothing substantial would be gained. The real problem is German unification, and it should be faced up to before it explodes into war. But Germany cannot be unified inside any great power alliance system. This would upset the balance of power which cannot be tolerated under the sovereign state system concept. Free elections, while desirable in a democratic world, have no relevance in the power-bloc system except for propaganda purposes. And this propaganda only promotes war.

The West favors free elections in Germany and Korea, where it has built-in majorities, but not in Vietnam, where it has a minority. The East favors them in the latter, while opposing them in the former two, and for identical reasons. Morality, unhappily, has nothing whatever to do with the so-called reasons for holding free elections. Naked power controls, and the leaders of both blocs know this. And it is time that all stopped the hypothetical that it does not.

Stated simply, this means disengagement of the polar power military forces in all critical areas is vitally important, and a compromise with the factors of power is a sine qua non of any possible peace. Germany must be made safe for Europe before unification by being neutralized militarily, and Europe must be made safe for Germany through a European settlement guaranteed by both great powers. Korea and Vietnam cannot be united under regimes that are hostile to China. This is simply a matter both of power and geography.

The poverty vacuum of the potentially rich Middle East can only be filled through cooperation between the two polar powers. And it is completely irrational to expect the Arabs and Israeli to settle their disputes so long as each can play the one great power against the other in the power struggle of the cold war. The Soviets have proposed such a solution and their sincerity should be tested through negotiations.

The success of negotiation here again will depend upon disengagement of great power military forces. Russia cannot be expected to accept exclusion from her own backyard, especially by a power geographically located thousands of miles away, and certainly not when that power has airbases and missile launching sites located only a few minutes and seconds from her vital centers. Exclusion and containment both are impossible in the thermonuclear-electronic age. Access to the raw materials of this rich area as elsewhere must be made available to those who need and are able and willing to pay a fair price for them. They must be made available without discrimination. And the profits from the raw materials of these areas must also be made available primarily for the development of the areas themselves. This is so because poverty is the greatest enemy of man. Disengagement in the Far East, potentially the most explosive of all areas, is vitally necessary, but may well prove the most difficult of all others to accomplish. Here one-quarter of the human race resides and its inhabitants are admittedly now the most revolutionary and dynamic in the world. Here again it will serve no useful purpose to try to assess blame.

Unless something can be done within the near future to reduce tensions here a third world war is almost inevitable. Obviously disarmament cannot be effective without the cooperation of the Red Chinese; not even the cessation of bomb testing now under discussion at Geneva. And it is unlikely that this cooperation can be had at the price of Chinese exclusion from the United Nations and nonrecognition by most of the Western nation states.

But how can recognition be effected when both Mao and Chiang refuse to accept the two-China policy and the United States refuses to withdraw recognition of the latter. The answer is, it cannot in the present climate and with the present policies: ours, Mao's or Chiang's. The only possible way of breaking the present impasse, it seems to me, is for the United Nations to step into the picture and offer to mediate. And even this is unlikely to succeed unless and until Red China is admitted to the U.N. Exclusion has always proved intolerable to those against whom it was exercised and China is no exception to this as she has shown many times.

As a contribution to the solution of this difficult problem, the United States should withdraw its active opposition to Chinese admission to the U.N. Even abstention would permit this to occur for it is becoming generally recognized that her present exclusion is a dangerous failure. But the problem of recognition still remains. And while recognition once was very simple our entangling alliance with Chiang makes Chinese recognition of the United States now difficult if not improbable.

This points up the urgency of normalization of relations throughout the state system. It should be noted that recognition has never been considered as approval of the character of any regime, but generally, merely a recognition of a hard fact of international life. If this were not so, the United States would have to withdraw recognition of many of her present allies and close associates. Fortunately most nations recognize this and have generally accorded diplomatic status to those regimes exercising the functions of governments over their people without a too close scrutiny of how this control was achieved. The United States would do well to return to this practice.

Normalization of nation-state relations should include travel and trade. This would reduce tensions and increase wealth for those participating in it. There is no longer any validity to the theory that these would increase the military potential of the supposed enemy. The launching of the sputnik, October 4, 1957, destroyed this for all time and, Clarence B. Randall, when chairman of the board of Inland Steel, reported to the President in 1954, after careful study of all the facts that restrictions on trade with the Soviet bloc were probably doing the West more harm than it was the East.

Since poverty is the greatest crime against man the resources of the world should be mobilized in a massive attack upon it. This should be made through the United Nations in order to do four things in addition to reducing the gap between the have and have-not nations: (1) Eliminate the charity character of present unilateral aid, (2) eliminate or reduce to the minimum power politics, (3) utilizes the total resources of war, (4) strengthen the United Nations.

This program could be easily financed through long-term loans at low rates of interest and through the savings from a reduction in the arms race. The latter is necessary anyway in order to avoid war, and can

be achieved without reducing any nation's relative security. In fact the security of all would be greatly increased by this action since the continuance of the present arms race must eventually end in world war III.

Only by doing these things can the U.N. be made into a world government with powers adequate but limited to world needs. Only through the establishment of world law, a world court to interpret those laws and a peace force to apply those interpretations can a world war be avoided and the survival of the human specie achieved.

Trade Policies

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the 1st session of the 86th Congress has witnessed a continuation of the controversy between those who advocate freer trade policies and lower tariffs and those who seek the adoption of measures to restore equitable balance to our foreign commerce.

One of the principal arguments of those who want to push the Nation farther along the road to unlimited import competition is that other countries are reciprocating our generosity by lifting the obstacles to U.S. exports. They claim we are not just giving away tariff concessions and receiving little or nothing in return.

This theme was emphasized in a recent exchange of letters between the chairman of the Subcommittee on Foreign Trade Laws and Policy, Committee on Ways and Means [Mr. BOGGS], and the Under Secretary of State, Douglas Dillon.

Responding to the chairman's request for information, Mr. Dillon reviewed various so-called liberalization steps taken in the first 6 months of 1959 by many of our trading partners, among them Argentina, Australia, France, West Germany, Italy, Japan, New Zealand, and the United Kingdom.

But even Mr. Dillon conceded that there is still room for improvement abroad in the treatment of U.S. products. As he noted in his report:

> Despite the progress which has been made, however, a number of countries continue to discriminate against U.S. exports. In the coming months, the U.S. Government, through such forums as the General Agreement on Tariffs and Trade and the International Monetary Fund, and in bilateral discussions, will continue vigorous efforts based upon the new financial situation which exists in international trade—to bring about further rapid elimination of dollar trade discrimination.

Perhaps it is significant that only a few days before Mr. Dillon's report was released, the State Department received dispatches from American diplomatic sources in Athens, Greece, and Havana, Cuba, which illustrate the brand of "reciprocity" that is frequently extended to U.S. manufactures, in this case, textiles.

Following is the text of a dispatch from Athens, dated July 17, 1959:

> POLEMICS ON MEASURES FOR PROTECTING DOMESTIC INDUSTRY
>
> Actions taken last week increasing basic import duty rate on artificial fiber textiles from 26 to 34 percent as of July 4, and subjecting, effective July 10, all textile imports to advance payments equal to 280 percent of cost, insurance, freight value, brought loud protests from merchants and trade associations. Some trade representatives criticized measures as giving local textile industry virtual monopoly with all attendant evils, while others claimed effect would be to force small importers out of business and allow large importers to corner the foreign textile market. Minister of Coordination answered by saying inter alia that all industrial countries, including United States, protect their textile industries. He also said uproar against measures came from merchants who had been making exorbitant profits on imported fabrics and who disregard facts that their imports reduced national income and that Greek workers need employment. Manufacturing and labor groups lauded the measures and the Minister's defense of them. Manufacturers repeated their longstanding complaint that merchants deliberately and systematically disparage Greek textiles in order to make higher profits from imported materials. They said merchants sell much of these imports at regular prices even though they often acquire them as "seconds" and avoid full Greek import duty by underinvoicing. Latest development was yesterday's visit to Minister of Industry by certain merchant representatives who told Minister many merchants approve of the protective measures.
>
> Comment: Fight is not yet over and the trade groups will be working hard to have the measures rescinded. However, Coordination Minister's position and fact that they are already on the books makes reversal unlikely, though there is some slight chance that modifications may be made to placate merchants whose political influence cannot be completely disregarded.

Next is a Foreign Service dispatch from Havana, dated July 24, 1959:

> On July 23, Dr. Fidel Castro spoke at a meeting of the 10th national congress of textile workers. In his speech to the workers, he announced a policy of high protectionism for the textile industry. A literal translation of his remarks on this subject follows:
>
> "So it is that the revolution will go on with its work and we will continue seeing each other, developing all the economic possibilities of our country, among them, this industry (textiles) in which we aspire within 4 or 5 years at the most to double the number of workers employed.
>
> "We aspire to achieve the following goal: that it be possible for the nation to produce absolutely all the textiles it consumes and that nothing further be imported except the raw materials that we cannot produce here. The raw materials that cannot be produced here may be imported but they will be processed here. In Cuba, Cuban products will be consumed. To that end, we rely on the collaboration of this whole sector, workers and industrialists, to set to work so that we may reach the goal whereby all textiles that are consumed in Cuba will be produced in Cuba. For others, there will be a protective customs tariff as high as may be necessary in order that foreign textiles are not imported here. One of the reasons for the revolution is protection, not of foreign interests but of national interests. One of the reasons this is a revolution is that it protects Cubans, and because it protects Cubans, it has incurred the enmity of so many foreign interests.
>
> "We shall raise the customs tariffs as high as may be necessary. Do the Japanese wish preferential nation treatment? Well, we can give them such treatment, but with tariffs as high as they must be, and with that there will be no discrimination against the Japanese. They say that the only thing they want is not to be discriminated against. Very well, we will treat them the same way we treat others, but the customs tariffs shall be established in such a way as to protect, above all, the national industry. The goal must be achieved that here will be consumed only textiles produced in the nation by factories established in the nation and by Cuban workers. And when the peasants start buying clothes and start dressing their children and their families, we are going to require here twice as much clothing as is used today. Furthermore, when the 30 or 40 millions worth of textiles presently being imported are produced here we are going to have work for thousands of Cubans. That is the policy that will be followed by the Government on textile matters."

Mr. Speaker, the U.S. textile industry remains in serious difficulty, largely due to irresponsible trade policies. Hundreds of American mills have closed their doors since World War II, hundreds of thousands of jobs have been exported abroad.

The industry's setbacks at the hands of foreign competitors are well documented by the 86th Congress. A special subcommittee of the other body, in Report No. 42, disclosed, for example:

That total employment in U.S. textile mills dropped from 1,325,000 workers in 1947 to about 1 million in 1957, a decline of 24 percent.

That employment losses in mills producing yarn, thread, and broadwoven fabrics were even greater.

That between 1946 and 1957 a total of 717 textile mill liquidations were reported in the press; these liquidations displaced nearly 200,000 workers.

That from February 1951 to April 1958, employment in the American textile industry slumped by 438,000, or 32 percent; of this total, New England lost 158,000 jobs; the Middle Atlantic States lost 126,400 jobs; the Midwest lost 12,700 jobs; the South lost 102,000 jobs.

That the number of woolen spinning spindles in place in the United States dropped from 1,561,000 in 1947 to 744,000 in 1957, a decline of more than 50 percent.

That the number of worsted spinning spindles declined from nearly 2 million to 709,000, or 63 percent, in the same period.

Only recently representatives of both management and labor in the textile industry met with Members of Congress to review the plight of their industry and to urge prompt remedial measures. The National Cotton Council, the American Cotton Manufacturers Institute, and other groups have appealed to the Federal Government for assistance in their struggle to preserve a share of the domestic market from the inroads of sweatshop competition.

Great textile unions in the federation of American labor have called for legislative enactment of quotas and a sliding-scale tariff system to safeguard American jobs and job opportunities.

The revolutionary government of Cuba declares:

One of the reasons for the revolution is protection, not of foreign interests but of national interests.

The U.S. textile industry, and the scores of other industries distressed by unreasonable import competition, do not propose revolution as a satisfactory solution to their problems. As faithful guardians of democratic processes, they have submitted their case to their elected representatives and to the American people.

So far little has been accomplished to ease the burdens placed on major segments of the textile industry by the continued upsurge of imports. Many of the foreign garments and fabrics which are overrunning the domestic market are manufactured in Hong Kong and Japan, where wages average about 10 cents an hour and 14 cents an hour, respectively, including fringe benefits. The American garment worker, on the other hand, draws an average hourly wage of $2.12, including fringes.

With labor costs accounting for about one-third of the cost of a garment, is it any wonder that U.S. textile producers find themselves unable to compete with foreign manufacturers? Is it at all surprising that American labor raises its voice in protest?

DAV Services in Maine

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. OLIVER. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Maine citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Maine, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is Bill H. Fribley, Crestline, Kans. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C.

They there have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

DAV SERVICES IN MAINE

The DAV maintains one national service officer in Maine, Mr. John F. McPherson, located at the VA Center, Box 151, Togus. The new department commander, William G. Earles of South Portland, is a representative in the State legislature, and the department adjutant is Mr. Robert W. Libby, 11 State Street, Biddeford, Maine.

There is one Veterans' Administration hospital in Maine in which the DAV has a Veterans' Administration voluntary service representative; her name is Mrs. Esther Dee, 502 Allen Avenue, Portland, Maine, and she is located at the 869-bed neuropsychiatric and general medical hospital at Togus.

During the last fiscal year, the VA paid out $29,794,000 for its veteran program in Maine, including $8,470,526 disability compensation to its 10,727 service disabled veterans. These Federal expenditures in Maine furnish substantial purchasing power in all communities. Less than 9 percent, 901, are members of the 10 DAV chapters in Maine.

SERVICE ACCOMPLISHMENTS BY THE DAV

This 9-percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Maine veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	17,440
Claims folders reviewed	14,533
Appearances before rating boards	1,765
Compensation increases obtained	1,020
Service connections obtained	301
Nonservice pensions	295
Death benefits obtained	31
Total monetary benefits obtained	$709,309.09

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetay benefits of $20,850,335.32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Maine veterans, their dependents, and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointment retentions, retirement benefits, and multifarious and other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible.

A VA claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses

his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of these claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,000 others at an aggregate loss to them of more than $28,000,000 per year. About one-half of 1 percent—0.005—of such discontinuances and reductions have probably occurred as to disabled veterans in Maine with a consequent loss of about $196,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veterans organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Maine to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent, expert national service officer.

COSTS OF DAV SERVICES

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim holder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—minature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or thier widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Indento-Tag Department, 2,314 of whom, during the last 8 years, were Maine residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustees, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests, in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation to which it recently added another $100. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,000, equivalent to about $5 per DAV member—an excellent objective for all other States. Benefactors from 32 States have, up to this time, become enrolled on the memorial honor roll.

Inasmuch as only the interest earning from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Maine. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Maine by sending in donations to the DAV Service Foundation, 1707 18th Street N.W, Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations—the United Spanish War Veterans, the American Legion, the Veterans of Foreign Wars, the AMVETS, the Military Order of the Purple Heart, and the Disabled American Veterans. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Having been an active member for many years, Mr. Speaker, in veterans' organizations, it is my hope that disabled veterans of Maine will avail themselves of the services rendered by these groups of organized fellow comrades.

Report to the People of the Eighth Congressional District of Wisconsin—XIII

EXTENSION OF REMARKS
OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a report to the people of the Eighth Congressional District of Wisconsin on my voting and attendance record for the 1st session of the 86th Congress.

The report includes all rollcall votes and all quorum calls. Its purpose is to collect in one place and in concise form information which is scattered through some 18,000 pages of the CONGRESSIONAL RECORD.

The descriptions of the bills and the amendments or motions in the report are for purposes of identification only; no attempt is made to describe the legislation completely or to elaborate upon the issues involved. This word of caution is advisable in view of the fact that the descriptions used are, for the most part, taken from the official titles of the bills which, unfortunately, do not always reflect the nature or true purpose of the legislation. Upon request, I will be pleased to furnish more complete information concerning any particular bill, as well as a summary of the issues involved and the reasons for my vote.

The furnishing of this report continues a service I began in the 1st session of the 80th Congress. This is the 13th report of my voting and attendance record. These 13 reports show how I voted on 1,712 questions in the House of Representatives. Based on quorum calls and the record votes, they also show an attendance record of 95 percent.

Roll-call No.	Date 1959	Measure, question, and result	Vote
1	Jan. 7	Quorum call	Present.
2	Jan. 7	Election of Speaker. (Rayburn, 281; Halleck, 148)	Halleck.
3	Feb. 4	Quorum call	Present.
		H.R. 2256, providing $300,000,000 for veterans' direct housing loans and raising the interest rate from 4¾ percent to 5¼ percent per annum:	
4	Feb. 4	On motion to recommit with instructions to delete additional funds for direct housing loans. (Rejected 123 to 277)	Yea.
5	Feb. 4	On passage. (Passed 310 to 89)	Nay.
		H.R. 2260, extending the Universal Military Training and Service Act until July 1, 1963:	
6	Feb. 5	On passage. (Passed 381 to 20)	Yea.
7	Mar. 4	Quorum call	Present.
8	Mar. 5	Quorum call	Present.
		H. Res. 205, providing for the consideration of H.R. 4221, providing for the admission of Hawaii into the Union:	
9	Mar. 11	On adoption of resolution. (Adopted 337 to 69)	Yea.
10	Mar. 11	Quorum call	Present.
		S. 50, providing for the admission of Hawaii into the Union:	
11	Mar. 12	On passage. (Passed 323 to 89)	Yea.
12	Mar. 12	Quorum call	Present.
		H.R. 1, authorizing a 1-year increase in the diversion of water from Lake Michigan at Chicago:	
13	Mar. 13	On passage. (Passed 238 to 142)	Nay.
		S. 79, permitting the continuance of established coloring practices in the orange industry:	
14	Mar. 13	On passage. (Passed 213 to 94)	Not voting.[1]
15	Mar. 16	Quorum call	Present.
16	Mar. 17	Quorum call	Present.
17	Mar. 18	Quorum call	Present.
18	Mar. 19	Quorum call	Present.
		H.R. 1011, providing for Federal aid for airports:	
19	Mar. 19	On amendment reducing Federal aid for airports by $97,000,000. (Rejected 194 to 214)	Yea.
20	Mar. 19	On amendment to require that no commitments be made for expenditure of funds until such funds are appropriated by Congress. (Rejected 191 to 216.)	Yea.
21	Mar. 19	On passage. (Passed 272 to 134)	Nay.
		H.R. 2575, authorizing the appropriation of $500,000 for the Pan American Games in Chicago:	
22	Mar. 23	On passage. (Passed 258 to 108)	Nay.
23	Mar. 24	Quorum call	Present.
		H.R. 4452, authorizing the increase in U.S. subscription to the International Bank for Reconstruction and Development:	
24	Mar. 25	On passage. (Passed 315 to 57)	Yea.
25	Apr. 14	Quorum call	Present.

Tributes to Judge Gustav L. Schramm, a Distinguished Juvenile Court Judge of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following biography and editorial tributes to Judge Gustav L. Schramm:

Gustav L. Schramm was born in Pittsburgh on May 11, 1898, the son of Rev. Alfred and Sophie (Lorch) Schramm; married to Louise Hammel; lives at 37 Mount Lebanon Boulevard, Mount Lebanon Township; educated in the Humboldt Elementary School and South Side High School, Pittsburgh; University of Pittsburgh: B.S. 1918, M.A. 1920, LL.B. 1924; Columbia University; Ph. D. 1928; St. Vincent College: LL.D. 1950; University of Pittsburgh: LL.D. 1954.

Lambda Chi Alpha (social), Beta Gamma Sigma (business-honorary), Delta Theta Phi (law), Order of the Coif (law-honorary), Omicron Delta Kappa (activities-honorary)—national president 1929–31, and Phi Sigma Pi (honorary member).

Member of the faculty of the University of Pittsburgh, 1918–53; attorney in charge of the Legal Aid Society of Pittsburgh, 1924–34.

Elected president judge of the Juvenile Court of Allegheny County in November 1933 for 10-year term; reelected in November 1943; elected for third term in November 1953.

Chairman, Panel on Juvenile Courts and Detention of the U.S. Attorney General's National Conference on Prevention and Control of Juvenile Delinquency, Washington, D.C., November 1946.

Junior Chamber of Commerce Certificate of Award for 1947 in recognition of outstanding achievement in the legal field.

Since 1948 instructor on the faculty of the FBI National Police Academy, Washington, D.C., on the juvenile court.

Pennsylvania Bar Association Distinguished Service Award for 1958.

Chairman: Committee on juvenile law and procedures of the American Bar Association; board of trustees of the National Juvenile Court Foundation; the Salvation Army-Juvenile Court Children's Fund.

Director: Children's service committee of the R. W. Grand Lodge, F. & A. M. of Pennsylvania.

District deputy grand master, 51st district, F. & A.M.; 33d degree.

Member: Council, section of criminal law of the American Bar Association; advisory section of the American Child Guidance Foundation; advisory committee of the Brashear Association; board of managers of the Kingsley Association; American, Pennsylvania and Allegheny County Bar Association; American Political Science Association; American Judicature Society.

Served two terms as president of the National Council of Juvenile Court Judges; served two terms as president of the Pennsylvania Council of Juvenile Court Judges.

National Council of Juvenile Court Judges Meritorious Service Award for 1959.

[From the Pittsburgh Sun-Telegraph, Sept. 8, 1959]

JUDGE SCHRAMM

The unexpected death of Gustav L. Schramm, Allegheny County's internationally acclaimed juvenile court judge, is a tragic loss.

If ever a man was struck down at the high point in his career, it was Judge Schramm.

Less than 48 hours before his death, Judge Schramm had been the central figure at the 10th session of the Pennsylvania Mason Juvenile Court Institute.

Attracted by Judge Schramm's achievements, scores of judges from all over the United States and from as far away as Korea and Alaska, joined Pennsylvania's top-ranking Masons and social workers in paying tribute to this modest man.

Founder and director of the institute, Judge Schramm had received the Distinguished Service Award of the Pennsylvania Bar Association only last year.

He was cited for having "created a juvenile court and a procedure for personalized treatment of juveniles coming into the court which has become a recognized model for juvenile procedures throughout the country.

This jurist who refused to wear a judicial robe so as not to overawe the children with whom he worked, firmly believed in making the punishment fit the child, not the crime.

After listening to police, social workers, attorneys, and parents so that he had all possible facts in the case, Judge Schramm talked privately with the child to probe in his own gentle way for the roots of the trouble.

This procedure, now widely acclaimed and imitated by other jurists, brought sharp attacks at various times from attorneys convinced that the time-honored procedures of

adult courts should also prevail in hearings for juveniles.

In recent years, however, Judge Schramm's record of success in dealing with more than 350,000 children in his nearly 26 years on the bench had served to still his professional critics.

Judge Schramm's pioneering work began with his election in 1933 to the juvenile court bench after enactment of a law making it the only court of its kind in Pennsylvania.

Reelection for his second and third 10-year term in 1943 and 1953 by impressive majorities offered convincing proof that Judge Schramm's work was appreciated by the general public.

Appreciation more difficult to assess doubtlessly fills the hearts of thousands of children he has helped.

He has shown the world how to make useful and happy citizens of children who had gone astray. Happily his methods will live on.

His devoted staff at the Juvenile Court Building in Oakland will see that the people of Allegheny County will continue to benefit from his philosophy.

[From the Post-Gazette, Sept. 7, 1959]

GUSTAV L. SCHRAMM

At a time when the problem of juvenile delinquency reaches frightening proportions nationally, the public can ill afford to lose the services of an experienced and dedicated public official like Juvenile Court Judge Gustav L. Schramm, who died suddenly on Saturday.

Thanks in large measure to his pioneering efforts, the problem of juvenile delinquency in this community has not degenerated to the jungle conditions found in New York City and, to a lesser extent, in Philadelphia.

Judge Schramm had been on the bench since 1933, when the legislature created in Allegheny County the first juvenile court in Pennsylvania. Since then he had become a nationally recognized authority in the field of juvenile delinquency. He built a nonpartisan court dedicated to the welfare and rehabilitation of youthful offenders.

The passing of Judge Schramm will be widely mourned. But he leaves behind a philosophy and a record of achievement which should prove useful to others in combating one of the Nation's most urgent problems. He served the public well.

[From the Post-Gazette, Sept. 7, 1959]

JUVENILE COURT JUDGE GUSTAV L. SCHRAMM

Judge Schramm died Saturday afternoon at his home of a heart attack. He was 61.

Judge Schramm was the only juvenile court judge in the history of Allegheny County. He was elected in 1933 when the State created the court as the only separate one of its kind in Pennsylvania. He was reelected to 10-year terms in 1943 and 1953 and would have served until 1964.

Last week Judge Schramm had conducted the 10th Mason Juvenile Court Institute, which he had originated 4 years ago. He had gone to the court at 3333 Forbes Avenue, Oakland, Saturday morning, and about 2:30 p.m. left for his home at 37 Mount Lebanon Boulevard.

He became ill while driving home and died at home at 3:30 p.m., before a doctor arrived.

FRIEND OF THOUSANDS

Recognition from many quarters had come to the judge during the 25 years he served as judge and in effect, as counselor and confidant to thousands of children who had wandered into trouble.

The most recent tribute was the announcement only last week that an international conference of juvenile court workers would be held here next year, with Judge Schramm presiding.

In 1958 Judge Schramm was presented the Distinguished Service Award of the Pennsylvania Bar Association for especially conspicuous service in the field of juvenile justice.

After serving as a visiting instructor before the Federal Bureau of Investigation Academy he was commended by J. Edgar Hoover, chief of the FBI.

Other commendation came from Supreme Court Justice Tom C. Clark and juvenile court judges and administrators throughout the United States.

INFORMAL IN PROCEDURE

Judge Schramm was president of the Pennsylvania Council of Juvenile Court Judges from 1951 to 1953 and was president of the National Council from 1949 to 1951.

Wearing a business suit and never a judicial robe, he held private conversations with the boys and girls brought before him. These informal chats were part of his procedure for handling their problems.

This process was the essence of the operation of Juvenile Court under Judge Schramm. It was designed, he frequently said, not to treat the juvenile as a criminal but as an effort to prevent him from growing up into a criminal, while at the same time protecting the community from wrongdoing.

NOT CRIMINAL COURT

Judge Schramm supported this informal procedure against proposed legislation which would, he felt, turn juvenile court into a criminal court similar to the type for adults. He felt the procedure he used was superior for handling the juveniles.

Before the court was formed, juvenile cases had been handled by common pleas court. When juvenile court was created, Judge Schramm was an attorney in charge of the Legal Aid Society.

He was sponsored by both parties but won in the 1933 Democratic Party primary and was elected with the backing of 100 civic and social agencies.

When he first took over the judgeship the court was in crowded quarters at 3336 Fifth Avenue. The present court building was completed in 1937.

FIT CHILD, NOT CRIME

Judge Schramm's guiding philosophy was "make the punishment fit the child, not a crime." He once said that juvenile delinquency is largely a problem of how much the community cares about its children.

Judge Schramm was a 33° Mason, a member of the executive board of the Boy Scout Council, a director of the YMCA, and was active in the Salvation Army.

He was born on the Southside May 11, 1898 and attended Humboldt Elementary School, South Side High School, the University of Pittsburgh and Columbia University.

His father, the Reverend Alfred Schramm, was pastor of German United Evangelical Church and his grandfather, the Reverend Gustav Lorch, had been pastor of the old church before that.

Judge Schramm is survived by his wife, Mrs. Louise Schramm.

Interment will be in Zimmerman Cemetery, 2511 Brownsville Road, Carrick Memorial donations may be made to favorite charities.

[From the Post-Gazette, Sept. 9, 1959]

SCHRAMM EULOGIZED IN COURTS—ATTORNEY, JURISTS SOUND PRAISES OF DECEASED JUDGE

Juvenile Court Judge Gustav L. Schramm, who died Saturday, was eulogized in common pleas and criminal courts yesterday.

Attorney Harold Schmidt, representing the Allegheny County Bar Association, praised Judge Schramm in common pleas court.

KNOWN NATIONALLY

Judge Harry M. Montgomery, in criminal court, paid tribute to Judge Schramm, who, he said, was largely responsible for the lack of organized gangs among juveniles here.

Judge Montgomery pointed out that Judge Schramm, whose funeral was held yesterday, was nationally known for his work among children.

Judge J. Frank McKenna addressed 215 jurors called for duty as common pleas court resumed jury trials. In criminal court Judge Montgomery seated the 16-member September grand jury.

CITY COUNCIL ADJOURNS

City council likewise took official notice of the passing of Judge Schramm. On motion of Patrick T. Fagan yesterday's session adjourned out of respect to his memory. The motion was adopted with a standing vote and a minute of silence.

The grand jury will consider some 800 cases this month. Foreman of the jury is James L. Cavanaugh, 210 Second Street, Aspinwall, a steelworker on strike from the Jones & Laughlin Steel Corp. southside works.

As a juror, he will receive $7 a day.

[From the Pittsburgh Press, Sept. 7, 1959]

THE CHILDREN'S FRIEND

A notable career, filled with service to humanity, came to an end the other day with the death of Judge Gustav L. Schramm. At 61, he had served for 25 years as Allegheny County's first and only juvenile court judge.

Judge Schramm was a social scientist and teacher as well as an attorney when, in 1933, he took over the difficult task of creating a new juvenile court. That institution today is entirely his own creation. He built the staff and worked out the procedures.

As a result of his work, he became a national figure in his field, recognized as one of the most preeminent authorities on the handling of juvenile crime. He headed the State and National councils of juvenile court judges and won many citations for meritorious service.

Judge Schramm's concern was, first of all, the child. He brought to his work as judge no pat formula for making the punishment fit the crime. Instead he made the treatment fit the child and he listened with patience to the personal problems of literally thousands of mixed-up children every year.

His work was effective, both for most of his charges and for the community. It is perhaps due to this court—the only one of its kind in the State—that Allegheny County has been spared the kind of juvenile crime that has afflicted other large cities.

Judge Schramm valued above all else his position as a friend of children. He certainly was that and he leaves behind him a rich legacy of knowledge of how to help them.

[From the Pittsburgh Press, Sept 7, 1959]

HEART ATTACK ENDED JUDGE SCHRAMM'S LONG COURT CAREER

Judge Schramm, one of the Nation's leading authorities on juvenile crime, was at his desk at the Juvenile Court Building on Saturday morning and complained of feeling ill.

He left his office and went to his home at 37 Mount Lebanon Boulevard where he was pronounced dead at 3:30 p.m.

WROTE ARTICLES

The native-born Pittsburgher was the first full-time judge of the court and contributed many articles on the handling of juvenile criminals to legal journals.

He is survived by his widow, Louise.

Judge Schramm was educated at the Humboldt Elementary School and South Side High School before going to the University of Pittsburgh.

He received his batchelor of science degree at Pitt in 1918 and a master of arts degree in 1920.

Degrees were earned also at St. Vincent College and Columbia University.

Judge Schramm was a member of the Pitt faculty from 1918 to 1953, and attorney-in-charge for the Legal Aid Society of Pittsburgh from 1924 to 1934.

ELECTED IN 1933

His first election to the juvenile court bench was in 1933 when he won a 10-year term, as he did in 1943 and 1953.

He was chairman of the panel on juvenile courts and detention of the U.S. Attorney General's National Conference on Prevention and Control of Juvenile Delinquency.

In 1948 he became an instructor on the faculty of the Federal Bureau of Investigation National Police Academy, Washington, lecturing on "The Juvenile Court."

Judge Schramm was given the Pennsylvania Bar Association's Distinguished Service Award in 1958.

He was chairman of the committee on juvenile law and procedures of the American Bar Association, board of trustees of the National Juvenile Court Foundation and the Salvation Army-Juvenile Court Children's Fund.

HEADED LODGE GROUP

And he was director of the children's service committee of the R. W. Grand Lodge, F. & A. M. of Pennsylvania.

Judge Schramm also served two terms as president of the National Council of Juvenile Court Judges and two terms as head of the Pennsylvania Council of Juvenile Court Judges.

Is a Yawn Coming On?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson as it appeared in the New Republic magazine of August 24, 1959:

IS A YAWN COMING ON?

(By Gerald W. Johnson)

They say that one great trouble with Khrushchev is his abysmal ignorance of America and Americans; but when he announced that he doesn't want to look at any Army installations because he comes as a peaceful man, not with a rocket in his pocket—well, with that he belted one clean over the centerfield fence. If he had made a lifelong study of Americans he couldn't have said anything better.

Perhaps, though, the commentators are right. It may be that Khrushchev spoke out of his knowledge, not of Americans, but Russians. If that is the case, it is another strong indication that Russians are people—a doctrine to be accepted hesitantly by anyone who dreads the accusation of being "soft on communism," but nevertheless a doctrine supported by massive evidence. If Khrushchev, saying what he knew the masses in Russia would like to hear, hit upon something that the masses in America very much like to hear, the implications are immense.

For, if we are alike in this, it is a reasonable assumption that we may be alike in other things. For instance, it may be that the Russians, too, are a horribly scared people, and if that is the case they must be appalled by the risk Khrushchev is taking in venturing into this country. As a matter of fact, judging by the superficial aspect of things, they are right. Any man who visits the haunts of the terrified is taking a serious risk, often a greater risk than one who goes among the vicious. The vicious, as long as they keep their wits about them, may be restrained by self-interest; but the utterly terrified are restrained by nothing. A badly scared visitor received by badly scared hosts is in a precarious position. If some American town proves to be another Caracas, no one need be surprised.

It is always possible, though, that the abject fright of this country is in considerable measure synthetic. That seems to be the case in Russia. At least the street crowds did not exhibit any notable fear of Vice President NIXON; on the contrary, they were consistently polite and in many places cordial. Politicians of the McCarthy type find terror a convenient means of garnering votes and they are adept at transforming reasonable misgivings into blind panic, or the appearance thereof. But when the thing is put to the test it frequently turns out that the common people were not half as scared as they had been told they were.

This is alarming to politicians whose political capital consists mainly, if not exclusively, of their ability to wave the Red flag as politicians of an earlier day waved the bloody shirt. If the head of the Russian Government is received quietly in this country, goes where he wishes without molestation, and returns to Russia in perfect health, it is probable that the politicians will have to find a new issue; and few of them have brains and character enough to do so.

The ruin would be complete if, after an uneventful Russian visit, the American President's visit to Russia should be marked by nothing more sinister than the presentation of bunches of flowers by little girls. If that should happen, even the politicians could see that as a vote-getter "the Communist conspiracy" is no longer infallible.

The whole history of this Republic attests that when it is no longer possible to stampede American voters by mere howling, the better class of men in public life have a chance to use their brains to settle issues in a reasonable way.

It is also historically true that the moment when the voters refuse to stampede usually comes suddenly, with no warning, and with no visible cause. It happened to McCarthyism. One day it appeared to be as invincible as ever, but the next day it was so dead that it wasn't even news. It happened to Palmer's witch-hunt after World War I. It happened to the Bloody Shirt shortly after 1885, when Kansans began to yawn as soon as Ingalls started to orate. It may be on the eve of happening to "the Communist conspiracy."

This is appalling to those politicians who have depended on the issue to hold their jobs, but nobody else need be alarmed. Certainly communism will remain a menace, but its threat will not be increased when we stop screaming and begin to take intelligent measures to deal with it. War is not an intelligent measure; but what to substitute for war calls for careful thinking, probably continued for a long time; and it is pretty hard to do careful thinking in the midst of a convention of whirling dervishes.

So if we can restrain such elements as the Puerto Rican Nationalists who tried to liquidate Truman and did shoot up the House of Representatives, perhaps Mr. Khrushchev's visit may be productive of some good. Perhaps it may even work the miracle of producing an American yawn when the words "Communist conspiracy" are uttered.

Trade Unionism, Its Needs and Responsibilities

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HAGEN. Mr. Speaker, there has been so much rancor expressed in the debate over the need for labor reform legislation that I think it is time to inject a little kindness into the discussion. The most abused party, of course, has been the trade union movement which has traditionally been the principal protagonist for those of our citizens who work largely with their hands. It has become clear that our national stability and prosperity largely depend upon decent working conditions and wages for the bulk of those who labor with their hands but this fact was somewhat obscured in the recent discussion of the crimes of a limited number of officers of labor organizations.

I think, therefore, that we can all regain a lost perspective from the very excellent editorial which follows, taken from the September 7, 1959, editorial page of the Fresno Bee.

TRADE UNIONISM, ITS NEEDS, RESPONSIBILITIES

"Trade Unionism" was the title of a piece written by the late C. K. McClatchy, for more than 50 years editor of the Sacramento Bee. It appeared on May 27, 1911, in his personal column, "Merely Some Private Thinks," on the Bee's editorial page. This being Labor Day, its republication is both fitting and informative. C. K. wrote:

"Trade unionism has had and has its evils. It has fallen here and there under the domination of corrupt and cruel men. It has too often been blind to, if it has not condoned, the crimes of some of its members, while sheltering the guilty. It seldom has taken advantage of its power to do injustice. It has been used by scoundrels as a political weapon against the best interests of good government.

"Yet when everything has been said—alike that which is only suspected, as well as that which can be proved—it must be admitted that trade unionism on the whole has been not a vast benefit to the working class, but as well a blessing to civilization, to humanity, to mankind.

"Admit everything that has been charged against it, the offenses of trade unionism against organized capital, against justice, are not one hundredth part as rank as those of organized capital against the laboring classes, against common rights—offenses which still would be continued practically everywhere in their shame and in their infamy if it were not for trade unions; offenses which smell to high heaven today where no trade unionism flourishes to do battle in the name of common humanity against the sweatshop system and similar evils.

"Were it not for the wonderful work done by labor unions in the United States the laboring classes still would be working nerve-killing hours at miserable pittances. They would have no time for pleasures, for leisure, for mental improvement. They would be little better than the beasts of the field.

Not alone the United States, but civilization, mankind and womanhood, owe a deep debt of gratitude to the labor unions. He is either blind or will not see, who will deny this; either sightless to every patent fact that lies about him on every hand, or else a hater of labor unions because they have forced the hoggish class to which he belongs to pay living wages to toiling workers.

"That a union of workingmen sometimes leads to unjust and unjustifiable demands goes without saying. But a union of capitalists frequently results in oppression; in illegitimate if not illegal squeezing of the consumer; in an advance of prices for the necessities of life, justified in law but not in equity. In neither case should employer nor employee be deprived of all right to organize, solely because it happens that organization sometimes leads to injustice.

"The only weapon the laboring man has is unity. He should cling to it. He should be encouraged and aided to its possession. He is learning day by day to use it better; with more moderation; with more justice. Surely he would have to labor overtime in order to use it more unjustly than organized capital often does. And certainly no one has the legal or any other right to declare he shall not have such a weapon."

Fresh Evidence of the Need for the Item Veto

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEATING. It seems to me the recent difficulties which we encountered with regard to the public works measure should have caused us to again focus our attention on the need for the item veto. I feel confident that the time will come when we shall have to enact something along these lines, and it seems to me the sooner, the better.

I ask unanimous consent to include in the Appendix of the RECORD my remarks entitled "Fresh Evidence of the Need for the Item Veto."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR KEATING

FRESH EVIDENCE OF THE NEED FOR THE ITEM VETO

I voted to sustain the President's veto of the public works appropriation bill. I did so as a salute to the Chief Executive's political courage in disapproving a measure he knew was of great importance to numerous localities and States. I supported the President because I believed he was completely justified in denying his approval to a bill which contained a plethora of unauthorized, unbudgeted, unapproved items.

After all, Mr. President, we have established certain procedures which should be followed before rivers and harbors and other public works projects should be authorized and funds appropriated for them. Such proposals must gain the approval of the Corps of Engineers. They must be found fiscally sound by the Bureau of the Budget. They should be included in the President's budget.

When a project has cleared those hurdles—hurdles which Congress has created to save itself from wasteful and unneeded spending—then it should get a green light from the House, the Senate and the President. But we should not ignore the safeguards we have established. If we do, why erect them in the first place?

Certainly we cannot have it both ways. We cannot set up tests for each project to pass in order to avoid unnecessary spending, and turn right around and ignore those tests and appropriate funds which have not been justified.

Yet that is what this Congress has done in passing on two occasions appropriation measures literally riddled with unauthorized, unbudgeted items. It is the height of irresponsibility for us to continue on this course, and I commend the President for so sternly calling a halt.

I hoped, therefore, that we would sustain the President's action, and that the Appropriations Committees would finally see the light and promptly give us a bill which contained only properly approved projects. Unfortunately the veto was overridden.

My only regret is that the President was forced to veto his entire measure. I wish he possessed the power to prune out the unnecessary items in this appropriation measure, leaving the good parts, and approving only the budgeted and authorized items. That is the sound and orderly procedure. It can be made possible by giving the President the item veto power.

For many years I have advocated granting the President the power to veto individual items in appropriation bills. Vigorous and wise application of that prerogative by a number of our Governors has resulted in substantial savings, and there is every indication even more fruitful results could be obtained on the Federal level. Political scientists, students of government, and numerous others who have looked into this matter are convinced that it would be a healthy and desirable means for eliminating much of the fat and wasteful spending now contained in appropriations measures approved by Congress.

Most State Governors today possess this power, and it has been consistently advocated by occupants of the White House. President Eisenhower, in his state of the Union message this year again called for the power of item veto, describing such authority as "one of the most important corrections that could be made in our annual expenditure program, because this would save tax dollars."

I agree wholeheartedly with the President's view of the tremendous worth of this additional grant of authority. It is my estimate that hundreds of millions of dollars could be saved annually by strong application of the item veto.

The two public-works bills vetoed by the President this year provide further evidence of the crying need for this grant of authority. To a lesser extent, the same may be said for the housing bill vetoed by the President.

Of course, as things now stand, our Chief Executive must either accept an entire appropriation bill, including all wasteful, unnecessary items, or veto the whole measure, including funds that are justified and needed. If the President had the item veto power he could have pruned the unbudgeted, unapproved provisions from the public-works bill and then have signed a measure that would be sound by every established yardstick.

I am pleased to note that the wise use by the President of his veto power this year has aroused new interest in the item veto proposal. For example, the Washington Post of September 11 pointed out that the failure of the majority leadership to improve on the first public-works appropriations bill "virtually insured the second veto which came so promptly." The Post went on to note that "Congress is unlikely to give up its close direction of rivers and harbors, reclamation projects, and the like until the extravagance of some of these ventures brings about public pressure for a more orderly system, free of pork-barrel politics. But even if Congress ultimately gets around the public-works vetoes they may at least have focused new attention on such abuses. The whole performance is a compelling argument for the item veto."

I subscribe strongly to that evaluation of the present situation as it relates to the need for granting the President the item veto power. The item veto is the only method by which logrolling can be expunged from appropriation bills. Certainly we should not deny the President any weapon he can employ to bring about reductions in unnecessary spending, and in my view the item veto would be the most effective tool we could possibly provide in this never-ending fight to save the taxpayers' money.

On February 3 of this year, in cooperation with a number of other Senators I introduced Senate Joint Resolution 44, which proposes a constitutional amendment to grant the President the power of item veto. Under the terms of this proposal, the President would have the power to disapprove any item or items of any general appropriation bill, just as he can now disapprove as a whole any bill presented to him by Congress. Such vetoes would be, of course, subject to overriding by Congress. This resolution is stated in terms of a constitutional amendment because I believe that is the clean-cut, decisive manner in which to approach the problem.

However, I am willing to support any sound legislative move embodying the same principle as the item veto, although I have some reeservations on constitutional grounds as to whether such authority can be delegated other than by amending the Constitution. On July 13 of this year I joined with Senator CURTIS and others in sponsoring S. 2373, which would authorize the President to reduce or eliminate, by Executive order, amounts from appropriations bills. Here, the President's action would be subject to normal congressional review and possible overriding by majority vote of either House. This proposal seeks the same goals as the direct item veto idea, and it has the additional virtue of not having to run the time-consuming gauntlet of approval by the legislatures of three-fourths of the States.

I am hopeful our experience in this session of Congress, where the President has wisely and vigorously employed the veto in the interests of all the American people, will impel a full study of all these proposals to curb wasteful spending. At a time when all of us should be dedicated to fiscal soundness, at a time when all of us should be searching out every means to balance the budget, a full congressional appraisal of the item veto and Executive order proposals is in order.

It is my hope that in the next session these ideas will be the subject of hearings by the Senate Judiciary Committee, and then a proposal will be brought to the floor of the Senate where I am confident of its success. Provision of authority for the President to cut down excessive and unwarranted congressional appropriations—be it by item veto or Executive order—is a step long overdue. No step will contribute more directly nor soundly to wise saving of taxpayers' funds.

I believe it would be helpful to have the text of these two proposals follow my remarks, and they follow:

"SENATE JOINT RESOLUTION 44

"Joint resolution proposing an amendment to the Constitution of the United States relative to disapproval of items in general appropriation bills

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"'*Article* —

"'SECTION 1. The President shall have the power to disapprove any item or items of any general appropriation bill which shall have passed the House of Representatives and the Senate and have been presented to him for his approval, in the same manner and subject to the same limitations as he may, under section 7 of article I of this Constitution, disapprove as a whole any bill which shall have been presented to him.

"'SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.'"

"S. 2373

"A bill to authorize the President to reduce or eliminate by Executive order any appropriation or appropriations made by any Act or joint resolution of the Congress

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized to eliminate or reduce by Executive order, in whole or in part, any appropriation or appropriations made by any Act or joint resolution, whenever, after investigation, he shall find and declare that such action will aid in balancing the budget or in reducing the public debt, and that the public interest will be served thereby: *Provided,* That whenever the President issues an Executive order under the provisions of this Act, such Executive order shall be submitted to the Congress while in session and shall take effect upon the expiration of the first period of sixty calendar days of continuous session of the Congress following the date on which such order is transmitted to it; but only if, between the date of transmittal and the expiration of such sixty-day period, there has not been passed by either of the two Houses a resolution stating in in substance that that House does not favor such order: *Provided further,* That the continuity of session shall be considered as broken only by an adjournment of the Congress sine die, but, in the computation of the sixty-day period there shall be excluded the days on which either House is not in session because of an adjournment of more than three days to a day certain. As used in this section, the term 'appropriation' includes an authorization to create obligations by contract in advance of an appropriation.

"SEC. 2. Any appropriations or parts thereof eliminated under the authority of this Act shall be impounded and returned to the Treasury, and the same action shall be taken with respect to any amounts by which any appropriations or parts thereof may be reduced under the authority of this Act."

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include copy of my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE, of West Virginia)

WASHINGTON, September 14, 1959.—One of the most encouraging developments insofar as the Fifth Congressional District is concerned was the action by the House and the Senate in overriding the President's second veto of an appropriation bill for flood control and navigation projects and other public works.

This means that the final legislative obstacle to beginning work on two urgently needed flood control projects in the Fifth Congressional District—Brush Creek at Princeton and Meadow River at East Rainelle—at a cost of about $500,000 each—has now been completed. Also included in the bill was nearly $71,000 to complete preengineering planning for the Williamson flood wall, as well as funds to continue the resurvey on the Big Sandy River.

Because of the importance of these projects to the Fifth District, I found it impossible this year to return home for Labor Day, as has been my custom. The House voted on Tuesday on the revised public works bill and those of us who are interested in providing adequate flood protection for our people had to spend Labor Day in Washington rallying support for the bill.

Both the House and the Senate passed the bill, the total of which was reduced by 2½ percent. The President vetoed this second bill but for the first time in 6 years the President's veto was overridden.

I cannot understand the President's veto. He objected to new starts included in the bill which had not been budgeted by the Budget Bureau—including the Princeton and East Rainelle projects. Yet, he does not object to the use of foreign aid funds to start almost identical projects in foreign countries.

It is popular to refer to the public works bill as pork barrel. But how in the world can anyone believe the projects in the Fifth Congressional District of West Virginia are not justified. The loss from recurring floods has been tremendous and unless these projects are built, the areas involved can look forward to frequent recurrence of devastating and costly disasters.

There is yet one difficulty to be faced before the funds included in the appropriation bill can actually be spent.

President Eisenhower can freeze the funds for all projects not budgeted by the Bureau of the Budget. But if he does, the money will remain allocated to these projects and cannot be used for any other purpose. I sincerely trust he will not do this. There would be nothing to be gained by such stubborn action on the part of the President.

The Princeton and East Rainelle and Williamson projects are urgently needed. Our people have suffered long enough. Now that Congress has spoken in such a decisive manner, the President should permit Army engineers to proceed in an orderly manner and get the projects underway without further unnecessary delay.

At this time I would like to acknowledge the tremendous help of Speaker SAM RAYBURN and Senate Majority Leader LYNDON JOHNSON in helping secure approval of the projects in the Fifth District. These two men are sincere friends of West Virginia. They understand our problems and they have gone out of their way to be helpful, not only on this particular problem, but on other matters of great interest to our State.

FULL DISCLOSURE ON FOREIGN AID SPENDING URGED

The House, in approving the mutual security appropriation, adopted an amendment requiring the International Cooperation Administration to make a full disclosure to Congress on expenditures of foreign aid funds. The Senate has knocked this amendment out of the appropriation bill.

A determined effort will be made to keep this provision in the bill. I am a member of a Government Operations Subcommittee which serves as a watchdog of the foreign aid program. Our experience has been that ICA officials make a determined effort to cover up waste and misuse of funds. Requests for information are frequently denied.

A congressional mandate cutting off funds in the event information is withheld would be a big help in efforts to bring about better, more efficient operation of the program.

The Fabricating Clause as Effected by Section 8(e) of the Labor-Management and Disclosure Act of 1959

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, because of the limitation of time in the debate on the conference committee's report on the recently passed labor reform legislation, it was impossible during that debate for me to establish a very important point of legislative history relating to the effects of section 8(e) of the new Labor-Management Reporting and Disclosure Act of 1959. For that reason, I consider it imperative that the legislative intent be made clear on a proviso contained in this act.

Many building trade unions officials advise me that there have been numerous questions submitted to them both by local union officers as well as contractors asking the question whether or not their particular subcontracting clauses in their existing agreements are covered by the proviso to section 8(e) of the new Labor Management Reporting and Disclosure Act of 1959. More particularly,

the question has arisen by the Plumbers and Pipefitters International Union based on what is known as their fabricating clause. In the plumbing and pipefitting industry, plumbing or pipefitting contractors have a collective bargaining agreement with the Plumbers and Pipefitters local unions, recognizing the Pipefitters local unions as the exclusive bargaining agent for all journeymen pipefitters engaged in fabrication and installation of pipe on a job site.

The collective-bargaining agreement further provides that all pipe installed on the job site must be either fabricated on the job site or in a shop of the employer. By fabrication is meant the cutting, bending, or fitting of pipe. A pipefitter is a fabricator. His job is to fabricate pipe. Fabrication of pipe can be performed either at the construction site or in a shop.

There is a further clause in the contract that provides that the contractor may subcontract out the pipe that is to be installed on the jobsite for fabrication in another shop provided that the subcontractor to whom the pipe is to be fabricated has an agreement with a local union of the pipefitters and pays the prevailing building and construction wage rate for pipefitters engaged in the fabrication.

This subcontracting clause is agreed upon in order to protect the wage rate and working conditions of the pipefitters. It is a term and condition of employment.

Section 8(e) was written in the Labor Management Reporting and Disclosure Act of 1959, abolishing hot cargo clauses and other forms of contract boycotting activity. However, there was inserted the following proviso: "*Provided*, That nothing in this subsection (e) shall apply to an agreement between a labor organization and an employer of work to be done at the site of the construction, alteration, painting, or repair of a building, structure, or other work."

The proviso above set out embraces and covers all forms of contracting or subcontracting clauses in agreements between building and construction contractors and building trades unions, with respect to work to be done at the jobsite. The pipe installed on the jobsite must be cut, treated and fabricated prior to installation. This is done at jobsite in some jobs or at the shop of the employer, or may be subcontracted by the contractor. This is all a question to be covered by the collective bargaining agreement.

The proviso permits plumbers and pipefitters local unions to bargain with their contractors relative to the contracting or subcontracting out of any fabrication of the pipe or the parties may agree that it may be done at the jobsite.

A question has arisen as to whether or not the plumbers and pipefitters fabrication clause falls within the above quoted proviso of section 8(e). It was the intent of the conferees that the quoted provision 8(e) applies wherever the work involved could be performed at the construction site. Fabrication can be and generally is performed at the construction site and since the fabrication clause relates to work which can be done at the jobsite, the fabrication clause contained in the National and Local Agreements of United Association local unions, is within the coverage of the construction industry proviso in section 8(e). This matter was expressly considered and discussed in the conference on the labor reform bill. By use of the phrase "relating to work to be done at the site of the construction," the conferees intended to cover all work which could be done at the site of the construction. The type of building and construction clauses which are outlawed and do not fall within the proviso are clauses which restrict the use and installation of manufactured articles. The proviso was never intended to prohibit a fabrication type of clause where the work or fabrication could be done or performed at the jobsite.

Payment in Lieu of Taxes

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Resolution No. 1503 from the Mariposa County Board of Supervisors, Mariposa, Calif.:

BOARD OF SUPERVISORS, COUNTY OF MARIPOSA, STATE OF CALIFORNIA, RESOLUTION NO. 1503

Whereas over 50 percent of the land in the County of Mariposa, State of California, is under Federal control; and

Whereas Federal control of said land in said county is undermining the revenue structure of the local government; and

Whereas S. 910, payment in lieu of taxes, cosponsored by 33 bipartisan cosponsors, has been favorably reported out of committee by the Senate Government Operations Committee; and

Whereas H.R. 5731 and H.R. 6073 have been referred to the House Committee on Interior and Insular Affairs, being identical versions of S. 910: Now, therefore, be it

Resolved, That the Board of Supervisors of the County of Mariposa, State of California, do hereby approve and respectfully urge passage of S. 910, H.R. 5731, and H.R. 6073, payment in lieu of taxes; and be it further

Resolved, That copies of this resolution be sent to Senators THOMAS H. KUCHEL and CLAIR ENGLE and Representative HAROLD T. JOHNSON; and be it further

Resolved, That the Board of Supervisors of the County of Mariposa, State of California, respectfully request that the honorable Senators and Representative above mentioned read this resolution on the floor of the Senate and House of Representatives and have it published in the CONGRESSIONAL RECORD.

Passed and adopted by the Board of Supervisors of the County of Mariposa, State of California, this 10th day of September 1959, by the following vote:

Ayes: Supervisors McGregor, Ellis, McCay, Miller, Conrad; noes: none; absent: none.

EUGENE MCGREGOR,
Chairman of the Board.

Attest:

GABRIELLE WILSON,
County Clerk and Ex-Officio Clerk of the Board.

The Labor Movement as It Appeared in 1911

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks I am submitting herewith an editorial which appeared in the Sacramento (Calif.) Bee on September 7, written in 1911 by the late C. K. McClatchy, editor of the Bee for more than 50 years. His observations written nearly 50 years ago regarding the labor movement and the responsibilities of union leadership are as appropriate now as they were then. Mr. McClatchy was certainly farsighted in evaluating the problems involving the labor movement and it is with respect and pleasure I submit his comments:

TRADE UNIONISM, ITS NEED, RESPONSIBILITIES

"Trade Unionism" was the title of a piece written by the late C. K. McClatchy, for more than 50 years editor of the Sacramento Bee. It appeared on May 27, 1911, in his personal column, Merely Some Private Thinks, on the Bee's editorial page. This being Labor Day, its republication is both fitting and informative. C. K. wrote:

"Trade unionism has had and has its evils. It has fallen here and there under the domination of corrupt and cruel men. It has too often been blind to, if it has not condoned, the crimes of some of its members, while sheltering the guilty. It seldom has taken advantage of its power to do injustice. It has been used by scoundrels as a political weapon against the best interests of good government.

"Yet when everything has been said—alike that which is only suspected, as well as that which can be proved—it must be admitted that trade unionism on the whole has been not alone a vast benefit to the working classes, but as well a blessing to civilization, to humanity, to mankind.

"Admit everything that has been charged against it, the offenses of trade unionism against organized capital, against justice, are not one-hundredth part as rank as those of organized capital against the laboring classes, against common rights—offenses which still would be continued practically everywhere in their shame and in their infamy if it were not for trade unions; offenses which smell to high heaven today where no trade unionism flourishes to do battle in the name of common humanity against the sweatshop system and similar evils.

"Were it not for the wonderful work done by labor unions in the United States the laboring classes still would be working nerve killing hours at miserable pittances. They would have no time for pleasures, for leisure, for mental improvement. They would be little better than the beasts in the field. Not alone the United States, but civilization,

mankind and womanhood, owe a deep debt of gratitude to the labor unions. He is either blind or will not see, who will deny this; either sightless to every patent fact that lies about him on every hand, or else a hater of labor unions because they have forced the hoggish class to which he belongs to pay living wages to toiling workers.

"That a union of workingmen sometimes leads to unjust and unjustifiable demands goes without saying. But a union of capitalists frequently results in oppression; in illegitimate if not illegal squeezing of the consumer; in an advance of prices for the necessities of life, justified in law but not in equity. In neither case should employer nor employee be deprived of all right to organize, solely because it happens that organization sometimes leads to injustice.

"The only weapon the laboring man has is unity. He should cling to it. He should be encouraged and aided to its possession. He is learning day by day to use it better; with more moderation; with more justice. Surely he would have to labor overtime in order to use it more unjustly than organized capital often does. And certainly no one has the legal or any other right to declare he shall not have such a weapon."

Washington Report

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. UTT. Mr. Speaker, under animous consent to extend my remarks in the Appendix of the RECORD, I would like to include my newsletter of September 17, 1959, to my constituents on the subject of Government bond interest:

WASHINGTON REPORT
(By JAMES B. UTT)

This is what the summer TV programs bill as a repeat. However, while the subject matter is the same as that contained in my release of February 26, the script is somewhat revised. I do this for the purpose of bringing to the attention of the people in my district the serious financial crisis faced by the U.S. Government and to show that this crisis can be met if the politicians in Congress will show a little more love for their country than for themselves.

The spectacular headlines on the front page deal with high interest rates, but you have to turn to the editorials and the financial columns of the newspapers to find the basic causes. It is a complicated question and is little understood by the average citizen who is so adversely affected. In two special messages to the Congress the President has put us on notice of the impending crisis and has requested prompt and positive action to permit the Treasury to manage our debt upon a sound fiscal basis.

The Ways and Means Committee, to which this legislation was referred, spent weeks in executive sessions with the Secretary of the Treasury and the Chairman of the Federal Reserve Board. At no point did the members of the Ways and Means Committee question the testimony of these 2 high Government officials, and at one time our committee voted 15 to 10 to provide the required legislation. The 10 Republican members and 5 Democrats voted affirmatively. However, the matter drug along for a week or 10 days, and then the committee reconsidered the matter and, on motion to report out the needed legislation, the vote was 14 to 11 against it with the 10 Republican members and 1 Democrat voting for it. What happened to make this committee reverse itself? The crisis had not vanished. There was no challenge to the testimony which we had received from the Secretary of the Treasury. The answer is simple—political instructions from the Democratic leadership. High interest rates was to become the Democratic campaign issue for 1960. Because high interest rates strike at every segment of our economy and the cause is complicated to explain; it appeared to be the only campaign issue left for the Democrats. Unemployment had disappeared, prosperity had returned, international relationships had improved, and the Republicans, backed by the President's vetoes, had slowed down the wild spending programs introduced at the first of the session. Ninety percent of the financial writers, including the Democratic South, have used millions of words urging the Congress to meet this crisis before it explodes; but the Democratic leadership turned a deaf ear to this warning and, when a substitute motion was made on the floor of Congress to grant the President the right to raise interest rates on long-term bonds, all but two Republicans and only one Democrat voted for it. The Democrats viewed with alarm the rising costs of money in the short-term market but would take no steps to remove the pressure by permitting the Federal Government to raise the statutory interest rate of 4¼ percent on long-term bonds. As a result, the Treasury is forced to go into the short-term market and compete with the needs of every consumer in America. This great demand, which far exceeds the supply, automatically forces an increase in the rental charge for the use of money.

We are a victim of our own prodigality. In other words, the chickens have come home to roost. For years we have been spending more than we could afford to spend and the deficits have built up. The $13 billion deficit last year had to be financed in the short-term market and created an unprecedented demand for money. On the other hand, if we had been able to have reduced our national debt by even a few billion dollars, we would have supplied money to the short-term market and interest rates would have gone down. As Americans we should not be proud of the fact that many of our Government bonds are traded in the market at 81 and 82 cents on the dollar, while bonds of the Japanese Imperial Government are selling at 100 to 101 cents on the dollar in the same market. In fact, there are a dozen foreign long-term issues selling at over a hundred cents on the dollar because these foreign governments are realistic and pay an interest rate sufficiently attractive to invite buyers.

The simplest illustration which I can give on the effect of supply and demand on the short-term market would run something like this: You have a pail of water (which corresponds to the supply of short-term money) with which you intend to water a large flock of chickens (the demand), but along comes a thirsty hog (the Federal Government) and preempts more than 50 percent of the water in the pail so that some chickens will either go without water or, figuratively speaking, would pay a higher price for what they get. If that hog was not thirsty and came along with another pail of water, there would be more than the chickens needed.

The crisis is so serious that I firmly believe the President will take it to the people on television and call a special session later this fall, as the maturing issues will have to be paid out of short-term borrowing and, every time the short-term interest rate goes up, the market value of the outstanding long-term bonds will go down. In other words, as the short-term rate goes up a percentage point, the market of the long-term bonds now selling in the eighties will drop a minimum of another five points. The only other alternative to this is printing-press money, and let me remind you that printing-press money issued in several of our neighboring republics has depreciated the value of their currency 99 percent, which in this country would mean that your dollar would be worth one penny in a very few years.

The Urgent Need for Doctors

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Madam President, the Oregon Journal, of Portland, on Septemeber 8, 1959, published a very thoughtful and informative editorial entitled "Oregon and the Nation Need Doctors." The article discusses the fact that not enough persons are being educated for the medical profession to keep up with our rapidly increasing population. The editorial also refers to a statement by the distinguished Dr. Howard A. Rusk, who was a guest in my native city over the weekend, where he delivered the annual Sommer Memorial Lectures to the American Conference of General Practitioners.

Madam President, I am particularly pleased to ask unanimous consent that the editorial from the Oregon Journal be printed in the Appendix of the RECORD, because the very gracious occupant of the Chair at time time [Mrs. SMITH] has herself been a great leader in the cause of medical research legislation. I think all the Nation, as well as all mankind, owe a debt to her and to her eminent colleague on the Committee on Appropriations, the distinguished senior Senator from Alabama [Mr. HILL], for their successful efforts to expand medical research, medical education, and health opportunities for our people and the rest of the people of the world. This year they helped greatly in bringing about expanded funds for the National Institutes of Health, which have done so much to explore new realms in the field of medical discoveries.

The editorial in the Journal also has drawn upon a recent article of mine in the August 1959 issue of the Progressive magazine on the critical shortage of members of the medical profession, and thus I believe the editorial should appear in the Appendix of the RECORD for the information of Members of the Senate and House.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OREGON AND THE NATION NEED DOCTORS

Is there a dangerous shortage of doctors and medical education facilities in the United States—and in Oregon?

Oregon's United States Senator NEUBERGER, a leader in health and medical research legislation since he entered the Senate in 1955,

says there is. And he documents his case in the August Progressive magazine.

Dr. Howard A. Rusk, medical editor of the New York Times and international authority on human rehabilitation (who is lecturing in Portland this month) says there is, and that the situation is becoming worse.

A recent editorial in the University of Oregon medical school's report to its alumni publication says there is.

The Bayne-Jones report made last year to the U.S. Department of Health, Education, and Welfare indicates that there is to the extent that the ratio of doctors to population is decreasing steadily and alarmingly.

And the Oregon State Medical Society admits that there is a current shortage of approximately 75 doctors in Oregon.

More specifically, Senator NEUBERGER says that our annual production of doctors will have to increase at least 27 percent a year to keep up with population gains. He adds that while our ratio of doctors to patients has been declining, Russia's has been increasing amazingly.

Oregon's ratio (with 1,970 doctors in practice today) is 1 doctor to 860 people. And while this is slightly worse than the national average, now 1 to 820, our ratio has improved from 1 to 920 in 1950 to today's 1 to 860, with a 20-percent increase in the number of practicing physicians since 1950.

In Portland, the State's principal medical center, the ratio is much better, about 1 to 550, but in one Oregon county we have no doctors at all, and we could place 75 additional doctors today—if we had them.

Nationally we have added only 6 new medical schools since 1950 (making only 85 altogether with 29,500 students) and three of them had not graduated any classes up to this year. Oregon's only medical school, the University of Oregon medical school in Portland, admitted only 79 students last year and has been stabilized at about 75 graduates a year. The situation would be more serious if the medical society did not place between 50 and 60 out-of-State doctors in Oregon each year.

Dr. Rusk estimates we'll need 5,250 more doctors each year to serve an estimated 230 million people by 1975.

Senator NEUBERGER estimates we need to spend between $500 million and $1 billion for new medical schools and research institutions in the next few years, just to prevent losing further ground. A new medical school costs around $35 million these days.

And Dr. Rusk also says we need 70,000 more nurses, 8,000 more occupational therapists, 3,500 more medical social workers, 6,000 more physical therapists, 10,000 more clinical psychologists and 3,000 dental school graduates.

With existing medical schools struggling to maintain their standards and faculties and students finding it harder and harder to finance 8 to 11 years of medical education, internship and residency, it's a staggering problem.

What's to be done?

Various suggestions include more scholarships for gifted medical students, more and more private gifts and grants, huge State expenditures for 15 to 20 new medical schools, and probably large Federal appropriations beyond those already being made for teaching hospitals and research centers.

Medical educators, Government officials, and the Nation's taxpayers face a terrifying problem. If they don't solve it, the penalty will be increased suffering and death for untold millions of Americans—our vaunted "miracle drugs," improved techniques and preventive medicine to the contrary notwithstanding.

The American Missile Lag

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "The American Missile Lag" which appeared in the March 1959 issue of the Free World Forum under the authorship of Mr. M. Stanton Evans, who, since he wrote that article, has become an editorial writer for the Indianapolis News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Free World Forum, March 1959]

THE AMERICAN MISSILE LAG

(By M. Stanton Evans)

August 14, 1958, was a day for grave pronouncements in the U.S. Senate. Part of it was devoted to debating the subject of when and how the United States might surrender to the Soviet Union. It began when Senator RICHARD RUSSELL, of Georgia, told his colleagues, with indignation, that he had heard that "some person or persons holding office in the Department of Defense have entered into contracts with various institutions to conduct studies to determine when and how and in what circumstances, the United States would surrender to its enemies in the event of total war."

Senator STUART SYMINGTON, of Missouri, had placed in the RECORD, on August 8, an article by Brig. Gen. Thomas Phillips, which said:

"Three nonprofit scientific agencies working for the Defense Department or the services are making studies as to whether the United States can survive and continue to fight after an all-out nuclear attack. One is studying the conditions when surrender would be advisable, rather than try to continue a war that is already lost.

While administration spokesmen assert that the United States is not losing the arms race with the Soviet Union, and the public is confused between such declarations and those to the contrary by Congressmen and commentators, the scientists are proceeding on the assumption that the Russians have achieved, or rapidly are achieving, intercontinental military superiority with missiles."

Senator SYMINGTON commented that such surrender studies were "contrary to the great traditions of our Nation"—a statement with which the other participants emphatically agreed.

Senator William Knowland of California, however, challenged the assertion that any official study was underway as to how the United States might surrender. General Phillips' article had reference to a study about losses from atomic attack, but the study, as he understood it, has nothing to do with the possibility of surrender by the United States.

Here the discussion backed away from the techniques of surrender to the underlying issue which had generated the discussion. "I say on the floor of the Senate today," SYMINGTON declared, "with great sincerity, and based on my knowledge of the situation, that the possible enemy is ahead in the intercontinental ballistic missile field—I do not want to be an alarmist, but the American people have a right to know the truth."

This frightening conviction had supposedly stirred up the hypothetical surrender study. Yet, everyone had previously agreed that such a study of possible surrender suggests a moral degeneracy in the American Nation and, made public, deals a bruising psychological blow to the American people. Senator SYMINGTON expressed himself emphatically on this point.

Thus, according to Senator SYMINGTON's analysis, we get the following chain of causation: (1) The administration has let U.S. defenses slide scandalously; (2) the result is that there is abroad and in the land the conviction (or, as in the case of the "scientists," the assumption) that America is disastrously behind the Soviets in missile development; (3) from this conviction stems another—that we are, or soon shall be, at the mercy of the Soviets—and a surrender psychology is the result; (4) the consequent defeatism is, in his words, "contrary to the great traditions of our Nation," and the "beginning of a form of appeasement which, unless it is stepped on now, may mark the eventual death of this country."

Thus, we proceed from administration bungling to the possible eventual death of this country. The last three parts of the indictment, in the view of this writer, are correct. It seems obvious enough that a widespread conviction of Soviet weapons superiority can have a damaging psychological effect.

But responsibility for this psychological chain reaction has yet to be fixed—and can be fixed only by an inquiry as to the essential facts of relative U.S.-U.S.S.R. capabilities. If, as claimed by SYMINGTON, KENNEDY, LYNDON JOHNSON, et al., the United States is, in fact, behind, then there might be a case for fixing ultimate blame on the administration. Although the blame, as urged by some Republicans, might be traced to the Truman regime. But if the case is otherwise, and the United States is not, in fact, behind, then Senator SYMINGTON and others have an even heavier share of blame to shoulder—a fact which they refuse to contemplate. For, by their charges of a "lag," they are making "sputnik diplomacy" possible for the Soviets—even if the Soviets do not in fact possess superiority. If the principal effect of a missiles lead is to give a nation a bargaining advantage, then the entire point of having the lead is to convince the opposing nation of one's superiority. If the opposing nation can be so convinced whether or not the lead exists, the main object has been obtained, the bargaining advantage achieved.

Thus, the effect of convincing Americans of Soviet superiority is exactly the same in terms of cold war results, as actually taking steps to put the enemy in possession of the physical equipment. As long as we believe the enemy to be superior, and act on that belief, it does not matter whether the enemy is in fact ahead or not.

If they are not supported by the facts, the pronouncements of Senator SYMINGTON and his political allies are themselves responsible for whatever defeatist psychology is present abroad and in America. It is the object of this study to discover who, in truth, is responsible for our psychological difficulties; and this may be determined only by resorting to the facts available about United States-Russian accomplishments in the missiles field.

Not long after the surrender debate was laid to rest on August 14, Senator JOHN F.

KENNEDY, of Massachusetts, delivered a portentious address in the Senate entitled "U.S. Military Power—Preparing for the Gap." In brief, Senator KENNEDY argued that the United States is "* * * about to lose the power foundation that has long stood behind [its] basic military and diplomatic strategy." "Shortly," he said, "the Soviets will have several times as many intermediate range missiles to destroy our European missiles and SAC bases; and intercontinental missiles to devastate our own country, installations, and Government; and history's largest fleet of submarines, and possibly long-range supersonic jet bombers, to follow up this advantage. If by that time (the period 1960–64) their submarines are capable of launching missiles, they could destroy 85 percent of our industry, 43 or our 50 largest cities, and most of the world's population."

"There is every indication that by 1960 the United States will have lost * * * its superiority in nuclear striking power."

Senator HOMER CAPEHART, of Indiana, practically alone among the Members of the Senate, decided to question KENNEDY's utterance. It appeared to him that there was a rampant tendency in the Senate to sell the United States short. "It is always being said that Russia is all right, that the Russians have more than we have. I do not know on whose authority these statements are based."

America, locked in a crucial psychological struggle with communism, owes a debt of gratitude to the resolution displayed on this occasion by Senator CAPEHART. If more Senators on both sides of the aisle had shared his skepticism, the American people might be better informed, if not about the status of our military situation, at least about the status of our own information on the subject.

For when one begins to probe beneath the generalities of Senators KENNEDY and SYMINGTON and others, he finds that they are based on very little in the way of concrete evidence.

When Senator CAPEHART directly challenged Senator KENNEDY as to the validity of the missile lag claim, CAPEHART got this answer:

"I refer the Senator from Indiana to what General Gavin said, published in Life magazine a couple of weeks ago. General Gavin had top confidential information, because he was head of one of the most important branches of the U.S. Army before he retired."

From his remarks and from the analysis of his speech it is clear that KENNEDY himself does not claim to know the facts. His chief authority—the only one he names, is Lt. Gen. James Gavin, the former Army Research Chief, who quit the service because of his differences with high Pentagon officials concerning military policy.

What, however, is the nature of Gavin's own knowledge? Nowhere in his testimony before the Preparedness Subcommittee of the Senate, or in his book, did he lay claim to having special information concerning Soviet capability. His testimony, generally thought to be ringing indictment of U.S. fumbling in the missile field, yields a different impression if read with care. The principal part of his testimony touching on the subject involved an examination of pictures made available by the Soviets in their November 7, 1957, "birthday parade," in which they displayed some rockets and other equipment. Indicating the extent to which we are reliant upon Soviet cooperation for information about their project, Gavin said:

"They have kept this equipment within the Soviet geographic area. It has not been seen in the satellite areas, and we have not seen it until they chose to show it to us. It is interesting, too, they did not show us any of the associated ground equipment, such as radars and computers and equipment that must go along. They just paraded these missiles.

The most powerful missile in the Soviet display, as identified by General Gavin, had an estimated range of about 350 miles. Some Western observers thought it was just an old made-over V–2. Tass, however, proudly identified the 350–mile missile as its ICBM—a confusion which has never satisfactorily been cleared up.

Thereupon followed this exchange between Counsel Weisl and the general:

Question: "General Gavin, in the interests of security of which you shall be the judge, what other equipment, in the area of missiles, does the Russian Army to your knowledge possess?"

Answer: "Well, the Russian Army possesses a family of surface-to-surface missiles, as far as we know, out to, well, they have announced an ICBM range which we, I believe, have accepted."

The first point to be noted is that the counsel asked Gavin to state what equipment, to his knowledge, was in the Soviet arsenal. In his answer, however, Gavin attributed U.S. estimates as to Soviet strength to "we"—obviously meaning persons in addition to himself, and, in all likelihood, as indicated by the "I believe," excluding himself. Moreover, the action of "we" consisted of "accepting" what the Soviets "announced."

In the course of his Senate testimony, General Gavin offered practically no further substantive discussion of Soviet long-range capability. He instead got into a discussion of limited war, and pointed out what he deemed U.S. inadequacy, in terms of doctrine and armament, to fight limited engagements. An important issue, and one in which the general's position—or that of Prof. Henry Kissinger, which it strongly resembles—may be correct. Nevertheless, the most minute and convincing discussions of this problem can do nothing to enlighten us about the missile gap on which he is cited as an authority. General Gavin spent most of his time talking about Soviet preponderance in conventional weaponry—a fact which, as a matter of quantitative magnitude, is denied by no one—and even gave some intimations that the direness of his prophecies concerned this imbalance only. Since he was not systematically questioned on this point, we cannot draw a firm inference about it. The following exchange, however, lends itself to various interpretations:

"Senator SYMINGTON. Why would the Russians ever want to fight an all-out war the way things are going? Wouldn't there be much more chance of their fighting a peripheral war?"

"General GAVIN. This colors very much my answer to relative capabilities, because I believe this is the case."

If we turn from General Gavin's testimony to his book,[1] we similarly fail to find solid information on Soviet missiles. There are many good things to be said for his book, particularly for its resolute anticommunism and its insistence that we keep constantly in mind the Soviet intention of destroying us. For all this, it offers little in the way of information—except perhaps, for the manner in which it suggests how little information there really is on this subject.

To take a striking example: It is generally believed that the Soviets have a huge long-range bombing force. Western observers have at least seen enough of their planes to determine that their designs are based on our own. Groups of them have been seen in flight. So esteemed an observer as Henry Kissinger has reported that by 1959, "the Soviet heavy bomber fleet is expected to exceed ours in numbers." And, certainly—while we are entitled to wonder about the authority for Professor Kissinger's statement—compared to our information on Soviet missiles, our knowledge concerning their air forces is encyclopedic. Yet General Gavin says:

"There are many well-informed individuals in intelligence circles who doubt that the Soviets have huge fleets of manned bomber aircraft. Instead, they believe that the Soviets achieved a significant lead over us by jumping ahead to missiles quite a few years ago, while at the same time they led us to believe that the bomber threat was the most serious."

This theory of Soviet deception is a striking one, and one that requires serious reflection. But it brings to mind a corollary that apparently failed to occur to General Gavin: If the Soviets could practice such a deception in the field of long-range bombers (where our knowledge of their project is relatively detailed and our own mastery of the art is highly advanced), could they not, with much greater ease, deceive us in the field of outer-space weaponry (an infant science in which our knowledge is uncertain, and where our information concerning the Soviet project is absolutely nil)?

General Gavin does, in fact, make the same point about the state of our knowledge in the missile field—although he doesn't set out with that object in mind. In his book he states repeatedly that America has fallen behind badly in missile development; in this respect the book supports the Kennedy and Symington thesis better than does General Gavin's testimony. As in his testimony, he carefully avoids claiming, on the basis of his own knowledge, that we are behind. Rather, he calls on other people as his authorities.

General Gavin makes the general statement that, in his opinion, the Soviets are ahead of us militarily and that their specific strength in many areas puts them in a position of clear advantage.

After this statement he seeks to support his "missile lag" thesis by reference to the statements of other people. Since these references constitute the whole of his sustained effort to document his position, they deserve careful examination. General Gavin calls in the following authorities to support his views: H. Rowan Gaither; the "Gaither report," prepared by a committee once headed by Mr. Gaither; Gen. Dwight Beach, Dr. Edward Teller, and Dr. Wernher von Braun.

The first source is H. Rowan Gaither, a former president of the Ford Foundation who was commissioned by President Eisenhower to head the Security Resources Panel of the President's Science Advisory Committee. General Gavin offers the following quotation by Mr. Gaither, taken from a New York Times dispatch of April 13, 1958:

"The relative strength of the United States in comparison with the Soviet Union and Red China is ebbing."

On what basis was this judgment made? Here is Mr. Gaither's own explanation of the remark:

"If we are to plan with any degree of hard realism, we must expect the Russians not only will maintain their rate of forward industrial and economic development. There are 40 years of explosive industrialization to support this belief. And let us not underestimate the potential power of Red China. It is on this basis that I must conclude that our relative strength is ebbing."

This, it will be observed, is quite a different matter from a firm judgment as to the relative capability in a particular kind of weaponry. Even assuming it to be entirely valid, it tells us nothing about United States-Russian capabilities. To pursue the matter further: What were the factual bases of Mr. Gaither's statements? He himself says:

"There are those who will argue that my assumptions put the Communist position in the most optimistic light possible, and, by contrast, our position in a pessimistic light * * * I fervently hope that, in this, history will prove I am in gross error."

[1] Gavin, James E., "War and Peace in Space Age" (New York, Harper, 1958).

It seems evident that Mr. Gaither was proceeding on safe assumption reasoning whereby, in the absence of concrete information, one arbitrarily determines that the Soviets are far in the lead. This mental procedure seems to stem from the idea that if the safe assumption is proved wrong, no particular harm has been done, and everyone can breathe a sigh of relief. As was suggested in the discussion of the reported surrender studies, however, this is not the case.

Second, there is the authority of the Gaither report. General Gavin invokes the authority of this report only indirectly, by quoting a comment on it from the British publication, New Statesman & Nation.

"The Gaither report," said this journal, "has revealed that, irrespective of any efforts which America may make, the Soviet preponderance in advanced weapons has reached such an absolute stage that America's national survival will depend, until 1961 at least, on Russian benevolence."

The general offers this amazing quotation as part of his mosaic of evidence. The statement is not an accurate paraphrase of the Gaither report—certainly a gloomy enough document without such embellishments—as the report was presented in the American press. Moreover, it is questionable whether the New Statesman and Nation actually saw a copy of the Gaither report itself, since it is still supposed to be a classified document.

If we assume, however, that the journal did in fact get hold of a "leaked" copy of the report, and if we further assume that its statement is an accurate reflection of what the report itself says, we still have settled nothing. We must try to answer the persistent question: upon what facts is the Gaither report based?

In the endless round of authorities alluding to the opinions of other authorities, the Gaither report is sometimes referred to as a repository of frightening information. Is this the final source of all the dire pronouncements, the first cause in the long chain of authorities, the fount of information where the facts are readily obtainable?

The answer would seem to be "No." There seems to be no doubt that the Gaither report indeed proclaims that we are in the greatest peril—which is probbaly why the administration has hesitated to release it. It is noteworthy, however, that the people most concerned about the Gaither report are those who have not read it; part of their concern, of course, is over the fact that the report is being kept from them, and perhaps their concern is justified. While the administration obviously seems to fear the impact the report might have on the people, it is not so obvious that the report is intrinsically convincing. In fact, it is of some evidential weight that the only people who have read the report, including the top military and civilian leaders of the country, have not been overly excited by it. If the proponents of the missile lag concept mean to support their case simply by appealing to the undocumented say-so of authorities, it hardly behooves them to impute an unheard-of mass dishonesty to our entire leadership. Their trust and scepticism seem to be entirely arbitrary, depending upon whether the authorities in question support or repudiate the doctrine of the lag. It is, of course, possible that the administration and the military, faced with overwhelming proof that we are behind, simply choose to suppress the evidence and to do nothing about it. That possibility, however, is not supported by any affirmative evidence—least of all evidence derived from the Gaither report itself. It should be remarked that, according to the New York Times' story recounting Rowan Gaither's remarks, a White House spokesman is reported to have said that "there was no factual information in the report that had not been made available to committees of Congress."

General Gavin quotes Gen. Dwight Beach of the Army as having testified "that the Soviets could have an ICBM capability in July 1958, although a very limited one." Let us, however, consider the way in which this testimony was qualified by General Beach and his superior officer, Gen. Lyman Lemnitzer, Acting Chief of Staff of the Army.

Congressman HESS, of Ohio, asked: "When do we anticipate that Russia will have its ICBM's operational?"

General Beach: "It is my understanding that the first one, the earliest could be operational, deleted."

Mr. HESS: "July of this year?"

Mr. Beach: "That is right."

Mr. HESS: "So there will be * * *"

Mr. Beach: "That is the very earliest."

Mr. HESS: (Deleted).

General Lemnitzer: "Well, I believe there is a variation of intelligence estimates on this point. Having a missile that could be used in tests and having them in quantity and in the hands of operational units are two very different things.

"I believe that the best answer to that question can be given by the intelligence people. I don't have any particular estimate."

Further enlightenment as to the nature of General Beach's statement was forthcoming when he offered this clarification:

"I said the first capability thought the Russians could have with ICBM, and it would be a very limited one, would be in July of this year, 1958, and as General Lemnitzer has stated that would be the first one. If that data is correct—it is certainly the earliest. * * *"

Later on, there was an exchange reflecting on the nature of information upon which General Beach based his tentative estimate, and the nature of information we have about the Soviet program. Discussing Soviet IRBM's, General Daley said:

"I believe to some extent when we show development here and operational the chart is misleading. These are actual reflections of firings which we believe we have data on.

"I am sure from intelligence that I am aware of, that the Russians were working in the IRBM field for many years. This has been shown—they were at least drawing designs, because German prisoners who came back I think as early as 1950 sketched out things that the Russians said they were using."

Congressman PRICE asked:

"We don't know, then, whether they have the concept or even thought of the IRBM as we think of it, at the same time? I am trying to draw a comparison of the progress that they have made when we began the race for IRBM's and ICBM's, to our own situation.

"Now, how would you compare that?"

General Daley: "Well, sir, I don't think—in the first place, I think this chart is not designed to show any such rate of progress in these particular fields.

"Really, it is a better statement of the state of our intelligence than it is a statement of their development."

To say that our intelligence does not yield a reasonable estimate as to the state of Soviet development is in itself an indictment of the state of our intelligence.

The guarded and hypothetical nature of General Beach's statement, and the thinness of the intelligence information with which it was associated, diminishes its value as an authoritative source for General Gavin's views.

Even more to the point, however, is the fact that General Beach's testimony was practically identical in content with that presented by General Gavin himself to the Senate Preparedness Subcommittee. Both were elaborating the Army's views on the uses of missiles and Soviet capabilities, and both of the presentations emanated from the same sources within the Army. By quoting General Beach, General Gavin, was in effect, quoting himself.

General Gavin also refers to the remarks of Dr. Edward Teller, the famous nuclear physicist who appeared before the Senate Preparedness Subcommittee. In the course of his testimony, Dr. Teller made it explicit that missiles work was not the field of his competence and insofar as he ventured statements on the status of the missiles race, it is clear that his remarks are primarily drawn from the opinions of others. He stated to the committee that the half-ton weight of the Sputnik II, as announced by Moscow, demonstrated powerful thrust capability.

"Of course," he said, "we do not have direct and complete proof that Sputnik II indeed was half a ton. What little I could find out from our observation is in agreement with this claim, and the Russian claims in this general direction have proved so far correct, and I think it would be a great mistake to proceed under the assumption that they are only bluffing."

Mr. WEISL. "Then you believe that the Russians have an intercontinental ballistic missile at this time?"

Mr. TELLER. "Well, I certainly do not know, I cannot say it with complete certainty, but I would like to say this: They have said that they have the weapon. There is every reason to believe that they have it at least in the stage where they have constructed it and tested it."

On other phases of the ICBM problem, Dr. Teller had these comments:

Guidance: "I do not think that we know enough about the Russian guidance system to be able to say * * * with definiteness; at least I do not know enough to be able to say with definiteness that they have the required accuracy at the present moment."

Reentry: "What we have done in the field, I cannot say for two reasons. One is that I do not know sufficiently the details, and second, the details are classified. What the Russians have done in this field, I just simply do not know. But I am sure that it is a solvable problem, and for all I know, they may have solved it already."

Despite the great respect this writer feels for Dr. Teller—as a scientist and patriot—his statements on this subject cannot be considered either "expert" or "factual." His basis for estimating Soviet superiority is entirely nonscientific. It boils down to two things: (1) accepting the say-so of the Soviets; and (2) reasoning by the law of the "safe assumption."

The last authority quoted by General Gavin is Dr. Wernher von Braun. Certainly Dr. von Braun is competent in the field of rocketry; so here one of Gavin's authorities, at least, is a real expert in the field, and seems to come out strongly in favor of his position. But what is the basis of the evidence offered by Dr. von Braun? He repeatedly told the committee that we are behind the Soviets but his questioners failed to follow up his statements to determine what information this conclusion was based upon. Dr. von Braun did relate, however, an interesting story as to how his opinion was dramatically reversed:

"Whenever a German rocket scientist came back from Russia he was interrogated on what he had seen there. On the basis of these reports, I personally came to the conclusion that the Russians not only had made poor use of the German talent they had taken along to Russia, but actually that there was a lot of mismanagement in their missile program. I came to the conclusion that the Russian program wasn't very convincing, and not really dangerous.

"Shortly thereafter, I obtained my American citizenship. General Gavin then decided it was about time for me to get the real story, what we really know about the

Russian program. And then, I must say, my opinion changed completely. It became obvious to me that those Germans that had been taken to Russia not only were poorly used but they were actually left completely in the dark about the fact that there was a Russian program outside of their own operation, outside of the places to which they were assigned."

Although Dr. von Braun gives the specific kind of information on which he based his negative opinion of the Soviet project (eyewitness accounts), nothing so specific is told us about the information which caused Dr. von Braun to change his mind. Was any specific factual information imparted to him when he was told the real story, or was he simply given the conclusion and assumptions prevalent among his superiors, and persuaded to operate from there? If the first alternative is the case, what was the information? Is it classified? If so, why wasn't that fact at least mentioned?

Most significant of all is the fact that Dr. von Braun had his original judgment corrected by General Gavin. General Gavin is the source of Dr. von Braun's information; yet he is supposed to be an authority for the general's own views.

Such is the analysis of the evidence produced by General Gavin. Unless there is further, unnamed evidence behind his judgments, they are all based on the conclusions of other people. All of which makes it unnecessary to comment further on Senator KENNEDY's speech and other speeches in the Senate.

Thus, we have an infinite regress of authorities quoting each other, but we are not given any facts convincing to the researcher who has no access to confidential data. Unless such data are produced the question will always remain: Is the United States really behind in missiles development or is the safe assumption theory simply dealing a psychological blow to our morale and to the morale of our allies?

Making the Services of Optometrists Available to Veterans

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GALLAGHER. Mr. Speaker, earlier in the session my distinguished colleague from Texas, OLIN B. TEAGUE, introduced H.R. 7966 which would have made available to veterans of World Wars I, II, and Korea, the services of optometrists on the same basis as other medical services are made available.

I would like to include in my remarks the following resolution I have received from Anthony R. Massarelli, commander of Bayonne Barracks 96, Veterans of World War I of U.S.A., Bayonne, N.J.:

RESOLUTION ADOPTED BY THE BAYONNE BARRACKS NO. 96, VETERANS OF WORLD WAR I, SEPTEMBER 11, 1959

Whereas the Veterans' Administration for more than 10 years has utilized the services of optometrists in its facilities, but has denied to veterans entitled to outpatient vision care the privilege of availing themselves of the services of the VA; and

Whereas this has resulted in some instances in veterans being denied entirely the care to which they were entitled, and in other cases has forced them to travel as much as 100 miles or more in order to secure the services of an ophthalmologist when the services of an optometrist were available in the community where the veteran lived; and

Whereas the Honorable OLIN B. TEAGUE, of Texas, has introduced H.R. 7966 in the 86th Congress, for the purpose of making available the services of optometrists to veterans entitled to outpatient vision care: Be it

Resolved by the Bayonne Barracks No. 96 Veterans of World War I, at its meeting of Friday, September 11, 1959, Does hereby commend the action of Congressman TEAGUE in introducing H.R. 7966 and urge its enactment into law at the earliest possible date by the 86th Congress; and be it further

Resolved, That copies of this resolution be sent to our United States Senators from New Jersey, namely the Honorable HARRISON WILLIAMS and the Honorable CLIFFORD CASE as well as to Congressman CORNELIUS E. GALLAGHER of the 13th Congressional District, the State and National departments of Veterans of World War I, requesting their support of the enactment of H.R. 7966.

ANTHONY R. MASSARELLI,
Commander.

The Consumer Finance Business

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HECHLER. Mr. Speaker, it is frequently said that the American standard of living is based on credit, and credit makes it possible for a poor man to enjoy many things formerly enjoyed only by the rich.

Credit is supplied by many institutions, such as banks, savings and loan associations, insurance companies, credit unions, and retail establishments. Today I want to direct my remarks to the small loan companies which have been and are fulfilling a special service to many communities.

Not too many years ago, unscrupulous lenders gouged their customers with usurious and extortionate interest rates and were justifiably labeled "loan sharks." I submit, Mr. Speaker, that the day of the loan shark is passing and we are witnessing the rise of thousands of respectable consumer finance companies which have helped countless people over rough spots.

I suppose the small loan company is the only agency which will gamble by handing out cash to a man they have never seen before. Who else would help out a man when the furniture store is ready to repossess the bed he sleeps on, the utility firm has cut off his service, and he is really up against it? Should a man facing these hardships humiliate himself by trying to get his friends and relatives to bail him out? I say there is a definite place for the small loan company, where a man can receive sympathetic treatment instead of the cold, fishy stare which he gets when he asks for credit without a large security or long seniority on his job.

Thanks to a model uniform small loan law, an overwhelming majority of the States have passed small loan acts which protect borrowers against unduly high interest rates and other practices which might injure those who borrow money. These small loan acts are additional protection also to the reputation of the honest and legitimate consumer finance businesses which have done so much to further the general welfare and meet the needs of those in the lower and medium income brackets.

Onion Futures—Public Law 85-839

SPEECH
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

(Mr. CHAMBERLAIN asked and was given permission to address the House for 3 minutes, and to revise and extend his remarks.)

Mr. CHAMBERLAIN. Mr. Speaker, you will recall that the Congress enacted Public Law 85-839 on August 28, 1958, making it unlawful for anyone to trade in onion futures upon any board of trade in the United States. The act provided that it should become effective on September 27, 1958. This legislation was given the most extensive consideration by the Congress after lengthy hearings held over a 2-year period before the Senate Committee on Agriculture and Forestry and the House Committee on Agriculture.

Public Law 85-839 reflected the considered judgment of the House of Representatives and the Senate that the trading in onion futures upon a board of trade was prejudicial to the orderly flow of onions in interstate commerce and should be prohibited. The purpose of this law was stated in the report dated May 26, 1958, of the Senate Committee on Agriculture—page 1—as follows:

This bill would prohibit trading in onion futures on any board of trade in the United States. In 1955, because speculative activity in the futures market was apparently adversely affecting cash onion prices, Congress added onions to the commodities subject to regulation under the Commodity Exchange Act, effective September 24, 1955. This has not cured the situation, however. It now appears that speculative activity in the futures markets causes such severe and unwarranted fluctuations in the price of cash onions as to require complete prohibition of onion futures trading in order to assure the orderly flow of onions in interstate commerce. The committee held hearings on this matter last year and again this year. The need for the bill is fully discussed in those hearings and the report of the House Committee on Agriculture, which is attached hereto as exhibit A.

As I have stated, this statute became effective on September 27, 1958, and ever since that date all trading on a board of trade in onion futures in the United States has been unlawful. On September 12, 1958, the Chicago Mercantile Exchange and others instituted a suit in the Federal Court in Chicago to enjoin the enforcement of Public Law 85-839 upon the ground that it was unconstitu-

tional. On the same day, U.S. District Judge J. Sam Perry granted plaintiffs' motion to convene a three-judge court and gave the Government leave to file a motion to dismiss within 6 days. On September 18, 1958, the Government filed a motion to dismiss the complaint with a memorandum in its support and a memorandum in opposition to plaintiffs' motion for a preliminary injunction. On September 23, 1958, a three-judge court, consisting of Circuit Judge John S. Hastings, District Judge J. Sam Perry, and District Judge Julius J. Hoffman, granted plaintiffs' permission to file an amendment to the complaint and on September 26, 1958, the day before the act became effective, the court granted a preliminary injunction enjoining the U.S. attorney from enforcing the statute pending the final determination of the complaint or until the further order of the court. Since that time there have been various efforts made by the Department of Justice to vacate the injunction and to obtain a final adjudication upon the merits of the constitutionality of the law but without success.

Assistant Attorney General George Cochran Doub, in charge of the Civil Division of the Department of Justice, has written me as follows:

In the Onion Futures case pending before the three-judge district court in the northern district of Illinois, the court has prevented the enforcement of Public Law 85-839 and the congressional policy embodied in that act for a period of 12 months without any determination of the constitutionality of the statute. Although it may be that upon an appropriate allegation of irreparable injury a court may enjoin the enforcement of an act of Congress for a few days or a few weeks to enable the court to convene and to adjudicate promptly the validity of a statute, I do not believe a court has any power to stay for such a prolonged period the operation of an act of the Congress and the continued maintenance of the injunction in this case constitutes a gross abuse of judicial power.

Mr. Speaker, the power of the judiciary to declare an act of Congress unconstitutional has been accepted in this country since the decision of the Supreme Court in Marbury against Madison, but as far as I know, the power of the judiciary to suspend the enforcement of a law of the Congress for an indefinite period has never been recognized. Indeed, I do not know of any legal scholar or any lawyer of standing who has ever asserted the existence of such a dangerous doctrine. I am in complete accord, therefore, with the views of the Assistant Attorney General and I believe that this House should take cognizance of this serious matter.

Unrestricted Imports

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following:

On numerous occasions I have taken the floor to speak on the question of unrestricted imports and their effect upon the economy of our country.

Many times I find a questioning attitude on the part of some of my colleagues who, I am sorry to say, seem to have no concept of the magnitude of the variety of goods that have been flooding our market.

Setting aside the right or the wrong of high or low tariffs. Setting aside the question of high or low living standards.

Setting aside the argument of American-financed foreign competition. Setting aside everything except pure logic, I offer for the information of the membership of the House a very abbreviated list of ships and cargoes entering U.S. ports, September 9, 1959:

SAVANNAH

MV *Andrea Gritte*, August 25:

From Sidonia—galvanized tubes, 89 packages, order;

From Lisbon—marble slabs, 35 cartons, International Expediters.

MV *Marivia*, August 24:

From Santiago—rum, 50 cartons—McKesson & Robbins.

MS *Hassel*, August 21:

From Calcutta—burlap, 385 bales, Frank Samuel; 375 bales, order; 285 bales, D. C. Andrews; 1,526 bales, Ludlow Manufacturing; jute carpet backing cloth, 280 rolls, order; 360 bales, order.

MV *Ravnaas*, August 21:

From Calcutta—raw jute, 297 bales, order; burlaps, 75 bales, order; 25 bales, Louis Dreyfus; 50 bales, Produce Agencies; jute cotton bagging cloth, 350 bales, Innes Corp.; 310 bales, Belmont Burlap; jute cotton bagging, 200 bales, Riverside Bag & Burlap; 150 bales, Hanson & Orth; 400 bales O. G. Innes Corp.; burlap, 14 bales, White Lamb; carpet backing cloth, 600 bales, White Lamb & Finlay.

SS *Southwind*, August 19:

From Liverpool—Steel wire; low ortho, 60 drums, D. J. Powers; jute burlap, 164 rolls, Jute Industries; scotch whisky, 275 cartons, Brown Vinters; 100 cartons, Golan Import; 265 cartons, Schieffelin; 303 cartons, McKesson & Robbins; galvanized steel wire, 249 coils, John S. James.

From London—Black and galvanized pipe, 19 bundles, C. Tennant Sons; mustard bran, 270 bags, Atlanta Sales.

From Bremen—Burlap, 66 rolls, James Lees; 44 rolls, Miami Rug; 27 rolls, American Carpet Mills; 33 rolls, O. G. Innes; 34 rolls, A. De Swann; 22 bales, International Jute Products; staple fiber, 25 bales, P. Kaufmann; galvanized wire, 15 reels, Sherman & Reilly; beer, 401 cartons, Alko Distributing.

From Rotterdam—Beer, 375 cartons, Southern Marine Supply; formic acid, 65 drums, Order; bicycles, 205 cartons, Bert Scheuer; tea, 200 cases, 50 chests, Tetley Tea Co.; ironware, 12 cases, White Hardware; plywood, 10 packages, S. R. Heger Lumber; choir pile mats, 17 bales, William D. Huff; brass rods, 10 cases, Rohner Gehrig; wire mesh, 254 rolls, John S. James; hot rolled mild steel, 13 pieces, Order; burlap, 143 rolls, D. C. Motor Lines; 50 rolls, Stein Hall; steel wood screws, 29 cases, H. D. Kennedy.

From Antwerp—Tees, 50 lifts, Kurt Orban; flats, 21 lifts, Silbo Steel; wire nails, 500 cartons, Schuster Naval Stores; window glass, 51 cases, Veerman Inery; steel wire, 19 packs, Schuster Naval Stores; galvanized wire, 96 coils, Schuster Naval Stores; galvanized barbed wire, 500 reels, Schuster Naval Stores; steel wire mesh, 295 rolls, Amerlux Steel; steel channels, 17 lifts, Amerlux Steel; jute burlap, 20 bales, Textile Converting; bicycles, 6 cartons, L. D. Freedland; jute cloth, 8 rolls, A. De Swann; burlap, 234 rolls, Stein Hall; 167 rolls, White Lamb Finlay; 38 rolls, Robert F. Fitzpatric; 33 rolls, Gillespie & Co.; jute backing cloth, 30 rolls, Burlap Industries; galvanized staples, 100 kegs, Schuster Naval Stores; wire nails, 1,850 kegs, Schuster Naval Stores; galvanized wire, 314 coils, Schuster Naval Stores; steel wire, 125 coils, Schuster Naval Stores; hairon leather bends, 59 barrels, Atlanta Belting; staple fiber, 283 bales, P. Kaufman; galvanized wire, 155 coils, John S. James.

CLEVELAND

MS *Aragonese*, August 14: From Leghorn—Marble slabs, 22 pieces, United Marble.

From Genoa—Vermouth, 1,000 cases, Hammer Co.; wine, 15 cases, Hammer Co.

From Marseilles—Isogil hardboards, 106 bundles, A. W. Fenton.

From Cadiz—Wine, 50 cases, Rutman Wine.

MV *Virgilia*, August 28: From Bremen—Bicycles, 80 cases, Halle Bros.; Toys, 24 cases, Halle Bros.; Christmas tree ornaments, 21 cases, Halle Bros.; steel, 39,994 kilos rolls, tubing, Blasser Mericle; 3,680 kilos, rods, L. D. Peters; chemicals, 10 drams, Amer Feisol.

MS *Tinderfjell*, August 29: From Rotterdam—Wire rods, 1,132 coils, order; Cognac, 1,375 cases, Schieffelin & Co.; beer, 1,800 cases, order; canned ham and bacon, 287 cases, order; flower bulbs, 281 cases, A. Fenton.

From Hamburg—Brass rods, 199,659 pounds, order.

From Breman—Glass, 63 cases, lamp shades, order.

From Antwerp—Green salted hides, 610 bundles, order; liquors, 490 cases, Old Peoria.

From Rotterdam—Steel nuts, 105 kegs, M. E. Dey; flower bulbs, 107 cases, M. E. Dey; edible casine, 800 bags, Salentine.

TACOMA

MS *Bonneville*, August 30:

From Hong Kong—lumber—20,000 thousand board-feet, East Asiatic Co.; 21,000 thousand board-feet, Heidner & Co.

From Nasipit—lumber—40,000 thousand board-feet mahogany, Jordan Pacific Co.; logs—100,000 thousand board-feet mahogany, Buffelen Woodworking.

MS *Chili*, August 29:

From Bremen—miscellaneous—15 cases, Western Department Stores.

OS *Indian*, August 27:

From Port Mellon—kraft pulp—2,160 bales, West Tacoma Newsprint.

SAN DIEGO

MS *Dowa Maru*, August 25:

From Kobe—wire nails—100 cases, order; jute twine—250 cases, order; glass—65 cases rolled, San Diego Glass; rayon blankets—40 bales, order; bolts and nuts—320 bags, order; wire mesh—50 rolls, order; wooden candy sticks—75 cases, order; wooden ice cream spoons—50 cases, order.

From Nagoya—ceramic tiles—143 cases, quality marble; bolts and nuts—240 bags, Order.

From Yokohama—steel—117 bundles, bars, Winter Wolff; 177 bundles, bars, Southern Equipment; glass—56 cases, figured and window, order; fishing tackle—13 cases, A. E. Dann; toys—12 cases, A. E. Dann.

From Otaru—plywood—16 crates, U.S. Plywood; 54 crates, Robert S. Osgood; 24 crates, birch, Scarburgh Co.; 29 bundles, sawn birch, W. R. Grace; Iwakura board—25 crates, Scarburgh Co.

MV *Patagonia*, August 22:

From Newport—cycles—144 cases, American Machine; pipe and galvanized pipe—661 bundles, 43 slings, Brumley Donaldson.

From Hamburg—bicycles—765 cases, order; wire netting—300 rolls, Commercial Steel.

From Rotterdam—glass—50 cases, window, Cottrell Leist; canned ham—100 cases, Fed-Mart Co.

From Antwerp—glass—33 cases, window, order; bolts and nuts—175 bags, order; canned goods—252 cases, order; steel—9,510 kegs, furring channels, order; galvanized pipe—42 lifts, order.

SAN FRANCISCO

MS *Dona Aurora*, August 26:

From Manila—desiccated coconut, 975 bags, Peter Paul, Inc.

From Hong Kong—toys, 34 cartons, Harper Robinson, 72 cartons, F. W. Woolworth; artificial flowers, 76 cartons, Floral Trading; cotton goods, 10 cases, Shalon Baby Wear; 130 cartons, World Wide Services; 33 cartons, Interstate Motor Lines; 50 cartons, Parker Corp.; rattan furniture, 152 packages, Bank of America; 14 barrels, Decorative Imports; 150 barrels, American Trust; Lauan plywood (Japan), 312 crates, Fidelity Trading; rattanware, 21 cartons, L. Skany; 31 crates, imported merchandise; acrylic buttons, 21 cases, Schner Block; wool, hooked rugs, 52 barrels, M. Grossman; tennis oxfords, 63 packages, F. H. Kaysing; artificial flowers, 43 cartons, American Import; fishing tackles, 48 cartons, Getz Bros.; cotton goods, 40 barrels, Marubeni Iida; 20 barrels, Black Export & Import; radios, 142 cartons, CM Import Export; gardening tools, 48 cartons, B. Petranker; glassware, 105 cartons, B. Petranker; glassbeads, 11 cartons, Century Jewelry Corp.; frozen frog legs, 80 cartons, M. S. Cowen; woodenware, 128 cartons, B. Petranker; grass mats, 20 cartons, Vandor Imports; pearls and novelties, 9 cases, Perfect Pearl; wooden stools, 115 cartons, American Siam Factories.

From Nagoya—Earthenware, 62 cartons, Far East; earthen, 31 cartons, B. Petranker Import; florist goods and pottery, 38 packages, Tapscott's; frozen swordfish, 125 pieces, Atalanta Trading; paperware, 8 cartons, Commercial Market; musical jewelry boxes, 13 cases, Arts & Crafts.

From Yokohama—Double yarn pacquard, 3 cases, Hanover Bank; frozen albacore, 1,250 pieces (22 tons), order; frozen yellowfin, 1,133 pieces (45 tons), order; radios, 62 cases, order; lighters, 14 cases, order; brass and iron wares, 39 cartons, F. W. Woolworth; woolen sweaters and slacks, 254 cartons, A. J. Fritz; toys, paper crackers, 90 packages, order; optical goods, 25 cases, order; toys and decorations, 72 cartons, order; cotton poplin, 19 cartons, order; toys, 362 cartons, F. W. Woolworth; 209 cartons, order; sweaters, 6 cases, Macy's; 41 cartons, A. J. Fritz; glassware, 32 cartons, E. W. Rice; antiques and decorative wares, 102 packages, order; iris bulbs, 75 cartons, order; wood, iron and stainless steel wares, 39 packages, Macy's; novelties, 17 cartons, B. Petranker Import.

SS *President Jackson*, August 25:

From Cochin—Mats, 53 bundles Montgomery Ward.

PORTLAND, OREG.

SS *Washington*, August 30:

From Nasipi—Lumber: 50 bundles mahogany, General Hardwood.

From Manila—Plywood, 15 crates, mahogany, U.S. Plywood.

MS *Kookaburra*, August 30:

From Shimizu—Alumina, 8,596 tons, Harvey Aluminum; alumina sulfate, 1 bag, Harvey Aluminum.

From Niihama—Alumina, 5,185 tons, Harvey Aluminum.

SS *Colorado*, August 30:

From Kobe—Steel pipe, 201,304 pounds, black, Huro Co.; glass mirrors, 40 cases, N.Y. Merchandise; steel wire, 20,304 pounds, Nissho, Calif.; copper tubes, 9 cases, Nissho, Calif.; nails, 87 cases, Nissho, Calif.

From Nagoya—Cutlery, 8 cases, Coast Cutlery; procelain, 940 cases, order; tile, 104 cartons, Chrlich Harrison.

MS *Kokokoku Maru*, August 30:

From Kobe—Nails, 616 cartons, Nissho, America; 400 cases, W. R. Grace; bird cages, 21 crates, Intern. Expediters; sewing machine heads, 8 cases, Elize Mercantile; steel sheets, 8,417 pounds, Nissho America Co.; plywood, 20 crates lauan, Balfour Guthrie; chains and parts, 18 cases, Intl. Expediters; wool and rayon rugs, 80 barrels, Miron Grossman; lumber, 244 bundles, order.

From Nagoya—Tulip bulbs, 81 cases, McHutchison; porcelain, 1,965 cases, order.

From Yokohama—Raincoats, 12 cases rubber, Lipman Wolfe; plywood, 122 crates, Balfour Guthrie; toys, 113 cases, N.Y. Merchandise; steel wire rope, 4 reels (8,509 pounds), Nissho, Calif.; lumber, 72 bundles hardwood, Dant & Marshall.

MIAMI

MS *Arimasan Maru*, August 26:

From Yawata—Glass, 48 cases sheet, Air Control Board.

From Moji—Wire, 22 reels, C. M. Whitney.

From Kobe—Books, 34 cases, Leon Adjmi; Sandals, 1,250 cases, Tessler Import, 127 cases, Pastene & Co.; oil lamps, 26 cases, Florida Tack Supply; nails, 1,100 kegs, Reedy Forwarder; shoes, 25 bundles, Lindsey Importers and Exporters.

From Nagoya—Tile, 130 cases—Louis Goldey, 44 cases glazed mosaic, Global Tile Importers, 217 cases, Central Tile; Toys, 73 cases pianos, Langfelder, Homma & Carroll; Porcelain, 50 cases, Amsterdam Trading; Christmas lights, 26 cases, Lindsley Import and Export; stainless steel, 105 packages, World Exports.

From Shimizu—Tuna, 100 cases canned, Mitsui & Co. From Yokohama—binoculars, 36 cases, Tanross Supply; radios, 88 cases, World Exports; plywood, 115 cartons, Hoenigh Plywood.

CRNS *De La Mercedes*, August 24:

From Caibarien—Roofing title, 39,000 new and used, Milton Henrique.

MV *Oro Lobo*, August 22:

From Progreso—Shrimp, 580 cases, Frozen Food Processors; fish, 43 cases, Frozen Food Processors.

MV *Willi Bohmer*, August 19:

From Georgetown—Lumber, 290 pieces sawn greenheart, 63 round piles, Florida Greenheart.

MV *Searoad*, August 18:

From Havana—Pineapple, 300 cases crushed, Shafton & Co.; papaya pulp, 250 5-gallon tins, Shafton & Co.

MILWAUKEE

MV *Valeria*, August 28:

From Rotterdam—Bicycles, 19 tons, Irving Trust.

From Bremen—Beer, 8 tons, Federal District.

From Hamburg—Xmas ornaments, 24 ctns, Holtzermann, Inc.

MV *Caroline Smith*, August 27:

From Copenhagen—Fish preserves, 1 ton, Order.

From Gothenburg—Copper sheets, 23 tons, M. E. Dey.

From Gdynia—Lactic casein, 55 tons, Order.

MV *Concordia*, August 27:

From Liverpool—Leather lining, 1 ton, Wyenberg Shoe Mfg. Co.

Shoes—1 ton, Judson Sheldon.

Leather—8 tons, A. I. Scherer.

Linoleum—10 tons, Lowy Lino & Rug.

PHILADELPHIA

MS *Farida*, August 28:

From Paranagua—Coffee, 500 bags, American Stores.

From Ilheus—Cocoa beans, 3,000 bags, First National City Bank.

From Buenos Aires—Horse mane hair, 81 cases, Samuel Zeitlins; greasy wool, 15 bales, G. Ferguson; scoured wool, 27 bales, H. L. C. Bendike, 39 bales, Brown Bros. Harriman; textile cuttings, 8 bales, Girard Trust Bank; corned beef, 1,000 cases, Wilson & Co.; roast beef, 2,000 cases, Wilson & Co.

From Salvador—Cocoa beans, 1,000 bags, First National City Bank; 1,000 bags, J. H. Schroder.

From Buenos Aires to Baltimore (Philadelphia discharge)—Grease wool, 52 bales, Ott and Zimmerman; scoured wool, 44 bales, G. Ferguson.

From Salvador to Baltimore (Philadelphia discharge)—Piassava—100 bales, Maryland fiber.

SS *Mentor*, August 28:

From Kobe—Mandarin oranges, 3,000 cases, Mitsubishi Intern; Wilton carpets, 3 bales, Donald L. Baird; optical frames, 16 cases, Philadelphia Optical Manufacturing; wire cloth, 20 cases, Fenestra, Inc.

From Yokohama—Fishing flies, 6 cases, American Import; compasses, 3 cases, American Import; compasses, 3 cases, American Import; brass stems, 6 cases, 1,230 pounds, Baldwin Hardware; brass tubes, 45 cases, 10,091 pounds, Snyder Manufacturing; Lauan plywood, 36 cases, Pan Pacific Overseas.

From Shimizu—Mandarin oranges, 580 cases, Edward Bellet.

From Nagoya—Ceramic wall tile trims, 2,819 cases, Standard Tile; plywood, 80 crates, Heidna, Tacoma; sewing machine console tables, 104 cases, Brother Intern.

MS *Havjo*, August 28:

From Antwerp—Animal hair, 288 bales, order; staples, 100 kegs galvanized, Wilmod Co.; horse pancreas, 361 bags, Val Gelder Fanto.

From Rotterdam—Fruit, canned, 2,500 cases, D. Hauser; rags, 6 bales, Dumont Export Clothing; chains, 3 bundles, Anchor & Chain; horse fronts, 500 bundles, C. M. Simon.

From Bremen—Sweater clips, 25 bundles, Provident Tradesman; statice tartarica, 800 cases, Rice Bayersdorfer; steel wire, 22 barrels, Philadelphia National Bank; beer, 110 cases, Park Distributing; aluminum sheets, 24,134 kilos, Chase Manhattan Bank.

From Hamburg—Sodium antimonate, 500 bags (22,950 kilos), Pigment & Chemical; lead alloy, 181 ingots (5,086 kilos), Intercontinental Metal; brass pins, 5 cases, Globe Machine; pumpernickel, 60 cases, Penn Food; rye bread, 20 cases, Penn Food; bristles, 14 cases, N. Wagman, 46 cases, Gerard Trust Corn Exchange Bank; textiles, 36 cases, order; aluminum tubings, 24 cases, Morris Friedman; textile machines, 7 cases, Narrow Fabrics; bicycle bells, 40 cases, Victoria, 93 packages, American Viscose; waste rope, 907 bales, Perkins.

NEW ORLEANS

SS *Mayan Chief*, September 2:

From Honduras—Lead concentrate, 2,197 pounds, American Smelters.

From British Honduras—Lumber, 2,098 pieces mahogany—Order.

SS *Lempa*, September 2:

From British Honduras—Cohune, 140 bags—Order; Copra, 261 bags—Order; coconuts, 350 bags; Otis, McAllister; lumber, 1,424 pieces mahogany and cedar—Order.

From Honduras—Coffee, 413 bags—Order.

From Guatemala—Coffee, 1,153 bags—Order; Abaca fiber, 800 bales—Order; plywood, 20 bundles, U.S. Plywood.

SS *Clarita Schroeder*, September 2:

From Surinam—Coffee 2,945 bags—Order.

SS *Brattingsboro*, August 31:

From Cuba—Rum, 115 cases.

From Costa Rica—Abaca fiber, 2,515 bales—Order; coffee, 250 bags—Order.

From Canal Zone—Coffee, 750 bags; banana puree, 500 cases—Catz American; brushes, 14 crates—Order; charcoal irons, 16 cases—Order; pharmaceutical products, 28 drums, 51 cases—Order; sewing machines, 245 cases—Order; foodstuff, 589 packages, 25 cases—Order; toilet preparation, 101 cases—Order; batteries, 50 cases.

SS *Koiku Maru*, September 1:

From Japan—Tube mats, 85 bales—Order; sewing machine heads, 2,087 cases—Order, 201 cases, sewing machine exchanges; iron nuts, 35 kegs—H. J. Schuter; footwear, 25 cases—Mitsubishi International; canned tuna, 130 cases—Mitsubushi International; fish nets, 20 cases—Order; porcelain, 1,051 packages, 1,145 cases—Order; 1,598 cases—Sears Roebuck; paper, 25 bales—Order; lumber, 86 bundles maghogany—G. F. Tujague; cigarette lights, 42 packages—Order; canned salmon, 3,000 cases—Order; furniture, 404 cases legs—Blumenfield; miscellaneous, 61 cases—

M. Adeler's Son; plywood, 50 crates—U.S. Plywood.

SS *Balla*, September 1:

From Mexico—Agricultural implements, 45 cases, order; fiber, 410 bales, 100 cases, order; gum rosin, 106 drums, order; broomroot, 138 bales, order; istle, 80 bales, 125 cases, order; thread, 10 cases, order; cocoa beans, 42 bags, order; sisal fiber, 2,295, order; sisal paddings, 113 bales, order, sisal cloth, 344 coils, order; sisal baggasse, 170 bales, J. Fyfe; twine, 734 reels, 1,107 bales, 52 cases, 105 cases, order; 100 cases, 3 bales, Pan American Foods; 137 bales, 235 reels, 105 coils, Schermerhorn Bros.; bee honey, 993 drums, order; tequila, 119 cases, J. E. Comisky; rope, 385 bales, order; 172 bales, G. W. Rueff; 50 coils, Pan American Products; electric material, 14 cases, order; nets, 700 bales, Dyson Shipping; pineapple, 1,150 cases, G. W. Rueff; titanium dioxide, 110 bags, American Cyanamid; coffee, 1,269 bags, order.

SS *Arensdyk*, September 1:

From Germany—Fatty acid, 7 bags, 16 drums, 1 can, 2 cases, B. R. Hendrix; lamp shades, 40 cases, Lang Co.; bicycles, 490 cases, order; hardware, 2,500 cases, Fisher Cycle.

SEATTLE

F W *Lovejoy*, August 31:

From Powell River—Newsprint, 1,130, rolls, Order.

From Blubber Bay—Agricultural hydrate, 1,600 bags, A. R. Smith.

SS *Saragen*, August 31:

From Wellington—Beef, 26,267 pounds, General Meats; 42,059 pounds, Meats, Inc.; 70,247 pounds, Jilgs Sausage; 92,975 pounds, Meats, Inc.; 20,769 pounds, International Packers; 23,499 pounds, Levback Trad; 124,813 pounds, S. & P. Meats; 71,604 pounds, Low Cost Markets.

From Dunedin—Beef, 24,000 pounds, Bank of California; 16,704 pounds, Bob Bilyed Meat; 28,672 pounds, Balfour Guthrie.

Clover, 8,806 pounds, Chas. Lilly.

From Lyttelton—Veal and bull meat, 23,872 pounds, Home Frozen Foods; 9,887 pounds, S & P Meats; 72,240 pounds, Cudahy Packing.

White Clover, 56 bags, Chas. Lilly.

From Napier—Beef, 46,420 pounds, Order; 99,489 pounds, International Packers; 91,160 pounds, Bob Bilyou Meats; 31,200 pounds, Associated Grocers; 61,680 pounds, F. P. Dow.

From Auckland—Beef, 24,825 pounds, S & P Meats; 140 pounds, Pan America; 41,958 pounds, Order.

Liver Meal, 300 bags, Wessel Duva.

Frozen Meat, 85,942 pounds, Order; 16,747 pounds, Rath Packing; 94,059 pounds, Armour & Co.

TAMPA

MS *Wurttemberg*, August 31:

From Bremen—bolts and nuts, 233 cases, Biddle Purchasing; window glass, 340 cases, Florida Glass & Mirror; peat moss, 1,350 barrels, Bruco Peat Moss Corp.; toys, 42 cases, Metasco, Inc.; bicycles, 635 cartons, Metasco, Inc.

From Hamburg—beer, 400 cartons, A. J. Arango; liqueurs, 100 cartons, Key Liquors of Tampa; scrap tires, 4,908 pieces, Wholesale Tire.

From Rotterdam—ironware, 15 cartons, Standard Marine Supply; scrap tires, 228 pieces, Wholesale Tire Co.

From Antwerp—galvanized pipes, 37 lift bundles, Bank of the Southwest N.A., Portland cement, 59,400 bags, Blanc Sales; steel wire, 10 kegs, Schuster Naval Stores; steel, 340,590 kilos angles, beams, Franco Steel; 179,730 kilos angles, beams, Amerlux Steel Products; 44,800 kilos angles, J. L. Wilmotte; 27,880 kilos channels, A. J. Arango; 68,915 kilos, angles, beams, Fillette Green.

MS *Nopal Trader*, August 31:

From Buenos Aires—distillers grains, 2,221 bags, Jac. C. Uiterwyk; 4,620 bags, Order.

MV *Clarita Schroder*, August 29:

From Curacao—Greenheart lumber, 1,401 pieces, Greenheart, Inc.; Greenheart piles, 29 pieces, Greenheart, Inc.

MV *Privateer*, August 29:

From Havana—Tobacco, 50 packs, Sack & Menendez; 85 bales, Olica Tobacco; 91 packs, Standard Cigar; 11 packs, Delgado Leaf Tobacco.

Mr. Speaker, I have reduced the number in order that I can cover various ports of entry as well as type of cargoes.

This is only a small percentage of the ships and cargoes that arrived in all U.S. ports.

Following is a list of all the ports covered in this issue of the "Import Bulletin":

PORT INDEX

	Pages
Baltimore	18, 19
Boston	19, 20
Charleston, S.C.	20
Chicago	20
Cleveland	20
Detroit	20
Everglades	20
Houston	21
Long Beach-Los Angeles	21, 22
Longview	22
Miami	22
Milwaukee	22
Mobile	22
New Orleans	22, 23
New York	2 to 18
Philadelphia	23, 24
Portland, Oreg.	24
San Diego	24
San Francisco	24, 25
Savannah	25, 27
Seattle	27
Tacoma	27
Tampa	27, 28

Mr. Speaker, unless a Member takes time to read a copy of this valuable Bulletin put out by the Journal of Commerce, he is operating in the dark on reciprocal trade and foreign aid legislation.

No nation in the world has ever set up such an elaborate and deliberate plan to destroy its own enterprise and production as has this country.

I want to add at this time the following summarization of activities that I think Congress and the people ought to know about.

If any Member of Congress can justify spending taxpayer money to build up not alone competition in production, but to actually send teams of Americans around the world selling goods for our competitors and at the same time shutting down our own plants.

Maybe we are trying to build a new type of world and maybe most of us want it that way, but when you learn that the main purpose of Khrushchev's is to soften us up for Russian imports, created by slave labor, then maybe we better ask the question: "Who will inherit the new world?"

IMPORT NEWS HIGHLIGHTS

U.S. imports of manufactured products continued through July at a near-record pace, sharp declines in the value of five basic commodities pulled the total value of July imports 9 percent below June's record total of $1,370 million. The imports of machinery, vehicles, and other processed goods brought the July value of imports to $12,248 million or 19 percent ahead of the $1,050 million recorded in July of last year. This category of freight included the heavy shipments of automotive stocks, business machines, wearing apparels, and other finished stocks which have met with ready acceptance here in consumer markets.

U.S. imports of bovine hides and skins in the first half of 1959 showed sharp increases over the January–June 1958 total, according to the Commerce Department. Relaxation of existing trade barriers between the United States and the Soviet bloc may be one of the most important results of the forthcoming talks between President Eisenhower and Soviet Premier Khrushchev, informed experts in Washington report. The Federal Ministry of Economics reports that the volume of trade between Germany and the United States has increased in the first 6 months of 1959 by $46 million, as compared with the same period of 1958. In the first half of 1958, the trade volume was $794 million. The exports of the Federal Republic to the United States increased in the first half of 1959 by $122 million. Imports from the United States during the same period dropped $77 million, or about 15 percent, to $440 million. Japan has suspended the authorization of spun rayon finished goods exports to the United States beginning September 1 for an undisclosed period. Interior Secretary Fred A. Seaton rejected an appeal by six lead and zinc smelting companies to scrap the current import quotas on two metals.

A five-man American trade mission representing the U.S. Department of Commerce has arrived to help Yugoslav exporters find new markets in the United States. The mission will stay in Yugoslavia for 5 weeks, visiting the Belgrade and Zagreb International Trade Fairs. The United States is trying to persuade Japan to end discriminatory import restrictions on dollar area goods. National Cotton Council opened fire on critics of its proposal for across-the-board import quotas to protect American manufacturers of cotton textiles. Ask for establishment of rigid import quota system. New outbreaks of rioting in Calcutta reported to have brought activity in the harbor to a virtual standstill.

More than 4,000 tons of pepper were exported from India during the first 6 months of this year with the United States topping other importers with 1,087 tons. The Soviet Union and Canada took the next largest quantities of 475 and 343 tons, respectively, according to the India Economic News-Letter. Indian hand-loom goods for export will soon be marked "certified" and "quality marked" to create confidence between exporters and importers, according to specifications and plans now being finalized by the All India Hand-Loom Board. The scheme will cover varieties of cloth other than those already standardized for export, providing requests to this end are made by the exporter or overseas importer. British scientists have discovered a new way of thawing frozen fish in bulk so that the whole of the mass thaws at a uniform rate. This is a problem that has troubled fish industry of the United States, Canada, and Europe for many years. The first full-scale exhibit of port equipment will be held at the 1959 convention of the American Association of Port Authorities scheduled to open December 7 in West Palm Beach, Fla., Dudley W. Frost, president, announced. Direct jetprop all-cargo service to the Far East and south Pacific from eastern, midwestern, and west coast industrial and trade centers will result in a 60-percent reduction in transpacific airfreight rates, Seaboard & Western Airlines announced last week. Raymond A. Nordn, president of the certified transatlantic freight-mail airline, said his company had presented a plan to the Civil Aeronautics Board calling for 25 round-trip, all-cargo flights weekly on 3 new transpacific routes.

The Tariff Commission advised President Eisenhower there is no need to reopen an in-

vestigation of the tariff increase on dried figs ordered in 1952 by President Truman. The Commission reported no change in conditions to warrant a new study. The Senate Finance Committee has ordered the Tariff Commission to investigate the effects of starch imports on the domestic industry. The Commission is to report back the results of the investigation by March 31, 1960. The report will be concerned only with the amount and effects of the imports and will not contain recommendations for any action. The Department of Agriculture has been requested to study the possibility of reducing pork imports from Canada. In a letter to Secretary Benson, they asked him to use his authority to cut imports if the Canadian Government decides to dump its surplus pork into the United States at depressed prices.

Mr. Speaker, somehow I've been haunted ever since Khrushchev's invitation by a hazy picture of a man with an umbrella and a placard saying "Peace in Our Time."

Munich isn't so far from Washington.

Realistic Looking Ahead: The Need for the Continuity of Government Program

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my remarks entitled "Realistic Looking Ahead: The Need for the Continuity of Government Program."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REALISTIC LOOKING AHEAD: THE NEED FOR THE CONTINUITY OF GOVERNMENT PROGRAM

(Statement by Senator KEATING)

Today we will have a visitor from abroad. I would be less than frank if I stated that he will be welcome. From the start, I have been dubious about the sagacity of extending this invitation to the leader of world communism, and I am still opposed to it.

However, the decision has been made by the best informed minds on this subject, and Mr. Khrushchev will soon be here. I am not optimistic about the outcome of his visit, but perhaps he will learn something of our power and our strength and more importantly, our dedication to the maintenance of our freedom and independence.

During the course of his tour, of course, the American people must be on their guard. We must never lose sight of what Mr. Khrushchev symbolizes and what he represents. We must never forget the bloody history behind him and behind the Communist conspiracy he directs.

He may utter seemingly candid words of friendship. But he represents the power and means of world destruction. He stands for subjugation of the individual, curbing of religion, and rule by force and tyranny.

Many millions of people pray that this visit will produce the first small step on the road to guaranteed peace in the world. I join in that hope, although I am skeptical about the positive results of the tour.

At the same time, we must remember that we must not lower the defensive shield which, in the final analysis, may have forced this visit. We must, in concert with our allies around the world, continually strengthen the military might which represents the only language the Communists understand.

Our defenses are impressive. The billions poured into them have produced missiles, aircraft, ships, and trained manpower—all the components of a modern and effective military machine.

These things our visitor can understand. He undoubtedly possesses many of the details of their efficiency and disposition.

He is also aware of the strategy that forms and directs these forces. He knows—and will know better by the time his trip is over—that it is our intention to shape such powerful weapons of retaliation that no nation will dare to mount an attack on this country.

He knows we are constantly improving our military power. But he also knows that many bombers in a full-scale surprise attack will get through. He is also aware that, up to now, there is no defense against the intercontinental ballistic missile.

What, then, is the purpose of the visit? What might our visitor have in mind as a fruitful area for personal study?

The most obvious purpose, of course, is to try to lull us into a state of complacency with a spate of smiles and reassurances of his desire for peace and understanding.

He also seeks to gain additional stature in the eyes of the world—a stature which means so much not only to the international conspiracy he directs, but which also means a great deal to his own personal and inflated ego. I feel certain Mr. Khrushchev looks upon his trip as a vehicle for a personal buildup—a booster for an egocentric politician who basks in the self-generated sunlight of the conviction that he and he alone shall lay down the terms on which world peace may be achieved.

Beyond that, it may well be that he intends to assess a resource that is critical to the strength of any nation. This resource—which is never surplus and can never be stockpiled—is the national will.

Our visitor knows the value of a tough-minded citizenry, determined never to accept defeat. He has seen it in his homeland.

In the span of a few short weeks in 1941, one-third of his country reeled under a devastating attack of the same order and magnitude as the destruction of a nuclear attack. He saw havoc which ranged from almost 50 percent to as much as 95 percent in such critical categories as armed manpower, civilian population, and key war industries.

His people survived and won despite the great obstacles.

The question of the moment may well be: Could we do as well under nuclear attack? You and I and all Americans believe we could. But we will never know until we are put to the test.

Our confidence that we can pass the test is tarnished somewhat by a profoundly illogical national attitude. Not only do many of us fail to buttress the national will in a manner readily available, but some of us apparently do not even understand the true value of this resource.

We should not have to be told that unyielding resolution in the face of danger can serve us threefold. Now—in the international poker of the cold war; later—in the event attack does come despite our efforts to win world peace; and after attack—when we try to "pick up the pieces."

It is obvious to everyone that the scales of decision in the competitive arena of diplomacy and military strategy can be tipped by the weight of sheer resolution on the part of our people.

Military strength alone is not sufficient unless it rests upon the strong will of the people. The policy of deterrence by the threat of massive retaliation means that we must contemplate the first blow. How can our people remain resolute unless they are prepared to take that blow?

Concurrently, the President and his aids cannot act with firmness in times of international crises unless they are assured of the steadfast support of the people.

There is no need to dwell on the value of moral fiber in an attack emergency. Neither is it necessary to describe the resolution mandatory upon all of us in our efforts to recover from the devastation of nuclear attack, if it comes.

But—and mark this well—courage in crisis, if it is to be effective and continuing, must rest on confidence and hope.

We can fulfill our quest for true confidence and hope in the face of nuclear dangers by successfully discharging the objectives of nonmilitary or civil defense—the other side of the coin of military defense.

I cannot emphasize too strongly my conviction that a fully effective civil defense will prove to our prospective enemies that (1) we will, if necessary, carry out our policy to deter and retaliate in kind; and (2) that we can survive, win and recover from total war. The will to survive and the ability to do so are mutually supporting. Together, they rank next to military power as the best deterrent to aggression.

The Nation's civil defense program today in general is logical and practical although in many ways it can be improved upon. It is logical because it seeks to provide what is necessary—no more and no less. There is calculated risk in the program—as in all human endeavor. But, its plans call for protection from nuclear dangers against which protection is possible.

Civil defense of today is logical because it is compatible with the urgency of the threat—according to the status of world conditions and in line with the best assessment of enemy intent.

Civil defense plans are practical. They are built, wherever possible, on existing government institutions, and systems. Only those things unique to civil defense exist independently of regular arms of Government.

Eventually, it may be determined that greater Federal responsibility should be exercised in the field of civil defense. But for the moment we must do the best we can with the existing structure.

Civil defense plans of today are practical because they are established on the principle of "first things first." Such things as nationwide instantaneous warning, fast dependable communications, and community or group leaders trained in radiation detection and other vital emergency skills must be provided.

Today's civil defense is practical because it is attainable. Only the degree of proper support provided by the Nation's leaders at all levels will limit or delay the success of the program as now established.

Let me review some of the important elements of nonmilitary defense that exist right now, today.

The national plan for civil defense and defense mobilization provides rhyme and reason. It establishes nonmilitary courses of action for national survival and recovery in the event of attack.

The plan sets forth the responsibilities of each level of government—Federal, State, and local—of industry, institutions, and organizations; and of the individual citizen. It

spells out just how the civil defense mission is to be accomplished and by whom.

This plan should be "required reading" for every official of government.

Part and parcel of the order provided by the national plan is the organization of the Office of Civil and Defense Mobilization as a unit of the Executive Office. OCDM, as an extension of the authority of the Chief Executive, provides direction and central control to the civil defense responsibilities inherent in the normal activities of the regular Federal Departments and agencies.

No single plan of action can fit each area of the country. Each faces unique problems. Specially tailored survival plans now apply to a large percentage of the population. These plans, federally financed or guided, have been completed by 45 States, two Territories, the District of Columbia and 240 metropolitan areas and 2,100 local communities.

A round-the-clock national warning system is maintained. It can flash notice of attack to 276 key warning points in a matter of seconds. These key points fan out the warning to cities and towns in a matter of minutes.

An excellent communications system to State and regional offices will soon bypass all critical target areas. Radio is being installed to back up land lines.

The conelrad radio broadcast system is ready to give official emergency information and direction without giving navigational aid to the enemy.

The OCDM radiological defense program is designed to give a nationwide capability for detecting, measuring, and reporting radioactive fallout. A half-dozen Federal agencies operate more than 500 fixed monitoring stations. More than 88,000 local monitors have been trained. Instruction in radiological defense is provided to adult education groups and to high school and college science classes.

A national shelter policy defines the Government's responsibility to alert the people to nuclear dangers—radioactive fallout in particular—and teaches them how to meet it. Fallout shelters offer the best single protective measure for the greatest number of citizens. Under the program, government provides example, research, and surveys of shelter capabilities of existing structures. In addition, some States, led by New York are seeking imaginative yet practical solution to the need for more shelters for individuals.

Emergency relocation sites from which the Federal Government can operate under attack conditions are established and will be hardened against the effects of nuclear weapons.

Federal training centers provide civil defense instruction in the eastern, central, and western sections of the country.

Civil defense emergency engineering and medical stockpiles are maintained in dispersed locations. These vital stores, valued at more than $200 million, include 1,900 complete 200-bed emergency hospitals.

Requirements for the national stockpile of critical materials are largely filled. These materials are worth about $6 billion.

OCDM directs and coordinates policies and readiness measures for mobilization of the nation's resources and production. Such measures deal with the economic consequences of emergency mobilization, and include development of postattack priority systems.

A national defense executive reserve program is being expanded.

The national damage assessment center is designed to provide a quick national estimate of what we have lost and what remains after any attack.

These things are largely the hardware of nonmilitary defense. In addition, a key to civil defense—that which gives it heart and muscle—is the program of continuity of Government. This program to provide leadership, operating as it does under the aegis of the national plan, is the critical element in our preparations to meet attack.

Leadership is the foremost single commodity that must not be in short supply during and after attack. Only regular government, trained and ready for any emergency, can possibly give the leadership, direction, and authority that will be required.

No reasonable person believes that an attack upon our country will relieve government of its responsibility to serve and to function. Government at all levels will truly be on the "firing line" in the event of total war. City and county government will not receive a package of "leadership" from the State capitol. Neither can a shipment of "direction" be dispatched to the State from Washington after bombs or missiles start falling.

At the same time, the Federal Government cannot establish emergency lines of authority during an attack or for some time thereafter. All these things must be ready in advance. It's too late to start yesterday. We should start today.

Government also has a larger responsibility than that of assuring its own continuity. It has the same responsibility as the line officer in battle. The good officer asks of no man more than he himself can and will do. Similarly, government cannot reasonably expect the individual citizen to prepare his home and family for attack, unless government itself leads the way by setting the good example.

No longer should we enjoy the suicidal luxury of allowing civil defense to be considered as just another economic or social program. Civil defense today is not the arm-banded helmet-wearing block warden of the 1940's. It is a new dimension to our way of life. It needs to be carefully and constantly nurtured.

Civil defense is not, therefore, something that the people can handle entirely by themselves. Even the question of whether or not we need civil defense cannot readily be decided purely on the basis of the rather limited sources of knowledge available to the individual citizen. He needs leaders who will marshal facts for his consideration—leaders who will pose specific issues in a matter which, even though it ultimately could mean personal survival, seems nebulous and far in the future. Then, and only then, can the individual citizen decide for himself the need for civil defense—the direction it should take.

I'll recite just one incident that illustrates a typical public attitude, which is directly related to leadership. Amazingly, it concerns individuals who had the courage and foresight to prepare their homes against the threat of radioactive fallout.

A reporter for a large midwestern newspaper was assigned the task of judging the status of civil defense in a nearby city. He went to the local civil defense director to obtain leads on residents who had prepared home fallout shelters.

The reporter called 20 homeowners, whom the civil defense director personally knew had constructed shelters. Eighteen of these citizens denied having a shelter. The other two refused any publicity.

The only possible answer to this enigma is the fact that these conscientious citizens were afraid to run the risk of being labeled "crackpots."

This incident, and the state of the public mind which it illustrates, can be traced directly—I am convinced—to lack of example and proper leadership on the part of government. I am hopeful that in the days ahead the Congress and all leaders of public opinion will strive mightily to fill this void and awaken our people to the challenges and dangers which lie ahead.

One step public officials can take is by means of the continuity of government program which will provide the control and authority which is vital in an attack emergency. The survival and quick recovery of this country will depend on the ability of government to function.

It is probable that cities and entire States would be temporarily isolated. Direction and assistance from other levels and other areas could not be available for some time. Therefore, all governments must maintain continuity and the fullest possible self-sufficiency.

To insure this capability, OCDM has developed a program with four objectives:

First is provision for succession. This applies to executive, legislative and judicial branches. Succession should be at least seven deep for the Governor and three deep for other officials.

Second is the matter of alternate sites from which government can be conducted, in the event city hall or the State Capitol is hit.

Third is the preservation of records—those essential to continued operations of government—and those records vital for the protection of human rights.

Finally, in this area of continuity is the requirement for full use of personnel and resources of government. There are about 7½ million public employees. Every one of them must have an alternate assignment for action in an emergency.

There is a persistent myth that detracts from the effectiveness of this continuity of Government program. Many responsible leaders continue to believe that the military not only will conduct the active defense of the country, but will at the same time deal with a thousand separate civil emergencies in case of attack. This is directly contrary to the wishes and capabilities of the Department of Defense. Clear unequivocal agreement on the point has been spelled out at the executive level.

The acceptance of the responsibility by the States for writing into law the minimum continuity of government measures is a remarkable story of concerted action. Skilled observers have advanced the opinion that the success of this program constitutes the outstanding example of federally sponsored, peacetime, State legislation. I am confident that all Members will join with me in offering our congratulations to the State officials and the members of the State Legislatures who have accomplished such an outstanding job of making ready for the attack we pray will never come.

In mid-1957, when the continuity program first was assigned top priority, OCDM began to assemble a package of proposed legislation. These measures, prepared with the assistance of Columbia University, were designed to establish a sound legal basis for the first two objectives—succession and relocation.

The program contained four sample acts and a constitutional amendment, providing enabling authority. The package immediately drew the full endorsement of the Council of State Governments.

The council, as part of its program of suggested State legislation for 1959, recommended immediate enactment by the States. There are a number of points that should interest the Congress.

Obviously, before government can function in an emergency, there must first be duly authorized persons to operate it. Therefore, in the event of large-scale disaster, there must be substitute officials ready to fill the gap instantly. They must be legally equipped to exercise the powers and discharge the duties of office.

Two of the sample acts in the legislative package fill the requirement for succession.

One deals with the executive and judicial branches of State government and all branches of local government. The other deals only with the legislature. Both acts, however, have certain interesting common denominators.

Probably most important in this age of nuclear warfare is the proviso for predetermined automatic interim succession to office. Legislatures and Governors will not have time or opportunity during and immediately after attack to designate interim successors. Lack of warning and shock of extreme destruction will deny this possibility.

To overcome this possible dilemma, emergency interim successors will be designated and take the necessary qualifying steps prior to attack. They will, by operation of law under certain stated conditions, become fully vested with the powers and duties of the office to which they succeed. The action is self-executing.

There is the matter of sufficient depth of succession. Legislation proposed to the States requires designation of at least three, and in most cases not more than seven, emergency interim successors.

Another common characteristic of State successor legislation is the provision for all contingencies which would require succession, such as absence or inability to act.

Finally, there is the fact that the emergency interim successor obtains neither title nor tenure. He is divested of the authority by the filling of a vacancy in the usual manner or by the return of the incumbent.

The Interim Succession Act provides a method for achieving automatic continuity of the legislative branch of State governments. It requires preattack designation of emergency interim successors who will temporarily exercise the functions of a legislator should he be unavailable following an attack.

Research by Columbia University on the subject of interim succession disclosed that application of this procedure to legislatures is almost unprecedented. Existing constitutional or statutory provisions deal only with vacancies. However, under attack conditions it is certainly possible that a majority of the members of a legislature might be either killed, incapacitated, or unable to reach the place of session. In many cases it would undoubtedly be difficult to raise a quorum. It is to meet this unprecedented contingency that the legislation was designed.

The model State act imposes upon each legislator a continuing obligation to maintain at least three qualified successors at all times. Each legislator is required to review the list of emergency interim successors to his powers and duties to insure the current status of such designation. The power and duty of a legislator to appoint emergency successors continues even in the event of an attack. But an emergency interim successor cannot himself appoint additional successors.

The legislator himself designates his emergency interim successors and specifies the order of succession. However, alternate procedures are included. These procedures are analogous to those currently existing in various States for filling vacancies other than by election. These include:

1. Designation by the Governor.

2. Designation by the Board of County Commissioners or similar local government unit.

3. Nomination by the local political party organization and designation by the Governor.

All of the alternative measures (as distinguished from the basic act where the successors are to be designated by the office holder) carry the provision that the emergency interim successor shall, if the office is partisan, be of the same political party as the duly elected incumbent.

The act also deals with several other matters, such as recording and publication of designations, oaths of office, and suspension of quorum requirements.

Sample acts in the legislative package also provide the Governor with authority to change the place of session to a safe or more convenient location.

Another provision requires the Governor to call the legislature into session as soon as is practicable. There is also a proviso for automatic convening of the legislature 90 days after an attack, if the Governor has failed to issue a call.

The Emergency Interim Executive and Judicial Succession Act provides for additional officers who can act as Governor, interim successors to other State and local officers, and special emergency judges.

The sample act extends the line of succession for Governor to at least seven, since he occupies a key position in the event of attack. There must always be a person who can exercise the powers and discharge the duties of Governor. The additional officers upon whom the office of Governor would devolve are specifically set forth in the act. These usually would be officials such as the president pro tempore of the senate and speaker of the assembly or executive officers elected on a statewide basis.

New York State has recently extended the line of succession for the Governor from 3 to 11. An act signed in April provides this order of succession: Lieutenant Governor, temporary president of the senate, speaker of the assembly, attorney general, comptroller, superintendent of public works, commissioner of health, commissioner of commerce, industrial commissioner, chairman of the public service commission, and secretary of state.

The program of State and local continuity of government has enjoyed really amazing success. Thirty-four of the 43 States that considered the program this year have enacted some or all of the recommended legislation. That is a wonderful record and my hat is off to OCDM for its vigorous leadership in the field, and to those concerned in the States which have taken action.

Surely it is time for the National Legislative body to follow suit. If the type of attack which is now possible should ever strike this country it is a foregone conclusion that Washington will be high on the priority list of targets.

Some steps have already been taken. Recent actions insure continuity of government within the executive branch, and vacancies in the judiciary may be filled by the President. There has also been some discussion about the need for designating a specific place in the United States as an alternate Capital, should Washington be sufficiently destroyed in an enemy attack. There is considerable merit in that proposal, which I trust will be fully investigated.

However, the legislative branch needs to take action to fill a glaring loophole in its present procedures. As it stands today, the Constitution provides that Senators can be appointed on an interim basis, if they die or their seat in any other way becomes vacant. But when Members of the House of Representatives die or resign or are otherwise incapacitated their office can only be filled by either a special election or at the next regular election.

At a time when scientific advances and accomplishments in the art of war have reached the point where there is a very real possibility that a large number of Members of Congress could be wiped out in a single enemy attack, we should not delay in dealing with this constitutional gap. The lack of a quorum in the House, of course, could result in a complete paralysis within our representative form of government at a time when we could least afford it.

It is time Congress engaged in some realistic looking ahead to forestall congressional inaction in times of emergency—when congressional action would in all probability be most needed. This is a problem which has concerned me for a number of years, and as a Member of the House of Representatives I sponsored legislation to solve it.

On March 26 of this year I introduced Senate Joint Resolution 85, which is similar to the legislation I sponsored in the other body, and which provides the machinery needed if Congress is to function effectively in times of disaster. A somewhat similar measure, Senate Joint Resolution 39, sponsored by Senator KEFAUVER, has been reported to the Senate by the Judiciary Committee. Unfortunately, it appears no action will be taken on this important proposal in this session, but I am hopeful it will be a first order of business when the Senate convenes in January.

Senate Joint Resolution 39 provides, simply, that whenever vacancies occur in more than half the authorized membership of the House, the Governors of the respective States may make temporary appointments to fill the vacancies. The Governors would have 60 days in which to make these appointments. Eventually, of course, the people would fill the vacancies by election, as now provided in article 1, section 2, of the Constitution.

It is the fervent hope of all of us that such a power would never have to be invoked. In these tense times, however, when cities can be demolished in a split second, we should delay no longer. The need for prompt action by Congress is underscored by the fact that since this is a constitutional amendment, additional time will be required for ratification by the legislatures of three-fourths of the States.

I regret we have not had before us in this session legislation dealing with the problem of presidential inability. That is another related issue which should be resolved by Congress before long.

I commend the distinguished Senator from Tennessee [Mr. KEFAUVER] for the manner in which he has pressed forward with his resolution, Senate Joint Resolution 39. I want to emphasize that my desire for action in this field is so great that I would support Senate Joint Resolution 39 as it is presently drafted. It is a realistic and acceptable attempt to deal with this problem.

However, I have prepared a couple of amendments to the Kefauver resolution which I believe would make this an even better piece of legislation.

My first amendment fills a void in Senate Joint Resolution 39 which, although not too serious, I believe deserves attention. The Kefauver proposal provides no specific machinery for notifying the Governors as to when they may proceed to make temporary appointments.

I note that the committee report points out that the power could be invoked upon the "ascertainable fact" that vacancies exist in half the seats in the House. However, it strikes me that in the disorder which would follow a disaster of such proportions, it may well be an extremely difficult task for Governors to determine the extent of the losses in the House. There is thus a possibility of delay and confusion under the language of Senate Joint Resolution 39.

I therefore have drafted an amendment which provides for a proclamation by the President that sufficient vacancies do in fact exist in the House, so that State chief executives should proceed to exercise their powers of appointment. I feel this is a more certain way in which to deal with the mechanics of replacing Congressmen in a time of national disaster and I believe its adoption would do much to tighten up the operation of this proposal.

My second amendment deals with the number of vacancies which must exist be-

fore Governors would be authorized to make temporary appointments. Senate Joint Resolution 39 specifies that the number must exceed half of the authorized membership of the House. I believe that figure is too high.

It may be that the 50 percent vacancy figure was fixed with the idea of a quorum in mind. If that is so, it is an unrealistic number, for the simple reason that even with a full complement of Members today it is sometimes hard to muster a quorum. Even if half the Members survived, there would inevitably be many Members injured, sick, or otherwise incapacitated, thus making a quorum unlikely even if everyone who could possibly be present were there.

It is my firm conviction that a requirement of one-third vacancies would be more realistic. As a practical matter, this figure is high enough to necessitate a national emergency or disaster before it could be called into play. Today, it would require 145 vacancies in the House before the authority of a Governor to appoint replacements would come into effect.

It may be that an even lower figure would be wiser, but I offer this amendment as something of a compromise.

Incidentally, my amendment specifies that vacancies must exceed one-third of the authorized membership of the House. I have not set it at an exact figure because of possible temporary fluctuations in membership in the years ahead as new States may be added to the Union.

As I have previously noted, I am hopeful the Senate will act on this legislation at the beginning of the next session of Congress. It is my further hope that the House, which for various reasons has been reluctant to act on this problem, will follow the Senate's lead early next year.

Looking ahead, it might be well for the Governors of each State to give thoughtful consideration to means by which they can implement their part of this procedure. For example, it may be that the most efficient way of handling the possibility of interim appointments to Congress would be by drawing up each year, in advance, a list of designated alternates for each sitting Member of Congress. The existence of such lists—presumably confidential—would do much to facilitate prompt action by each Governor if the need arose for speedy appointment of temporary Members of the House in time of disaster. And such lists would be consistent with the continuity of Government program promulgated in the States by the OCDM.

Mr. President, although this type of legislation has not received the prominence it deserves, I believe we should tarry no longer. It is time we caught up to the many States which have already acted. Enactment of legislation to provide for filling vacancies in the House of Representatives in time of disaster can go a long way toward insuring the proper and effective operation of our Government no matter what the future may hold.

Furthermore, enactment of Senate Joint Resolution 39 or similar legislation will demonstrate anew to the world America's determined national will to face up to the dangers of responsibilities which go with being the leader of the free world.

Coastal and Intercoastal Shipping

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JARMAN. Mr. Speaker, the Secretary of Commerce has been instructed by the President to undertake a study of certain major problems of the transportation industry, to comprise both those elements relating to economic well-being of the industry and the country, and also the readiness of various segments of the industry to assume their proper roles in the national defense.

One of the most urgent and critical situations within the transportation industry is that of the general cargo common carriers coastal and intercoastal shipping lines. An abundance of statistics and testimony have been furnished to committees of the Congress last year and this year pointing up the drastic decline which has taken place over the last 20 years in this industry, with its attendant consequences in unemployment, scrapping of vessels, and all the resulting effects on both the commerce and the national defense of the United States.

There were nine companies in this trade in 1940, employing 108 vessels and carrying approximately 5½ million tons of cargo. This had declined to two companies by 1958, operating a total of 10 vessels and carrying less than 1½ million tons of cargo.

To my knowledge, no other segment of transportation has undergone an experience remotely similar to this and I urge that the Department study focus very heavily upon the causes and the cures for this situation.

Coastal shipping has always been of vital importance to the economy of the United States; the existence of most of our great seaboard cities was founded upon the availability of low cost deep water transportation along the coasts and between the coasts. The costs of deep water transportation, though subject to increases over recent years like the costs of everything else, still remain lower than the costs of land transportation. Unless coastal shipping is resuscitated, there will naturally ensue a long-term upward trend in transportation rates between these cities, once the moderating effects of low cost water transportation is removed. Many great ports of the United States, including such cities as Boston, Baltimore, Philadelphia, Charleston, Galveston, and a number of others, are presently wholly without coastal general cargo service.

I feel certain that the management of the two remaining companies will be happy to furnish the Department's staff with what they believe to be the causes in the decline in coastal shipping along with their recommendations for remedial actions and I am hopeful that the Department will seek their views.

Annual Résumé of Appropriations

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. CANNON. Mr. Speaker, in compliance with the usual session-end custom, I include a statistical tabulation summarizing the work of the 1st session of the 86th Congress on the appropriation bills. The tabulation is limited to bills processed by the Committee on Appropriations through the traditional annual appropriations process and does not reflect action on those parts of the President's budget recommendations disposed of through revenue bills or so-called back-door appropriation bills processed outside regular appropriation channels.

Budget estimates of appropriations submitted to the House by the President during the session just concluded, and considered in bills from the Committee on Appropriations, totaled $74,077,609,151. These requests do not include the permanent appropriations recurring automatically under existing law without necessity of annual action. Interest on the Federal debt is the principal item. The January budget estimates for permanent appropriations for fiscal 1960 totaled $8,593 million; it is now known that rising interest costs will run this total up appreciably.

The Committee on Appropriations recommended $71,162,088,261, a net reduction of nearly $3 billion—$2,915,520,890 to be precise. With a single exception, the Labor-HEW bill, every bill was reported below what the President wanted. The vetoed public works bill was reported in the exact amount of the request, but the substitute version, enacted into law over the President's second veto, was slightly less.

Before passage, however, the House, contrary to recommendations of the Committee on Appropriations, insisted on restoring $158,583,500 of committee cuts. The House-passed bills aggregate $71,320,671,761, resulting in a net reduction of $2,756,937,390 below the corresponding Presidential estimates. That is a reasonable total reduction although deeper cuts could have been made without harm to essential functions of Government.

But, Mr. Speaker, while we made these reductions, however inadequate the cuts, the other body, not entirely out of character, insisted that we not only restore many of the reductions but that we exceed the budget requests on some bills. In summary, budget requests considered by the Senate—including items sent to the Senate after the bills passed the House—aggregate $74,859,008,445. Against this, bills passed by the Senate total $72,883,029,577, or $2,562,357,816 above House totals and $975,978,868 below the corresponding budget estimates.

Final amounts approved, again excluding permanent appropriations, total $72,977,598,352, or $905,431,225 below Senate totals but $1,656,926,591 above House totals. The final amounts represent a net reduction of $1,881,410,093 below the President's requests considered in appropriation bills. As noted, Mr. Speaker, these totals do not include amounts of authority to obligate the Government processed outside the traditional appropriations procedure.

The table on appropriation bills processed through the Committee on Appropriations follows:

Comparison of budget estimates and appropriations, 86th Cong., 1st sess.

[NOTE.—Excludes permanent appropriations]

Bill	House				Senate					Final action, amount approved	Increase or decrease, compared to budget estimates
	Budget estimates considered by House	Amount reported by committee	Amount passed	House action compared with budget estimates	Budget estimates considered by Senate	Amount reported by committee	Amount passed	Senate action compared with—			
								Budget estimates	House action		
1959 APPROPRIATIONS											
2d supplemental	$2,864,954,526	$2,479,522,494	$2,657,402,994	−$209,551,532	$2,900,799,370	$2,820,040,054	$2,843,902,805	−$56,896,565	+$186,499,811	$2,764,500,380	−$136,298,990

[1] Vetoed and overridden Sept. 10, 1959.
[2] Includes $500,000,000 for Development Loan Fund for fiscal year 1961 (not allowed).
[3] In addition, certain permanent appropriations became available automatically under previous law; January budget estimate was $8,593,000,000, but this is subject to upward revision principally due to increased cost of interest on public debt.

NOTE.—Indefinite appropriations are included in this table.

"BACKDOOR" APPROPRIATION BILLS

The regular appropriation bills at one time disclosed the disposition of the President's spending requests, but in recent years, and especially last year and this year, the appropriation bills are only part of the record.

It is difficult to authoritatively summarize complete disposition of the budget under diffused processes whereby money is removed through the backdoor of the Treasury as well as through the regular appropriations procedure.

The other body, with the concurrence of the House, continues to insist on preempting the exclusive powers of the House to originate appropriations, resulting in bypassing of annual appropriations review and accounting by the departments for the vast sums expended.

The President twice vetoed the "backdoor" housing bill, terming it excessive and inflationary; it greatly exceeded, on a camparable basis, the President's requests. Excluding the vetoed bill, but including the final version, the following list of "backdoor" bills sent to the President totals at least $5,701 million identified, and some extra billions not precisely determinable. Furthermore, on a comparable basis, these bills exceed executive recommendations by some $231 million, plus additional billions not precisely identified.

Action on other propositions, such as postal rate increases, not handled through appropriations channels, affect the ultimate Treasury position.

New authority to obligate the Government ("backdoor spending") carried in legislative bills (86th Cong.)—Public debt transactions and contract authorities

Grand total	6,400,000,000	5,470,000,000	6,040,000,000	6,072,000,000	5,701,000,000	−699,000,000	+231,000,000

[1] $1,375,000,000 for immediate expenditure; $3,175,000,000 in nature of guaranty for World Bank bonds.

[2] In addition, provided for 45,000 public housing units (contract authority) estimated at $874,500,000 and, in addition, carried language permitting an additional number of about 145,000 at an estimated cost of some $2,825,000,000.

[3] In addition, provided for 37,000 public housing units (contract authority) estimated at $719,000,000.

[4] Increased gas tax by 1 cent from Oct. 1, 1959, until July 1961 at which time, for the 3 fiscal years 1962–64, bill actually appropriates to the highway trust fund, from the general fund, certain excise taxes estimated to total approximately $2.5 billion.

So, Mr. Speaker, while we cannot determine with absolute precision the status of the budget, it is conceded that we are on the highroad to still bigger and bigger budgets unless we stop granting licenses right and left to remove more and more money, through every door of the Treasury—money that is not even in the Treasury, money they must borrow—and borrow with increasing difficulty and at ever increasing cost.

Without the Congress directly turning a hand, the interest cost on our staggering Federal debt was estimated in the January budget at $500 million more than the previous year—and not long ago it was officially disclosed that the amount is now expected to go up another $500 million or so to a total of some $8,500 million.

This increase of $1 billion alone will doubtless exceed all the expenditure reductions effective in fiscal year 1960 resulting from cuts in appropriation requests. This colossal rise in interest cost in the short span of only 12 months dramatically, and distressingly, demonstrates the inevitable result of spending more than we take in. So heavy have been the appropriations urged by the President and voted by the Congress that the Treasury is on a hand-to-mouth basis in refunding the Federal debt. We have reached a fiscal crisis of gargantuan proportions.

In 23 of the last 28 years we have spent more than we took in. In the 6 fiscal years (1954–59) under the present administration, budget expenditures exceeded budget income by more than $19,400 million. And we have done this notwithstanding the fact that we were receiving the largest national revenues ever enjoyed by any nation in any period of time. In the fiscal year 1959, closed on June 30 last, the headlong rush to fiscal chaos saw the Treasury suffer from the biggest red-ink spending spree in peacetime history.

Here are the official figures:

Net budget receipts, expenditures, and deficit (−) or surplus (+), 6 fiscal years, 1954–59

[In billions]

Fiscal year	Net receipts	Net expenditures	Deficit (−) or surplus (+)
1. Fiscal 1954	$64.7	$67.8	−$3.1
2. Fiscal 1955	60.4	64.6	−4.2
3. Fiscal 1956	68.1	66.5	+1.6
4. Fiscal 1957:			
(a) Including highway trust fund	72.5	70.3	+2.2
(b) Excluding highway trust fund as per budget	71.0	69.4	+1.6
5. Fiscal 1958:			
(a) Including highway trust fund	71.2	73.5	−2.3
(b) Excluding highway trust fund as per budget	69.1	71.9	−2.8
6. Fiscal 1959: [1]			
(a) Including highway trust fund	70.4	83.4	−13.0
(b) Excluding highway trust fund as per budget	68.2	80.7	[2] −12.5

Net budget receipts, expenditures, and deficit (−) or surplus (+), 6 fiscal years, 1954–59—Continued

[In billions]

Fiscal year	Net receipts	Net expenditures	Deficit (−) or surplus (+)
7. Total all 6 years:			
(a) Including highway trust fund	$407.3	$426.1	$−18.8
(b) Excluding highway trust fund as per budget	401.5	420.9	−19.4

[1] Fiscal 1959 figures are preliminary; subject to slight revision based on final reports.

[2] January budget forecast was a $12.9 billion deficit.

ANALYSIS OF BUDGET DEFICIT, FISCAL 1959

Mr. Speaker, there is the impression that recent record peacetime deficits resulted from declining revenues more than from rising expenditures. Nothing could be further from the facts. The situation is just the opposite. In fiscal 1958, for example, the budget went in the red by $2.8 billion, compared to a nominal surplus of $1.6 billion in fiscal 1957—a deterioration of $4.4 billion. That came about through decline in revenues of $1.9 billion and an increase in expenditures of $2.5 billion.

For fiscal 1959, the year of the largest peacetime deficit, the budget went from a 1958 deficit of $2.8 billion to a $12.5 billion deficit. This deterioration of $9.7 billion came from a nominal de-

cline of $0.9 billion in revenues and a huge increase of $8.8 billion in expenditures.

So, Mr. Speaker, the unvarnished truth is that our rapidly deteriorating fiscal situation has its roots in ever-increasing expenditures in excess of record revenues.

The following tabulation of official figures is in substantiation:

Analysis of budget deficits, fiscal years 1958 and 1959

[In billions]

	Fiscal 1957 actual	Fiscal 1958 actual	1958 actual change from 1957	Fiscal 1959		1959 actual compared with—	
				Original budget estimate	Actual	Original 1959 estimate	Actual 1958
Net budget receipts	$71.0	$69.1	−$1.9	$74.4	$68.2	−$6.2	−$0.9
Net budget expenditures	69.4	71.9	+2.5	73.9	80.7	+6.8	+8.8
Surplus, deficit, or change	+1.6	−2.8	−4.4	+.5	−12.5	+13.0	+9.7

NOTE.—Highway trust fund not included in "budget" figures.

DEFENSE AND NONDEFENSE SPENDING

Furthermore, Mr. Speaker, the widespread impression persists that recent deficit spending results of necessity from heavy defense outlays. That has not been so, and is not now so. It is the nondefense expenditures—the frills and furbelows—that have unbalanced recent budgets, as the following table of official figures discloses:

Net budget expenditures—Defense and nondefense

[In billions]

Fiscal year	Major national security		All other programs		Total net expenditures	
	Defense-military	Total [1]	As per budget	Including highway trust fund	As per budget	Including highway trust fund
1. Fiscal 1953 (Korean war year)	$43.6	$50.4	$23.9	$23.9	$74.3	$74.3
2. Fiscal 1954	40.3	46.9	20.9	20.9	67.8	67.8
3. Fiscal 1955	35.5	40.6	24.0	24.0	64.6	64.6
4. Fiscal 1956	35.8	40.6	25.9	25.9	66.5	66.5
5. Fiscal 1957	38.4	43.3	26.1	27.0	69.4	70.3
6. Fiscal 1958	39.1	44.1	27.8	29.4	71.9	73.5
7. Fiscal 1959	41.2	46.4	34.3	37.0	80.7	83.4
Comparisons:						
a. 1959 compared with last war year (1953)	−2.4	−4.0	+10.4	+13.1	+6.4	[2]+9.1
b. 1959 compared with 1st year of present administration (1954)	+.9	−.5	[3]+13.4	[4]+16.1	+12.9	+15.6
c. 1959 compared with 1st year showing surplus under present administration (1956)	+5.4	+5.8	+8.4	+11.1	+14.2	+16.9
d. 1959 compared with preceding year (1958)	+2.1	+2.3	+6.5	+7.6	+8.8	+9.9

[1] On basis classified in 1960 budget (earlier years included "Defense support" which in 1960 budget is classified as "all other").
[2] Represents increase of 12.2 percent over war year of 1953.
[3] Represents increase of 64.1 percent over 1954.
[4] Represents increase of 77 percent over 1954.

NOTE.—Highway trust fund began with fiscal year 1957.

This tabulation points unerringly to the genesis of the situation. In the year just closed nondefense spending exceeded the first year under the present administration by 77 percent—up $16.1 billions with the highway fund included for comparability, while defense items dropped a half billion dollars.

Again, compare the year just closed with fiscal 1956 when the President first showed a small surplus. It was widely acclaimed at the time that spending was finally under control. In fiscal 1959 spending for non-defense items exceeded fiscal 1956 by $11.1 billions, again including the highway item.

Read it anyway you may, the record adds up to the same indisputable answer—non-defense spending has far outstripped defense spending. At the urging of the administration in a succession of record-breaking peacetime budgets, we have insistently and repeatedly provided more and more appropriations to be met with money we didn't have for things we could get along without.

These appropriation and backdoor bills, like the President's budget recommendations on which they are based, add up to more than the people can afford.

They, like the President's budget, are too big.

They, like the budget, are inflationary.

They, like the budget, will further cheapen the value of the dollar.

They, like the budget, will hike the cost of living for every American family to still another high watermark. Wages will buy less and less.

They, like the budget, will further erode the people's life insurance, pensions, and savings accounts.

They, like the budget, will throw more roadblocks in the path of the Treasury in refinancing the debt as it comes due—already the situation is of crisis dimensions.

A major proposal of the President's budget message was that we live within our means. On its face, it was in balance by the narrowest margin—$70 million, a mere pittance in the context of $77 billion budgets. Of course, it would have been out of balance except for the President's request that wartime tax rates be again extended—although he has previously insisted that tax rates are too high.

It was a spender's budget. It topped all previous record budgets from President Eisenhower. It proposed to spend more. It was at least $5 billion above the budget against which the people, and even the administration itself, rebelled 2 years previously.

It made no provision for payment on the debt. On the contrary, it proposed a further debt limit increase and urged that the increase be permanent, not merely temporary, thus foreclosing any reasonable prospect of debt reduction or reduction in the stupendous burden of interest cost in the foreseeable future.

It was a standstill budget at best.

It afforded no tangible hope for tax relief. That subject seems to have been all but forgotten.

Official revisions of the January revenue and expenditure estimates for fiscal year 1960 will not be available for several weeks, but there is every reason to expect the new forecast of spending will be higher. Another deficit, instead of the hairline original surplus prediction is a distinct possibility, even a probability. Just that much further down the high road to a fiscal debacle.

THE PUBLIC DEBT

Mr. Speaker, with these successive record-breaking deficit budgets has come the inevitable succession of increases in the national debt. The tax collector has been working around the clock to bring in money to meet the excessive expenditures. He has succeeded in taking more taxes from the people than ever before but, even with the help of wartime tax rates in time of peace, he has failed to collect enough to balance accounts. So, the Treasury had no alternative but to keep hiking the mortgage against future generations by selling Government bonds to pay for the profligacy of higher and higher budget recommendations and appropriations.

In consequence, the President has made six straight requests to raise the old $275 billion debt ceiling—twice to $281 billion, once to $278 billion, once to $280 billion, then to $288 billion, and this year to $295 billion—an increase of $20 billion over these last few years. Imagine such foolishness, Mr. Speaker—spending more and more beyond our means in times of record national revenues for nondefense purposes with no serious thought of the inevitable day of reckoning. Since the present administration took over, the national debt has increased $18,600 million. Only 2 weeks ago it stood at $290,506,390,464.80—the highest since the Republic was founded. That represents a mort-

gage of $1,635.22 against every man, woman, and child in America today. And it is nearly $11 billion above the highest of the World War II debt and $39 billion above the low water postwar mark.

As the table shows, piece by piece, step by step, the so-called temporary debt ceiling becomes distressingly permanent. No longer does the ceiling serve to restrain excessive spending; it is now a mere annual gesture.

The public debt

1. Actual increase, 6 fiscal years (1954–59):

[In billions]

July 1953	$266.1
July 1954	271.3
July 1955	274.4
July 1956	272.8
July 1957	270.5
July 1958	276.3
July 1959 (reflects increase during fiscal 1959 of $8.4 billion as compared to January budget forecast of $8.7 billion)	284.7
Actual increase, 6 years (July 1953–July 1959)	+18.6

NOTE.—Old statutory limit of $275 billion raised as follows:

For fiscal 1955 by $6 billion (temporary).
For fiscal 1956 by $6 billion (temporary).
For fiscal 1957 by $3 billion (temporary).
For fiscal 1958 by $5 billion (temporary).
For fiscal 1959 by $8 billion (permanently to $283 billion); $5 billion (temporarily to $288 billion).
For fiscal 1960 (but as of June 30, 1959) by $10 billion (permanently to $285 billion); $10 billion (temporarily to $295 billion).

The red lights are flashing. But we blindly drive through them, ignoring the warnings, heedless of the day when we must pay the fiddler. But, the Treasury has to live with the dire realities of the situation every day of the week. It cannot ignore warnings. It has the job of refunding large parts of the debt coming due—something on the order of $75 billion in the next 12 months.

More and more people are refusing to buy Government bonds. They are cashing in savings bonds twice as fast as they are buying new ones. They know Government bonds are no longer attractive. The rates of interest are too low. The Treasury is unable to meet competition at the old rates. This competition for money to cover the deficits feeds on itself with the result that this year the carrying charge on the debt will exceed last year, we are told, by approximately $1 billion—it will cost us about $8,500 million. We operated the whole Government for that amount just 21 years ago.

Only a few days ago the Treasury paid 3.97 percent interest on 13-week notes—the highest rate for such short-term borrowing in the last 25 years. For 26-week notes it had to pay 4.47 percent. Government bonds have plummeted to the lowest price in history.

The Treasury is between a rock and a hard place. Ever-increasing inflation spawned by deficit spending put it there. The official cost-of-living index has been climbing to new record high water marks every 30 days for the last several months. And the buying power of the dollar keeps falling. It is now less than 48 cents—one for the price of two rather than the other way around.

All fiscal recommendations begin with the President. He makes the budget. He submits it. He recommends it. And he has been submitting all these record-breaking inflationary budgets. And the Congress has been concurring in deficit spending though at some reduction below the President's asking price.

Mr. Speaker, tomorrow may be too late. An alternative is the possibility of witnessing the fulfillment of Lenin's prediction that we will spend ourselves out of existence.

DePaul Institute of Pittsburgh's Golden Jubilee, 1908–58

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FULTON. Mr. Speaker, the De Paul Institute, Castlegate Avenue in the Brookline, South Hills section of Pittsburgh, Pa., is one of America's outstanding schools for children who are sensory handicapped through deafness, or blindness, as well as for children who are hard of hearing, and children who are partially sighted.

Bishop Canevin, who was the fifth Bishop of Pittsburgh at the time of the dedication of DePaul Institute, on May 6, 1911, said "I think our Lord is pleased to be here." DePaul Institute and its dedicated, devoted staff have been blessed by great success and world wide recognition of their distinguished and top level work in the training of children with sensory handicaps. Modern day miracles of development of handicapped children are the products of their wise teaching and devotion. DePaul Institute has been a godsend to our whole community, and has the gratitude of the whole diocese, and the admiration and respect of our Pennsylvania civic minded citizens of all faiths.

Bishop John Wright, the new Bishop of the Pittsburgh diocese, on July 10, 1959, has written:

JULY 10, 1959.

One of the most inspiring experiences I have had since coming to Pittsburgh was my visit to the pageant staged by the boys and girls of DePaul Institute at the close of school this spring. I had heard high praise of the school long before I went there, but I was unprepared for the moving demonstration of the talent of the students and the magnificient training that talent receives at DePaul.

Since then I have reflected many times, and with great gratitude to God, on the number of young lives transformed by DePaul in its half century of service, on the graces enriching those lives of which the Sisters of Charity and their lay teachers have been the channels, on the generosity of our people which has made this school possible and on the wonderful influence, direct and indirect, that DePaul has had on the happiness of families and the general good of communities.

For all these blessings in the past, for the like blessings in the years to come, I join with all who rejoice in the work of DePaul as they praise the Lord who loves afflicted children and those who are good to them.

JOHN WRIGHT,
Bishop of Pittsburgh.

The work of DePaul Institute is now ably carried forward by the current director, the highly esteemed Reverend Thomas R. Bartley, M. Ed., under the leadership of Bishop Wright.

In June 1954, the Most Reverend Bishop John F. Dearden, appointed the Reverend Thomas R. Bartley director of DePaul Institute. Father Bartley's appointment marked a return to Brookline, where he had served as assistant in Resurrection Parish prior to his appointment to Sacred Heart Parish, East End.

An able administrator, Father Bartley, in 5 years since his coming to DePaul has made extensive improvements in the physical plant of the school. In the field of public relations, through chairmanships, speeches, radio and television broadcasts, Father Bartley has interested in the work at DePaul, many individuals, many religious, civic and service organizations; these have donated valuable equipment for the use of the deaf and blind and sight-defective children.

The two previous directors of De Paul Institute are:

The Reverend Thomas F. Coakley, D.D., first director of De Paul Institute, 1908–36: A scholar, a writer, a dynamic and vigorous leader, a man of vision and boundless energy, a zealous priest—Father Coakley provided "nothing but the best" for the deaf children. His service and devotion to De Paul began with his priestly life, immediately following his return from the North American College in Rome, October 16, 1908. He organized an aid society; he secured unnumbered benefactors; all his friends were De Paul-minded. He provided for the teachers' continued study and research; he kept the staff alerted to new developments in teaching procedures and equipment; he constantly sought to imbue the deaf children with greater appreciation of beauty in art, music, drama, through creating a cultural environment; urging them on to higher achievements. In time, he inspired, initiated, and directed the rapid progress that characterized De Paul from the very beginning. "From the shores of Europe, our own work shows up first-class," he wrote after addressing the deaf children in the great oral schools at Paris, Bordeaux, and Rome. And he came home, his conviction unshaken that "De Paul is the finest oral school for the deaf in the world."

The Reverend Raymond J. Doherty, second director of De Paul Institute, 1936–53: In January 1936, the Reverend Raymond J. Doherty was appointed to succeed Father Coakley as first resident chaplain and full-time director of De Paul Institute. Father Doherty's influence and zeal extended to every phase of school life and to every little child.

In June 1954, Father Doherty was appointed pastor of St. Rosalia's Church, Greenfield, where he is stationed at the present time.

The sisters and lay teachers are worthy of special tribute. Two outstanding sisters are:

A DEVOTED AND SACRED HERITAGES DE PAUL'S 50 YEARS

Sister Marie Antonio McLinden, teacher, principal, administrator (1908–30; 1936–57): Of all those who saw the beginnings of De Paul Institute, who "bore the labors of the day and the heat," Sister Marie Antonia labored the longest and is the sole surviving pioneer. She began the work of teach-

ing the deaf 50 years ago and was closely associated with Bishop Canevin and Father Coakley in shaping the ideals and policies of the school. Her entire life was spent in the work except for the 6 years (1930–36) she served as Assistant Mother of the Sisters of Charity, Greensburg, Pa. A very concrete tribute to her is cut into the stone of Our Lady of Victory Hall, named for the devotion to Our Lady of Victory Sister Marie Antonia instilled into the sisters and pupils from the very first days of the school on Troy Hill.

Sister Teresa Vincent Mahoney, child psychologist, principal, 1924–57: Sister Teresa Vincent succeeded Sister Marie Antonia as principal at De Paul Institute in 1930, remaining in office until 1957. It is owing to her vision and constant vigilance and indoctrination of teachers that there is at De Paul a solidarity, a unity and consistency of aim and methods that could scarcely be duplicated elsewhere.

ACTIVITIES

Running parallel with the religious organizations at De Paul, such as the sodalities and junior Holy Name Society, organized in 1926 and 1927, were the Scout programs, which also included the entire student body. Troop 241 Boy Scouts of America was organized in 1930 and the Girl Scout Troop 278 in 1935. The Cubs were organized in 1937, the Peeps and Brownies in 1938, and the Playmates in 1941. With the admission of the preschool children, De Paul made a unique contribution to the scouting program, the boys becoming Peeps and the girls becoming Playmates, with their own annual activities and court of awards.

The pursuit of Scout merit badges, field trips, study, social contacts, led to the discovery of aptitudes and acquainted the Scouts with a variety of occupations. Father Doherty, realizing the need to develop self-confidence in the deaf children, encouraged association and competition with hearing Scouts in camps, in crafts, in scout-o-ramas, where the deaf Scouts won many prizes. He also strongly endorsed and supported the athletic teams; and that the boys might have greater opportunities to compete with hearing athletes, he enrolled the older boys in the Catholic Youth Organization and the younger boys in the diocesan grade school basketball league. Thus was the way opened for social integration of the deaf with the hearing in a hearing world; thus was confidence built up, for in the spheres of scouting and athletics the deaf excelled.

One of the most publicized groups at De Paul is the harmonica band. It grew out of the rhythm band. Father Doherty took it to Forbes Field, June 20, 1936, to participate in the Music Jubilee. Ripley, who introduced the band, said that it was the realest "believe it or not" he had ever seen. He invited the whole group of 50 children to New York at his own expense; this invitation brought a similar one from Major Bowes for his New York program over a national network.

The harmonica band astonished even the conductor of the Pittsburgh Symphony, Mr. Antonio Modarelli, who visited De Paul in November 1936 to hear the children play. He was surprised at the deaf child's appreciation of tone quality, his awareness of pitch, resonance, volume, and accent, which carried over to the child's speech, giving it color and meaning. In April 1937, the band made its radio debut over KDKA; and in the following October Father Doherty took 40 members to Harrisburg to give a concert for the Pennsylvania Conference of Exceptional Children in the forum of the Educational Building. The band has always been an integral part of the Christmas plays and the June closing exercises.

In June 1954, Bishop Dearden appointed Father Doherty pastor of St. Rosalia's Parish in Greenfield and the Reverend Thomas R. Bartley third director of De Paul Institute. During Father Doherty's almost 19 years as director of De Paul, the enrollment increased from 150 to 731 pupils. Father Doherty's contribution to De Paul was phenomenal both in the spiritual and in the material order. He was always before the children as a shining model of all that was praiseworthy, entering into their joys, understanding their difficulties, guiding, counseling, making adjustments; always the teacher, helper, leader; zealous and enlightened.

Father Bartley's appointment marked a return to Brookline, where he had served as assistant in Resurrection Parish prior to his appointment to Sacred Heart Parish, East End.

Already in the 5 years since his coming to De Paul, Father Bartley has made extensive improvements in the school plant, as part of a program of modernization and remodeling. In the field of public relations, through chairmanships, speeches, radio and television broadcasts, father has interested in the work at De Paul, many individuals, religious and civic organizations, who have donated valuable equipment.

In 1955, a conference of the Society of St. Vincent de Paul was organized under the direction of Father Bartley. It was a happy day for the members when this, the first conference of deaf men in the world, was aggregated on July 29, 1957. The conference is under the patronage of St. Francis de Sales, one of the early teachers of the deaf.

In 1955, the Boy Scout Troop 241 celebrated its 25th anniversary. To date, 126 boys have won the Ad Altare Dei Cross; 42 are Eagle Scouts; 21 have won the Eagle Palm. In May 1957, 17 Girl Scouts were the first to receive the new National Catholic Award, known as the Marian Award. Previously, for 11 years, De Paul Scout leaders conferred their own Catholic award, the Ad Virginem. In January 1958, 20 Cub Scouts received the Parvuli Dei Award; they were also the first group in the country to qualify for this award. Thus, the schoolwide interest in scouting has not only motivated much of the fine arts and craft work but has stimulated the study of religion and the practice of works of mercy and charity, requirements for these new awards.

The year 1958 marked the golden jubilee year of De Paul Institute. Someone has said that St. Thomas Aquinas wrote the Summa of Faith, but that it was St. Vincent de Paul who wrote the Summa of Charity. The Summa of Faith was completed once and for all; but the Summa of Charity will continue as long as time and human need shall last. Chapters are still being written in that summa, and one of the most glorious of these began just 50 years ago in the year 1908, when Bishop Canevin opened a school for the deaf of the diocese on Troy Hill. It was a modest beginning in a rented house with three trained teachers for one deaf pupil. One person did the sowing; others did the reaping. Some labored; others entered into their labors. The seed planted 50 years ago has grown into a mighty tree and borne fruit many hundredfold. God giveth the increase.

From being a school for the deaf and hard of hearing alone, De Paul Institute has become a school for all types of sensory handicaps. Its growth over the 50-year period has been great in all directions; in physical expansion; in enrollment in the ever-widening span of its services. This growth is consonant with its aims to keep abreast of developing needs. At present the work includes:

1. Intensive general education of the deaf and the blind child from preschool through junior high school.

2. Education of the child with a hearing loss or impaired vision or speech to the point from which he can make normal progress in a regular class among unhandicapped children.

3. Rehabilitation of the child who has become handicapped in sight, hearing, or speech after his education has begun.

4. Guidance and direction of students attending regular high school or college.

5. A clinical testing program.

6. Counseling service for parents of handicapped children.

7. Adult education, including speech and speech reading; tutoring of special cases.

8. A teacher training program.

9. Conducted tours for civic groups, nurses, university classes.

10. Saturday speech classes.

What Do Red Phrases Mean?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News, Monday, September 14, 1959:

PEACE, WAR, FREEDOM: WHAT DO RED PHRASES MEAN?

(By Henry N. Taylor)

No discourtesy is meant to Khrushchev, but as he comes among us with words like "peace" and "coexistence" and "noninterference"—it might be a good time to remind ourselves what Communists truly mean by such favorite phrases.

For Kremlinese is a language unto itself, often far more difficult to translate than mere Russian. Veteran students of communism point out how words like "peace" can mean almost the opposite when used by Mr. K. For instance:

Peace: In Kremlinese this does not mean absence of shooting. It means absence of capitalism.

Lenin said that until communism has elbowed capitalism off the globe, "peace" will be impossible and impermissible no matter how nonbelligerent relations may sometimes seem.

War: To Communists, this has never been limited to gunfire. War is what exists until the last capitalist is erased everywhere.

Lenin said weapons of "war" should include not only pistols but cocktail parties and conferences. Any believing Leninist—including Mr. K.—must consider himself at "war" with us today.

History: A favorite Khrushchev word, often paraphrased as the objective laws of social development, history means more to Moscow than just a record of events.

It is a force, irreversible, dictating the future, which will inevitably be global communism. Progress is measured only by how fast the past (which means us) succumbs to the future (which means communism).

Freedom: We think this means being left to do as we please. Not so Lenin.

Said he: "The flag of freedom will be waved against us. But every freedom is a fraud which contradicts the emancipation of labor from the oppression of capital."

Imperialism: This means any Western defense arrangement, from NATO to the smallest crate of rubber boots to Red-threatened Laos.

American troops abroad, even a squad of them vacationing at a beach resort, become a war base. When Russia and her allies make military plans, this is described as

comradely resistance to imperialist aggression.

Aggression: To us, stemming from the Latin "go toward," this means attacking people and taking something by force. In Communist eyes, you can be an aggressor without budging; just by failing to retreat in face of communism's inevitable advance.

Noninterference: In Kremlinese, this is loaded to mean only noninterference in the progress of communism.

Ditto for renunciation of force, reduction of tensions, and elimination of positions of strength. Khrushchev speaks of peaceful competition, but insists history sentences us to lose.

Revolution: Khrushchev says Western statesmen err in calling the Hungarian or Tibetan freedom-fights revolutions.

For the Kremlin, there is only one revolution, the progressing Soviet one. Thus Hungarians—and Americans too—are counter-revolutionaries.

Coexist: To us this means you go your way and we'll go ours.

But for Khrushchev this means, by definition from Karl Marx onward, we'll go our way and eventually you will too.

Democracy: This is what Mr. K. says exists in Russia.

In our language, democracy means self-government, with elected representatives enforcing laws which have survived genuine debate. But Lenin said: "The Soviet Socialist democracy is in no way incompatible with the dictatorship of one person."

Hon. Isidore Dollinger

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

(Mr. O'HARA of Illinois asked and was given permission to address the House for 5 minutes.)

Mr. O'HARA of Illinois. Mr. Speaker, when I came to the Congress, which was in the 81st Congress, I met one of the sweetest, nicest men I have ever known in my life. He and I were in the steerage of the Committee on Banking and Currency. At that time the Committee on Banking and Currency had an elevated level where the great and the senior members of our committee sat. Down below were those in the steerage. Next to me was the gentleman from New York. My association with him has enriched my life. There never came to the Congress a finer gentleman than IZZY DOLLINGER of New York, and in his six terms in the Congress he has shown the stature of a statesman of highest quality. I am informed that Congressman DOLLINGER will not be with us in the next session because he is on the eve of being elevated to a high political position in New York. The election will be in November, and I think there is no question that he will be elected. So he will not be here in the next session of the Congress. I would like to take advantage at this time, when the House has time from its legislative chores to listen to praise of those we love and who will not be here in the next session to express my affection and my esteem for one of the finest gentlemen I have ever known, a really great American statesman, the Honorable ISIDORE DOLLINGER of New York.

Mr. HARRIS. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Arkansas, the distinguished chairman of the great Committee on Interstate and Foreign Commerce.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ALGER. Mr. Speaker, I include the following newsletter of September 12, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER)
SEPTEMBER 12, 1959.

A bill to provide standards for the issuance of passports says: "Section 5. The Congress finds that the international Communist movement of which the Communist Party of the United States of America is an integral part, seeks everywhere to thwart U.S. policy, to influence foreign governments and peoples against the United States, and by every means, including force and violence, to weaken the United States and ultimately to bring it under Communist domination; that the activities of the international Communist movement constitute a clear, present, and continuing danger to the security of the United States; that travel by couriers and agents is a major and essential means by which the international Communist movement is promoted and directed; that a U.S. passport requests other countries not only to permit the holder to pass freely and safely, but also to give all lawful aid and protection to the holder, and thereby facilitates the travel of such holder to and in foreign countries; and that in view of the history of the use of U.S. passports by supporters of the international Communist movement to further the purposes of that movement, the issuance of passports to any person described in section 6 is harmful to the security of the United States and therefore passports should be denied to such persons."

The need for this legislation results from the 1958 Supreme Court decision (*Kent* v. *Dulles*) which countermanded the State Department's rights to deny passports to known Communists. As a result, 15,000 to 20,000 hard-core Communists in the United States have the right to come and go freely in their despicable work of attempting to undermine our Government and free society. An amendment to strike out section 5 failed and the bill passed. Eighteen Democrats comprised the only final opposition. Isn't a study of section 5, in the light of Khrushchev's impending visit thought provoking.

The problem of Laos further complicates pending Federal business—the Khrushchev visit, world peace, the relationship of the free nations as allies, U.N. effectiveness, and foreign aid. As the $225 million Lao foreign aid expenditures come to light it appears again that our expenditures have created greater problems, not solved them—an ineffective army, peoples' apathy, or hostility toward their government, and a greatly increased cost of living. Once again it becomes apparent that our foreign aid goals and accomplishments fail and should be studied and reevaluated before we spend more.

The President's veto of public works projects was overridden to the hurrahs of the Democrats, gleeful over their success. Only 5 Democrats (no Texans) joined 116 Republicans to vote to sustain the veto, 280–121. The President's position to me was logically sound. The 67 new starts of unbudgeted projects would still cost the taxpayers almost $800 million despite the heralded 2½ percent cut. Forgotten is the fact that there is already a backlog of authorized projects that would take 20 years for which to appropriate at the usual rate. So we're back to the same old problem that underlies our basic governmental economic difficulties—spending too much money, more than budgeted, a lack of fiscal responsibility and self-discipline. Unfortunately, good projects are hurt when hastily conceived political boondoggle or pork barrel projects are added. Like all Federal matters though, it's up to the people.

The third housing bill passed overwhelmingly, the President's two earlier vetoes forcing the Democrat leadership to compromise, resulting in more fiscally responsible legislation. Changes include: (1) Eliminate the loans for college classrooms, (2) extend FHA cut off date beyond October 1960, (3) extend the $650 million urban renewal expenditure from 1 to 2 years. Presidential objections which I share, that were not deleted include: (1) The housing for elderly programs, (2) 37,000 new public housing units (over 100,000 unit backlog has never been built).

The Ways and Means Committee is 1 of 20 standing committees of the House, yet handled 13 percent of all bills introduced. Of 10,360 bills (as of September 2), 1,585 were referred to Ways and Means Committee. Of these, 921 related to tax, 183 to tariff, and 381 to social security. Of the total, 49 were reported out this year by the committee (as of September 3). Besides 40 days of hearings, the committee met in executive session 91 times. Also, overall tax reform hearings are scheduled later this year.

Democrat leadership claims of budget cutting, as carried in the daily CONGRESSIONAL RECORD, have been branded erroneous and false. The alleged $324 million cut is $930 million in error; actually there is a $606 million deficit or more. Such falsification or distortion of facts is wrong, certainly it should not be carried in the RECORD. It will take some complicated explanations by the Democrats to disprove the "big spenders" tag, in view of their voting records.

In closing this year, perhaps Congressmen should remember the "10 cannots": "You cannot bring about prosperity by discouraging thrift. You cannot help small men by tearing down big men. You cannot strengthen the weak by weakening the strong. You cannot lift the wage earner by pulling down the wage payer. You cannot help the poor man by destroying the rich. You cannot keep out of trouble by spending more than your income. You cannot further the brotherhood of man by inciting class hatred. You cannot establish security on borrowed money. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves."

Hon. Isidore Dollinger

SPEECH
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. AVERY. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield.

Mr. AVERY. Mr. Speaker, if the gentleman from Arkansas and the gentleman from Illinois will permit, I would like to say, if I may, speaking for the minority, on Interstate and Foreign Commerce, that we would like to be associated both with the gentleman from Illinois and the gentleman from Arkansas in paying our tribute to the fine service that Mr. DOLLINGER has rendered on the Committee on Interstate and Foreign Commerce. We wish him well in his service to the State of New York in the important position of District Attorney of Bronx County.

Mr. O'HARA of Illinois. I thank the gentleman from Arkansas and the gentleman from Kansas.

Civil Rights

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KARTH. Mr. Speaker, it was with a good deal of satisfaction that I signed the discharge petition on the civil rights bill (H.R. 8601) which I consider to be a significant and much-needed legislative step forward.

It has been said that discriminatory practice against individuals based on consideration of religion, race, color, or national origin is our democracy's greatest unfinished business. I believe this to be true—that is why I am so eager to see early favorable action on H.R. 8601 which would make possible substantial progress in certain areas of civil rights. H.R. 8601 is a bill which is most modest in scope and made so, frankly, to win the widest possible acceptance. The bill deals with the obstruction of court orders in desegregation cases, flight to avoid prosecution with a broadened provision to include the destruction of any building or other real or personal property, preservation of Federal election records, extension of the Civil Rights Commission for 2 years, and education of the children of members of the Armed Forces.

Let me say at the outset that in my view this is not legislation directed at any particular section of the country, North, South, East, or West. There is no monopoly of prejudice in any one section of the country or for that matter any one area of the world. For example, the English who have prided themselves on their tolerance have witnessed savage outbreaks between Londoners and West Indians. The French have hounded and segregated Algerians in the cities of France. Anti-Semitism has flared up in Germany. Soviet Russia has not divested itself of anti-Semitism which under the Czars took the form of pogroms but which under communism means segregation in a Biro-bidzhan ghetto, purges, and virtual exclusion from important posts.

We in the northern United States of America are not without sin on the score of prejudice, but we have found that with properly enforced antidiscrimination laws that fairplay in human relations becomes not only legally but morally right. Equality, the equality of opportunity, is the great, wonderful secret of our democracy's strength and stability which the genius of the Founding Fathers conferred upon the Nation. Where this principle is defaulted upon or is abrogated, our total democracy suffers. That is why a civil war was necessary and why when the victory for justice and democracy was thrown away for a mess of political pottage, it has now become painfully necessary to rewin the legal and moral battle for the sacred democratic rights of those who have been disadvantaged.

It is one of the ironies of history that the political party of the Great Emancipator has so recently joined with many southerners to circumscribe and deny rights to another substantial minority of our own country—organized labor—by inflicting the Griffin-Landrum formula for labor-management relations upon the trade union movement. I fought this denial of rights as I have long fought against the denial of all constitutionally ordained rights and privileges to any group.

Action on the Griffin-Landrum bill has confirmed my conviction that the cherished body of democratic rights must be retained inviolate for all if the rights for any are to be preserved. Any erosion of rights if allowed to begin becomes progressively worse and extends to new groups.

I believe that the Civil Rights Commission has done our country a tremendous service by shaking us out of our dream state that "all's right with the world" as far as our Nation's treatment of minorities is concerned. The Commission in an outstanding report treats with three major problems of discrimination: In voting, in public education, and in housing. In describing these aspects of discrimination the report says:

> The fundamental interrelationships among the subjects of voting, education, and housing make it impossible for the problem to be solved by the improvement of any one factor alone. If the right to vote is secured, but there is not equal opportunity in education and housing, the value of that right will be discounted by apathy and ignorance. If compulsory discrimination is ended in public education, but children continue to be brought up in slums and restricted areas of racial concentration, the conditions for good education and good citizenship will still not obtain. If decent housing is made available to nonwhites on equal terms but their education and habits of citizenship are not raised, new neighborhoods will degenerate into slums.

I believe that the need for effective civil rights legislation is most imperative to restore the good health and the very survival of our democracy.

H.R. 8601 is an important means to achieving that worthwhile end. We cannot delay much longer in initiating necessary action because the damage delay might inflict could be tragically irreparable.

In the words of the report—

> What is involved is the ancient warning against the division of society into two cities. The Constitution of the United States, which was ordained to establish one society with equal justice under law, stands against such a division. America, which already has come closer to equality of opportunity than probably any country, must succeed where others have failed. It can do this not only by resolving to end discrimination but also by creating through works of faith in freedom a clear and present vision of the city of man, the one city of free and equal man envisioned by the Constitution.

Simmons Co. at Kenosha Treats Employees in Deplorable Manner

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FLYNN. Mr. Speaker, I rise to inform this body, which only a week ago gave serious consideration to the curbing of unfair practices by labor leaders and labor unions, of an unfair labor practice which exists in my district. This unfair labor practice is one, however, where the union and its members are clean, honest, sincere members of the community. They work for the Simmons Co. and this company is being unfair and grossly unjust to its employees. This company has done business in Kenosha for 94 years. It has grown and prospered and today has branches throughout the United States. Its home office, however, is in Kenosha, Wis., where it has employed steadily approximately 3,000 men. Over 25 years of negotiation, the union met regularly with the employer and had a minimum of labor disturbances. I never remember of any strike being held at this company. The contract between management and labor is a normal one with the Simmons Co. paying the approximate average which labor receives in other plants in that city.

Two years ago, through duplicity, the Simmons Co. moved the soft goods end of their company from Kenosha. At that time, they stated they wanted to expand their hard goods industry. When the company started operations in Indiana in a plant about 90 miles from its Kenosha home, it was found that it signed a union contract apparently before it employed any help, or at least, when only a few men were employed. This contract, we believe, is a sweetheart contract because it is so substandard in comparison with the Kenosha contract that it would shock the conscience of anyone who read it. The wage rate is approximately 85 cents an hour less than they were paying and there are no clauses to protect the workingmen. In other words, management perogative clauses are all in labor of the com-

pany—none are in favor of the workingmen. In addition to this, women have been put on men's jobs at reduced rates and the savings, by these practices at the Indiana plant, are running, according to our best estimates, over $3 million a year.

The Simmons Co. has now, without notice, announced that it has sold its building and is moving the balance of its operation to Indiana. We presume that they will seek a sweetheart contract with the same union and although the men of Kenosha will protest this, the question is—will they be able to do anything about it? The company, in moving, refuses to take any of its Kenosha men along, saying that it owes an obligation to the community where it is moving to hire men from that area. The company is taking only a handful of its key personnel. The company has a pension plan but for men under 55 the termination of employment will completely ruin that pension plan. It will cause extreme havoc to those men over 55. This means that the security of these men and their families will be ruined and the company in separating its employees appears to be willing to pay back only the money which the men paid in. That is, they seem unwilling to pay back the contributions which the company made to this pension fund.

The Simmons Co., by moving, is leaving an old building which they have permitted to run down. They are ridding themselves of men who have been with them 30 or 40 years and will be hiring men who are younger and more productive and who can turn out more work in a day. Through this added productivity, through the savings on the pension plan that will be in effect, and the saving of the moneys already paid into the pension plan, through the hiring of women in place of men at reduced rates, and through the signing of a sweetheart contract, we estimate that the Simmons Co. will be saving in excess of $5 million a year. The men of Kenosha who worked for this company charge that this savings is being purchased at the price of their labor, sweat and loyalty. They claim it is being purchased at the price of their pension fund, which is their security in old age. The management of the Simmons Co., apparently, has lost consideration of the human element in business today.

Mr. Speaker, I feel that this could well be the commencement of a trend where industry, protected by the new labor law, can ruthlessly rid itself of old employees and move into a new community where a chamber of commerce is anxious to guarantee it a steady employee force who will work either without a union contract or at substandard wages, in order that there will be more industry in the community.

The trend of this can only bring down the standard of living in America and to reduce the standard of everyone to the standard of the lowest paid citizen in America. I say that, although there is need for labor reform, there is also need for management reform and I ask what provisions were in the bill recently passed to reform management, insofar as their relation with labor is concerned. Why did we have to pass this bill, in a frenzy, because of hysteria developed by the National Manufacturers Association? I ask whether or not it would not have been better to come back next January and to have considered this legislation in a more calm manner and to have placed in the bill provisions to control labor, yes, but also provisions to control management, such as the management at the Simmons Co. in Kenosha, Wis.

I respectfully submit this for the consideration of all Members of Congress during adjournment in the hope that when we return in January, we can pass legislation which will take care of this very serious situation.

Twentieth Anniversary of Invasion of Poland by Nazis and Communists

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call attention today to a resolution and memorandum adopted by an estimated 4,000 residents of Chicago who attended a rally sponsored by the Illinois Division of the Polish American Congress on Sunday, September 13, 1959.

The purpose of this memorial service was twofold: First, to register a protest against the invitation of Premier Khrushchev to the United States, and second to call attention to the fact that on the 20th anniversary of the invasion of Poland, which occurred on September 1, 1939, the entire world should be reminded that this horrible war was visited upon civilization after a treacherous conspiracy between the Nazis and the Communists when they signed the infamous Ribbentrop-Molotov agreement.

I am today placing in the RECORD both the resolution and the memorandum which were unanimously adopted by those attending the rally because I think it is important in these crucial times, when so many would lead the United States to believe that all of the past crimes committed by the Soviet Union against civilized nations should be forgiven, that these people should be reminded of Communist treachery just as often as possible.

Mr. Speaker, the resolution and memorandum follow:

RESOLUTION

The participants of the meeting called by the Polish American Congress, Illinois Division, on this day, September 13, 1959, at Lane Technical School Auditorium in Chicago to commemorate the 20th anniversary of the conclusion of the German-Russian pact of nonaggression and mutual assistance of August 23, 1939; the German attack on Poland on September 1, 1939; and the Soviet invasion of Eastern Poland on September 17, 1939, do hereby resolve that:

1. The Polish Nation, which 20 years ago, on September 1, 1939, rose to an unequal fight with invading Nazi Germany, has not regained as yet its full national sovereignty to which it is entitled. Sharing the same common national, historical, and cultural tradition, the Poles on this memorable day are paying a tribute to all those who either in the Polish Army at home or abroad, or as members of the national resistance movement, heroically, and without interruption kept fighting for liberation of their country in the tragic years of great challenge and unprecedented terror and persecution started by the Nazi invaders on that September 1, 1939.

2. The victory won on the battlefields during World War II over German imperialism was not followed by the expected period of peace and international justice because the exigencies of war and, above all, the shortsighted diplomacy of the Western Allies have led to the rise of a new danger the world is confronting right now in the form of imperialistic and aggressive aims displayed by the Soviet policy of conquest and expansion.

3. We remind the whole free world that the Polish Nation, which throughout all the time manifested its fighting spirit and deep faith in the return of freedom and independence and did it with the uncompromising attitude and immense contribution to the common world effort at terrific costs in population and property, this nation, its will disregarded by naked force, has been thrown into the empire of Soviet dictatorship and slavery and does not enjoy the right of self-determination, this unalienable right being one of the cardinal principles adopted by the Atlantic Charter as a moral and political program set by the victorious coalition of the Western Powers.

4. The Government of the United States activate and intensify a policy of liberation of Poland and all other captive countries from the Soviet bloc of slavery, such a policy thus becoming a practical continuation of the Week of the Captive Nations, officially proclaimed and solemnly commemorated in July of this year and ultimately enabling those nations to rejoin the world of Western culture and ideology to which they belonged for centuries and to which they keep striving to return.

MEMORANDUM

Shortly after the end of World War II in 1945, a special international Tribunal, established by the victorious Allied Powers at Nuremberg, pronounced the judgment in the case of major Nazi war criminals after having found them guilty of launching aggressive war and committing crimes against humanity during and in connection with the war.

Unfortunately, this was only an unfinished act of justice because there was no indictment and no sentence against Communist war criminals who committed exactly the same—if not even worse—crimes than those for which their Nazi partners have been convicted.

One should not forget that by the disgraceful Hitler-Stalin pact of mutual assistance and nonaggression from August 23, 1939, the Soviet Union is equally guilty as an accomplice in the conspiracy that touched off the disaster of World War II, and subsequently guilty of unprovoked armed invasion upon Poland, Finland, Baltic States, Rumania, and Hungary, these countries having been finally swallowed by the insatiable Soviet empire of exploitation and military conquest.

By committing mass murders on the citizens of the conquered countries, and by deportation of millions of human beings to the Soviet concentration camps where they were exposed to unescapable destruction, the Soviet Union is guilty of the abhorring crime of genocide on a scale surpassing the mass murders by Hitlerite henchmen.

And even quite recently, in 1956, the same Soviet Union has drowned in blood a merciless massacre, the heroic uprising of the Hungarian people in their dramatic fight for freedom and independence.

While all these inhuman and unpunished crimes of the Soviet regime are still fresh in the memory of the civilized world, one of the leaders of this notoriously criminal political system and one of the direct coinitiators and coexecutors of the crimes that will stand forever as an abominable disgrace of our times, this man, Nikita Sergiejewicz Khrushchev, arrives in our country to be received by our Government with honor and respect accorded to the invited guests on state visits.

The President of the United States, symbol of our national dignity and bearer of the high and priceless American ideals of freedom, justice, faith in God, and desire for universal peace, will have to, either as the host or guest, shake the hand stained with the blood of millions of innocent victims, murdered, tortured, and starved in the prisons and death camps by Russian tyrants and killers.

At a time when a deep and sincere desire and determination to preserve the peace and thus prevent the sufferings and disaster of a new war may persuade our highest Federal authorities to undertake such a humiliating step, we American citizens of Polish descent, knowing from tragic experience of our own and our friends and relatives, probably better than anyone else the history and the scope of Soviet crimes and abhorrent part played in those crimes by one of the leading henchmen. Nikita Khrushchev, regard it as our duty to raise our voice of conscience and voice of warning in defense of the same immutable moral principles which we feel should serve as the key to the relations among the states all over the world.

Once these principles are ignored, or even diluted, the road is open to the rule of blackmail, supremacy of naked force over law, and, ultimately, to chaos, anarchy, and total annihilation.

Showing our deepest concern for the future of Western civilization based upon these high principles of law and morality, we want to restate that, in our conviction, the announced exchange of state visits between Moscow and Washington is seriously endangering the moral prestige of the United States not only among the nations raped and dominated by the Soviet Union, but also within the free nations throughout the world.

Further, we want to emphasize that the invitation to visit the United States of America extended to that arch criminal Nikita Khrushchev, will be, no doubt, interpreted as a sign of weakness and uncertainty of the foreign policy of the United States which is now retreating to a humiliating gesture of receiving in this country a representative of a system built upon the violence and totalitarian dictatorship and aimed at the ultimate domination of the free world of free peoples through the conspiracy of international communism.

Such a gesture will be, not without reason, appraised as new evidence of appeasement toward an aggressive foe of peace and justice, effected by a conciliatory and friendly policy of concessions which, as the discouraging experience of the last 20 years teaches us, does not lead to lasting peace but only and exclusively to a further increase of audacity and new ultimative demands of the Communist aggressor in his road of threats and blackmail.

With feelings of deep devotion to the democratic ideals of a free and law-abiding country in which we live, we participants of the meeting called by the Polish-American Congress, Illinois Division, on September 13, 1959, in Chicago, do hereby adopt unanimously a resolution as follows:

1. Express the deep sorrow felt by millions of American citizens of Polish descent because of the invitation to the United States of America of Nikita Khrushchev, notorious Russian war criminal responsible for extermination and unprecedented sufferings of innumerable victims of the system led by him and disgraceful henchmen of nations suppressed by him and kept constantly in slavery.

2. Constraining ourselves not to demonstrate our true feelings toward the person of Nikita Khrushchev in a way which might have discredited our authorities during a reception customarily accorded to a guest from abroad, we urge the American people to keep in mind the register of sinister crimes carried by the Muscovite tyrant Khrushchev and show clearly and unmistakably our great disdain to him by preserving the attitude of full indifference and turn our cold shoulders in the dignifying silence to prove that we protest and mourn his visit to the United States of America.

Calling All Hogs

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DAGUE. Mr. Speaker, in the comparatively short time I have been in Congress I have learned to appreciate the finer qualities of a colleague while at the same time disagreeing with his legislative philosophy. My distinguished neighbor in the Old House Office Building and a fellow member of the House Committee on Agriculture, the Honorable EARL HOGAN, is a fine, courteous gentleman and I am sure he is as highly regarded among his constitutents as he is among his colleagues of the 86th Congress.

In his promotion of subsidies to farmers who market lightweight hogs it appears, however, that he has ignored the lesson of agricultural history which points up the fact that what is intended to became a floor virtually becomes a ceiling with prices frozen at a low level. And, as with all other subsidized items, the producer increases his production at the guaranteed minimum and again we are up to our eyes in a commodity in which there is already a surplus.

Included with these remarks are an editorial and a news item taken from Midwestern papers which underscore the objectionable features of Congressman HOGAN'S proposal:

COUNT THIS ONE OUT

If Representative EARL HOGAN had run for Congress by promising Hoosier farmers $11 a hundred for hogs, he wouldn't have gotten enough votes to count.

The Hogan proposal to make Government payments for lightweight hogs can all too easily lead to just such a fixed, low price. Briefly, Representative HOGAN has offered a bill in Congress under which the Government would pay farmers up to $3 a hundred for lightweight hogs marketed when the price drops below $14 a hundred for this type. There are certain limits on the amount to be paid the individual farmer, and on the total annual cost of this temporary plan.

In theory, the payment would induce farmers to sell off some of the present large numbers of hogs instead of feeding them out to best grade. It is generally known that there are too many hogs. The market price has dropped to about $15 for best grades, and one way to get the price up is to reduce the number of pigs being grown and fed.

What could happen if the Hogan plan went into effect? Hog buyers can read and count like farmers and politicians. With an oversupply of hogs and an assured Government payment to the farmer of $3 a hundred, the processor will reason that he can pay $11 a hundred in the market and let the Government carry $3 of his costs for what are really $14 hogs.

Then would the farmer really be encouraged to reduce the number of pigs being produced? It is a fact that overproduction of hogs is the sole reason why prices have come down.

Again it's simply a matter of counting. Even at $15 a hundred, the average Hoosier farm operator can make some money on hogs. He's not making as much as he did when hogs sold for $20. He'd like to make more and when the oversupply is worked off, he will make more.

But if the market is fixed by a Government payment, the farmer who profits on 100 hogs at $15 will correctly figure that he can make even more by selling 200 hogs. The practical result of the Hogan plan would be more pigs, not less. Overproduction would be encouraged, and a vivid case in point for Indiana farmers is the wheat program.

There are other side effects. Government payment plans have tended to freeze farm markets, with the bottom also becoming the top. Areas now competing with Indiana farmers in hog production would get the same payment and same push to continue competition. At a time when everyone agrees that the temporary farm program is a failure, this would be a step to further Federal control of farming.

This proposal should be given a quick death in Congress. Hog farmers, working through the free market, will solve this problem in pigs for themselves.

KUHFUSS HITS CONGRESSIONAL PORK BILL

William Kuhfuss, president of the Illinois Agricultural Association, Thursday lashed a congressional effort to pass incentive payments for pork producers.

A bill to provide special payments for producers who will market lightweight hogs has passed the House of Representatives Agriculture Committee and is awaiting action in the House Rules Committee.

Kuhfuss said the bill is just like the other payment programs considered in the past few years—"It purports to benefit everyone, but actually benefits no one."

The bill provides a subsidy payment on all slaughter hogs marketed at live weights of from 175 to 190 pounds and places a guarantee on $14 per hundredweight on hogs.

While farmers fear hog prices may go to $10 in the near future, Kuhfuss pointed out that this is not the most important point to observe. In 1955, prices did drop down around $10, but they came back to $14 in 4 months and went to $16 in 8 months.

"In fact in the past 10 years, the average annual price has been $18.33, considerably more than the $14 guarantee proposed," he said.

"But, if the market were influenced by Government controls, chances are the $14 floor would also become a ceiling as with other programs. Commodities under Government controls today, without exception, are the ones in the most serious trouble.

"Even the housewife will suffer under such an idea," he continued. "The program will lower meat prices slightly, proponents say, but if she doesn't pay a price based at least partly on what the farmers get, she'll have to make up the difference in added taxes."

Summarizing the program Kuhfuss commented. "This kind of legislation can mean only one thing—runaway pork production unrelated to demand, reduced income for the farmer and a higher tax burden for all taxpayers."

Khrushchev's Real Game

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call attention of my colleagues to an article which appeared in the Washington Star by Mr. David Lawrence on September 14, 1959. I agree with these views.

The article follows:

KHRUSHCHEV'S REAL GAME—PREMIER'S AIM IS SEEN AS DEADENING OF MORAL FORCE OPPOSING COMMUNISM

(By David Lawrence)

The American people are entitled to know the game Soviet Premier Khrushchev is playing.

It is a game of diversion—rockets to the moon, protracted conferences on disarmament and nuclear tests and summit talks that if, carried on for years, are intended to make the American people grow weary of international tension and finally to accept the immoral and unlawful conquests of millions of peoples now enslaved.

There are two instruments of power in the world today that can affect the peace of mankind. One is military, and it is designed to act as a deterrent to physical aggression. The other is moral force which when developed to full strength can influence whole nations and cause them to rise up against their oppressors.

Mr. Khrushchev's game is to deaden the moral force that has made liberty loving nations so articulate in world history in behalf of human freedom.

Khrushchev's game is to make it appear that, by exchanges of visits, by expansion of trade, by constant talk of peaceful coexistence, Americans are abandoning their dedication to moral force. This is expected to discourage revolt behind the Iron Curtain. For, if America becomes indifferent, the captive nations, it is presumed, will lose all hope.

Mr. Khrushchev's game is based on a belief that Americans are influenced only by selfishness and materialism—solely by the desire of businessmen for more trade—and that such idealism as remains can be anesthetized by wearisome and exhausting negotiations, or by implied threats of war through emphasis on missile and rocket development.

Mr. Khrushchev's game reaches a climax in propaganda intensity this week as he visits the United States. The dispatches and radio reports from America telling of "enthusiasm" for him, official honors paid and courtesies extended, together with news pictures of high American officials fraternizing with Mr. Khrushchev, will be displayed throughout Eastern Europe and behind the Iron Curtain, generally, as meaning approval of Communist policies by the people of the United States and their Government.

What can the American people do about it all? Various types of protests have been planned for the next 2 weeks and will be publicized widely. These devices are effective psychologically to some extent abroad, but it is here in Washington that the biggest opportunity has been missed.

The Congress speaks for the American people. It should have decided to stay in session throughout the Khrushchev visit to allow for an extensive debate on the cold war issues. This would have told the world in unequivocal terms that the American people have not forgotten what happened in Hungary and East Germany. It would have furnished an opportunity to ask Mr. Khrushchev openly what has become of the millions of persons exiled to concentration camps behind the Iron Curtain, and to expose to full view the operations of his autocratic government.

For moral force is potent when it effectively expresses a nation's ideals, and when it seeks by debate and discussion to underline and emphasize the basic principles of human freedom.

Actually there is only one issue. It is the self-determination of peoples everywhere—the right of the people to vote in free elections and choose their rulers. In the Soviet Union, only one party can vote and military duress is applied to suppress free speech and debate. Just the other day, Mr. Khrushchev himself publicly told a group of Soviet writers that they were overstepping the bounds in their criticism, and that he might have "to shoot a few of you, and my hand will not tremble."

Moral force means a constant emphasis on the right of peoples to govern themselves.

Moral force means the exercise of the right of free speech persistently, without regard to the inhibitions of official courtesy. For, while the President and high officials of our own Government must follow the "amenities," this does not bind the American people. There must, of course, be only peaceful demonstrations and never the slightest encouragement of disorder. But the American people ought not to be misled into allowing so-called "courtesy" to squelch those expressions of contempt for tyranny which ought never to be suppressed.

For the "butcher of Budapest," and the man who is responsible for the murder, exile, and imprisonment of tens of thousands of people in Eastern Europe, cannot be allowed to believe that his crimes have been forgotten. To kowtow to dictators, and let them misconstrue official courtesy as approval of their cruel acts, would be a backward step for America in world history.

Today tens of millions of people in the world are in bondage. Many of them are being tortured daily in concentration camps by the two big Communist regimes—in Moscow and Peiping. It is time to show the deepest sympathy for the oppressed and to speak frankly to the visiting ruler who has earned the doubtful distinction of having by his acts become the cruelest man in the world today.

Prayers are in order—prayers to the Almighty to give courage to the faltering and to find ways to bring the criminally guilty to the bar of justice. "Peaceful coexistence" should mean freedom for everybody, and not a world half-slave and half-free.

Hon. Isidore Dollinger

SPEECH
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CELLER. Mr. Speaker, it is pleasant to hear these encomiums heaped upon my very dear friend, ISIDORE DOLLINGER, of New York. He is deserving of all. He has served quite a number of years in the House, and now he is being rewarded by his political friends and the citizenry in New York to become the district attorney of Bronx County. I am sure he will bring to play in that important office, the same high qualities that he has exemplified in this Chamber. I have been always happy in my association with him—I call him my friend. He is a duly dedicated public servant, as sagacious as he is kind—as persevering as he is gentle. We all, I am sure, wish him good fortune and good health in his new station.

Historical Values

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GEORGE. Mr. Speaker, the real significance of historical sites has been recognized by one of the most progressive and forward looking civic organizations in this country, the Kansas City (Kans.) Chamber of Commerce.

All too seldom do businessmen take time out of their busy lives to give consideration to the historical values and the beneficial effect upon future generations of the preservation of important reminders of days long past.

In Kansas City, Kans., Mr. Speaker, is the Huron Indian Cemetery which is steeped in historical lore of the Indian of long ago. The city of Fort Scott has within its limits the site of the old fort named for Gen. Winfield Scott. The prairie or grassland near Bazaar, Kans., is ideal for the preservation of the frontier plains viewed by early pioneers.

Mr. Speaker, included in my remarks is the resolution adopted on August 25, 1959, by the Kansas City (Kans.) Chamber of Commerce, of which I am proud to be a member.

RESOLUTION

Whereas it is proposed to establish two national parks in Kansas—one a historic park at Fort Scott, the other a prairie or grasslands park in the vicinity of Bazaar; and

Whereas the parks would be the first national ones in Kansas—neighboring States already having one or more; and

Whereas the Fort Scott site for the proposed historic park would preserve old structures, including a military bridge constructed in the Civil War; headquarters house erected in 1842 and now used as a museum; an original soldiers barracks; Fort Blair, one of three original blockhouses in the State, and national cemetery No. 1; and

Whereas the prairie or grasslands park would preserve in its natural state the flora and fauna of the virgin Kansas prairie and provide present and future generations with the priceless privilege of seeing and knowing the unique beauty of a plains area typical of that which existed in the historic and colorful days when they were seen by the first white men: Now, therefore, be it

Resolved, by the Board of Directors of the Kansas City (Kans.) Chamber of Commerce, That it endorses these endeavors.

Adopted by the Board of Directors of the Kansas City (Kans.) Chamber of Commerce at its regular meeting held August 25, 1959.

F. J. NASH, M.D.,
President, Kansas City, Kans., Chamber of Commerce.

Attest:

ELLSWORTH GREEN, Jr.,
Executive Manager.

Mr. Nikita (the "Red Hitler") Khrushchev

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLYNN. Mr. Speaker, freedom and decency are at stake in the visit of Mr. Nikita—the "Red Adolf Hitler"—Khrushchev to our beloved country. This is the first time in the history of the United States of America that a dictator, whose soul is sustained with the blood of millions of human beings, is to be given the red carpet treatment in the home of liberty. Indeed, never before in the history of the Western Hemisphere, has the slavemaster of numerous peoples been welcomed, officially or unofficially, to any American Republic.

It is alleged that this state visit will open the eyes of the Marxist-Leninist dictator to the strength of America and the united will of Americans to maintain their ideals. The truth is that every Marxist writer in the world is hailing the visit of Mr. Khrushchev, their chief prophet, as a triumph for the Soviet Government. If Adolf Hitler, in the midst of his campaign of extermination against God-loving people, had been invited to Washington, the whole newspaper, radio, and television industry would have expressed righteous indignation and pointed out the prestige value of such a visit to the vicious Nazi movement. American citizens, who love God and their neighbor, are equally indignant about the press, radio, and television buildup accorded to the "Red Adolf Hitler," Mr. Nikita Khrushchev.

The visit of the "Red Fascist" Khrushchev is a result of a careful, slick propaganda campaign which first brought Anastas Mikoyan, one of the worst Soviet conspirators, to this country as an unofficial guest. Part of the campaign was the subsequent reception given to Comrade Frol Koslov. After the visit by tyrant Khrushchev, we may expect another slick campaign to invite tyrant Josip Broz-Tito, still unrepentant about the murder of five American airmen who, inadvertently, flew over the territory of Yugoslavia.

It is a splendid civic and religious attitude to forgive and forget offenses, crimes, and sins when the sinner repents and shows firm signs of amendment. The tyrant Khrushchev is honored, however, at the very moment when his Marxist-Leninist partners in crime in the Far East are engaged in another series of aggressions. The peoples of Laos and of the Republic of Vietnam can testify about the peaceful coexistence offered by Kremlin agents. In fact, the evidence is overwhelmingly to the effect that Dictator Nikita Khrushchev and Mr. Mao Tse-tung, the Soviet gauleiter of China, are wholly unrepentant criminals. How many more million human beings have to be killed or enslaved in order that the hypocrisy of the Soviets and their sympathizers and fellow-travelers can be understood by the most naive onlookers?

The people of Wisconsin and the citizens of every State in the Union believe in representative government, in democratic procedures, in free elections, in a free press, and in religious ideals. Those who uphold these noble principles have a right to question the wisdom of a policy which, directly and indirectly, tends to glorify a political boss who, rightly, is called "the hangman of the Ukraine."

We who love freedom and democracy have a right to protest against the evils which will follow this visit. A bad precedent has been established. Citizens who love God and country must be on guard against future campaigns to undermine freedom and national security.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I ask unanimous consent to include the following statement by Col. August G. Rudd, retired, which was published in the New York Times on September 4, 1959:

[From the New York Times, Sept. 4, 1959]

KHRUSHCHEV VISIT OPPOSED—OFFICIAL INVITATION IS VIEWED AS INCREASING SOVIET PRESTIGE

To the EDITOR OF THE NEW YORK TIMES:

Washington officials have expressed concern lest Khrushchev's visit give "a shot in the arm to Communist activities in South America." Its alertness also should extend to the whole world, for there is real danger in regarding this visit as a simple gesture of good will, of little, or only localized, significance.

It is no secret that this opportunity long has been one of the major goals of Kremlin diplomacy. The Soviets have everything to gain and nothing to lose by this exchange of visits, in which the killer in the Kremlin is placed on an equal footing with the President of the United States, the last great citadel of freedom.

Since 1934 Khrushchev has been knee-deep in the bloody atrocities of the Soviet Union. It was he who cleaned up the Ukraine in a 12-year ruthless reign of terror. A single mass grave at Vinnetsa, uncovered by the Germans in World War II, found 10,000 victims, fully dressed, with hands tied behind them, each shot in the head. Khrushchev's shocking record of inhumanities is long and consistent, but his treachery and brutality to the freedom fighters of Hungary still rankles in the minds of all decent people.

GOAL OF WORLD CONQUEST

Now, by its official invitation, our Government is committed to making his visit a triumphal procession. In so doing it is offending the sensibilities of tens of millions of Americans and has taken unto itself a task that is not only dangerous but can be tragic in its ultimate consequences. Keep in mind that the Communists long have admitted that they intend to conquer the world, and now are boasting that they have taken about one-half of it in a space of only 40 years.

Every step in their conquest is planned. With this perspective, we can begin to see the advantages they expect from the Khrushchev "affair."

It will give a tremendous boost to Soviet prestige all over the world, and discourage the last hopes of freedom within the 16 enslaved countries. "Captive Nations Week" to them must appear to be a cruel hoax, as we honor their captors. It will be very sad news to those in the Soviet Union who still dream of freedom.

It will tend to cause dissension among our allies, and weaken our position in dealing with the Soviets, playing into the hands of Communists, their fronts, fellow travelers, and appeasers all over the world. Thus it will facilitate the infiltration and conquest from within other free nations.

It will encourage Red China to expect similar hospility and then admission to the United Nations.

If any agreements should be reached as a result of these visits, the Soviet record since 1933 proves conclusively that they would be worthless since the Red dictators have violated the most solemn obligations as soon as it served their purpose.

PROLONGED COLD WAR

The cold war could be ended tomorrow if the Kremlin so desired. All that is needed is for the Communists to cease their numerous campaigns of conquest. But they have given not the slightest indication of stopping this war in which they have been so strinkingly successful—16 nations and 800 million people enslaved.

There is no antagonism between the Russian and American peoples. But does anyone believe that strewing flowers in the path of Communist dictators will alter their determination to destroy us as the chief obstacle to their world domination? The door to peace must always be kept open, but if such naivete influences our policies we shall, indeed, be in grave danger.

At this very time this peace offensive was started the Reds launched new attacks on Laos and in India. Knowing Khrushchev's earnest desire for the visit, it would seem that the least we should have exacted as a quid pro quo was a cessation of new wars and threats of war. But their aggressions continue. This cold war (history may well record it as world war III) is principally psychological. Propaganda, publicity, and infiltration are the shock troops so long as they can win.

Khrushchev's visit has created new and pressing problems not only in Latin America but on all continents. As the Communists are quick to take advantage of favorable conditions, the free world should vigorously counter increased Communist activities, lest this visit prove to be another Soviet diplomatic victory.

AUGUSTUS G. RUDD,
Colonel, U.S. Army (Retired).
GARDEN CITY, N.Y., *August 26, 1959.*

A Note of Appreciation

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RANDALL. Mr. Speaker, on this last day of the 1st session of the 86th Congress I want to express in the RECORD my thanks to my colleagues for their many kindnesses.

Seated in March for the unexpired term of the late George H. Christopher, I missed the benefit of orientation provided for the class of new Members. Although junior to this group everyone has been most considerate and even my fellow first-termers have been helpful.

I take this opportunity to thank the leadership of the House, the chairmen of the two full committees, of which I am a member and on which it has been my privilege to serve; as well as the chairmen of the subcommittees and those committee members with whom it has been such a pleasure to work; and all of those associated with the clerk's office, and the office of the doorkeeper, the document room, and the many liaison representatives who have been generous with their assistance to a new Member.

Finally, I want to say that all this friendliness has been heartwarming and I shall forever be grateful.

Ike's Household (Whew) Budget

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, a very interesting article has just come to my attention. It is particularly appropriate in view of the fact that the Congress has cut the President's budget estimates by more than $1,882 million.

The article was written by Ed Koterba and appeared in the Washington Daily News of May 14, 1959, as follows:

[From the Washington Daily News, Sept. 14, 1959]

IKE'S HOUSEHOLD (WHEW) BUDGET

(By Ed Koterba)

I hope President Eisenhower has more success with the national budget than he's having with his own household budget.

He'll have tough treading to make ends meet at 1600 Pennsylvania Avenue this coming year if the estimates I have are correct. And they are.

Take the cost of maids, for instance. Back in 1938, before inflation, when Eleanor Roosevelt supervised the household chores, they were hired at $19 a week.

In Ike's household budget for 1960, Mamie's going to have to pay her maids, out of our pockets, $50.80 a week, plus board. Mrs. Roosevelt required only five maids. Mamie has eight.

Domestic help around the White House in 1938 was paid $85,000. This year it's costing Mamie and us taxpayers $278,440.

Take a look at the garden expenses. In 1938, the Chief Executive required only five gardeners who drew total wages of $7,500.

Although the White House grounds haven't increased a square inch since then, Ike now needs 12 gardeners—at a cost of $45,110. The only major change in the grounds, as I see it, is the President's golfing green.

In the old days—back in 1938—our President needed only 60 police and Secret Service agents to guard him and his house. We paid 'em $150,650. Now, although there is still one White House and one President to protect, there are 160 agents around, for a total outlay of $1,055,000.

I mean, this high cost of living is going to do things to Ike's budget.

The total 1960 estimate comes to $5,401,000. This is for 615 people who work there, not including the President who gets $150,000.

This cost doesn't take into account Camp David, the expenses for which have never been revealed.

Then there's the President's two cabin cruisers, *Barbara Ann* and the *Susie E*, which cost the Government about $60,000 a year to keep shipshape, not to forget Ike's $3 million Super-Constellation, Columbine III, with its ground and flight crew of 28, which costs $711 an hour to operate. And two six-passenger planes, which cost about $35 an hour to run.

In addition, Ike has at his disposal several $350-an-hour helicopters, and a $1,000 motorized golf car which is driven by a Secret Service man.

Finally, there's his $30,000 bubbletop Lincoln, and a new Cadillac and a Chrysler Imperial with sliding roof, plus two armored Secret Service escort Cadillacs costing $130,000.

I'd say Ike's household budget will get its biggest shock when the Air Force delivers that jet airliner which is costing $4.7 million.

One thing sure, if the President's budget won't balance this coming year, he can't blame Congress.

Hon. Thomas Burke

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am deeply grieved to learn of the passing of Tom Burke, and to the members of his family I join with the gentleman from Ohio [Mr. ASHLEY] and others of my colleagues in expression of sincere sympathy. Tom Burke and I were of that group of new Members who came to the 81st Congress, feeling very keenly that in the elections of 1948 was a clear mandate for liberal legislation. We were bound together by mutual interests and the ties of a personal friendship that resulted from our association, grew ever warmer as the months of Congress in which we were fellow freshmen passed on and which continued until his untimely death. His service in the Congress was marked by loyal and effective championing of the causes in which he believed and from adherence to which he never retreated. He was outstanding among the new Members of the 81st Congress. I doubt if any Member of the House ever left after one term of service with more friends or a higher record of constructive liberal statesmanship. His heart was in the welfare of people, the men and women who are not in the seats of the mighty but do the hard work of the world, faithfully making their contribution to our country and to our times, and for whom he always was spokesman, advocate, friend, and champion. Tom Burke's passing is a loss to our country and to his former colleagues in this body it brings a very keen personal grief.

The Complex, Confusing, Litigious Labor Act

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HAGEN. Mr. Speaker, submitted herewith for the attention of Congress and the public is an analysis of the 1959 Labor Act, prepared by a staff of labor relations experts of the Research Institute of America, Inc. It is captioned "Management's New Rights Under the 1959 Labor Law" by Leo Cherne, the executive director of the institute.

The point I make is that this report is only the first of several interpretations, which may be internally consistent but in conflict with other reports. Undoubtedly all features of the act, with the possible exception of those sections dealing with internal union management, will be litigated in courts across the land. When the record is completed it will be certain that this law will have proved to be complex, confusing, and litigious.

It is my opinion that these vices, in the main, can be attributed to the fact that the compromise finally passed was based largely on the Landrum-Griffin bill. This proposal was hastily drafted and hastily considered without the benefit of close scrutiny by either labor, management, or the public.

It should follow that the public should give full credit to those legislators who endeavored to make an objective, reasoned choice between the competing proposals identified very incompletely to the public through public and private news media and propaganda. In other words, all Americans should recognize that this was an issue over which differences of opinion should produce no rancor or condemnation. The institute analysis reads as follows:

MANAGEMENT'S NEW RIGHTS UNDER THE 1959 LABOR LAW

Employers gained important new protections in the law resulting from the McClellan hearings, but the rights are narrowly circumscribed. To enjoy the benefits without exposing itself to new dangers, a company must know just where and how the new lines are drawn, as described in this report.

Note, too, that the new law has weakened management's hand in some respects, particularly in dealing with an economic strike; and has imposed additional reporting responsibilities on employers.

Unionized or not, almost every employer is potentially affected by the 1959 legislation. Its main impact will be felt in the following situations:

If a union uses picketing to force your employees to sign up, or force you to recognize the union, it will run into new curbs on such tactics.

You run less risk of a secondary boycott, since unions are now barred from pressuring your customers, suppliers, truckers, and so forth.

If you a small business, you are no longer in no man's land. The protection available to your larger competitors is now equally accessible to you.

Members in building trades are free to enter special hiring arrangements with their unions.

You will face fewer demands for payments and other abuses that come close to bribery or extortion.

If you face a strike on economic issues, you will have to be prepared to hold out much longer. Replaced strikers can now vote.

Promanagement people within a union are now given added opportunity to present their point of view—potentially affecting the attitude of the union as a whole.

You face a new complicated reporting task if any expenditures by your company affect employee attitudes toward the union or collective bargaining.

The economic impact of many of these changes will be felt immediately as both labor and management begin to anticipate the new balance of powers won and lost. This, despite the fact that legally the modifications of the Taft-Hartley law won't become effective until 60 days after the President signs the bill; other provisions of the new law won't go into effect until 90 days after enactment; and reports won't be due until even later.

CURBS ON PICKETING TO FORCE UNION RECOGNITION

If your workforce is not now organized and you have good reason to believe that most of your employees would just as well do without a union, your chances of successfully fighting off a unionization effort have now been greatly increased.

Your hand will have been similarly strengthened if your employees have already chosen a union, but you are being pressured to recognize another group.

In both situations the union seeking recognition will run into restrictions which the new law places on picketing. Aimed chiefly at Teamster tactics often called blackmail picketing, the new provisions will hamper other strong-arm methods as well.

WHEN PICKETING CAN BE STOPPED

Whether a union seeks to persuade employees to joint up or tries to force management to recognize it as the workers' bargaining representative, it can no longer use picketing in three basic situations:

1. Where the employees have, within the preceding 12 months, voted against unionization.

2. Where the employees are already represented by a union. The existence of a valid union contract bars any new election for up to 2 years (of course a bona fide union must be involved, not a company-dominated organization).

3. After the union has picketed for a reasonable period of time without filing a petition for an election among the employees. This time certainly cannot be more than 30 days and may possibly be less if the NLRB so orders.

Action: Once picketing in any of these circumstances has come to the NLRB's attention, the Board must immediately seek a court injunction to stop further picketing.

WHEN PICKETING MAY CONTINUE

Though many of the proponents of new curbs set out to bar all recognition picketing, the new law allows three important exceptions:

1. Once the union has petitioned for an election, it may carry on (or resume) its picketing. However, the NLRB must then move quickly to hold the election, shortcutting some of its usual time-consuming procedures.

Observation: The Board's newly granted power to let its regional officers handle election cases should help speed up this process.

2. When the NLRB has reasonable cause to believe the picketing union's charge that the employees' present organization is company-dominated. In such a case the Board must find the charge has no reasonable basis before seeking an injunction against the pickets.

3. So-called informational picketing, by which the union seeks to inform the public that the company is nonunion. Such picketing may go on indefinitely without violating the law, unless it causes truckers or other workers to refuse to cross the picket line.

Observation: This provision may actually favor unions more than did the fromer Taft-Hartley rule. In the Curtis case now before it, the Supreme Court may well hold that it was not legal under Taft-Hartley for a union to picket at all unless it had the backing of a majority of the employees; yet the new law allows some picketing even though the union does not have majority status.

SUPPLIERS AND CUSTOMERS ARE NOW SAFE FROM SECONDARY BOYCOTTS

If you have a dispute with a union, you will no longer have to contend with the indirect pressure usually referred to as a secondary boycott. Here is the important distinction which labor law makes between primary and secondary boycotts:

Suppose a union claiming to represent your employees concentrates its fire on you by, for instance, circulating "please do not patronize" and similar notices, the union would be engaging in a primary boycott, since your company is the target of its efforts. Such an action is well within the law unless the union does not in fact represent a majority of your employees.

But suppose the union tries to cave you in by picketing your suppliers, etc., to force them to stop doing business with you, such indirect pressure—that is, not placed directly upon you—is called a secondary boycott. Contrary to the intent of the authors of the Taft-Hartley Act, only some secondary boycotts were held to be illegal. Several loopholes in that law enabled unions to get around the prohibition. The new 1959 law has now closed most of these loopholes.

These practices are outlawed

It has been illegal right along for a union trying to organize or win contract improvements from company A to induce or encourage the employees of company B to strike, picket, or refuse to handle the goods of A. Under the new, reworded provision, however, additional practices are equally illegal. A union cannot:

1. Induce individual employees—like truckdrivers of the second firm—to boycott the target company. This is sometimes done, for instance, as they approach the gates of the target firm. Such inducement was not banned under the original Taft-Hartley Act, on the theory that it is aimed at individual rather than concerted conduct by the truckdrivers. The new amendments change all that.

2. Induce or encourage farm laborers, railway or airline employees, supervisors, etc., to refuse to handle the goods of a target company. Since such groups were technically not employees as defined by Taft-Hartley, the ban on secondary boycotts did not apply to them. The 1959 change in wording brings them under the secondary boycott restriction.

3. Persuade the second company itself, rather than its employees, to stop doing business with the target firm by threatening a strike or other economic retaliation. Such pressure on the management of supplier or customer companies is now specifically outlawed.

4. Force the second company, by strike or otherwise, to sign an agreement that it will not deal with the target company. Such a hot cargo agreement is illegal, and existing contracts of this type are declared unforcible and void.

Recommendation: When it comes to stopping an attempt at a secondary boycott, you may have a choice: either to go after the union yourself, if you are the target, or to have your supplier or customer take legal action. Especially where one of the companies involved is too small to qualify under NLRB's standards, it may be advantageous to let them take the lead—going to a State court may quickly produce an injunction against the boycott.

Important exceptions: As a concession to labor's viewpoint and in recognition of established industry practice, several exceptions were written into the law:

1. Publicity other than picketing may be used even on customers of a company with whom the union is having a dispute. For instance, a union in conflict with a manufacturer could use publicity to advise the public that a particular store handles goods produced in a struck shop. There are two important limitations: (a) the publicity must be truthful, and (b) it may not have the effect of inducing an employee of the second company (the store) to refuse to make deliveries or perform other services.

2. Refusal to cross a picket line will not be considered a secondary boycott provided two conditions are met: (a) the strike is duly authorized by a union that the company would legally have to recognize as bargaining agent for its employees and (b) the workers (such as truckdrivers) who refuse to cross the picket line do so on their own initiative without being induced by the union.

Anticipates: This is potentially a big and, from management's point of view, a very serious loophole. It could turn out to be one of the ways around the new law which the Teamsters' lawyers are said to be currently looking for. The reasons is that it would seem to permit truckers, for instance, to aid other unions by refusing to cross their picket lines.

3. In the garment industry, a special kind of subcontracting is established practice. Typically the jobber buys the piece goods, possibly even has them cut, but the actual sewing is done in contractor shops. The law enables the International Ladies' Garment Workers' Union, for instance, to continue requiring jobbers to agree they will not do business with nonunion contractors. The new provision guarantees that this practice does not violate the antiboycott provision by providing that the jobber and contractor will in effect be considered a single employer.

4. In the construction industry an employer may also make an agreement with the trade unions not to use nonunionized subcontractors at the site of the construction, alteration, painting, or repair of a building, structure, or other work. But note that, if he refuses to make such a contract, the union cannot picket at the construction site. (A provision that would have exempted such picketing was knocked out of the bill in the last days of the congressional maneuvering.)

SMALL BUSINESS NO LONGER IN NO MAN'S LAND

Effective immediately, small companies have available legal means with which to stop unfair union pressures. Of course such companies may in turn be hauled into court if they engage in any unfair management practices. The new provision represents a radical change, since small business has been caught for more than 2 years in a labor relations no man's land.

The National Labor Relations Board flatly refused to handle any case involving a company with less than a certain minimum amount of interstate business. The NLRB's right to restrict its activities in this way has now been approved.

The State courts were previously unable to come to the rescue if the case involved an un-

fair labor practice or a question of representation governed by the aNtional Labor Relations Act since under the so-called preemption doctrine such matters were reserved to the Federal agencies and courts. (*Guss v. Utah*, 351 U.S. 1).

Now an employer (or a union) can go to a State court or any agency to stop any illegal activities.

Practices which can now be stopped: Up to now unions have been able to do many things with impunity to small companies trapped in no man's land. They could use blackmail picketing to force a company to pressure its employees into joining the union against their wishes or where the employees were already represented by another certified union. They could employ secondary boycotts to presuade customers to stop dealing with the company or to persuade carriers not to handle its goods. They could make excessive contract demands which amounted to bargaining in bad faith.

In turn, small companies will now find that they can be legally stopped from actions like firing an employee for union activity; threatening empolyees during a union-organizing campaign; trying to buy their allegiance with raises or other benefits; refusing to bargain in good faith.

When to turn to NLRB

Since the new law specifically prohibits the National Labor Relations Board from refusing to handle any cases which it now accepts, the standards presently in effect will continue. This means that you must go to the Board—rather than the State—for help if you qualify under the following rules.

For nonretail establishments, the Board will handle a case if the interstate outflow or inflow, direct or indirect, comes to at least $50,000 annually.

Direct outflow refers to goods shipped or services furnished by the employer outside the State. Indirect outflow includes sales within the State to users who meet any standard except an indirect inflow or indirect outflow standard.

Direct inflow refers to goods or services furnished directly to the employer from outside the State.

Indirect inflow refers to the purchase of goods or services which originated outside the employer's State, but which he purchases from a seller within the State.

Direct and indirect outflow are combined by the Board to determine if the $50,000 minimum is met. Direct and indirect inflow are also combined. However, for purposes of determining jurisdiction, the NLRB will not combine the value of outflow and inflow.

For retail concerns, the rule is that the Board will take jurisdiction if the annual gross volume of business comes to $500,000.

There are additional rules, too many to mention here, affecting special lines—associations, office buildings, utilities, transit systems, newspapers, and communication systems, and companies whose business has a subtantial impact on national defense.

If you are too small for NLRB

Under the new act you really get a break if you are too small for the NLRB. In the great majority of States you can turn to your local court for relief. In a few States you must go to the State labor relations board or similar administrative agency.

You don't have to wait for the NLRB to turn you down before making use of the alternatives now available. As soon as you know that you cannot qualify under the Board's self-imposed standards above, you can seek an injunction from your State court or file a complaint with your State labor relations board. In most cases you should receive quick and effective relief from the union pressure.

Your chances of getting prompt relief from a State court will actually be better than if you could turn to NLRB. One reason why the unions opposed this particular solution to the no man's land problem was the fact that they fear the conservatism of the average State court judge and dread a return to the injunctions of the 1920's.

Observation: Relief by injunction is of course only the first—though the most important—step. In order to settle the issue finally, the State agency will need authority to order an election. This is the reason why many State legislatures will be passing labor relations acts at their next sessions.

SPECIAL HIRING RULES FOR THE BUILDING TRADES

Recognizing the practices prevailing in parts of the building and construction industry, the new law allows certain limited exceptions. Companies may make arrangements with unions in the following situations:

Employers may legally sign a contract with the union even before the workers are actually hired.

Such an agreement may require the worker to join the union within 7 days after he starts on the job (against the 30 days provided in all other lines).

The agreement may require the employer to notify the union of employment opportunities, permit them to refer qualified applicants, specify minimum qualifications and set up priorities for employment.

Exception: Since such arrangements come very close to imposing a closed shop, the provision is specifically made noneffective in the 19 States which have right-to-work laws.

Observation: Any group of employees who are forced by such arrangements to join a union against their wishes can petition for a deauthorization election and eliminate the union shop.

Observation: Note that in a last-minute maneuver another special provision for the construction industry was not put into the law. Therefore the construction and building unions have no specal exemption from the boycott provisions; they may not picket a construction site against a nonunion subcontractor if such action would induce employees of other companies working on the same job to lay down their tools.

PROTECTION AGAINST OTHER ABUSES

In line with its general purposes of eliminating unsavory practices, the law establishes additional safeguards. Three of these reform provisions will be of particular interest to management:

1. Demanding fees from motor vehicle operators for the so-called privilege of loading and unloading trucks is made a crime.

2. Picketing for the purpose of exacting a bribe from the employer is declared to be a crime, punishable by a fine of $10,000 or imprisonment up to 20 years, or both.

3. Using threats of force or violence to interfere with or prevent the exercise of a union member's rights under the act is punishable by a fine of $1,000 or imprisonment up to 1 year, or both. Such a crime could of course be charged not only against a union but also against any employer who might resort to strong-armed methods in trying to prevent unionization of his employees.

REPLACED STRIKERS ARE GIVEN THE RIGHT TO VOTE

One of the few areas where unions achieved an important gain under the new law concerns the rights of employees who are out on strike. The new provision will make it particularly difficult for small companies to maintain operations in the face of a strike over wages and working conditions.

At issue here are strikes over economic issues, not those called in protest against an employer's unfair labor practices. The basic rule still stands: An employer hit by an economic strike has the right to hire permanent replacements for those striking employees who refuse his appeal to return to work. Once the replacements are hired, the employees still out on strike lose their right to reinstatement in their old jobs.

Under the old Taft-Hartley rule any such economic striker who lost his right to reinstatement also automatically lost the right to vote in his former place of employment. With voting limited to those who had voluntarily returned to their jobs and the newly hired replacements, the odds were that a new election would go against the striking union. This is the reason that President Eisenhower joined in denouncing this provision as "union busting."

The new law radically changes the voting rules. It provides that replaced economic strikers retain the right to vote in their old place of employment for 12 months from the start of the strike. This means that for 1 year any election would probably go in favor of the striking union. No matter how unreasonable the strikers' demands, therefore, an employer would have to hold out that long before petitioning for an election with any hope of ousting the union.

Illustration: One actual case which persuaded Congress to write the original Taft-Hartley provision illustrates the weird results which the new law may well produce again. When 54 employees struck, they were replaced by 52 new men. In an election the 2 groups stood firm and the vote was 54 to 52 for the striking union. The result was that the union, whose members were out on strike, was certified as representative of the new employees who had voted against it and in which they were not members. (Columbia Pictures Corp., 64 NLRB 490.)

DEMOCRACY IN UNIONS—AN AID TO MANAGEMENT?

Any company that might be tempted to seize upon the new bill of rights of union members as a means to bust the union itself will be asking for trouble.

The chief purpose of the new provisions is to protect the rights of the individual worker against dictation and abuse within the labor organization itself—and that's how they'll be applied by NLRB and the courts. But many employers, with a record of fair dealing with their workforce, will find that the new law has substantially improved their chances of getting a fair shake in return.

For this reason, members may want to inform all employees of their rights under the 1959 law. While unions are specifically required to tell members of the new provisions, there's nothing to bar management from restating these rights in a company announcement.

Caution: This kind of announcement is as far as any company should go. From that point on, it's up to any individual employee to stand up for his rights—or to combine with others of like mind to achieve their joint purpose. The new law specifically prohibits any employer, acting alone or through his association, to finance, encourage, or participate (other than as a separate interested party) in any suit or proceeding that a member of the union may bring against the organization.

Rights of the individual worker

One of the basic purposes of the new law is to guarantee to any individual or group within the union—including, of course, one which might be sympathetic to management—the right to advocate its viewpoint before the full union membership and to participate in all affairs of the organization.

In addition to all the rights and remedies that a union member may now have under any State or Federal law, before the National Labor Relations Board, or under any union constitution or bylaws, the new law specifically provides that every member of a union may meet and assemble freely with other members and express his views on business

before any union meeting or upon candidates in a union election.

Has the right to receive, upon his request, a copy of a collective bargaining agreement which affects him.

Must have equal rights and privileges within the union to nominate candidates, vote in union elections, attend membership meetings and participate in the deliberations of the union.

Is protected against dues increases and special assessments, unless they're approved by a majority vote, in a secret ballot, as prescribed by the new law.

Is protected against a fine, suspension, expulsion or other disciplinary action (except for nonpayment of dues) unless the member has been (a) served with written specific charges, (b) given a reasonable time to prepare his defense, and (c) afforded a full and fair hearing.

Has the right to sue in a court, bring a matter before an administrative agency, appear as a witness or petition any legislature, provided only that he has first exhausted reasonable hearing procedures within the union; these may not take more than 4 months to run through.

May sue in a Federal district court if he believes that any of his rights have been infringed upon or if he's threatened with disciplinary action for exercising his rights (presumably, the court would issue an injunction).

The only limitation on the member's exercise of this "bill of rights"—a limitation which potentially could be important to management as well—is the right of the union itself to adopt and enforce reasonable rules. These may deal with the responsibility of every member toward the organization as an institution, and restrain members in any conduct that would interfere with the performance of the union's legal or contractual obligations.

The importance of this provision lies in the fact that it could be used by the union to discipline a member for advocating another union (dual unionism) or engaging in a wildcat strike.

Union locals are also protected

Management is indirectly but importantly affected by provisions designed to protect a local union against arbitrary action by officers of the international with which it is affiliated.

Many union constitutions authorize the international officers to suspend the normal processes of government of local unions and to assume control of their property and funds—that is, impose trusteeships.

In addition to the legitimate functions of trusteeships, the McClellan committee spotlighted many instances where corrupt union officers have used them to plunder local unions and attack opposing political factions.

Observation: In line with other findings of congressional hearings, the new law establishes many additional safeguards. Primarily aimed at internal union problems and abuses, they will also make management's job easier to the extent that they keep out criminal elements and promote clean unionism. For example, the act bars from union office anyone who within the preceding 5 years has been a member of the Communist Party or within 5 years has served any part of a prison term for robbery, bribery, extortion, embezzlement, grand larceny. It imposes heavy criminal penalties for embezzlement of union money or property; for the willful failure of a union official to be bonded for not less than 10 percent of the funds he handled during the preceding year; for making loans to union officers or employees in excess of $2,000; for paying the fine of any officer or employee convicted for willful violation of the act, etc.

COMPANIES MUST FILE NEW REPORTS

Don't be lulled into a false sense of security by the fact that the main purpose of the law's new reporting requirements is to expose abuses by union officials. As is true under the Pension and Welfare Plan Disclosure Act, the unintended effect may well be to saddle the employer with nearly as much paperwork as is required of the union.

The law defines very broadly the information that employers must report in these groups:

1. Amounts paid to employees or their representatives, excluding only wages, checked-off dues, and contributions to certain specified welfare and trust funds.

2. Payments made for the purpose of coercing or influencing employees in their right to organize and bargain collectively through representatives of their own choosing. This would include payments made directly to the employees: for instance, amounts contributed to company-dominated or supported unions or employee committees. And it would also cover payments to labor consultants or other independent contractors who might influence the employees concerning their exercise of these rights.

3. Payments made to obtain information on the activities of employees or the union in connection with a labor dispute. However such information can be collected if it is to be used solely in connection with a proceeding before a labor board, a court or an arbitrator.

Observation: One of the strange aspects of the new law is that it requires the reporting of certain payments which, in another section of the law, are declared crimes. Undoubtedly lawyers for any company charged with failure to report such payments will plead that these reporting provisions are unconstitutional since they would compel the employer to furnish evidence against himself.

In practical application, the reporting responsibility imposed on employers will undoubtedly be narrowed. It is clear that, aside from what must bluntly be labeled bribes, the act is primarily intended to cover payments which reflect an unfair labor practice on the part of the employer. It is certain to be interpreted not to require the reporting of expenditures for house organs, letters to employees and similar purposes which are protected under Taft-Hartley's free speech provision.

Such a lightening of the reporting responsibility can be accomplished quite easily. The Secretary of Labor, who will administer these provisions, will issue forms and instructions for such reporting. He is specifically authorized to provide simplified forms for small business organizations (note, however, that the Secretary also has the power to require full reporting where he considers it desirable).

Recommendations: Most members will want to wait for these forms and instructions before deciding what payments should be separately recorded in their books and accounts. Also, don't overlook the requirement that all records will have to be preserved for 5 years.

Hon. Isidore Dollinger

SPEECH
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WHITENER. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield.

Mr. WHITENER. Mr. Speaker, I would like to join in what has been said by the distinguished gentleman from Illinois and my chairman of my committee, the distinguished gentleman from New York [Mr. CELLER], about our friend, ISIDORE DOLLINGER. Upon coming to this body, it was my privilege to immediately become acquainted with our distinguished colleague whom we are eulogizing tonight as he is about to enter upon a greater service—or, at least, a greater service to his immediate area. I shall miss him, and I shall miss the many opportunities that I have had to associate with him as I have with his friends and my dear friends, Congressman HOLTZMAN and Congressman RODINO and the others, who are so close to ISIDORE DOLLINGER. So I join gladly on this occasion to pay my tribute to this distinguished gentleman from New York and wish him well as he goes forward in his new service.

The SPEAKER. The time of the gentleman from Illinois has expired.

Equality of Congressional Districts, H.R. 575

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 575, to require that congressional election districts be contiguous and contain approximately the same number of inhabitants.

In this connection, I commend to the attention of our colleagues the following articles by Gus Tyler, political director of the International Ladies Garment Workers Union. Mr. Tyler's articles appeared in the New Republic magazine of June 21, 1954, and June 28, 1954:

[From New Republic, June 28, 1954]

THE HOUSE OF UN-REPRESENTATIVES

(By Gus Tyler)

Our House of Un-Representatives, with its heavy percentage of overpopulated, underpopulated, and gerrymandered districts, is the handiwork of our State legislatures. The gross inequalities created by these legislatures express the even grosser inequalities by which these selfsame legislatures are created.

The most direct way to remedy the growing disease of unfair representation in the Congress would be to go to the State legislatures for relief. But, in this case, the doctor is sicker than the patient; in fact, it is the former who carries the contagion to the latter.

In the State legislatures of America, the more than 60 percent of the Nation's people living in urban areas are allotted 25 percent of the legislature. This makes a rural vote worth about four and one-half times as much as an urban vote.

In a report by the U.S. Conference of Mayors, titled "Government of the People, by the People, for the People" (1949), the following breakdown on representation is presented, covering 18 typical States:

Michigan: Wayne County (Detroit), with 40 percent of the population, has 27 percent of the representation in the lower House.

New Jersey: Eight urban counties with four-fifths of the population have 8 State senators, while 13 rural counties with one-fifth of the population have 13.

Georgia: Fulton County (Atlanta) with a population of 393,000 has 3 Representatives in the lower House; Echols County, with a population of 3,000, has 1.

Oklahoma: Oklahoma City with a population of 244,000 has 7 Representatives in the lower House; 7 rural counties with a population of 57,000 also have 7 Representatives.

Delaware: New Castle County (Wilmington) with 67 percent of the population has 42 percent of the representation in both houses.

California: Los Angeles County with 39 percent of the population has 2½ percent of the State Senators.

Missouri: St. Louis with a population of 816,000 has 18 representatives in the lower house and 18 rural counties with a population of 158,000 also have 18.

Pennsylvania: Allegheny County (Pittsburgh) with a population of 1,400,000 has 27 representatives in the lower house; 36 rural counties with a population of 1,200,000 have 36 representatives.

Oregon: The State average is 55,406 people per senator in urban areas and 9,072 people per senator in rural; 22,202 people per representative in urban areas and 5,272 people per representative in rural.

Illinois: Cook County (Chicago) with 51 percent of the population has 37 percent representation in both houses.

Connecticut: Hartford with a population of 166,000 have 2 representatives; Colebrook with a population of 547 also has 2 representatives in the lower house.

Colorado: Denver County with a population of 415,786 people has 1 representative for every 21,500 people while Baca County has 1 for every 6,207 people.

Ohio: Cleveland with 16 percent of the population has 7 percent of the representation in the lower house.

Iowa: Polk County (Des Moines) with a population of 195,835 gets 1 senator and so does Mahaska County with a population of 26,485.

Maryland: Baltimore with 47 percent of the population gets only 29 percent representation in both houses.

Rhode Island: Providence with 36 percent of the population gets 25 percent of the representation in the lower house.

Wisconsin: Each assembly district represents 67,447 urban people and 15,827 rural.

Montana: Silver Bow County (Butte) with a population of 53,207 has 1 Senator and so does Petroleum County with its 1,083 inhabitants.

A report made this year by the American Political Science Association points up the socio-economic results of unrepresentative democracy in the States. "This rural dominance," says the report, "is one reason why the States have not always been able to cope with the greater problems of an urbanized society, such as housing, metropolitan transportation fares, price control on foods, social insurance and community planning beyond city limits."

The shockingly unfair composition of the State legislatures is responsible for other social ills. Our major cities suffer financial strangulation at the hands of rural legislatures. In acute pain, the U.S. Conference of Mayors cries out that "while the State may tax its citizens in any way it pleased within the limits of the U.S. Constitution, the city must use the means allowed it by the State—the worst of all revenue raising bases—real-estate taxation. Acute financial embarrassment and near bankruptcy is a chronic condition in our American cities and towns—the cities and towns whose citizens and business concerns pay more than 90 percent of all taxes to all levels of government in the United States."

These self-same State legislatures with the industrial voter under-represented are also responsible for the rapidly multiplying "right-to-work" laws, going far beyond the Federal Taft-Hartley law in outlawing union shops.

These anachronistic legislatures are given ever wider areas of our economic life to control as the present Federal administration relinquishes its Federal supervision to the States. In effect, this means that a somewhat unrepresentative Federal Legislature is relinquishing control of vital aspects of our economic life to a grossly unrepresentative set of State legislatures.

It is to these same State legislatures that proponents of a Bricker amendment or a millionaire's tax amendment look for alteration of the Federal Constitution.

Finally, it is the totally lopsided State legislature that is the decisive voice in setting up the congressional districts through which the electorate will choose its delegation to the lower House of the Federal Legislature.

The rural versus urban conflict is not the only reason why the State legislatures are composed so undemocratically. Dr. Lashley G. Harvey, Boston University, after a study of State practices concluded that "large taxpaying interests frequently gain from rural domination and will go to great lengths to maintain existing apportionments." In a study of the California Legislatures, Dean McHenry found that "certain business interests in the State have found it easier to make their influence felt in the legislature through senators from rural areas. Privately owned utilities, banks, insurance companies and other concerns with crucial legislative programs have discovered some 'cow country' legislators more responsive to their demands and less committed to contrary points of view on key social and economic questions than are urban representatives."

A former president of the National Association of Real Estate Boards provided an ideological base for continuing inequality: "Today the greatest threat to democratic institutions, to the republican form of government, and ultimately to freedom itself, lies in our big cities. They are populated for the most part with the mass-man, devoid of intelligence, and devoid of civic responsibility. He talks only about rights and has no conception of responsibilities. He will vote for anyone who offers him something for nothing. Whether it be subway fares at half-price or public housing at one-third price * * *. Our one hope of survival as a free country is that rural and semi-rural areas still dominate most of the State legislatures through their representatives and still dominate the House of Representatives at Washington. Our best hope for the future is to keep it that way."

Still another reason why unrepresentative government is perpetuated in the State legislature is the political boss. The county boss, the center of the courthouse gang, likes the present unfair setup because his control of some thinly populated county makes him a big shot in his party through his ability to elect people regularly to the State legislature. His representatives are just as powerful as the representatives of the more populous counties—and that multiplies the influence of the back-county boss in his party.

The prevalent system of districting and apportionment in the State is a self-perpetuating plot to maintain the undemocratically established power of the rural areas, a few large taxpayers and the county bosses.

The primary device for maintaining an unrepresentative system in the State legislatures is the ancient system of rotten boroughs. A system of districting may have been worked out some 50 years ago in a State. In the intervening couple of generations, there may have been radical shifts in population. But the State legislatures just sit tight and refuse to redistrict or reapportion.

After the census of 1940, only 18 States out of the 48 bothered to reapportion. The others permitted the silent gerrymander to perpetuate districts wherein radical population changes had taken place. Mississippi reapportioned in 1890; Delaware in 1897; Illinois and Alabama in 1901. Prior to 1953, the modern State of Connecticut had not reapportioned its lower chamber since 1818 and its senate since 1903.

In other States, inequality is built right into the constitution. Towns, no matter how small, are guaranteed a seat; a county, no matter how small, is guaranteed a seat; other counties, individually or jointly are limited in the number of seats they may have—no matter how large their population. In some of these States, the constitution is unenforcible because it is mutually contradictory. Thus, a constitution will provide that seats be allotted on the basis of population and will then provide that certain areas be guaranteed a minimum of seats.

Above all, to quote Dr. Lloyd M. Short, University of Illinois, in a 1952 study, "State constitutional provisions with respect to legislative reapportionment are more honored in their breach than in their observance."

In the absence of an aroused and informed public, representative government in State and Federal Legislatures tends to become increasingly unrepresentative.

[From New Republic, June 21, 1954]

THE HOUSE OF REPRESENTATIVES

(By Gus Tyler)

Millions of dollars and millions of words will be poured out this year to determine what party will control Congress. Yet the party with most votes in the congressional contests may not be the party with a majority of representatives. Who controls Congress may not be decided by the electorate but by unrepresentative State legislatures.

For instance: There is a proposal currently before the Massachusetts legislature to increase the Republican delegation to Congress by two and to decrease the Democratic delegation by the same number. This will not be done because of a shift in public opinion but because the State legislature decides to do it. In 1952, the GOP elected eight Representatives from Massachusetts while the Democrats elected six. Should the legislature so move this year, a vote in 1954 identical with that in 1952 would give the GOP 10 Representatives and the Democrats 4.

Massachusetts is no exception. The juggling of legislative districts to produce artifical majorities is becoming universal:

In the U.S. Congress, one Representative from Texas represents a district with more than four and a half times as many people as that of another Representative from Colorado.

In one State legislature, a member of the lower house represents an area 300 times as large as that of another representative.

In 1952, Democratic candidates won a majority of the popular votes in the congressional contests, but the party ended up with a minority in Congress.

In the 48 State legislatures, the urban areas representing about 60 percent of the Nation's population are allotted 25 percent of House seats.

One American's vote is not equal to another's vote in 1954. The cases where one equals one are exceptional rather than normal.

This year, about one-third of the congressional districts are so stacked, cracked, or packed as to win for the lower Chamber of our Federal legislature the title of "House

of un-Representatives." The rigging of seats is deliberate, and artfully so—violating the spirit of the Federal Constitution and the letter of many State constitutions.

Such unrepresentative representation in the House was not one of the compromises written into the Federal Constitution by its authors. The historic compromise between area and population was made in the Senate. It was not intended that the compromise be extended to the House.

James Madison keynoting this issue, openly stated his fears that special interests, in control of State legislatures, would fix elections to Congress in such a way as to retain power for these same interests in the national legislature. Said Madison:

"The inequality of the representation in the legislatures of particular States would produce a like inequality in their representation in the national legislature, as it was presumable that the counties having the power in the former case would secure it to themselves in the latter."

Out of this fear came article 1, section 4 of the Constitution empowering Congress to regulate or alter the manner of electing the House of Representatives so as to guarantee its democratic composition. For a time in our national history, Congress used this power to restrain abuses of the States. Right now there are virtually no restraints on the tailormaking of districts to produce congressional delegations congenial to given parties, interest groups or sectional prejudices. Between 1842 and 1929, there were Federal restrictions, providing in various degrees for districts that were contiguous, compact and almost equal in population; these no longer exist. The courts want to keep hands off—to avoid the charge of judicial interference with the composition of the legislature. The State legislatures can't be counted on to do very much about it—they are the prime culprits. What's more, State legislatures themselves are creatures of rigged districts, even more unrepresentative than the Federal legislature. Political parties do little to restrain one another on the tacit theory that juggling apportionment is one of the acceptable, though not-so-nice, rules of the political game.

So the evil grows. Only an aroused public conscience can bestir the parties, the State and the Federal Legislatures to remedial action.

Here's the way the Congress of the United States is composed. The total population of the country (minus the population of Washington, D.C.), after the decennial census, is divided by 435, the fixed number of Congressmen since 1911. The resulting figure is the average size, by population, of a congressional district. The population of the separate States is then divided by the average size of a district and the State is assigned a certain number of seats in the House of Representatives. It is then up to the State to carve out its own congressional districts. The separate States may elect all their Congressmen at large; or may elect some at large and some from districts. The separate States may make some congressional districts huge in population and others small; may carve out a district that looks like a rattlesnake or may block out a neat geometric design. In short, they may do as they please—and what they please to do is scandalous.

Consider the present House membership. An average seat should represent some 350,000 inhabitants in a perfectly representative situation. If you allow, as does the American Political Science Association, for a 15-percent margin to accommodate geographic, county and other reasonable adjustments, a Congressman should represent between 300,000 and 400,000 inhabitants.

In the present House of Representatives, there are only 252 Members who fall in this category. The other 183 come from districts either under populated or overpopulated.

Here are the figures showing what population is represented by present House Members:

Population in thousands:	Number of districts
150 to 200	3
200 to 250	25
250 to 300	62
300 to 350	147
350 to 400	105
400 to 450	53
450 to 500	13
500 to 550	8
550 to 600	2
600 to 650	2
800 to 850	1

The very heavy percentage of over- and under-populated districts is neither causal nor accidental. It is purposely weighted against the urban areas.

The 13 most populous districts represent the following cities: Houston, Tex.; Dallas, Tex.; Atlanta, Ga.; Indianapolis, Ind.; Birmingham, Ala.; Seattle, Wash.; San Antonio, Tex.; Columbus, Ohio; Dayton, Ohio; Detroit, Mich.; Miami, Fla.; Bridgeport and surrounding cities in Connecticut; Hartford, Conn.

The enormity of misrepresentation is most dramatically displayed in contrasting a single district against others in the same State:

In Texas, the Houston district, represented by ALBERT THOMAS, is larger (809,701 population) than the total of the 17th District (226,739 population) plus the 6th District (228,112 population) plus the 4th District (227,735 population). Obviously, if you live in Houston, your vote is worth only about one-quarter of what it's worth if you live, let's say, in Cross Plains.

In Georgia, the Atlanta district with a population of 618,431, is larger than the total of the Eighth District with 267,251, plus the Ninth District with 246,227.

In Indiana, the 11th District of Indianapolis is as large as the total of the 6th and 9th Districts.

In Michigan, the 16th District of highly industrial Detroit has a population of 525,334, which is some 120,000 more than the totals of the 12th District (178,251 population) plus the 11th District (227,810 population) located in the woodlands of the Upper Peninsula.

In Ohio, the 3d District with a population of 545,644, includes Dayton, and is larger than the total of the 15th District (226,341 population) in the farmlands of southeast Ohio plus the 23d District (240,223 population) pieced out of GOP wards in Cuyahoga County.

In Florida, the Fourth District, covering Miami, has a population of 525,401, which is greater than the total of the Seventh District (220,479 population) plus the Eighth District (210,428 population).

This system of over-populating and under-populating congressional districts in order to make an urban vote worth only a fraction of the rural vote thus guarantees that the House of Representatives shall be heavily weighted against a sector of the population currently estimated at 64 percent of the Nation. At the end of the century, the Nation was 39.7 percent urban; by 1920, it was 51.2 percent urban; by 1950, it was 64 percent urban. The prevailing system of congressional malapportionment and districting is an attempt to preserve the political configurations of the past against the socio-economic contours of the present.

These inequities of overpacked and understacked districts are viciously multiplied by the craftsmanlike use of gerrymandering. Because millions of American voters learned in their high-school years that gerrymander was a word coined about 150 years ago from the name of the unconscionable Governor of Massachusetts, Elbridge Gerry, who carved out a district looking like a salamander to guarantee a seat for his party, these grown-up voters assume that the practice of gerrymandering is an historic fossil no longer extant—or only feebly so.

Actually, the gerrymander marches on: his footprints are all across the political map of America.

In the case of Massachusetts, mentioned earlier, under the gerrymander the Democrats with 46.8 percent of the congressional vote in Massachusetts, would get 28.6 percent of the State's congressional delegation. To accomplish this political legerdemain, the GOP will have to create a Third Congressional District that by contrast would make the original gerrymander look like a pattern for fairplay. The district would be a long corridor starting in the southwest portion of the State, near Springfield, wandering north, then bifurcating itself with one arm reaching down to the Connecticut border and the other arm reaching eastward to the suburbs of Boston.

In Ohio, heavily Democratic Cleveland has been so split that Cuyahoga County guarantees two Republican and two Democratic seats. The 22d and 23d Districts are Republican; the 20th and 21st are Democratic. The artificial character of the districts is obvious from the map. The inequity is compounded by the fact that the two Democratic districts have a total of 847,837 population while the two Republican districts have a total of 545,695. In other words, 60 percent of the people of Cuyahoga County have two Congressmen (Democrats) and the remaining 40 percent also have two Congressmen (Republicans).

In California, the lazy, crooked Y shaped 26th District was used by the Republican-dominated State legislature as a Democratic dumping ground to clear opposition party pockets out of the 15th and 16th Districts—thereby assuring GOP representatives from the latter two. Result: the Democratic 26th District has a population of 480,827, which is 120,000 more than the neighboring 15th District (360,139 population) and more than twice that in the neighboring 16th District (223,139 population).

In North Carolina, the 8th and 11th Congressional Districts are the products of a Democratic plan to make certain that the historically Republican mountain counties in the northwestern corner of the State shall have not more than one GOP representative by dumping the GOP votes into the 10th district. The congressional districts chop up the hill country and run down the Piedmont toward the seaboard, so that with 68 percent of the votes in the State, the Democrats control 90 percent of the seats, whereas in neighboring Tennessee (where no such gerrymander is practiced), the Democrats with 70 percent of the vote carry only 77 percent of the seats.

New York State was neatly juggled in the reapportionment before the 1952 election to gain five seats for the Republican Party. Following the new census, New York lost two seats in the House of Representatives. The two districts abolished by the GOP—on a straight party vote—were both in New York City, where the Democratic Party usually elects the Congressmen. This was done in spite of the fact that in predominantly Democratic New York City, the average congressional districts have a population of 358,721, while in predominantly Republican up-State New York the average congressional district is 330,396. A new district was created in heavily Republican Long Island. And then, in Democratic Brooklyn, a thoroughly artificial district (12th District) weaved its way through the streets of the borough, avoiding low income areas and housing projects, to give Johnny Crews, Brooklyn GOP boss, his own Representative in Washington. This GOP district has a population of 317,635 while the five surrounding and contiguous Democratic dis-

tricts have populations of between 367,000 and 382,000.

Commenting on this atrocity, the New York Times stated:

"The law is a blatant gerrymander, designed for one purpose only—to squeeze an additional Republican representative out of the city of New York in outrageous disregard of the proper standards for congressional districting."

Assemblyman Lewis Olliffe (Republican) in demanding later that the skulduggery be repeated in the districting for the State legislature, pointed out to his GOP colleagues that if it had not been for the above mentioned apportionment strategy of the Republicans in New York State, "the Congress would be Democratic today."

Olliffe was right. The GOP control in the House in the 83d Congress is the product of a gerrymandered majority.

An Address on the Vulnerabilities of Russian Communism by Dr. Lev E. Dobriansky, Author of the Captive Nations Resolution

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, while Mr. Khrushchev tours parts of this country, it would do well for the American people to give serious thought to the deep, underlying weaknesses of the Red czar's empire. Despite the bluff and bluster of Moscow's propaganda machine, Moscow fears any American exploitation of the opportunities presented by these real, inherent weaknesses.

This past summer Khrushchev himself displayed his fears with his crying pains over the Captive Nations Week Resolution. That resolution was originated and authored by Dr. Lev E. Dobriansky, a professor in Soviet economics at Georgetown University. Dr. Dobriansky is also the national chairman of the Ukrainian Congress Committee of America.

At the very time Khrushchev was blasting away against the resolution, its author was addressing the National Strategy Seminar held at the National War College here in Washington. The address, titled "The Political, Economic, and Social Vulnerabilities of Communism" depicts the areas of vulnerability in the Russian Communist empire and suggests certain practicable areas of approach for us.

Because of the pertinance of this address to American thinking about the aims and purposes of Khrushchev's visit here, I include the address in the RECORD.

TEXT OF REMARKS BY DR. LEV E. DOBRIANSKY, ON "THE POLITICAL, ECONOMIC AND SOCIAL VULNERABILITIES OF COMMUNISM," GIVEN ON JULY 22, 1959, AT THE NATIONAL STRATEGY SEMINAR HELD AT THE NATIONAL WAR COLLEGE, WASHINGTON, D.C.

General Armstrong, members of the faculty, and friends:

As I stand here, I cannot help but feel that I am going to be the personification of an anticlimax.

After you have heard Congressman JUDD and his brilliant eloquence, after you have heard the informative dissertation here by my friend, Mr. Lyons, and then in view of the fact that I don't have too much time available to me, I hope that I shan't strike that anticlimax too readily.

I do feel in a way as some of the students at Moscow University when they assembled one day and the professor at the university was talking about the interplanetary junketing that was possible in the near future. He said, "We will be able to travel to Mars, to Pluto, to Venus."

After his lecture, he turned to the student body and asked, "Are there any questions?"

At that time a student in the back of the lecture hall raised his hand and he said, "Professor, please tell me, when can we travel to Vienna?"

In this case, with the distance and mileage that I am to cover here, I hope that I will be able to do it in the time available.

One is very vulnerable when treating the many and numerous vulnerabilities that characterize the Communist empire. One could go ahead and enumerate, in a way Mr. Lyons has done, the various points of vulnerability on the sociologic, economic, religious, political, diplomatic, and numerous other spheres of this particular empire.

Another way, however, is to rank these points of vulnerability in some order of importance, seeking the main spots, or the crucial spots of vulnerability in this particular area.

As Mr. Lyons has pointed out, it will be my purpose to emphasize one area of vulnerability over others, not because I am at all attracted particularly to this point, but rather because I think that it is particularly relevant to any cold war activity that we might launch.

We should recognize that the future will not be one of any military foray or conflict with the Soviet Union only but rather will be, just as in past centuries—not to speak of the past decade—in the area of what we have called cold war activity. When looking over this past decade, one might be thinking of an article with the title "From Atomic Monopoly and Air Supremacy to Surrender Research." Rarely in the history of mankind has a country lost so much in so little a time than our own dear United States within this past decade.

This certainly is a source of great comfort to the people in Moscow and the Kremlin, and to their supporters. It can indicate to them that if they can realize their 7-year plan, if they can maintain and expand their military hardware, if they can for propaganda and other shows continue with their explorations into space, they are building up at the same time their instruments for cold war activity. They can expand their empire in this way whether it be in the Middle East, Asia, or elsewhere, and avoid any real global conflict.

For example: If in the event, let's say, of Iraq, because of internal Communist activities, supported to be sure by Moscow, there should be an overturn, ask yourselves what could the West really do? Would you say send SAC in there? Would you employ nuclear weapons? Aren't we neutralized by the special type of cold war activity that Moscow wages?

I would be the first to admit that this is an old technique. It is not the creation of Communists. It is a technique by which Russians were able to build up an empire, over the past, from Ivan the Terrible right down to the Russian Revolution. They have been able to use ambassadors; they used internal conflicts, as in the case of Poland, between classes, long before Marx; and they certainly employ these tactics to the greatest extent today.

If we should decide to engage them in this area, it won't be a matter of fighting on our side of the 50-yard line constantly, let them nibble away at us, and neutralize our armaments and instruments of military warfare; rather, we would have to seize some of their vulnerabilities and do it as cautiously, as skillfully as they have done and are doing in the area of the free world. In that case, we must study many of these vulnerabilities with great care.

One vulnerability, of course, is in the party itself. The party, as it exists today, appears to be completely Leninist in its form, in its rigidity, in its discipline. It continues to show the same strength that it had in the past. And it certainly is a medium for the advancement of the new class that definitely exists in the Soviet Union and the many new classes that are emerging in other areas of the empire.

I don't believe, however, that Mr. Khrushchev is fully entrenched to warrant any prime minister or any other person to say that his is the only voice. Surely he has made great progress in the past year and a half, and certainly since the 20th party congress; but to jump to the conclusion that, therefore, he has assumed a completely Stalinist position in the Soviet Union, I think, is unwise.

Now, looking at this area, what could be the point of vulnerability? To me it seems that this varies with time and circumstances. The Soviet Union was most vulnerable in this area upon the death of Stalin in March 1953. Those years were full of turbulence within many areas of the Soviet Union. The death of Stalin, followed by the liquidation of Beria, than the so-called triumvirate and up to the February 1956 congress, when you had a complete denigration of Stalin first by Mr. Mikoyan and then by Khrushchev; these were opportunities for the West.

They revealed a weakness, a weakness that came from a lapse in the succession process. There was a power conflict on the part of individuals and their supporters within this great party machine.

It contributed more than anything else to the numerical weakening of the Communist Parties in the West. Of course, we like to take credit for it, as for the decline of numbers in Italy and elsewhere at that time; but actually when many in these Western areas saw what was going on, and the contents of Mr. Khrushchev's speech were released, there began immediately a doubt, questions arose, and many actually deviated completely; a repetition pretty much of a situation in August of 1939.

Another point in connection with the party is the matter of the doctrinal revisionism. That surely is another vulnerable point. That, of course, takes into consideration the thing that we call Titoism. And the more you have of this revisionism, the greater the possibility for an undermining of the party position.

These are, to be sure, important points of vulnerability in connection with the party dictatorship. But it depends on time and circumstance.

If Mr. Khrushchev should die tomorrow or a week hence, there will be a problem. To what extent could we seize upon that, especially if we are so ill prepared as we indeed are today? But that is a thing nevertheless to be considered in any launching of a planned cold war activity which seeks a victory over time.

A second area that I would like to touch upon is sociological. Here we have a number of points which I shall consider very quickly. You have heard, of course, of the managerial discontent on the part of individuals who are connected with the various enterprises or trusts within the Soviet Union. They want

greater jurisdiction, more freedom in determining how to make goods, how to process them, and the like.

This is not a new thing. It has characterized the Soviet Union since the very first 5-year plan. And it was one of the factors pressing for the so-called economic decentralization that has taken place in the Soviet Union.

But all the evidence on this matter of economic decentralization affording greater latitude to these managers has shown, actually, that they continue to be almost as restricted as ever.

This, too, is a force. How crucial a force? To that question, I would answer not as crucial as many make it out to be.

Another force in the sociological area lies in the field of education. We have heard a great deal about this, and here is another example of cold-war accomplishment on the part of Moscow. After sputnik, a year or so ago, we ourselves went into a rather excessive self-criticism of our own educational system and processes.

In this case the thinking goes, as they improve their education, more people are brought within that kind of training, which some consider to be superior to ours. In effect this reasoning, as Mr. Lyons time and time showed, really is doing the work of Moscow and is bringing about doubt and confusion in the United States. But the theory goes here that there will be a mellowing process, and through such education individuals, regardless of whether they are scientists, technicians, peasants, and the like, will begin to question, will begin to doubt. And, consequently, pressures will arise which will make the dictatorship in the Soviet Union more responsive to the needs of the people, make it less warlike, and in time that will be the basis for a blending, if you will, of their institutions with ours, and we get into the coming millenium.

The fact here is that, sure, education can be a liberalizing force, but the main point is education for what, and in what? It is certainly not a liberal education that we speak of. When one looks at the education, let's say in Nazi Germany, even in Japan, there was a great deal of education. You wouldn't say that Germany was below what the Soviet Union is at now. And yet that did not prove to be that instrument of evolution that many speak of today.

There is a high degree of naivete here; although one can recognize this as a source of trouble for the Kremlin, it is not crucial.

Let's look at other spheres; for instance, the religious. Well, many people who go to the Soviet Union report that there is a religious revival. But they may have seen the same churches twice. Oftentimes you find that one church seems to be filled to capacity simply because another church had been eliminated.

There is no concrete evidence of any vast religious revival within the Soviet Union. This, too, could be another force to be exploited, to be sure, but hardly a crucial one.

A fourth point would be, of course, with regard to the literati. I think Mr. Lyons handled that very effectively. The Pasternak case and numerous others, not only within Russia but within the non-Russian areas in the Soviet Union are of importance.

We had one, Bahriany, before the House Un-American Activities Committee.[1] He managed to escape from the Soviet Union after having played quite a role through his writings while he was in the Soviet Union pressing for human freedom and also national freedom. He himself is a Ukrainian.

Another area we want to look into is the economic. In this area, just as in the previous areas, a great deal of very questionable thinking is going on in many circles in the United States.

The main pressure here is, of course, for consumer goods. But this, too, is not a new pressure. This pressure has always existed since the centralization that took place from 1928 on.

Mr. Melenkov wrote it out in this decade, and Mr. Khrushchev to some extent is satisfying it. The 7-year plan, as you know, attempts to bring about an 80 percent increase in the industrial output by 1965 in the Soviet Union. But you notice that 0.9 of the new investment is going into the heavy and capital goods area.

In the area of housing, acute shortages exist. Despite the fact that Mr. Khrushchev attempts to increase that by one-third, the likelihood is, in view of the other considerations, that that will not be entirely fulfilled.

The same thing with real income. The plan contemplates an increase of about 40 percent in real income of the people in the Soviet Union. But what many don't recognize is that the realization of this 40 percent is entirely dependent, or to a great extent dependent, upon a concurrent increase of 70 percent in agricultural output.

That leads then into a great deal of problems; there is the matter of peasant resistance. Peasant resistance not along freedom lines as such, but to be able to get a better price for his product and at the same time to continue to have his garden unit and not be submerged in a larger collective such as Mr. Khrushchev contemplates, namely, the state farms.

The point here is that they, the Russian colonial planners, are confronted by many problems, and these problems in toto make up an economic vulnerability. Khrushchev has made a promise. Whether he will be able to realize that promise is a very crucial question that we shall have to follow and look at in the course of these years.

There was a great deal of propaganda at the launching of the sixth 5-year plan. As you know, within a year that had to be scrapped. And the 7-year plan, in a sense, is to take up what the sixth 5-year plan had contemplated.

The fact is that the Soviet Union is confronted—which Mr. Khrushchev himself admitted—by strained investible resources. It certainly will need a great deal of capital and more to be able to fulfill these goals.

In addition, in many areas resources are lacking, or at least the resources are being progressively depleted. There, of course, they might depend, as indeed they are, upon the minerals from China and also from some parts of central Europe.

Whether they can purchase these depends upon heightened productivity. Whether they will be able to achieve that is a question to be looked at.

So this is an important area, a vulnerability especially from a propaganda viewpoint; in whetting the appetite of the people in the Soviet Union for more and more consumer goods.

The next area is the political area. In the remaining time I should like to develop the matter of the non-Russian nations in this empire known as the U.S.S.R. I should like to dwell on the force of nationalism throughout the Soviet empire, and on the relation of Moscow, which is in Russia, not only to Warsaw, Budapest, but also, within the Soviet Union, to Kiev, Minsk, to Tashkent, and numerous other capitals in the non-Russian republics within the Soviet Union.

In doing so, I am not impervious to the contentions of others that there are freedom forces operative within Russia itself. On the contrary, many of the points brought out by Mr. Lyons are quite true. But oftentimes I feel that there is an unnecessary and perhaps a very misleading confusion, when we do not use proper concepts in connection with the Soviet Union. And as a consequence, in having this confusion in any cold war activity we would not know what to feed one area of this empire and what to feed another area.

Let me give you a few illustrations of the confusion that arises even in the utterances of people in the highest places of our Government and in our own politics.

Mr. Acheson, for example—who has said better things, but I just wonder whether he understood what he said—in a recent talk at the Colgate Foreign Policy Conference at Colgate University last July, spoke on "A Critique of Current Foreign Policy." In it you come across this: "The Soviet Union is not only a vast and powerful nation * * *." There is the rest of it, and end of quote.

To him the Soviet Union is a nation. The concept of nation, is it like ours? Is it really one with a spirituality that unites all the various people within our Nation? Well, it would seem so on the basis of this quote.

Mr. Herter, for example, appearing before the House Foreign Affairs Committee this year, in a section of his statement said, "The most immediate is the threat of Communist imperialism. The world's second most powerful nation, the Soviet Union," and he goes on.

Mr. Allen Dulles, another example of the confusion of terms, before the Edison Electric Institute last April likewise speaks of the Soviet Union as though it were a nation, as though you had a Soviet people, as though you had a common basis that would account for the behaviors not only of the Russians but of the Lithuanians, Latvians, Ukrainians, and numerous others within the Soviet Union.

I think this is highly suggestive. This isn't a matter of just flippant semantics, as some of us are prone to say; the fact is that not only do ideas have consequences, but words have consequences as well, in view of the fact that words usually are the eyes of one's ideas.

It seems to me that one, in treating the Soviet Union, must constantly bear in mind that you have a very important non-Russian periphery, running from the Baltic, and consisting, of course, of the three Baltic nations, the Estonian, Latvian, Lithuanian, then coming through Byelorussia, and Ukraine, and from the Ukraine into the very vital area of the Caucasus where you have distinct nations, the Georgians, Armenians, and the Azerbaidzhans.

Then in central Asia, at the moment, you have five republics. Anyone familiar with the history of the Soviet Union knows that Moscow is very anxious to divide this area permanently and actually broke what was Turkistan into five distinct republics.

Also, in the area of the so-called Soviet Far East, even in 1917 there were people, many of them Russian, who developed decentralist tendencies, and actually set up their own republic at that time, which lasted until about 1921–22.

Consequently, the Soviet Union, populationwise, resourcewise, and in many other areas, as I will indicate in a moment, is by no means a nation. The problems that confront the Russian people are not necessarily the same problems that are confronting the other peoples and nations with the Soviet Union.

Let us quickly take up population. The Soviet Union has released statistics of its population this past spring; it places it at 202 million. But the fact is that in considering this population figure, one has to do it in terms of what has taken place in the past, not only within the Soviet Union, not only before 1922–23, but even for that, going back into the history of the whole Russian empire.

These statistics have been played with. The statistical sampling procedure employed

[1] Ivan P. Bahriany, "Control of the Arts in the Communist Empire," consultation, June 3, 1959.

was not of the sort that any Western statistician would accept.

Consequently, the conservative least one could say is that about one-half of the population of the Soviet Union is Russian; the other half is non-Russian. People like Lenin and numerous others, when it was worth their while, pointed out, prior to the Russian revolution, that over one-half or about 57 percent of the population in the Russian Empire was non-Russian.

This, however, takes only the Soviet Empire as a whole, but when one looks into the individual republics, it is significant that in many of these areas, which are national areas, there is a vast majority of non-Russians as against the Russian. Of course, Moscow doesn't release that kind of figures to show what the composition of the non-Russian population is, for example, in Ukraine or in Armenia, as against the Russian.

Another point to impress this perspective upon you is the matter of resources. If you were to look into the resources of the Soviet Union—we make a great deal of that—you will find that although the R.S.F.S.R. appears well endowed with resources, certainly to sustain even agriculturally the Russian people within the R.S.F.S.R.; yet in the Soviet Union the major resources are found in the non-Russian areas. Oil, for example, in the first Baku region is in a Moslem, non-Russian area; also the Fergana Valley, the second Baku, is again in the area of Turkistan.

The same is true for agriculture. The most important single agricultural base is Ukraine. Many minerals and other resources are found in the Caucasus and elsewhere.

In view of all this, one can't help but wonder what would Russia proper be if, at the time of the Russian revolution, the non-Russian revolutions for independence on the part of these many areas which are now within the Soviet Union had permanently succeeded.

There was a Russo-Georgian war that lasted into the year 1920–21. The Georgian people attempted to sustain and maintain their independence. They were even recognized by Moscow, not to speak of many Western powers. In varying degrees that was true of Ukraine. It was true of a number of a other of these non-Russian republics. Without these, Russia itself would be reduced to a second-rate power.

This situation must constantly be kept in mind, this kind of division, this natural kind of nationalism.

I could go on for an hour to indicate to you from the 1920's right down to the present time the persistence, the sustained nature of the resistance, the pressures on the part of many of these non-Russian nations to gain greater autonomy, to gain greater independence, and eventually complete national freedom.

Just a few weeks ago you must have read—and I understand there is great validity to this—of the dispatch of the Red Army, presumably for maneuvers, into the Carpathian area, where there have been, down to the present day, political bases of the Ukrainian underground and even Slovakian units that have opposed the Kremlin and its secret forces.

Operating in this area does not mean that we are opposing the Russian people. On the contrary. I could cite many bits of evidence, especially in this decade, that Russians and non-Russians in slave labor camps and elsewhere are actually collaborating. These Russians, and these non-Russians, which Mr. Lyons and others would regard as extremists, understand respective national aspirations.

In conclusion, we might ask, of what importance is this force of nationalism, operative in the Soviet Union itself, to us if we should launch cold war activity? The ramifications appear immense.

Look at it in terms of the party. There has been a rumor of late—and it is not the first time—that an attempt is being made to bring about the establishment of a Russian Communist Party instead of the present overall Communist Party of the Soviet Union. In that case, if you have that, and you have the Ukrainian Communist Party and others, again a feeling of independence would build up despite the fact that the Communist framework would remain. Some have even suggested the following in the U.N.: You have Byelorussia and Ukraine represented in the U.N. What is there to stop Mr. Lodge or someone else from saying, "You have these two republics. You don't need a Mr. Gromyko or any other representative for the Soviet Union as a whole. We want someone from the R.S.F.S.R. In other words, have a true bona fide Russian representative in the U.N."

Another point, going into the psychological field. Why do we restrict our publication of America just to the Russian language? Why isn't it possible to have America circulate in the Ukrainian language, in the Turkistanian language and numerous others, to indicate that we are not only concerned with the Russian people, seeking to gain their confidence and their loyalties, but that we are also concerned with these of the many non-Russian nations within the Soviet Union.

One need only look and read the constitution of the Soviet Union. It promises separate military units. Can you visualize what would happen if you had a separate Georgian Army, a separate Ukrainian Army, a separate Bylorussian Army?

In the case of Hungary, Moscow realized what would happen if you have a nationally compact unit. But that also suggests to us that the military forces of the Soviet Union are not monolithic.

It is not even nationally integrated. As a matter of fact, about 42 or 43 percent of the forces in the Soviet Union happen to be non-Russian. The policy pursued by Moscow is always to make sure that military personnel coming from a certain republic are not stationed in that republic.

Many Ukrainians will be found right above northern Korea. National forces are dispersed.

In conclusion, I don't know whether we have arrived at Vienna or not. But, as I said, it was a little trying, especially after this heavy barrage of informative and instructive talks that you had this morning. It is really a pleasure to be with you.

Tailoring Banks' Annual Reports for Both Depositors and Stockholders—Part I

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced my bill, H.R. 1035, to protect the integrity and independence of national banks. My bill would strengthen the laws relating to ownership of stock in such banks.

In this connection, I commend to the attention of our colleagues the following articles which appeared in the publication Banking, April and May, 1959 issues. These articles were written by Henry P. Hill, a partner in the accounting firm of Price Waterhouse & Co.

He is an alumnus of Brown University and of the University of Pennsylvania. He is a certified public accountant in several States and a member of the American Institute of Accountants and the New York State Society of Certified Public Accountants. In the former organization he is a member of the special committee recently appointed to study the question of statistical sampling in auditing. In the New York State Society of CPA's he is a member of the committee on cooperation with bankers. In the past year or two he has addressed the eastern regional convention of the National Association of Bank Auditors and Comptrollers and various local meetings in the same field. He has written articles for several publications and at present is a member of the editorial board of the "What To Read" department of the Journal of Accountancy.

The articles follow:

TAILORING BANK'S ANNUAL REPORTS

(By Henry P. Hill)

Something is wrong with published financial statements of banks. This is a recurring theme in the writing of both accountants and bankers. In late 1957, for example, the accounting profession, through its magazine, was addressed by a bank president on the failure of banks as an industry to adopt uniform accounting principles in their financial reports to the public. In September 1958 a special committee of the Connecticut Bankers Association issued a report entitled "Suggestions for Uniform Financial Reporting by Banks."

This preoccupation with lack of uniformity is not a new thing. In 1952 a committee of the National Federation of Financial Analysts Societies reviewed the annual reports of 28 of the largest banks in the country and reported that "the variations in content of the reports are so broad as to make one wonder how there could be so many varieties of reporting to stockholders."

In the face of this kind of criticism, banks in recent years, particularly the large publicly owned banks, have had considerable improvements in their annual reports. The improvements, however, seem to have been in the direction of more complete disclosure instead of toward more widely accepted accounting principles. From the standpoint of the owners of the banks the average report is still not good.

MOST COMMON CRITICISMS

What precisely are the criticisms usually made of the financial reporting of banks? Perhaps the most fundamental one is that the majority of banks do not clearly identify the amount of net income for the year. Many smaller banks, in fact, do not even include in their published figures a statement of earnings. Large or small, those that do publish such a statement often include entries in the undivided profits account which by their nature should be included in the determination of net income.

Second, banks often do not describe the basis on which assets are stated nor the amount and character of related reserves. In an industrial company, for example, it is considered important that the gross cost of the capital assets be shown and that the amount of depreciation taken so far be deducted from this figure to arrive at the net undepreciated amount carried forward to the next period. It is a rare bank, however, that shows in its financial statements anything except the net amount of the banking house and other capital assets.

Third, banks do not follow acceptable methods of depreciating capital assets to

charge the cost of these assets systematically to the operations of the periods covered by their useful lives. Instead, many banks have written off capital assets with an eye to the year's profits and have varied the writeoffs with the profits. In some cases these write-offs have been charged to the undivided profits account, with the result that both the statement of condition and the statement of earnings are incorrect.

Fourth, bank accounting is characterized by an extreme conservatism. Every opportunity to write down assets is availed of, and, in addition, many reserves are provided that cannot be related to the assets. Unallocated reserves for security and loan losses are cases in point, as are the treatment of capital assets and security premiums and discounts mentioned elsewhere in this article.

Fifth, only in unusual cases is it possible to derive from a bank's annual report an analysis of the movement in the reserves during the period. Many times through these reserves it is possible to provide in good times for losses that may come in less favorable times. The losses, however, never appear in the earnings statement and thus escape the notice of the average reader, and the provisions being made out of undivided profits likewise never appear in the earnings statement.

Sixth, the determination of interest from and profits and losses on sales of investments in securities is unrealistic. Many times the earnings statement shows as interest earned the coupon rate of interest paid by the issuer rather than the interest earned by the bank on its investment. Since the price paid for the type of security generally held by banks is determined by the market rate of interest, and the coupon rate which was fixed when the securities were issued is merely one of the elements in determining this price, there is serious doubt that the resulting figures can have any use whatever to the person attempting to analyze the bank's income.

INTERESTS OF DIFFERENT PARTIES

The general tone of bank accounting seems to result from the history of banking in the United States, which years ago was punctuated with panics and bank failures. Even today in a sound bank the ratio of the bank's investment to depositors' funds is small, and in the more liberal climate of past decades it might have been even smaller. Banks' depositors were poorly protected and bank failures had social as well as economic effects upon a group of people who outnumbered by far the banks' owners.

It was, and is, socially desirable, therefore, that the accounting and reporting practices of banks be designed to inform and protect the depositors of the bank. In this respect, banks differ from industrial organizations, where the primary objective of the reporting is to apprise the owners regarding their financial condition and achievements. This social aspect of bank reporting has produced the kind of thinking characterized earlier as conservative. Actually, as accountants have said many times, what is conservative in one fiscal period will usually turn out to be overly liberal in a succeeding period. An unjustifiably high depreciation rate, for example, will understate income in the earlier years when the capital assets are being depreciated and will overstate the income when those assets become fully depreciated but are still in use. The result is that over a long period, instead of achieving conservatism, banks' statements of income have achieved a high degree of distortion.

It is not desirable, however, that the interest of the investors be overlooked. True, the depositors of the banks still outnumber the owners in number and in amount of investment, and their financial interest in the bank should be clearly stated. On the other hand, the owners of banks, particularly the larger publicly held banks in the metropolitan centers, constitute an important and growing segment of the financial community. As the number of stockholders in these banks gets larger it becomes more and more important that shareholders' earnings and shareholders' equity be fairly reported. For example, there are reported to be at least 14 banks in the United States with more than 10,000 shareholders each.

THE ACCOUNTANT'S VIEW

Accountants, particularly professional accountants who may deal more with commercial and industrial organizations than with banks, are apt to overlook the fact that there are these two groups with an interest in the financial condition of a bank and that the interests of these two groups are not the same. Thus, professional accountants may attempt to apply commercial and industrial rules to bank accounting. Bankers, on the other hand, having been schooled in the requirements and conservative thinking of the regulatory authorities, conditioned by years of experience with the present form of bank reporting, and desirous of eliminating differences between book and tax income because of the special rules of the Internal Revenue Code, are inclined to reject the views of the professional accountants as being primarily designed for someone else. They disregard the fact that the principles of income determination advocated by the accountants have been found quite useful in the financial statements of the banks' own borrowers.

A PROPOSED SOLUTION

Actually, it should be possible to devise financial statements that will be useful and informative both to the depositors and their watchdogs and to the shareholders. Such financial statements should clearly indicate the assets available for the protection of the depositors and should state these assets at current realizable values. "Current realizable values," in this sense, means that market values of all assets having a ready market should be disclosed. While it has a liquidating connotation, it does not carry any implication that the prices used would be those that would be found to exist under panic conditions.

The same financial statements should disclose the shareholders' equity and earnings on a long-term continuing basis. Assets that have been adjusted to market values for the purposes of reporting the amount of equity protecting the depositors should be adjusted to cost for stockholders' purposes if the nature of these assets is such that they will probably be held until maturity and will be worth face value at that time. From the depositors' standpoint it may be desirable to show the market value of the United States Government securities owned, but from the standpoint of the shareholders there is no point in writing down to market a security that may be selling below par at the moment because it carries a low coupon rate. Such a write-down simply transfers income from one accounting period to another.

TAILORING BANKS' ANNUAL REPORTS FOR BOTH DEPOSITORS AND STOCKHOLDERS (II)

(By Henry P. Hill)

It should be possible to devise financial statements that will be useful and informative both to the depositors and their watchdogs and to the shareholders. Such financial statements should clearly indicate the assets available for the protection of the depositors and should state these assets at current realizable values. "Current realizable values," in this sense, means that market values of all assets having a ready market should be disclosed. While it has a liquidating connotation, it does not carry any implication that the prices used would be those that would be found to exist under panic conditions.

The same financial statements should disclose the shareholders' equity and earnings on a long-term continuing basis. Assets that have been adjusted to market values for the purposes of reporting the amount of equity protecting the depositors should be adjusted to cost for stockholders' purposes if the nature of these assets is such that they will probably be held until maturity and will be worth face value at that time. From the depositors' standpoint it may be desirable to show the market value of the U.S. Government securities owned, but from the standpoint of the shareholders there is no point in writing down to market a security that may be selling below par at the moment because it carries a low coupon rate. Such a write-down simply transfers income from one accounting period to another.

STATEMENT OF CONDITION

Exhibit I shows a statement of condition designed to achieve both purposes at the same time. In this statement I have made an attempt to meet the requirements of the two interested groups by segregating the net assets into those primarily available for depositors' claims and those of a capital nature. Another way to think of this separation is to consider as banking assets those assets that will eventually become converted into cash through the banking process and to think of the assets and liabilities that will be consumed, amortized, or otherwise availed of through the income account as equity assets.

Following this concept, the first figure in Exhibit I to be noted is the one described as "excess of banking assets over liabilities to depositors and others." A perusal of this model financial statement will show that this caption shows the amount of the net equity, both realized and unrealized, that is available for the protection of the depositors over and above the face amount of their claims.

For this purpose, Government and municipal securities have been stated at market value regardless of whether this is above or below cost. Cost would be interpreted as amortized cost, both premiums and discounts at acquisition being amortized and, as will be described later, in the case of rollovers or wash sales might be cost of prior issues held. The significance of this concept will be developed later.

Loans and discounts would be stated net of the loan loss reserves allocated to specific loans. In the case of instalment loans it would be acceptable to provide a lump sum reserve to avoid the necessity of providing specific reserves for a large number of loans of small face value. Commercial loans, however, would be evaluated individually and specific reserves set up for those loans that the management thought would be doubtful of collections. The other banking assets would be stated pretty much as they have been in the past, as would the current liabilities.

SHAREHOLDERS' NET ASSETS

The next significant figure in the model statement of financial condition is the total equity of shareholders. This, it will be observed, is arrived at by adding to the assets available for depositors' protection the net undepreciated capital assets, deferred charges and credits to income, and unallocated reserves except those that are really surplus reserves. It is true that in a forced liquidation of a bank the capital assets would produce some funds that could be used to satisfy the depositors' claims. This would not happen, however, as long as the bank was a going concern. On a going concern basis the undepreciated value of capital assets in a statement of financial position is a residual amount showing the portion of the cost that remains to be applied against future earnings.

The same can be said of prepaid expenses. As to other deferred items, it will be noted that two kinds of balances have been shown. The first, unearned discount, follows the concept which has been applied by many banks for a long time. This account is simply the unearned portion of the face amount of loans made where the interest is deducted at the time the loans are made.

GAINS, LOSSES ON SECURITIES

"Unrealized gains and losses on securities" is a more interesting account for the purposes of the present discussion. This account reflects the difference between the market value of the securities carried in banking assets and the amortized cost of these same securities. If the aggregate market value of the securities is in excess of their amortized cost, this account would have a credit balance which would be taken into income in subsequent periods when the portfolio was liquidated. Conversely, if it were necessary to write the securities down in order to state them at their market value, this account would show a debit balance since from the stockholders' standpoint the loss attributable to this decline in market value would never be realized if the securities were held to maturity.

The unallocated reserve accounts would include reserves which the management felt were necessary for precautionary measures but which could not be applied to specific assets carried in the statement of financial condition. A bank with a high-grade loan portfolio, which by the Treasury tax formula could record a loan loss reserve in excess of presently anticipated losses, would carry the excess in this account. Precautionary reserves for losses on securities would be similarly treated. Because these reserves are classified as unallocated does not mean that they are set up at the whim of the management. There are times when the management should provide reserves for possible occurrences that at the moment of provision cannot be applied against a specific asset. What is important is that these reserves represent costs that should be applied against current year's earnings. On the other hand, general purpose contingency reserves set up to equalize profits between years do not qualify and should be provided by an allocation of undivided profits or surplus as described later on.

SHAREHOLDERS' EQUITY

The total equity of shareholders arrived at by this computation would ordinarily be the aggregate of the capital stock, surplus, undivided profits accounts, and general purpose contingency reserves, if any, and these balances would be stated at the foot of the statement of financial condition. General purpose contingency reserves would be considered an allocation of undivided profits, and all entries would, therefore, be made to and from undivided profits. In other words, it would not be permissible to use this reserve to absorb losses that should be reflected in the statement of earnings. For this reason amounts provided in such reserves would not serve to reduce earnings. Reserves required for specific purposes which should be provided out of current income would appear in the capital assets and liabilities section of the statement of condition.

In summary, we have provided for a three-way split in reserves: (1) those that reduce the carrying value of a banking asset and are provided out of banking income, (2) those that do not apply to a specific asset and are therefore the concern of the stockholders but which nevertheless reflect by their provision a real diminution in income of the period, and (3) those that are purely precautionary and for this reason are really only a segregation of the bank's capital.

STATEMENT OF INCOME

The model statement of income, exhibit II, attempts to follow a similar pattern and segregate the amounts applicable to banking operations from the results of other transactions. It will be noticed that approximately two-thirds of the way down the attached exhibit a subtotal is arrived at entitled "Net income from banking operations." Of the captions entering into the computation of this figure, a few deserve comment.

BANKING OPERATIONS

Interest income from security investments is stated net of amortization of both discounts and premiums. Tax considerations aside, it is doubtful that any investor in Government and municipal interest-bearing obligations considers either discount or premium as anything save an adjustment to bring the coupon rate to the market interest rate. It seems proper, therefore, in the financial reporting to state the interest income from securities on the basis of the interest earned on the actual money invested in the securities.

Federal and State income taxes applicable to operating expenses have been included in operating expenses, since they are both inescapable and permanently with us. This is a matter of personal preference, however, and those banks interested in showing the before-and-after tax figures could do so without disturbing the basis on which these statements have been composed.

OTHER INCOME

As for other profits and losses, it will be noted that those comprise a number of items often included in the undivided profits account. From the standpoint of the owners of the bank, however, it seems clear that they are a part of the determination of the net profit for the year, which is the reason they have been so treated in this statement. This, it may be noted in passing, is what the Federal Reserve Board does in its statistics on member bank earnings. (See, for example, "Member Bank Earnings, First Half of 1958"; Federal Reserve Bulletin, November 1958, page 1275; especially the footnotes on page 1275.)

SECURITY TRADING PROFITS

A few comments on some of the captions in exhibit II would be in order. "Net profit on sale of securities" would usually be a much smaller amount than heretofore. This is true for two reasons. First, amortization of discounts would qualify as interest income some of the amounts formerly considered as profits on sales; second, the treatment of profits on sales advocated by the writer would substantially reduce the trading profits now ascribed to investment securities.

If a bank sells some of its U.S. Governments and reinvests in other U.S. Governments for the purpose of changing the average maturity of its portfolio or improving its yield, no profit has really been achieved. What has it accomplished except to exchange pieces of paper? As long as the funds remain invested in U.S. Governments the transactions should be treated as an exchange rather than as a completed sale. This is true, even though the two transactions did not take place simultaneously. Unless a portion of the portfolio had been liquidated, it seems to me that no profits or losses should be recorded. The only profits or losses that should be recognized are those realized when the total investment in U.S. Governments declined for more than an short interim period. Similar treatment would be afforded investments in municipal securities.

There are some who even advocate considering the investment in U.S. Governments, municipal securities, and loans all as the investment of depositors' funds and would advocate carrying forward all profits or losses realized where the aggregate amount invested in these assets did not materially change. From the standpoint of theory they have a stronger position and are probably right. The mechanical problems of computing and amortizing the amount to be carried forward are substantial, however, and for practical reasons only, it is my opinion that this treatment should be applied to the U.S. Governments, municipal, and loan portfolios as if they were three separate portfolios. Whichever way the final decision is made, it need not affect the considerations of the attached financial statements, since it will not change the problems of statement presentation.

PROVISIONS FOR GENERAL RESERVES

One other account, the "additional loan loss reserve provided," deserves comment. This caption would show the amount of loan loss reserve provided in the current year that did not represent actual losses on specific loans. In other words, the amount added to "estimated losses on collection" in the banking assets section of the statement of financial condition would be an operating expense. On the other hand, any amounts added to "unallocated reserves for losses on loans" in the statement of financial condition would be provided by a charge at this caption.

CONCLUSIONS

In summary, banks should follow generally accepted principles of accounting, and the attached form of financial statements shows how they can. Adoption of this style of financial reporting would make available several specific advantages, since (1) by this method banks can prepare financial statements for their owners showing on a realistic basis the actual net income for the period and the financial position on a going concern basis, (2) the accounting for income from investments in securities can be shown in a manner that truly reflects the economic considerations, and (3) the conservatism necessary to the protection of depositors because of the banks' quasi-public position can be observed. It is hoped that by these methods of financial reporting publicly owned banks' annual reports can be made more useful to the management, the depositors, the public, and the shareholders. These proposals are, perhaps, too far reaching for the individual bank to act upon unilaterally, but the state of flux that present bank reporting finds itself in and the repeated recognition of the problems in the literature indicate that the time may have arrived for the industry, through its organizations and the regulatory authorities, to arrive at a program for improvement of banks' financial reports to their owners.

Farming the Escape Valve

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SMITH of Iowa. Mr. Speaker, so many people who are not farming or in related employment very freely advocate a free economy for agriculture as the answer to the farm problem, when, in fact, there would be little or no farm problem if there were a free market economy outside of agriculture. An editorial in the Des Moines Register of Tuesday, September 8, 1959, comments upon some papers by two economists and contributes to the analysis of alternatives to removing all controls and supports from the agricultural economy. I hope my colleagues will study and consider the editorial, which is as follows:

FARMING THE ESCAPE VALVE

Two economists of the U.S. Department of Agriculture have expressed doubts that doing away with Government farm income support programs and letting farmers go it alone would solve the farm problem.

At the recent annual meeting of the American Farm Economic Association at Cornell University, Ithaca, N.Y., William E. Hendrix and John M. Brewster, both of the Agricultural Research Service of the Department of Agriculture, presented papers concluding that a Government "let alone" policy would not cure the farm problem—but only made it worse.

They believe that if farmers are to have parity income, people will have to leave agriculture for other industries faster than they now are. Advancing technology in farming, combined with a very slow growth in demand for food, calls for a heavy movement of labor out of farming.

This would put farm income in better balance with nonfarm income—both because there would be fewer people to divide up the farm income, and because it would hold increases in farm output more nearly in line with food demand.

The theory of a free market system is that when an industry is over-producing and incomes are low, people will flee the industry and enter others until a balance is reached. Moreover, employers will actively seek the lower-cost labor available in surplus areas.

But Hendrix and Brewster point out that opportunities in nonfarm industry are not opening up fast enough to absorb the surplus of farm labor. They attribute this to a lack of free competition in nonfarm industry. "Near monopoly conditions in labor markets," says Brewster, and lack of free price competition in nonfarm industry prevent free movement of farm people into nonfarm occupations.

That is, labor unions tend to prevent free entry into some industries. And business firms do not always compete vigorously by lowering prices and expanding output, preferring to "live and let live."

Farm leaders sometimes have argued that if farm people were given employment information and guidance, plus financial help in moving to the city, full adjustment in agriculture would take place. But Hendrix and Brewster believe such a policy would not help much. It would only mean a transfer of underemployment from farm to city, so long as opportunities are limited to the cities.

In short, if we really had a free market economy outside of agriculture, there would be no farm problem. It isn't the rapid technological advance of agriculture relative to market growth which causes the farm problem, says Hendrix. It is the "unique" free market system under which agriculture operates.

If this analysis is correct, obviously removing the relatively minor Government controls over farm markets would make the farm problem all the worse.

Hendrix says there are three theoretical solutions:

1. A program of "positive laissez faire" (that is, rigorous antitrust enforcement for both business and labor unions to make markets really free).

2. Monetary and fiscal policies to achieve and maintain rapid economic growth despite imperfect price and wage competition. This implies an inflationary boom which would increase demand for labor.

3. "Comprehensive supply controls" in commercial agriculture plus direct subsidies to underemployed farm people.

None of these three theoretical solutions is likely to be adopted in full measure or even in large part. Each of them runs in conflict with deeply held beliefs and strong pressure groups. Consequently, the "administered," less competitive sectors of the economy in industry and labor are likely to continue to use competitive agriculture as "the escape valve" (Brewster's phrase) for the bulk of the Nation's underemployment.

Comparing Educational Standards of the United States and the Soviet Union

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PUCINSKI. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an article pertaining to testimony given by Vice Adm. Hyman G. Rickover before the House Appropriations Committee, which appeared in the Washington Daily News on September 12, and which describes in great detail Admiral Rickover's personal comparison between the educational standards of the United States and the Soviet Union.

I think that every American should soberly reflect on this very penetrating analysis of Admiral Rickover, the father of the American atomic-powered submarine. I believe, as a member of the House Committee on Education and Labor, that this interview should open the eyes of all Americans on how woefully lacking we are in adequate educational standards to meet the great scientific threat from the Soviet Union.

Admiral Rickover has indeed made a telling contribution toward bringing this very important subject in the public form. I urge all my colleagues to give serious thought to this entire subject because I have infinite faith and confidence in the views and penetrating knowledge of Admiral Rickover.

We cannot afford to ignore this great American's sincere warning. I should like to recall that it was only because of Admiral Rickover's stubborn insistence that the United States proceeded to de-

velop an atomic submarine that we can today boast of a nuclear underwater fleet which gives us a formidable advantage over our enemies. I hope that we Americans will heed Admiral Rickover's latest observations with the same degree of concrete action that we supported his program for development of the atomic-powered submarine.

Mr. Speaker, Admiral Rickover's remarks follow:

THE REAL RACE WE ARE IN IS TO SEE WHOSE EDUCATIONAL SYSTEM BETTER PREPARES FOR THE WORLD OF MODERN SCIENCE

(By Milton Berliner)

Vice Adm. Hyman G. Rickover told the House Appropriations Committee, at a closed meeting, that compared to Russia "our children are being shortchanged" in education.

Admiral Rickover, in his recent visit to Russia, made a special investigation of the educational system there—as well as in the Iron Curtain country of Poland.

His report to the House Appropriations Committee, available today, warned that "the real race we are in with communism is to see whose educational system best prepares youth for the world of modern science and technology."

He warned also that "by 1961, the Russians will have 2 million scientists and engineers, and we will have only 1.6 million."

"Ours is not merely a deficiency in quantity; it is deficiency in quality as well," the Admiral said.

"We do not have sufficient numbers of scientific and technical people who are good enough in their particular fields and who have a broad liberal education.

"Without a broad liberal education such people remain narrow specialists, and they are not as useful to our Nation as they could be."

He returned from his trip, he testified, feeling that "the Russian educational system has been designed more efficiently to serve their national and ideological objectives than our school system serves the objectives of our democratic capitalism."

CHILDREN ARE 2 YEARS AHEAD

Admiral Rickover told the committee that:

"Russian children are at least 2 years ahead of the American high school graduates in sound, basic education." (Mathematics, the sciences, mastery of mother tongue, knowledge of their own classical literature, and of major foreign nations, foreign languages, history.)

"Russia, through her 10-year schools, produces a much larger talent pool than we obtain through our public school system.

"Fewer talented Russian youths are apt to waste their potentialities in vocational courses when they could become scientists, engineers, writers, historians, or teachers.

"In the United States, a child may squander his best learning years on easy know-how courses which require no homework but which earn him the same credit toward a high school diploma as academic projects.

"Too many people here think of a liberal education as a luxury, something of no immediate usefulness," the Admiral said. "It is true that, except for the basic elementary skills of reading, writing, and arithmetic, which everyone needs today, a liberal education does not in itself prepare one to earn a living.

"For this one needs in addition some specialized skill—this can be manual or intellectual, that is, vocational or professional. This specialized skill should properly come after one has completed his general education and through it has discovered his particular talents.

"To allow a child to choose typewriting instead of physics, machine shop instead of history or a foreign language, is to let a minor make a decision which will affect the whole course of his future life; a decision he is too young to make intelligently.

"In other modern democracies, vocational subjects are to some slight extent taught in schools attended by children who are not academically talented, but they are never considered a substitute for general education. Here we stop teaching basic subjects to slow learners too soon; we shift them too early from education into training."

"NOT ONLY RUSSIA"

In genuine education, U.S. schools not only are behind Russia's but those of northern and western Europe, Admiral Rickover told the committee.

He said it was not true, as many believe, that the percentage of Russian children completing the 10-year school was a small one.

The numbers are about the same as those graduating from U.S. high schools, he said.

But, he stressed: "Our high school diploma tells us nothing about the scholastic achievement of its possessor."

A Russian 10-year school graduate must pass a "maturity" examination, verifying the amount of knowledge acquired.

The Russian student, Admiral Rickover testified, has no choice of subjects to be examined upon but must pass in seven academic subjects—Russian language and literature, a foreign language, algebra, geometry, physics, chemistry, and history.

"The Russian examination therefore covers a much broader field than our college board achievement tests," he said.

"I hope that American parents and teachers will look at these exams and realize that our children are being shortchanged," Admiral Rickover said.

"I hope they become angry enough to force their school boards to improve the curriculum, to improve the teaching, and to stop wasting the time of our children with fun subjects and other matters unrelated to education."

He submitted to the committee copies of these Russian examinations, commenting that "I hope this set definitely shows them [parents and school boards] that our schools are not the best in the world."

OVERDOING SCIENCE?

Admiral Rickover disabused Representative BEN F. JENSEN, Republican, of Iowa, of "a fallacy which has been spread in this country."

Representative JENSEN had asked the witness if he thought Russia was overdoing the emphasis on science to the extent that "they are not teaching the things which are basic to the strength of a nation economically."

Admiral Rickover: "If we were all alone in this world and could work our own destiny without being bothered by anyone, we could do many other things. But suppose you are the most cultured, the most educated and religious person in the world and you have the greatest degree of freedom, and suppose there is somebody opposing you who is not as fine a person as you, but who is 2 feet taller than you are and who is much stronger than you are and gets into a fist fight with you, who is going to win—regardless of all your good qualities, regardless of your great faith and charity and everything else? This is the situation we are faced with."

Representative JENSEN: "The forces of the Devil never have been and never will be the victors over the Soldiers of the Cross so long as God is in his Heaven. I have one more question. We are told that a great number of the Russian children do not even have an opportunity to go to school. Do you believe that to be true?"

Admiral Rickover: "No, sir. That is not so."

Representative JENSEN: "How about in Siberia?"

Admiral Rickover: "The majority of Russian children do not have an opportunity to go on to university, but every Russian child not only has an opportunity to go to school, in fact, he must go. Look, as I have said, we have seven States in this country that require compulsory education for only 8 years, 33 for 9 years, 7 for 10, 2 for 11, and 1 for 12 years. There is a 7-year compulsory education all through Russia now, and by 1961 it will be 10 years. It is a fallacy to believe that all Russian children do not go to school."

Representative JENSEN: "I speak at many high schools, to groups of high school students, and I am always agreeably surprised to know how well informed they are in all matters pertaining to the sciences. They amaze me with their knowledge in this field."

Admiral Rickover: "It would be interesting to see if the high school graduates in your district can pass the Russian 10-year examination."

"WHAT KIND OF CHILDREN?"

Representative JOHN J RHODES (Republican of Arizona) observed that perhaps it was a question of what kind of children we want to raise.

"I doubt," he said, "that we want to raise children like the Russians do; anyway I cannot imagine what pills they feed these children to make them so brilliant they can absorb the physical sciences, the social sciences, and still have what we would call a normal childhood. Something must be left out. You are not saying we should change our way of life because of this?"

Admiral Rickover: "No, sir; we should not. We must recognize that formal education is only one part of the training of youth. As I said, there is a distinction between training and education. The function of the home and of the church is to train our youngsters. Children, when they are born, are little savages.

"The training they get in the home and in the church, if it is good, will prevent them from becoming big savages when they are 20 years old; we have plenty of big savages in this country.

"Now the function of formal learning—and it can be done best in school—is to train the intellect. This distinction between training and education is not thoroughly understood.

"When you teach a boy how to operate a lathe you are training him; you are not educating him. Training does not develop his mind. Education is a process by which the mind is developed. In education the Russians are doing better than we.

"There is no purpose in bringing up the difference in ideology between communism and democracy; it is not relevant in defining education.

"You have the same system of education in Western Europe as in Russia. You have it among the totalitarian States and you have it among the democratic States. It can produce a Hitler or it can produce a Thomas Mann."

HERE'S THE DIFFERENCE

Admiral Rickover pointed out that Soviet children are compelled by law to complete at least 7 years of schooling.

"They have 7 years in rural areas; 10 years in the cities," he said. "But let me tell you what this all means—the difference between 10 and 7 years—because the boys and girls who graduate from the Russian 7-year schools know as much as many of ours who graduate from high school."

"I have my doubts about that," said Representative ALBERT THOMAS, Democrat, Texas.

Admiral Rickover: "Here is a strange thing about having doubts: everybody wants to

hear the good things. Now, the good things can take care of themselves, but you have many competent observers who come back and make reports.

"If Russia succeeds in making 10 years compulsory for all her children, she will be well ahead of us. Graduates of the Russian 7-year schools have had in classroom hours the equivalent of 14 Carnegie units in Russian language, grammar, and literature, 7½ in mathematics, 1½ in history, 1½ in geography, 1½ in biology, 1½ in physics and chemistry combined, 2 in a foreign language, or a total of 29½ Carnegie units in solid subjects, besides drawing, singing, physical education, technical drawing, and some practical work in shop or agriculture.

"All of them have done a great deal more homework than is customary in our schools. We have today 7 States in the United States that have compulsory 8-year school, 33 that have 9, 7 that have 10, 2 that have 11, and 1 that has 12 years.

"But that is not the whole story, because it isn't only the number of years the children go to school, but also how much time they put in. For example, when you compare the years spent at school by a Danish child, you must consider that he goes to school 280 days while ours go 180 days—this means that 9 years' schooling in Denmark is equivalent in class-hours to 14 years here.

"I believe that you would find that children with minimum ability to absorb academic subjects abroad who go to school perhaps only until age 14 or 15, have learned at least as much as similar children who graduate from high school here.

"These are unpleasant facts but according to the best information we have they are true. If they did not greatly worry me, I should certainly not devote almost all my leisure time to education. I am here because of this. I have to take off time from my real work to be here. I do not have a minute's time."

Representative THOMAS: "It is not hurting you to come over here. If you are making a sacrifice——"

Admiral Rickover: "I am not making a sacrifice. I am doing it because it is my duty to do it."

Chairman CLARENCE CANNON, Democrat, Missouri: "Do you think we are educationally equipping our children for the space age?"

Admiral Rickover: "No, sir; I do not. That is the gist of what I have been trying to say. I think that many American parents consider teenhood as chiefly a time for the children to have a lot of fun; abroad it is considered a period of preparation for adulthood. I firmly believe that many of our children, left to themselves, would do much better at school if their parents by their own lazy habits did not set them a bad example; if the parents were not so solicitous about the children having a good time, giving them cars, fancy clothing, and so on."

ON TEACHER TRAINING

As for teacher training, Admiral Rickover testified that the Russian secondary school teacher "has the equivalent in education of about what a lawyer has in this country."

Representative G. P. LIPSCOMB, Republican, California: "Admiral Rickover, why do you not tell us something about the other side of the coin, such as what happens to students when they do not cut the mustard, and about the state taking over children at the age of 4 or 5? What is your opinion of that?"

Admiral Rickover: "You must not misunderstand what I am trying to say, sir. I am not advocating that we copy the Russian political-social system. I am only addressing myself to one respect, to education—to the training of the intellect—and it is my contention that in the training of the intellect the Russians are doing a better job than we.

"It is unfortunate that every time one mentions the accomplishments of some foreign country people think that he is advocating that we adopt their government and their way of life. I have frequently been accused of recommending adoption of the Russian system because I say some good things about it. I believe there is a saying—'Know thy enemy.' It is also a truism in military matters that intelligence is most important. You must find out what your opponent is doing; and the same is true in science, and it is true in education.

"There is nothing wrong in finding out what the Russians or anyone else does. We must not get to the point that we say the Russians do nothing well. You know, until about 4 or 5 years ago, our own Navy people were saying that the Russians couldn't be good seamen. Now we are worried about the large number of submarines they have and what they might do to us.

"We mustn't delude ourselves. If we fail to admit, when it is true, that other countries are doing something better, we harm ourselves. In fact, if they do something better than we do, we shouldn't be ashamed to adopt it.

"As it is, the Russians do not, in my opinion, have a greater secret weapon—one which undermines our ability to win the cold war more effectively—than our own progressive educational system; and they didn't have to do a thing to get it. We set it up ourselves, with the best intentions in the world. If I were the Russian Government, I would do all I could to keep us from changing our present system of education.

"They select about the top 30 percent of their secondary school graduates to go to the university. The rest of them either go to technical schools, are drafted into the army, or become workers."

Representative THOMAS. "They go to the technical schools?"

Admiral RICKOVER. "Some of them go to technical schools."

Representative THOMAS. "They do not throw them away, by any means."

Representative J. VAUGHAN GARY, Democrat, Virginia. "To what extent is the accomplishment of these children due to totalitarian discipline?"

Admiral RICKOVER. "It has little to do with totalitarian discipline because there are plenty of children who will take their places if they do not want to study. The Russian system in that respect is no different from the system in Poland, Denmark, Sweden, Switzerland, Holland, Norway, France, Germany, or England. This is a thing that is not understood here. The children simply study harder because they fully realize what education will mean to their future."

Representative GARY. "Are they not under state discipline to make them work harder?"

Admiral RICKOVER. "No, sir. You cannot make people study harder in school by compulsion. Their parents urge them to study, and the children want to study because they know if they are to get ahead in the world they have to become educated. They do not have well-to-do parents taking care of them and giving them automobiles when they are 16 years old."

Representative THOMAS. "Parents do not have automobiles to give them."

WHAT'S TO BE DONE?

Representative GEORGE H. MAHON, Democrat, Texas, wanted to know what the United States could do about the situation.

Admiral Rickover suggested that:

"First, we must recognize that our schools are not the best in the world.

"Then, we must recognize that we are not the only ones who have free education."

The one-track system be eliminated.

Specifications be set up as to what we want our high school graduates to know when they finish.

National standards be set for teachers.

There be Federal aid to teachers.

Scholarship aid be given to talented poor children.

Federal equalization funds be used to help the poorer States provide as good an education as the richer States.

"Somehow," Admiral Rickover said, "we must convince our children that their future depends on their really becoming educated."

He believed the American school year could be pushed up to 240 or 250 days a year, against about 180 now.

"It seems to me," he said, "that we must change our attitude as to what constitutes the 'good life' and realize that to become well educated enhances the human personality and makes life more interesting; it also gives one greater versatility in the ability to do things, including earning a living."

Admiral Rickover criticized the U.S. Office of Education for having "fallen down on the job of alerting us as to what goes on in the schools of other countries."

"The whole question of our relative standing compared to the Russians was brought out by the people in the Office of Education," he said.

He recalled how a report on Russian education, written by an Office of Education Russian expert, was edited to the point where it became meaningless.

"There was left out," he said, "the great emphasis placed by the Russians on teacher training. Many paragraphs were reworded, resulting in errors."

Appropriations, 1st Session, 86th Congress

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. TABER. Mr. Speaker, I submit herewith two tables for printing showing the process of the appropriation bills, and both the legitimate and illegitimate variety.

The total amount made available under all appropriations coming through the Appropriations Committee into the Congress was $72,977,598,352. The illegitimate back-door appropriations totaled $5,701 million. This amount was $231 million above the budget.

The details of these things are shown on table II. Table I shows the first group.

This means that the Congress has made available to the Executive better than $80 billion which is more by far than our tax receipts can possibly come to.

The tables follow:

TABLE I.—*Comparison of budget estimates and appropriations, 86th Cong., 1st sess.*

[NOTE.—Excludes permanent appropriations]

Bill	House				Senate						
	Budget estimates considered by House	Amount reported by committee	Amount passed	House action compared with budget estimates	Budget estimates considered by Senate	Amount reported by committee	Amount passed	Senate action compared with— Budget estimates	Senate action compared with— House action	Final action, amount approved	Increase or decrease, compared to budget estimates
1959 APPROPRIATIONS											
2d supplemental	$2,864,954,526	$2,479,522,494	$2,657,402,994	−$207,551,532	$2,900,799,370	$2,820,040,054	$2,843,902,805	−$56,896,565	+$186,499,811	$2,764,500,380	−$136,298,990

[1] Vetoed and overridden Sept. 10, 1959.
[2] Includes $500,000,000 for Development Loan Fund for fiscal year 1961 (not allowed).
[3] In addition, certain permanent appropriation became available automatically under previous law; January budget estimate was $8,593,000,000, but this is subject to upward revision principally due to increased cost of interest on public debt.

NOTE.—Indefinite appropriations are included in this table.

TABLE II.—*New authority to obligate the Government ("backdoor spending") carried in legislative bills (86th Cong.)—Public debt transactions and contract authorities*

Bill and subject	Executive requests		Senate	House	Final	Final compared with requests	
	Full basis	Basis comparable to final				Full basis	Comparable basis
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
S. 1094 (H.R. 4452): Bretton Woods Agreements Act (public debt) [1]	$4,550,000,000	$4,550,000,000	$4,550,000,000	$4,550,000,000	[1] $4,550,000,000		
H.R. 2256: Direct veterans loans (public debt)			100,000,000	300,000,000	100,000,000	+$100,000,000	+$100,000,000
S. 1 (H.R. 1011): Airport grants (contract authority)	200,000,000	120,000,000	465,000,000	297,000,000	126,000,000	−74,000,000	+6,000,000
S. 57: Housing Act of 1959 (public debt and contract authority) (vetoed)	(1,650,000,000)	(800,000,000)	(2,675,000,000)	(1,975,000,000)	[2] (1,300,000,000)	(−350,000,000)	(+500,000,000)
S. 2539: Housing Act of 1959 (public debt and contract authority) (vetoed)	(1,650,000,000)	(550,000,000)	(825,000,000)	(825,000,000)	[3] (825,000,000) [4]	(−825,000,000)	(+275,000,000)
H.R. 8678: Highway Act of 1959							
S. 2654: Housing Act of 1959 (public debt and contract authority)	1,650,000,000	800,000,000	925,000,000	925,000,000	[3] 925,000,000	−725,000,000	+125,000,000
Grand total	6,400,000,000	5,470,000,000	6,040,000,000	6,072,000,000	5,701,000,000	−699,000,000	+231,000,000

[1] $1,375,000,000 for immediate expenditure; $3,175,000,000 in nature of guaranty for World Bank bonds.

[2] In addition, provided for 45,000 public housing units (contract authority) estimated at $874,500,000 and, in addition, carried language permitting an additional number of about 145,000 at an estimated cost of some $2,825,000,000.

[3] In addition, provided for 37,000 public housing units (contract authority) estimated at $719,000,000.

[4] Increased gas tax by 1 cent from Oct. 1, 1959, until July 1961 at which time, for the 3 fiscal years 1962–64, bill actually appropriates to the highway trust fund, from the general fund, certain excise taxes estimated to total approximately $2,500,000,000.

Conferees Changed Landrum-Griffin Bill

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PUCINSKI. Mr. Speaker, the press has claimed in appraising the 1959 labor-management reform bill passed by this Congress that there was relatively little change between the bill reported out by the Senate-House conferees and approved by Congress, and the original Landrum-Griffin bill originally passed in the House.

I should like to call attention of my colleagues to the fact that such an assumption is grossly misleading. It is obvious that those who would make such a statement have studied neither the original bill approved by the House nor the conference report subsequently signed into law by the President.

There were 15 substantive changes made in the Landrum-Griffin bill at the insistence of the conferees and it was these changes which made the conference report acceptable to many Members of this House who originally voted against the Landrum-Griffin bill. I believe Senator KENNEDY deserves a great vote of thanks for insisting on these changes which helped make this legislation acceptable to those who opposed the measure originally approved by the House.

I am indeed happy to associate myself with Senator KENNEDY's determined efforts to get at those who have abused their privileges in the labor-management relations field without destroying the legitimate aims of honest unions.

The analysis follows:

MAJOR CHANGES MADE IN LABOR-MANAGEMENT REFORM BILL BY CONFERENCE COMMITTEE

The following changes safeguarding the rights of workingmen were made upon the insistence of a majority of the conferees:

1. Subcontracting: The legality of restricting subcontracting in the garment industry in order to keep out sweatshops was established.

2. Consumer appeals: The right to publicize nonunion goods to consumers, without causing a secondary work stoppage, is recognized in the conference agreement. Employees will also be entitled to publicize, without picketing, the fact that a wholesaler or retailer sells goods of a company involved in a labor dispute. All appeals for a consumer boycott would have been barred by House bill.

3. Organizational picketing: The conference report preserves the right to engage in organizational picketing provided that a petition for an election is filed within a reasonable time not to exceed 30 days. Unless the union won the election, the picketing would have to cease. The House bill would have virtually banned organizational picketing.

4. Informational picketing: The right to engage in purely informational picketing without filing a petition for an election is secured provided that the picketing does not halt the pickup or delivery of goods or the providing of services by the employees of other employers.

5. Primary strikes: The conference report recognizes the right to engage in primary strikes and primary picketing, thereby eliminating the danger that the House bill would sometimes invalidate such picketing.

6. Defense to picketing: Although the conference agreement contains a prohibition upon picketing an employer who has a contract with another union, language was added to the House bill which would make it a defense to show that the General Counsel had issued a complaint charging the employer with unlawfully dominating, maintaining, or assisting the other union.

7. Union liability for damage suits: The section imposing liability on labor unions for damages in the case of unlawful organizational picketing was eliminated.

8. Federal-State jurisdiction (no man's land): The conference report permits the States to take jurisdiction over labor cases over which the Board currently refuses to assume jurisdiction. Under the House bill the NLRB could have refused jurisdiction over additional cases. The Board's present jurisdictional standards are broader than they have ever been, thus insuring more unions and employers protection of the act than at any time in the history of the act.

9. Economic strikers: The House bill contained no provision permitting economic strikers to vote in representation elections. The conference provision permits strikers to vote in representation elections within 1 year after the commencement of a strike.

10. Struck work: The conference report preserves existing law on the question of the right of labor to refuse to work on struck goods. The House bill would have limited this right.

11. Prehire contracts in the construction industry: Conference report permits prehire contracts in construction industry accepting Senate provision on this subject. Conference report also permits unions and prime contractors in construction industry to enter into agreements by which contractor refuses to subcontract to nonunion operators.

12. Bonding: Conference report places a $500,000 limitation on amount of bond required to be taken by a union officer; the House bill had no such limitation.

13. Elections: Conference report makes the Secretary of Labor responsible for bringing suits in a Federal court to remedy improper elections. The House bill would have provided that individual members could bring suits in U.S. district courts to overturn improper elections.

14. Membership lists: House bill gave candidates for union office the right to inspect and copy from membership lists in union shops. Conference report restricts this to one inspection 30 days prior to an election without right to copy.

15. Employer reporting: Conference strengthened immeasurably employer reporting section 203 which was meaningless in the House bill.

Hon. Isidore Dollinger

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I thank the gentleman from Illinois for yielding to me. You cannot know how proud this moment makes me. I daresay I have known ISIDORE DOLLINGER intimately, socially, and professionally longer than anybody in this House. My first experience with him was when it was my privilege to employ our distinguished colleague as one of my law clerks, and that goes back a long, long time. That is why I have so proudly watched his progress in the political, as well as the professional life of our community.

It was my pleasure to see him go to the Legislature of the State of New York after he had made his mark at the bar. In our State capital he made an outstanding record as a fine, good, liberal, progressive legislator. Then he joined me here where he has done so well. Here, also, he earned the respect of all who knew him and gained the affection of all those who had the privilege of associating with him. I am sure this next step in his forward progress up the political ladder will afford him the opportunity for greater accomplishments in his career where he may render wider service to the people of his city, his State, and of his country. We will miss him here.

As he goes on to new and greater success, we wish him well.

Rural Development

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DEROUNIAN. Mr. Speaker, I am pleased to report that the Wall Street Journal has given deserved recognition to the importance and long-range potential of the national rural development program. This program, now going forward in 30 States and some 200 counties, has as its aim the development of economic resources in disadvantaged rural areas. In short, it is trying to do something for the small farmer on low-production farms.

Early this week the Journal ran a lengthy and extremely interesting article on rural development, by one of its staff correspondents. Among other things, the article reported that specially qualified young agents were at work on the program in all participating States.

According to the Journal:

The program places great emphasis on local initiative. The special agents work directly under the extension services of the State colleges which receive Federal money to cover the extra salaries. A State committee decides what area will receive the rural development services. The agent has the assignment of acting merely as a catalyst from income boosting efforts of the local chamber of commerce and other groups.

Employment of special rural development agents marks a significant new tack for the State extension services. These agencies traditionally hire county agricultural agents to advise commercial-scale farmers on the best time to plant corn, or whatever, according to research findings at the State agricultural college. This top-level clientele takes most of the regular county agent's time, and he ordinarily has little to do with poorer farmers who don't grow much. But subsistence-scale farmers are the rural development agents' special target.

The Wall Street Journal is obviously impressed with the approaches being used in the rural development program. The September 11 issue carried an editorial pointing out that some farmers receive little of the benefits of highly publicized farm programs and need special approaches to deal with their income problems.

I commend this editorial to the attention of my colleagues and, with unanimous consent, I insert it in the Appendix of the RECORD:

THE OTHER HALF

Just the other day our Mr. Large reported on another plan of Uncle Sam's to help the Nation's farmers, and we're happy to learn this one, so far at least, doesn't seem as burdensome for the taxpayers as the rest.

This one is called the rural development program. It operates in 30 States (mostly in the South) and Puerto Rico and it costs all told $2 million a year, which is about the cost, Mr. Large notes, Uncle Sam has to pay just for storing the crop surplus on hand for 36 hours.

Rural development consists not of handing out money or loans or signing up farmers at a goodly price not to plant things. It consists mainly of advice to farmers and communities to try to raise their incomes by promoting better marketing programs and facilities or even plants and small factories to create off-farm jobs.

Now the reason the rural development program is handing out advice instead of money is that his particular program is working among farmers who receive little if any benefit from the giant price-support programs. These farmers either grow the wrong kind of crops—which is the kind Uncle Sam doesn't pay off on—or they grow too little of the supported crops to qualify.

Yet these farmers number more than half the farmers in the Nation. There are 2.7 million of them. They supply only 10 percent of the Nation's farm products. The commercial farmers number around 2 million, and they are the happy recipients of almost all of the tax-supported farm handouts.

Now there must be millions of taxpayers all over who don't realize that the wasteful farm-supported program actually makes prosperous fewer than half the farmers in the Nation, which makes the farm program more than twice as costly per farmer as the taxpayers thought. And what it has cost in total losses since 1954 is $5.8 billion.

It ought to be remembered when the farm bloc Senators and Representatives start their annual mournful chant about the necessity of keeping the farms going that they're talking about fewer than half the Nation's farmers.

And when half the farmers come to realize how their own Federal taxes help permit the other farmers to live higher on the hog, Congress might come to its senses and do something about this annual plowing under of all the taxpayers.

The Late Honorable Thomas H. Burke

SPEECH
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. STAGGERS. Mr. Speaker, the passing of former Congressman Thomas H. Burke, of Ohio, who served in the 81st Congress, has brought sadness to my heart. I would like to add my voice in praise and gratitude to those of my colleagues who remember Tom when he walked the Halls of Congress and took an active part in the proceedings on this floor.

He came to Congress with the 81st Congress, the beginning of my own congressional career, and early in those days we became close friends, and worked together toward mutual goals. He was a true gentleman, kind, helpful, courteous, gentle but firm, outspoken but wise. A high-type American—the kind this country needs to keep it strong and free. His services during his short stay in Congress, and during his other governmental assignments left their prints on the path of progress. Labor and education were his main interests, and both received benefits as a result of his interest and activity. He was a good man, this man—Thomas H. Burke.

Another friend is gone, but I shall long remember his kindness to me. To his family, which he so dearly loved, I extend heartfelt sympathy.

Mr. Fidel Castro: Military Dictator

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article about Mr. Fidel Castro's Cuba. It is clear that Dictator Castro is determined to exploit the laboring people of the Republic for his personal advantage. We all know that free unions are essential to democracy.

The article is worthy of consideration by my distinguished colleagues and is inserted at this point in the RECORD:

[From Latin American Events]

NEWS AND COMMENTARIES

CUBA

The latest agreements adopted and publicized by the Cuban Confederation of Labor (CTC), the second organization of this nature in ranking, internationally speaking, which in proportion to Cuba's 6 million inhabitants has more than 1,500,000 members among its 1,560 unions and 33 industrial federations, invites reflection and objective analysis of the country's internal problems, as well as its international relations and obligations.

Cuba is a signatory to the international agreements drafted by ILO and duly ratified by the Senate of the Republic, which recognize the right to strike and condemn the use of labor organizations for political or military ends; and such principles are contained in Cuba's Constitution of 1940.

The CTC's agreements precluding the exercise of the right to strike and militarizing the unions, implicitly defies such international agreements and the Constitution of the Republic. It is the most antilabor step ever taken in the history of the Republic.

Let us briefly explain why Castro's communistic regime took those steps. When the CTC took command of union reins in 1944, its outstanding characteristic was its anticommunistic fervor and eliminated Communists from labor organizations. When Castro and his comrades came to power, he gave Communists the whole Direction Bureau and the majority of the key positions. At present, it can be assured that the Com-

munist Party controls the organized labor movement in Cuba.

It became necessary, therefore, to overrule the right to strike and militarize the labor movement, the Communist way, in order to divert attention from two measures which would have great repercussions:

1. Hand the nation's economy over to the Russians by means of a bank loan.

2. Violate the nonintervention doctrine, without using bearded soldiers for invasion, by simply carrying out a boycott movement, already started against the Dominican Republic, by requesting the cooperation of the organized labor in the United States in order to choke said country economically.

How are the Communists in Cuba achieving those ends? Fidel Castro's government, according to the press, has arranged for a $60 million loan with the Dutch Continental Co. under the direction of a Mr. Matelwich (namely, Moscow government) with the collateral guarantee of agricultural surplus and its byproducts, tobacco, and cocoa.

The floating of this loan, which was done without taking into consideration the opinion of the affected parties, will undoubtedly result in a considerable reduction in the salaries of the sugar workers; it will shorten the duration of the next sugar crop, with less wages to be earned by workers, and will cause a vertical downfall in the final molasses price, and eventually affect the basic factors of Cuba's sugar production. If the report is true, this loan places Cuba, economically and as far as its labor relations are concerned, in the hands of the Russians. And we must not forget that the Soviet Union is one of its largest competitors, since technicians predict that Russia's sugar production next year will exceed 6 million tons.

And by forcibly taking over Cuba's organized labor movement, the Communists also gain control of Cuba's representation in international organizations, such as ILO (ORIT), etc. These representations will be used for political ends, in an effort to attack governments refusing to surrender to the requirements of international communism, thus resorting to the boycott. The workers have, like in the Soviet Union, already been officially militarized. Juvenile militia corps, like in Russia, have been organized; groups of pioneers, and children instructed to accuse their parents if they express themselves against the government, as done in Russia, have been formed.

It is regrettable that there are still candid people in the United States who are vainly trying to find Castro's Communist affiliation card to prove that the Cuban minister is unconditionally under orders from Moscow.

CHILE

The liberal deputy, Raul Aldunate Phillips, declared before the Chamber of Deputies, that Cuba's Secretary of Education Armando Hart took advantage of Chilean hospitality during his recent visit to Santiago as a member of the Cuban delegation to the meeting of foreign ministers in Santiago (Chile).

Making reference to the speech made by Hart in a public gathering sponsored by the Communists on the eve of the meeting of American foreign ministers, Aldunate said: "Mr. Hart seemed to be trying to educate our people on how to incite armed forces to rebellion." Aldunate continued: "I protest against that form of taking advantage of the Chilean hospitality. It seems as though Cuba's Minister of Education, who has come to our country on an official visit is endeavoring to lecture the Chilean people on how to destroy our well-reputed armed forces, an attitude which I consider as ignominious." Mr. Hart stated in that Communist gathering that it was ignominious to try and hold free and honest elections in Cuba.

Chile is still talking about the 42 bearded and armed men commanded by Raul Castro, Chief of Cuba's Armed Forces who pretended to invade its national territory. This attempt to violate Chile's national sovereignty produced genuine indignation among the Chilean people, who supported President Alessandri's energetic attitude forbidding the invaders to leave the premises of the airport and returning them to their unfortunate island.

GUATEMALA

As previously informed in one of our newsletters, the communists, under the leadership of Moscow, Montevideo and Mexico City, are trying to overthrow the President of Guatemala, Gen. Idigoras Fuentes and intend to replace him with ex-President Arbenz, who is one of the chief Communist leaders in Latin America.

They have now started with a campaign of sabotage and terrorism, mainly in Guatemala City, tending to provoke popular unrest and a state of alarm and uncertainty, which would reflect on the business activities of the Nation. On August the 27th, nineteen dynamite bombs went off in the Capital city alone; one of these exploded at a distance of 200 yards from the Palace of Congress at the time when the Chamber of Deputies was in session.

As is customary with the Communists, they will try by every possible means to antagonize the students against the constitutional Government and to provoke clashes with the public forces which will result in some victim, preferably among workers or the high class of people.

Finally, they will strive for a split between the Government and the Catholic Church, and once this is accomplished, they will then stage the revolution and will try to attract and induce the elements of right wing and the moderates or center ones, who oftentimes fall in the trap.

If the Army remains loyal to the Democratic Government, the one elected by the people and in an election accepted by all political parties, then President Idigoras will be able to stay in power. However, if he shows signs of weakness and he allows the Communist plan to succeed in breaking up relationship with the Catholic Church, we would certainly be running again into another Communist regime in the largest of the Central American republics. All of this could happen, as has been the case in Cuba, with the complete indifference of the remaining countries of the continent, who have not yet decided to enforce the Caracas Declaration, which should be taken more like a preventive obligation than a punitive act.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-sixth Congress will be published not later than Monday, October 5, 1959. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

Report of the Minority Leader on the 1st Session of the 86th Congress

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, in conformity with the unanimous-consent request which I presented to the Senate and to which there was agreement, I submit herewith the "Report of the Minority Leader on the 1st Session of the 86th Congress."

In this report I have sought to be factual, impartial, and unbiased in setting forth the record with particular reference to those items that I conceive to be of greatest importance. Another report, to be printed as a Senate document, will contain a résumé of all major legislation with which this session of Congress has dealt. These reports, I am sure, will be found at once constructive, informative, and useful.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPUBLICAN REVIEW OF THE 1ST SESSION, 86TH CONGRESS

I. STATE OF AFFAIRS WHEN THE 86TH CONGRESS CONVENED

With the hour of adjournment near at hand, we have reached the stage for a frank appraisal of the work of the 1st session of the 86th Congress.

For a full understanding of the work of this session, an appraisal must be something more than the cold statistics of laws enacted and laws left dangling until we meet again next January.

Congress does not meet in a vacuum. The conditions in which Congress meets strongly influence the outcome of legislative programs. And what goes on behind the scenes is often of equal or greater importance than what is done on the stage in the full glare of the public spotlight. A vote of 90 to 1 in the Senate on the final passage of a bill, for example, rarely reveals the important issues that were involved as the bill moved through the various stages of the legislative process.

The composition and control of Congress itself is affected by the national elections. The legislative program reflects the recommendations of the President and the judgment of congressional leaders. And the final result is influenced by the state of the Nation and the moods of the people.

In short, a better understanding of the work of this session will be had if we look at some of the conditions and forces which influenced the final results.

Condition of the economy when Congress convened

The work of the Congress was also strongly influenced by the condition of the national economy at the time Congress met.

At election time in 1958 there had been about 4 million unemployed. By January the number had increased to nearly 5 million, owing to the usual slack which follows the heavy temporary employment of the holiday season.

But as the President correctly noted in his state of the Union message, the Nation enjoyed a strong and expanding economy.

"A year ago the Nation was experiencing a decline in employment and in output. Today that recession is fading into history, and this without gigantic, hastily improvised public works projects or untimely tax reductions. A healthy and vigorous recovery has been underway since last May. New homes are being built at the highest rate in several years. Retail sales are at peak levels. Personal income is at an alltime high.

The President forcefully indicated that it was not the proper approach to a sound economy to push the panic button and call for a wide variety of great expenditures and new functions.

On the contrary, he pointed out that we can afford everything we clearly need, but it is wise to avoid waste, to spend prudently, to balance the budget, to deal firmly with the basic causes of inflation which could disrupt the sound growth of our economy, to encourage confidence, and to induce new private activity into the national bloodstream.

The 1958 election and a divided Congress

The sound policies endorsed by the administration are largely responsible for the record employment and personal income achieved during recent months. The administration deserves great credit for having resisted the many proposals to embark on extensive public works programs of dubious value during the 1957–58 recession.

It is unfortunate that the United States during this critical period of world history has been plagued with a divided Government where the executive branch is in the hands of the Republican Party and the Democrat Party has the responsibility for the enactment of the President's recommendations. In spite of these difficulties, a substantial record of accomplishment has been achieved which attests to the patriotism and inherent commonsense of the Congress. Immediately following the election, certain labor groups attempted to take credit for the election of a Democrat Congress and few believed that the 1st session of the 86th Congress would enact constructive labor legislation, which had been opposed by labor bosses who had infiltrated the Democrat Party. It is significant that the conference report on the Labor-Management Reporting and Disclosure Act of 1959 was adopted in the Senate on a vote of 95 to 2, and in the House by a vote of 352 to 52. Thirty-three Republicans Senators supported this measure and 138 Republican Members of the House of Representatives.

Several matters merit some comment in appraising the work of the 1st session of the 86th Congress and providing for a better understanding of the forces and motivations which dictated the actions which were taken.

Both Houses of the Congress have been overwhelming Democrat. In the House of Representatives, prior to the admission of Hawaii as the 50th State, the ratio was 283 Democrats to 153 Republicans. This gave the Democrats 65 percent of the membership with a majority of 130. With the admission of Hawaii as a State, one more Democrat Member was added to the House of Representatives. In the 85th Congress, the Democrat majority was 35. Not since 1937 has there been a smaller Republican membership in the House.

In the Senate, the ratio was 64 Democrats and 34 Republicans prior to the admission of Hawaii. At the present time, the ratio is 65 Democrats and 35 Republicans. Again the Republican membership in the Senate is the smallest since 1941. Under our two-party system, the American people always have the opportunity to assign responsibilities to the party of their choice. It must be remembered that in 1937 there were only 16 Republicans in the U.S. Senate and 89 in the House of Representatives. Yet, within the short space of a decade, there were 51 Republicans in the Senate and 244 in the House of Representatives. The Republican Party had been given a clear mandate by the American people to legislate during the difficult period of readjustment from World War II. The record of the Eisenhower administration since 1952 in recommending economic policies which have led to a rapid recovery from the recession of 1957–58 gives promise that the Republican Party will be given legislative responsibilities again in the near future.

One of the consequences of a national election is the change in the committee structure of the Congress. In the 85th Congress most Senate committees gave the Democrat Party a majority of a single member. However, in the 86th Congress, in most cases, the Democrats enjoy a 2 to 1 ratio over the Republicans. Therefore, it was necessary to get substantial support from the majority party to make the Republican position prevail.

The equation for legislative action is quite simple. It consists of attitudes plus voting

power. The presence of 31 more Democrats than Republicans, giving that party a 65 percent majority in the Senate, places not only great power but also attendant responsibility on the Democrat Party for the welfare of the country.

The heady wine of the election results led other groups which supported the Democrat Party and claimed credit for the victory to take off on flights of exhilaration, casting off economy and moderation as they zoomed their spending proposals into space. These groups were eager, determined organizations who were anything but shy in asserting their causes. They buttressed the so-called liberals who had been elected in the Democrat sweep and who impatiently awaited the opening of Congress so that they could bring the millenium to the American people.

The Americans for Democratic Action issued a program under the fetching title, "A New Deal for the 1960's." Its first line read: "Americans for Democratic Action interprets the November elections above all, as a demand for a New Deal.* * * This should be the overriding objective of the 86th Congress." There followed a list of proposals and recommendations so ambitious, when calculated in terms of expenditures, as would have bankrupted the Nation and given wings to the flights of inflation.

Political union leaders of the AFL–CIO were scarcely less modest in demands upon Congress. Claiming a major share of the credit for the election outcome, they were ready and insistent in clamoring for immediate action on a host of proposals, all of which carried astronomical price tags.

Among the Senators- and Congressmen-elect, a considerable number looked upon the election as a mandate to indulge in generous liberality with other people's money and to cure all of the ills of the Nation, real and fancied, by more Federal laws.

All such influences combined more or less to impress on the Democrat leadership in Congress that this was a new era, this was the space age, this was a time for bold and dynamic action, and that the so-called mandate derived from the people in the November election of 1958 was to be used to send the country spininng to new levels of something or other.

Immediately after the election, the prospective majority leader of the Senate, with his customary modesty and good sense, sought to tone down the exuberance of his followers and to put at rest the Nation's fears that a phalanx of Democrat spenders was poised for the opening gun of the 86th Congress.

Leaving a conference with the President at the White House a few days after the election, the Senator spoke in general of a program of "prudent progressivism" in the bracing air of confidence that the Congress would go forward to meet the challenge of the times. The Democrats would cooperate with the Republican President for the "2 more years" of his term and when they disagreed, they would present "constructive alternatives."

Later, but still in general terms, the majority leader listed "the kind of things I believe must be done." This was simply a topical list of items. How they were to be done, and at what cost to the Nation, was wisely left to the unfolding future.

II. THE PROGRAMS UNFOLD

The majority program

As the session opened, Congress was soon to see what lay behind the bold, dynamic program of the Democrat majority. The bright blueprints of glittering generalities began to take shape in the form of specific bills.

It included, among other things, a Federal aid to airports bill by Senator MONRONEY, of Oklahoma, and others. Bearing the title S. 1, this was a 5-year program to cost $565 million, a sum quite in line with concepts of the space age.

Then came a housing bill (S. 57), introduced by Senator SPARKMAN, and others, with provisions so broad and generous that it seemed as if a housing program was to take the form of castles in the air. Running well into the billions, the bill embraced urban renewal grants, college housing loans, new public housing units, direct loans to veterans, millions for planning and for training planning and housing technicians.

Indeed, so generous were the loans and grants to be that the bill looked more like a campaign document for 1960 than the work of "prudent progressivism" promised by the majority leader. Only a nursery building program for expectant mothers was missing from the bill, but possibly that was an oversight in the process of covering so many beneficiaries.

Among the other major measures sponsored by Members of the Democrat Party which were never enacted were the following:

Independent Rural Electrification Administration: In 1953, following a recommendation by the Hoover Commission, the Rural Electrification Administration was incorporated into the Department of Agriculture. This action recognized that the REA provided a service mainly to the agricultural community. The action of the Eisenhower administration, pursuant to the Reorganization Act, recognized the responsibility which the executive branch holds in the administration of such a program. The Democrat 86th Congress attempted to alter the normal chain of command and to reestablish the REA as a separate, independent agency within the Department of Agriculture. In effect, this would permit the almost uncontrolled use of $3 billion of public credit without effective Executive or congressional supervision. In President Eisenhower's words, this would result in a "major retreat from sound administrative policies and practice."

The measure introduced by Senator HUMPHREY, passed the Senate 60 to 27 on April 8; passed the House, 254 to 131 on April 15; and was vetoed on April 27. The veto was overridden by the Senate, 64 to 29, on April 28, and the veto was sustained by the House 280, to 146, on April 30. Thus, the President stopped dead in its tracks this deliberate attempt to discredit the Chief Executive and his Secretary of Agriculture by removing an important administrative function of the U.S. Government from proper regulation.

Social security—medical care: Congressman FORAND introduced in the House H.R. 4700, a bill amending the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, whether or not cash benefits have been applied for and are being received. Payments may be made for hospital services furnished an individual for 60 days of hospitalization in a 12-month period or for hospitalization in a nursing home for 120 days in a 12-month period less the period of actual hospitalization. Patients are free to choose the hospital or nursing home to be attended. The provisions of this act are to be administered by the Secretary of Health, Education, and Welfare after consultation with a National Advisory Health Council created by the measure. If enacted, the bill would constitute a big step forward in the movement to nationalize medicine.

Similar bills were introduced in the Senate: S. 881 by Senator MORSE, and S. 1056 by Senator MURRAY.

Construction of medical, dental, and public health educational facilities: Senator NEUBERGER introduced S. 2170, a bill to authorize a 10-year program of grants for construction of medical, dental, and public health educational facilities. For the fiscal year beginning July 1, 1959, and for each of the 4 succeeding years it authorized $50 million for grants for the expansion and improvement of existing schools of medicine, dentistry, and public health, and an additional $100 million for a 10-year period beginning July 1, 1959, for grants for the construction of new schools of medicine, dentistry, or public health. No action was taken on this proposal.

International medical research: Senate Joint Resolution 41, sponsored by Senator HILL and 63 other Senators, proposed the establishment in the Department of Health, Education, and Welfare of a National Advisory Council for International Medical Research and the establishment in the Public Health Service of a National Institute for International Medical Research. The purpose of the bill is to help mobilize the efforts of medical scientists, research workers, technologists, teachers, and members of the health professions generally, in the United States and abroad, for assault upon disease, disability, and the impairments of man, and for the improvement of the health of man through international cooperation in research, research training, and research planning. It authorizes $50 million annually to start the program.

While this measure appeals to the emotions, it must be viewed as one more spending measure added to the numerous international contributions already being made by the United States, such as the World Health Organization and the United Nations International Children's Fund (UNICEF).

The resolution passed the Senate by a vote of 63 to 17. Subsequently, the resolution was referred to the House Interstate and Foreign Commerce Committee. There was no provision for this item in the President's budget, and it has not been enacted into law.

Unemployment compensation: The Democrat mandate program also called for the enactment of legislation to encourage permanent maximum unemployment compensation. Senator KENNEDY and 33 cosponsors introduced S. 791, a bill to provide for unemployment reinsurance grants to the State, to revise, extend, and improve the unemployment insurance program. In addition to providing a permanent maximum unemployment compensation benefit period of 39 weeks, it would also provide unemployment benefits amounting to 50 percent of employees' weekly wage although it was limited to a maximum of two-thirds of the average weekly wage within a State.

The enactment of this program would have destroyed merit rating, a feature which has been a part of the combined Federal-State unemployment compensation system since its inception. This measure encourages employers to provide uninterrupted employment for their employees and would also have federalized unemployment compensation. In many cases it would have deterred any incentive for individuals to seek private employment even though their skills and efforts were badly needed in the furtherance of our normal free enterprise economy.

Unemployment commission: As the 86th Congress assembled, the prophets of gloom and doom were convinced that the recuperative powers of our free enterprise economy were no longer adequate to assure employment of our growing population. The majority leader proposed the establishment of a commission to study the employment situation in the United States. In order to dispel any partisan connotations over this vital issue, the minority leader and 66 Senators joined in sponsoring this impartial study of the employment situation. It is significant that the bill providing for this study (S. 1631) was introduced on April 8 and passed

the Senate on April 10. However, the American economy was progressing at so rapid a rate that this measure never received consideration by the House as it was obviously unnecessary. Instead, a more modest study—by a Senate committee—was scheduled. This action thoroughly vindicates the position of the President and his economic advisers that the course which he had laid down at the beginning of the recession to restore the American economy without undue Government intervention was sound and in the public interest.

Youth Conservation Corps: Added to their already inflationary program was a Democrat proposal (S. 812) establishing a Youth Conservation Corps which was patterned after the Civilian Conservation Corps of the depression era. This measure proposed a nonrepayable yearly Federal expenditure of $375 million to $450 million, which would eventually cost nearly $4 billion over a 10-year period.

Supporters of this program have justified it on the grounds that it is an antidepression remedy, it is supposed to combat juvenile delinquency, and it is urged as an aid in natural resources conservation.

The present state of our economy would hardly justify enactment of this proposal. In 1933, when the CCC was established, there were 12,830,000 unemployed, or 24.9 percent of the total labor force. Today, there are only 3,744,000 unemployed, or just 5.1 percent of the labor force.

S. 812 provides for a regimented barracks life for 50,000 to 150,000 young men between the ages of 16 and 21, who "are citizens of the United States of good character." If they must be of good character, the bill is certainly not designed to mitigate juvenile delinquency. If enrollees must be of good character before they can enter the camps, it will not be possible for juvenile delinquents to be admitted to the camps. Of the 7,106,000 young men in the United States between the ages of 16 and 21, the enormous cost of this program would benefit only seven-tenths of 1 percent of the eligible young males in the country.

In commenting on the effect of the program in terms of the conservation program, the Departments of Agriculture and Interior indicated that they could do a much more effective job in the field of conservation by recruiting people trained in that type of work with the same funds.

This measure was passed in the Senate on August 13, 1959, by a vote of 47 to 45, but no action was taken by the House in the first session.

In agriculture, there was to be a new farm program to cure all the evils compounded over a quarter of a century, but the details of the program were not revealed, possibly because the majority did not, itself, know how to do the job.

Labor-management reform and civil rights were touched upon gingerly, possibly because the Democrat majority found itself in a hot box on each of these matters.

In the labor-management field the abuses uncovered by the McClellan committee had generated a heavy public demand for an end to labor racketeering, for protection of the rights of rank and file workers against unscrupulous union leaders, for protection of business and the public from secondary boycotts, organizational picketing, and other related abuses.

How to meet this demand and yet not offend union leaders whose powerful political support they sought, posed a real dilemma for the Democrat majority. The only possible way out seemed to be the Kennedy bill prepared with the aid of labor bosses and sweetened by changes in the Taft-Hartley law long sought after by union leaders.

In the civil rights field, the situation was equally difficult for the Democrat majority. The Republican administration and the public were pressing for further progress ever since 1957 when the Senate Republican minority leader forced the bill, passed by the House and embodying Republican administration recommendations, to the Senate floor where it was passed to become the first civil rights measure to be enacted in over 80 years. After Little Rock, the pressure for further legislation increased and it was clear that the 86th Congress would have to do something about it, reluctant as the Democrat majority was to touch the issue—even with the asbestos gloves offered by the majority leader in the form of a relaxation of the filibuster provision in Senate rules.

But what to do? The northern wing of the Democrat Party joined with a stronger body of Republicans to insist upon action. But the southern wing of the Democrat Party held back. How to satisfy the demand for civil rights enforcement without splitting the Democrat Party was the dilemma facing the majority leadership.

Nothing in the bold, dynamic program of the majority leader pointed the way out until a bipartisan approach took the preliminary step at the opening of the session of attempting to change rule 22—the filibuster provision which long had been the graveyard of civil rights issues. With his hand forced, the majority leader made a virtue of necessity and played a creditable part in finding a workable solution of the matter. After this skirmish, the real struggle for further progress in civil rights had to await the pleasure of a Senate committee controlled by Democrat opponents of the civil rights bills. As we shall see, the eagerness of this committee to bring forth a civil rights bill was anything but dynamic.

Such were the ingredients of the strange dish that came to be the Democrat majority program—a generous batter of spenders' delight, well moistened with the heady liquid of further expansion of the Federal Government, a liberal helping of welfare borrowed from their taxpaying neighbors, a dash of depression blues, a pinch (not more) of labor reform and civil rights, all raised to program proportions with the yeast and warmth of the 1958 elections. And this tasty dish—bearing the label "Caveat Emptor"—was set before the Democrat leadership to bake in the legislative oven.

The administration program

In contrast with the strange concoction cooked up by the Democrat majority, the Republican administration presented the Congress with a carefully worked out, responsible program. It aimed at balanced progress in meeting the Nation's needs. The price tags on the President's recommendations were moderate, and they added up to a little less than the expected revenues, so that there would be something in the cashbox to apply on the heavy national debt.

Few people really know how carefully worked out the administration's program is. The job has to be well done because, unlike the free-wheeling Democrat majority in Congress, the administration has to operate a huge Government, carry out the vast programs at home and abroad, pay the bills, and keep the Treasury solvent.

The budget is the administration's plan to do these things. Government Departments and the Budget Bureau start work a year before the President transmits the final budget message to the Congress. Between January and June they study carefully all the programs Congress has directed them to operate by previous laws. They study the requirements of national defense, the condition of the national economy, and the needs of the people.

Then each Department and agency comes before the Budget Bureau to present and justify its requirements. This is followed by a period of cutting and trimming until estimated Government spending is brought in balance with estimated Government revenues.

If this cutting and trimming is not done firmly, the Government will slide into deficits, heavier debt, and more taxes, as was done for so many years during the New Deal. We are paying for the excesses of the New Deal now by high inflated prices, by a heavy cut in the purchasing power of the dollar, and by enormous interest charges on the gigantic Federal debt.

The Budget Bureau takes the whole fall of the year to shape up the final program and then goes over it with the President in December. At that time all the big decisions on the program are finally made and the budget message is crystallized.

This is the heart of the program which the President submits to Congress in three basic messages: the state of the Union message, the budget message, and the President's Economic Report.

By the Constitution and the laws of the land, it is the President's duty to do these things. Charged with the duty of approving or vetoing the laws passed by Congress, he is a part of the legislative process as well as the Chief Executive of the Nation. Congressmen represent districts; Senators represent States; but the President is elected by and represents all the people.

When the administration program goes to Congress in January, it is the duty of Congress to consider it, to act upon the recommendations according to its best judgment, and then to appropriate the money and to pass the laws to carry out the program for the fiscal year which runs from July 1 to the following June 30.

Following this careful procedure, then, the administration's program was developed. It covered many of the same fields embraced within the Democrat majority program, but with a difference in approach, as we shall see.

It included the following items:

1. The submission of a balanced budget for next year.

2. The reduction of Federal operations in any area where private enterprise can do the job including legislation for greater flexibility in extending Federal credit, and in improving the procedures under which private credits are insured or guaranteed.

3. Necessary action to make more effective use of the large Federal expenditures for agriculture and to achieve greater fiscal control.

4. Review and revise operating and benefit standards of the agricultural conservation program.

5. The development of a program designed to encourage greater participation by private enterprise in economic development abroad.

6. The adjustment of other fees and charges so that persons receiving special services will more nearly pay the cost of these services, which include fees to the Patent Office and to other agencies which render services benefiting a limited group of our citizenry.

7. Authorize revenue bond financing for TVA generating facilities.

8. Strengthen and improve housing mortgage insurance programs.

9. Continue for 1 year beyond June 30, 1959, the present tax rate on corporate income and the excise taxes on automobiles and parts, cigarettes, distilled spirits, and wines and beer.

10. Increase temporarily the Federal tax on motor fuels, raise the tax on aviation gasoline, and impose a similar tax on jet fuels.

11. Authorize a revision in postal rates.

12. Enact a permanent plan for the taxation of life insurance companies and adjust the present laws relating to the taxation of cooperatives.

13. Specify the treatment processes which shall be considered as mining for the purpose

of computing percentage depletion allowances in the case of mineral products.

14. Grant wider administrative authority in setting interest rates and make certain adjustments in rates for various credit programs, as follows: Veterans' Administration programs of guaranteed and direct home loans; Federal Housing Administration programs of rental (including armed services) and cooperative housing (Sections 207, 803, and 213 of the National Housing Act); the college housing program of the Housing and Home Finance Agency; the loan program of the Rural Electrification Administration; and the ship mortgage loan program of the Maritime Administration.

15. Provide the President with authority to veto or reduce the amounts for specific items in appropriation bills and in other bills authorizing expenditures.

16. Raise the permanent debt limit by $2 billion, to $285 billion, and authorize a further temporary increase for the fiscal year 1960.

17. Amend the Employment Act of 1946 to make price stability an explicit goal of Federal economic policy.

18. Extend Federal regulation to bank mergers accomplished through the acquisition of assets.

19. Require notification to the antitrust agencies of proposed mergers by businesses of significant size engaged in interstate commerce.

20. Empower the Attorney General to issue civil investigative demands in antitrust cases when civil procedures are contemplated.

21. Make Federal Trade Commission cease-and-desist orders final when issued for violations of the Clayton Act, unless appealed to the courts.

22. Authorize the Federal Trade Commission to seek preliminary injunctions in merger cases where a violation of law is likely.

23. Amend the Securities and Exchange Act to extend the privilege of regulation A filings to a wider range of security issues.

24. Enact a program that will provide assistance, through development loans and grants for technical studies, to communities that have suffered substantial and persistent unemployment; and technical aid for the diversification of rural low-income areas and of towns heavily dependent on a major industry.

25. Enact a long-range program to conserve helium gas.

26. Provide for extending the coverage of the Federal-State unemployment insurance system to employees of firms having fewer than four workers, to employees of Federal instrumentalities, nonprofit organizations and certain other groups, and to workers in Puerto Rico.

27. Bring the provisions of the District of Columbia unemployment insurance system up to the standards recommended for the States.

28. Strengthen the State systems of workmen's compensation (State responsibility).

29. Extend the coverage of the Fair Labor Standards Act.

30. Improve the 8-hour laws applicable to Federal and federally assisted construction projects.

31. Carry out the principle of equal pay for equal work without discrimination based on sex.

32. Require reporting and disclosure of financial dealings between employers and employee representatives and their agents, and the filing of public reports on the status of union finances, organization, and procedures.

33. Prescribe standards to promote democratic procedures in union affairs.

34. Modify the law governing secondary boycotts, organizational and recognition picketing, and representation elections; and provide that States be given jurisdiction in labor-management disputes where the National Labor Relations Board declines to exercise authority.

35. Correct shortcomings in the Welfare and Pension Plans Disclosure Act.

36. Review and revise operating and benefit standards of military service credits for railroad retirement.

37. Expand non-Federal participation:
(a) Urban renewal.
(b) Flood control.
(c) School aid in federally affected areas.
(d) Waste treatment construction grants.
(e) Vocational education grants.
(f) Public assistance.
(g) Feed and seed assistance in disaster areas.

38. In other areas of human rights—freedom from discrimination in voting, in public education, in access to jobs, and in other respects—the world is likewise watching our conduct. The image of America abroad is not improved when schoolchildren, through closing of some of our schools and through no fault of their own, are deprived of their opportunity for an education.

The government of a free people has no purpose more noble than to work for the maximum realization of equality of opportunity under the law. That is the concept under which our founding papers were written. This is not the sole responsibility of any one branch of our Government. The judicial arm, which has the ultimate authority for interpreting the Constitution, has held that certain State laws and practices discriminate upon racial grounds and are unconstitutional.

39. Enlarge the resources of the International Monetary Fund and the International Bank for Reconstruction and Development.

40. Provide additional authorization for the Development Loan Fund.

41. Extend the mutual security program.

42. Extend the authority for sales of surplus agricultural commodities for foreign currencies and for the donation of such commodities for famine relief and other assistance.

43. More effective cooperation with the United Nations and its specified agencies including a reexamination of our own relation to the International Court of Justice.

44. Continue military draft, Reserve forces, and related legislation.

45. Repeal limitations on minimum strength of military Reserve forces and on disposal of unneeded military real estate.

46. Authorize sale of surplus military and other real property.

47. Review and revise operating and benefit standards of (1) Veterans' pension and other programs, (2) foreign bidding on certain military contracts.

48. Authorize statehood for Hawaii and home rule for the District of Columbia.

49. Disposition of the Alaska communications system and related facilities.

The important fact about such a program is that it has to be a balanced program. It has to deal with the immediate present and the long-range future. It has to balance the needs for defense with the needs for civilian operations. It has to balance domestic programs with oversea programs. It has to balance Government income and outgo. When it proposes spending, it has to think of taxes and debts and the need for protecting the spending power of the dollar.

It just isn't a question of balancing the budget, but the bigger problem of balancing all the parts within the budget. No Government will ever have enough money to do all that is demanded of it. First things have to be put first, and all other things in some proper order. If this is not done, we risk many dangers and even the solvency of the Government itself. The well-being of all our people depends upon a balanced plan of Government operations.

So long as Congress bears this in mind when it considers the budget, no great harm can be done if it enacts some new proposals or changes some of the President's recommendations. Congress never has to dot every "i" and cross every "t" in the President's program. After all, by the time Congress acts upon the President's program, some 18 months have elapsed and many conditions have changed. Congress has to take note of these changes in its legislation. But if it throws the whole thing out of kilter by taking potshots here and there, there is bound to be serious trouble.

That is what the Democrat majority threatened to do with all their freewheeling spending proposals. It is no excuse for them to say, "We appropriated less than the total sum the President requested—we balanced the budget." The question is: How was it done? If it was done by throwing a great many items within the budget out of line, just as much harm can be done as if the budget total itself was unbalanced.

Look at it this way: If a father spent half of his week's wages on golf clubs, leaving the children without needed shoes and the family with less groceries than it needs, it would certainly be no excuse for him to say: "I did not spend more than I earned." The same principle holds true of Government and the Nation's needs.

At many points, the Republican administration's program came into sharp conflict with the bills presented by the Democrat majority. The next section of this report will describe in detail what then happened, what issues arose, and how they were resolved.

III. BATTLE OF THE BUDGET

Nowhere was Operation Retreat and Fallback more apparent than in the celebrated battle of the budget.

The President submitted a comprehensive budget plan, providing adequate funds for each of the many and diverse activities of the Federal Government, all fitted into an over-all framework of balance between revenues and expenditures. The President proposed various programs of assistance in the fields of housing, airports, depressed areas—all of which were carefully considered as parts of a total Federal program, with benefits and costs fully evaluated and balanced.

Specifically, the President submitted the following balanced budget in January 1959:

Receipts	$77,100,000,000
Expenditures	77,030,000,000
Surplus	70,000,000

This program was conditioned on Congress providing certain necessary increases in revenue, particularly in the areas of (1) the motor fuel tax, (2) postal rates, (3) so-called "user charges" for special Government services, and (4) miscellaneous revenue increases, including closing of tax loopholes. Congress granted only part of what was requested in motor fuel taxes and miscellaneous revenues, and none in postal rates or user charges. These failures to act were offset by unexpected increases in other revenues, due to the very sharp recovery in economic activity; but this same recovery also necessitated added expenditures. As a result, it appeared that the hoped-for surplus would be upset by about the amount of the neglected revenue requests.

The Democrat majorities in Congress embarked in January with great promises as to the programs which the Federal Government would undertake. In program after program—we were promised—the Democrats would do more than the President proposed.

But, when the President made plain his determination to stand firm on his balanced budget, public opinion rallied to his side. Congressional leaders were impressed by pub-

lic opinion. As the session progressed, Congress' efforts to put up an outward show of fiscal restraint, in contrast to their earlier promise to spend, reflected their recognition that the President's position was basically in tune with the wishes of the people.

Despite unwarranted increases in some budget items, Democrat majorities on the Appropriations Committees cut back other programs, including mutual security and defense funds, sufficient to convey the appearance of substantial reductions below the President's requests for appropriations for fiscal 1960. But several millions of the claimed cuts in appropriations were, in reality, only "postponements" and will have to be restored in supplemental appropriations next year. And of the remaining claimed cuts—about $1 billion—most of them will not affect actual expenditures in fiscal year 1960, since long "lead-time" items were involved.

The strength of public support for the President's balanced budget stand was reflected in the effort by the Democrat leadership to draw attention toward reductions in formal appropriations bills and away from major increases in its own big spending proposals where actual appropriations will not be made until later budget years.

Of course, it is customary for the legislative to appropriate less money than the Executive requests in the formal appropriations bills. This has happened in every Congress, even during World War II and the Korean war.

Yet a somewhat different picture emerges if we take an overall view at not only formal appropriations bills, but also the major programs involving authorizations for later appropriations and/or public debt transactions which never require appropriations. In housing, airports, depressed areas, and other fields, Congress repeatedly tried to mortgage the future far beyond Executive requests.

Even here, however, public demand for fiscal responsibility exercised an effective restraining force. As shown below, original Democrat-sponsored bills were cut way back when it became clear that the President, backed by Republicans in Congress, was taking a determined fight to the country in the interests of preserving the value of the dollar. In many cases, Presidential vetoes enforced the demand of public opinion.

But again, many reductions claimed by the Democrat leadership were "paper" reductions. In some cases, for example, Congress took a multiyear administration request and cut it back to 1 or 2 years, appearing to reduce dollar totals, when, in fact, they were committing taxpayers' dollars far more than the original administration request. In short, they claimed to cut spending; but, in fact, they cut the calendar, while raising the rate of spending.

On the important issue of backdoor financing, people who believe in keeping a close rein on the spending of the taxpayers' money won a significant victory. A Democrat-sponsored effort was made to convert the Development Loan Fund to a 5-year $5 billion public debt transaction, cutting it loose from the appropriations process for the first time. A point of order was raised against this effort to bypass orderly appropriations procedures. While the issue was not pressed to the fullest, a clear-cut victory was scored to the extent that the Development Loan Fund was reduced way back and put on an authorization basis. The President has made known his position that this administration will never request further backdoor spending.

IV. OPERATION RETREAT AND THE BOX SCORE

What happened when these two opposing programs met in the legislative halls was a joy to behold. Any comparison of the measures as introduced with the same measures as signed by the President indicates all too clearly that there was a broad retreat and significant fallback from the New Deal-type of measures in the Democrat majority program.

The session just closed was a vindication of the President's good management in devising a program that made good sense to the people.

The victory belongs to the public which so strongly supported the President on the main issues of a balanced budget and responsible government. Had the people not been aroused, the Democrat 86th Congress would never have jettisoned the key measures of New Deal-type spending.

Republican Members of Congress who stood strongly for sound finance, for moderate progress, and for the correction of abuses such as in labor-management relations can be proud of their record in this session. Although they were in the minority, they fought the good fight and won.

Every veto message but one sent to Congress by the President has been sustained despite Democrat majorities in both Houses. The Democrat-controlled House couldn't muster enough votes to prevent the biggest lobby ever assembled by political labor leaders from taking a drubbing on labor-management reform.

The Democrat congressional leaders even silenced their party's national chairman, Paul M. Butler, who publicly demanded that they set a liberal course even if the measures passed ran into the President's vetoes.

That retreat and backtrack from an insupportable Democrat majority program is the main earmark of this first session of the 86th Congress becomes abundantly clear in the detailed analysis of the major public laws acted upon. Item by item, they are as follows:

Agriculture

The main agricultural problem facing Congress was again what to do in the case of a few commodities for which outmoded price support programs have been too long continued.

The 85th Congress had grappled with the same problem and, after much lost motion, came up with compromise legislation dealing with cotton, corn, and feed grains, and rice. That wasn't perfect legislation, certainly, but it was a good compromise, and it dealt with the commodities generally held to be in the most trouble at the time.

It was evident even then that something ought to be done in this first session of the 86th Congress about wheat and perhaps about tobacco and peanuts.

Farm picture generally bright: Except for these three crops, and the problem of what to do about mandatory price supports in general, the agriculture picture was, and today is, fairly bright. Production is at the highest levels in history. Gross farm income is at a record level. Per capita farm income is the highest in history. Farm ownership is at a new peak, and the amount of money the individual farmer has invested in his farm, or the amount he has paid off on his mortgage, has never been higher. Transportation, telephones, television, electricity, and other aids to good living are more widely available on farms than ever before. The standard of living on farms is the highest ever. Of course there are serious unsolved problems, not the least of which is the cost-price squeeze. But, in general the main problem was and is what to do about the 16 commodities now under mandatory price supports, and particularly wheat, tobacco, and peanuts.

That was the problem at the start of this last session, and it is still the problem now. For the fact of the matter is that no law—not even one like last year's compromise Agricultural Act—has come out of this Congress.

It is true that wheat and tobacco bills were passed. But it is also true that these bills moved toward higher supports and stricter controls, and were therefore vetoed by the President.

Wheat problem: Wheat particularly presents an alarming problem demanding attention. By next year the Government will have $3.5 billion invested in wheat. A wheat carry-over of 1.3 billion bushels existed in July and one of 1.5 billion bushels is indicated for next June 30. The cost to the taxpayers is $1.5 million every day for interest, storage, handling charges, and transportation. The $3.1 billion already invested by the Government in wheat represents a third of the total cost of all programs designed to support farm prices and income. But only 6 percent of all farmers benefit from this investment in wheat.

This situation in regard to wheat is indicative in the extreme of the overall problem of Government attempts to control production through acreage restrictions and to protect farm income through price supports.

Inaction of Congress: Because no major farm law has been produced during this session, and because it is generally felt that many people think Congress should have produced such a farm law, there have been attempts to fix the blame for this inaction of the Congress. Although Congress is the lawmaking body, there have been attempts to fix Congress' failure to act in this instance upon the Secretary of Agriculture.

The cry has gone up to the effect that he said he would write out the law for Congress, but didn't do so. To begin with, he did write out the law for Congress, as appears later. But, even if he did not do Congress' work for it, and even if he said he would, how does this get Congress off the hook? It cannot. The responsibility to write laws rests with Congress—even farm laws.

Definite program offered: But, let the record speak.

On January 29, 1959, President Eisenhower and Secretary of Agriculture Benson recommended that Congress either abandon parity and relate mandatory farm price supports to average market prices, or, if it insisted on keeping parity, allow the Secretary to set supports anywhere from zero to 90 percent of the parity price.

"The price-support and production-control program has not worked," the President said. He said there were three main things wrong with it:

"1. Most of the dollars are spent on the production of a relatively few large producers. * * * It does not help the farmers in greatest difficulty. * * *

"2. The control program doesn't control. Mandatory supports are at a level which so stimulates new technology and the flow of capital into production as to offset, in large part, the control effort. * * *

"3. The program is excessively expensive. * * * Budgetary expenditures primarily for the support of farm prices and farm income are now equal to about 40 percent of net farm income."

Specific recommendations: The President made these specific recommendations:

"I recommend that prices for those commodities subject to mandatory supports be related to a percentage of the average market price during the immediately preceding years. The appropriate percentage of the average market price should be discretionary with the Secretary of Agriculture at a level not less than 75 and not more than 90 percent of such average. * * *

"If, despite the onrush of science in agriculture, resulting in dramatic increases in yields per acre, the Congress still prefers to relate price supports to existing standards, the Secretary should be given discretion to establish the level in accordance with the guidelines now fixed by law for all commodities except those for which supports presently are mandatory."

The President also served notice that he opposed direct payment and multiple-price programs. "Difficulties of the present program," he said, "should not drive us to programs which involve us in even greater trouble. I refer to direct payment programs, which could soon make virtually all farm people dependent, for a large share of their income, upon annual appropriations from the Federal Treasury. I refer also to various multiple-price programs, which would tax the American consumer so as to permit sale for feed and export at lower levels."

Administration program spelled out: The President said more than this. He gave considerable detail as to both what he wanted and what he did not want; but these were the highlights.

Now, atttached to the President's message to Congress was a memorandum for the President from the Secretary of Agriculture. It went into still more detail, stressing the alternative presented by the President and applying them particularly to wheat, tobacco, and peanuts. This memorandum also went on to call for extension of Public Law 480, extension of the conservation reserve, and certain other recommendations.

Thus the administration program was very well spelled out, even before Secretary Benson appeared before the Senate Committee on Agriculture and Forestry on February 16 and 17. It was spelled out in even greater detail at that time. Again the Secretary presented in more detail the alternate programs outlined by the President, preferring, as the President had, the program to relate support prices to average market prices within a range of 75 to 90 percent.

Legal language provided: It is true that the Secretary did not bring with him to the committee the legal language covering his and the President's recommendations. He did agree to supply such legal language, and subsequently did. Wheat legislative language was sent March 12, 1959. Legislative language for peanuts was forwarded on April 2, 1959. Legal language with reference to extension of Public Law 480 was forwarded on April 17, 1959. Legislative language for tobacco was forwarded on April 20, 1959. On May 1, 1959, there was forwarded a combined draft on all of the above legislation.

How then, can one explain the cry that the Secretary said he would send proposed legislation to Congress but did not?

Could it be that this was a kind of smokescreen to cover up the fact that no general agreement could be reached among those most critical of the Eisenhower-Benson program? It is hard to be sure. It is interesting, however, that at the time there were newspapers and other reports to the effect that Senate Democrats jointly would propose their own broad farm legislation, but those reports died out, and, of course, no such joint proposition is before Congress.

No cure-all offered: It may be accurately charged, and had been, that Secretary Benson did not send to Congress a so-called omnibus farm bill designed to cure all the ills of all the farmers and straighten out all the kinks in all the history of farm legislation in one fell swoop.

But it cannot be accurately charged that the Secretary ever said he would be so rash as to attempt such a feat.

The record of the hearings before the Senate committee makes it abundantly clear, for instance, that it was agreed no changes would be proposed for the crops covered by the Agricultural Act of 1958. So, any so-called 1959 omnibus bill would be less than "omnibus," at least to that extent.

Excerpts taken out of context, together with the fact that, as usual, the hearing transcripts were edited for clarity, have been used to try to show that the Secretary of Agriculture said he would send up legal language for an all-inclusive new farm law. But the most any objective appraisal of the entire record shows is that the Secretary agreed to send to Congress the legal language which, indeed, he has sent, but which Congress has seen fit to ignore.

Responsibility of Congress: But, no matter how much may be said about what the Secretary of Agriculture did or did not do, said or did not say, the undisputable fact remains that Congress is the lawmaking body, Congress has the power and the obligation to make the laws, and when Congress fails to take action in a field where action is needed, Congress and Congress alone is ultimately responsible.

Extension of Public Law 480: Late in the session, Congress passed a bill (H.R. 8609) extending Public Law 480, the Agricultural Trade Development and Assistance Act.

The final measure, as worked out in a Senate-House conference, extended title I (sales of surplus commodities for foreign currencies) for 2 years to December 31, 1961, with an increased authorization of $1.5 billion per year. It also extended title II (famine relief donations) for the same period with an increased authorization of $300 million per year.

Among other features of the measure was one authorizing the establishment of a permissive 2-year food-stamp plan for the distribution of $250 million worth of surplus food per year to needy people in the United States.

Anti-inflation legislation

During most of this session's deliberations decisions were shaped largely by the shadow of mounting inflationary pressures.

Defense against inflation was a paramount concern. The President's vigorous stand for a balanced budget, supported by Republicans on Capitol Hill, was motivated basically by a desire to protect the value of the dollar against further attack from inflation. Not only in the overall battle of the budget, but on many individual legislative battlegrounds—like housing, airports, depressed areas—Republicans stood against inflation and for a stable cost of living.

But, in addition to these important issues, several proposals were advanced dealing directly with the problem of inflation.

Senator PRESCOTT BUSH introduced legislation (S. 64) which would amend the Employment Act of 1946, to establish the prevention of inflation as a major goal of economic policy. This bill was endorsed by the President in his 1959 Economic Report.

The Republican Party is in accord with the objectives of the Employment Act, but believes that increasing employment opportunities must be found within a stable, noninflationary economy. Balance must be maintained in the goals of economic policy. Therefore, the act must be amended to include a stable price level—as well as ample job opportunities—as our objective.

Democrats in Congress presented an alternative solution which would require either the Federal Trade Commission or the Council of Economic Advisers to review price increases by leading firms. This proposal amounted to price control by admonition. Such a procedure would destroy the foundatons of our free economy, and impair the usefulness and objectivity of the Council of Economic Advisers.

The Joint Economic Committee is currently reviewing the economy and is conducting a special investigation which the Democrats have sponsored to determine how growth and price stability may be achieved simultaneously. The work of this committee will be appraised very carefully.

The President's own battle against inflation led to the creation of a Cabinet Committee on Price Stability for Economic Growth. Vice President RICHARD M. NIXON is Chairman. This Committee was created "to follow governmental and private activities affecting costs, prices, and economic growth; initiate studies by Government or by groups of private citizens of price stability in relation to economc growth; seek ways to enhance productivity in the American economy and to build a better public understanding of the need for reasonable price stability in a free society and of the conditions necessary to achieve this objective."

This Committee is concerned with fostering economic policies which will promote growth of the national income without inflation. It has issued several instructive interim reports.

Atomic energy

In contrast to the Democratic policy for direct Government participation in the development of large-scale nuclear reactors, the President recommended that this program be developed by private enterprise. As a compromise measure, Senator ANDERSON, Chairman of the Joint Committee on Atomic Energy, introduced S. 2094 which appropriated $55.5 million for the cooperative power reactor program. This bill was enacted into Public Law 86-50 on June 23, 1959.

In his budget message, the President noted that the United States, at the Second Conference on the Peaceful Uses of Atomic Energy in Geneva during September 1948, had demonstrated the range and scope of its research and development in the peaceful application of this energy.

The Congress, in response to the President's program, authorized $229.9 million for the Atomic Energy Commission for 1960. Portions of this appropriation will be used for civilian reactors, biology and medical facilities, reactor development supporting facilities, and isotopes development facilities. In addition, the necessary amounts were appropriated to maintain our defense needs under the national security program.

In addition, the President called for expanded participation in international undertakings, such as Euratom. The Congress followed his recommendation by authorizing $10 million for a Euratom development and research program.

An appropriation of $2,683,029,000 (H.R. 8283) for the Atomic Energy Commission, to cover all of its various activities including the production of fissionable materials, the purchase of uranium, and the operation of its facilities, was signed into Public Law 86-164 on August 18, 1959.

On January 19, 1959, the President declared:

"This administration intends to explore all possible means of attaining armament control under adequate inspection guarantees despite the recent suspension of negotiations on means of avoiding surprise attack."

Testing of nuclear weapons by the United States has been suspended since October 31, 1958. Although the suspension was originally to last for only a year, it has been extended for an additional 2 months.

Civil rights

One of the most significant facts of our time is this: the Civil Rights Act of 1957 was the first important civil rights legislation to be enacted in over 80 years. The Democrats always talked about civil rights but never did anything about it.

And, it must be remembered, it was the Republican leadership in the last Congress which made civil rights legislation possible. It happened this way: The administration civil rights bill (H.R. 6127) passed the House June 18, 1957. Ordinarily it would have been referred to the Senate Judiciary Committee where it surely would have died—because of a committee filibuster. However, through a deft parliamentary maneuver, former minority leader William F. Knowland objected to referral of the bill to the Judiciary Committee and he rounded up enough votes to sus-

tain his objection on a rollcall vote. This action had the effect of placing the bill on the Senate Calendar where it could be called up for consideration by a majority vote at any time. Which it subsequently was.

The act passed in 1957 was designed basically to protect the voting rights of the Negro. It set qualifications for Federal jurors, independently of State laws, and provided for an additional Attorney General to handle civil rights laws. Moreover, it established a six-member, bipartisan Commission on Civil Rights with a life of 2 years. The law as finally passed was limited in scope principally because of Democrat opposition to part III of the bill. This section dealt with enforcement powers to protect not only voting rights, but a variety of civil rights.

Four Republican Senators on January 17, 1959, introduced a bill (S. 435) to give the Attorney General authority to seek civil injunctions against segregation in schools, parks, and other public facilities—the very authority removed from the act of 1957. These four Senators were JAVITS and KEATING, of New York, CASE of New Jersey, and SCOTT, of Pennsylvania.

Forced to show his hand by this action, Majority Leader JOHNSON introduced a civil rights bill which was woefully inadequate. This fact is attested to by the subsequent action of many of his Democrat colleagues.

Senator PAUL H. DOUGLAS, Democrat, of Illinois, January 29 introduced still another civil rights bill (S. 810), cosponsored by a bipartisan group of 17 Senators. The provisions of the bill were identical to those of H.R. 3147 previously introduced in the House. It is significant that in a statement accompanying the bipartisan measure, DOUGLAS attacked the civil rights measure introduced earlier by JOHNSON. He called the Johnson bill an "ostrichlike proposal" that ignored the school integration problem. "You cannot determine," DOUGLAS declared, "whether it is for or against compliance with the Constitution."

In a February 5, 1959, civil rights message, President Eisenhower made seven specific proposals for legislative action this year. They were:

"(1) Provide expressly that force or threats of force to obstruct court orders in school desegregation shall be a Federal offense.

"(2) Give the FBI additional investigative authority in crimes involving the destruction of schools or churches by making interstate flight to avoid detention or prosecution a Federal offense.

"(3) Authorize the Attorney General to inspect Federal election records and require that they be preserved for a 'reasonable period of time so as to permit such inspection.'

"(4) Provide a temporary program of Federal assistance to State and local agencies to help meet additional costs directly occasioned by desegregation programs. Also, provide a temporary program to make technical assistance available to State and local educational agencies in preparing and implementing desegregation programs.

"(5) Provide temporarily for education of children of members of the Armed Forces when State-administered public schools are closed because of desegregation difficulties.

"(6) Establish a statutory Commission on Equal Job Opportunity Under Government Contracts.

"(7) Extend the life of the Civil Rights Commission until 1961."

The President declared that "Two principles basic to our system of Government are that the rule of law is supreme, and that every individual, regardless of his race, religion, or national origin, is entitled to the equal protection of the laws. We must continue to seek every practicable means for reinforcing these principles and making them a reality for all."

Filibustering in the Democrat-controlled Constitutional Rights Subcommittee of the Senate Judiciary Committee has prevented any action by the full Senate on the civil rights issue, despite attempts by Republican Members to have a bill reported. The subcommittee did vote, however, to remove the section dealing with enforcement powers from all bills having such provisions.

Debt management

The Democrats have long advocated easy money and low interest rates regardless of the fact that permanent inflation would ultimately require controls or result in the destruction of our entire monetary system. For some years the Democrats have attacked the sound fiscal policies of the Republican administration.

The management of the Federal debt, so much of which is now being forced into inflationary short-term obligations, presents a serious problem to the Treasury as well as the Federal Reserve Board and the banking system of our country. If inflation is to be prevented and controls are not to be imposed, it is necessary for the Federal Government to compete with other borrowers in the money markets of the Nation for necessary funds to finance the Federal deficit.

The President, in a special message delivered to the Congress on June 2, 1959, requested the removal of the present 3.26 percent interest rate ceiling on savings bonds. The Congress enacted H.R. 9035 which would increase the maxmum rate to 4¼ percent.

However, a corresponding request for removal of the 4¼ percent ceiling on all long-term U.S. bonds was never granted. Democrats on the House Ways and Means Committee, after months of wrangling, decided to grant only the savings bond request—despite a renewed presidential plea for action on August 25, 1959.

At the present time there is no maximum interest rate applicable to short-term Government indebtedness which does not exceed 5 years duration. In order that more of the Federal debt may be funded into long-term maturities, the ceiling on interest rates on securities maturing after 5 years will have to be removed.

The President also requested an increase in the permanent debt limit to $285 billion as well as an increase in the temporary debt ceiling covering the Government's operations through June 30, 1960. The necessary congressional approval was enacted on June 25, 1959, and was signed into Public Law 86–74 on June 30, 1959.

Depressed areas

In the case of depressed areas legislation, the retreat and fallback was total. Initially, the Senate committee demanded all or nothing and reported out the Douglas bill at full cost and without modification. An effort on the floor to substitute the administration bill was defeated; so was a compromise offering. Then the unmodified $389.5 million Democrat package was forced through by the surprisingly narrow margin of 49 to 46. Chronologically, the closeness of that vote—on a measure which had sailed through the Senate on two previous occasions by much wider margins—was perhaps the first real portent of the coming operation fallback. As it turned out, after that close Senate vote, the depressed areas legislation died completely, even despite a tentative move in the House to cut back the amount by one-third.

Education

The Democrats raised the age-old question of Federal aid to education again in the 86th Congress.

Senator Murray submitted S. 2, designed to extend Federal influence into the field of education by providing $25 per school-age child in fiscal 1960 with the grant rising to $100 per child in the fourth year. It has been estimated that this would cost $1,085,000,000 in the first year, and that the total would rise to a staggering $4,746,000,000 in the fourth year. The total expected expenditure would have $11.4 billion over a 4-year period. The bill would also extend Federal regulation further into the field of education by prescribing the manner in which the money would be spent, specifying that the only programs for which it could be used would be school construction or teachers' salaries. The bill also provided that the money should not be given to a State unless it has met certain requirements in terms of what the proposal calls the school effort index. This bill was never reported.

Senators MCNAMARA and HART introduced S. 8, designed to authorize an emergency 2-year program of Federal financial assistance in school construction to the States. It authorizes $500 million a year and would distribute the Federal funds to States on the basis of population and wealth. The States would be required to match the Federal funds. Toward the end of the session, this bill was reported from committee, but no further action was taken.

Public funds can never be spent without some degree of regulation and control. Those who advocate Federal largess to assist education, health, and other worthwhile local activities, delude themselves if they believe that such programs can be accomplished without inviting complete centralized control over what traditionally have been local responsibilities. Yet both these bills would further interject the Federal Government into the field of education.

Experience also indicates that every tax dollar must be collected locally and then returned for admittedly worthwhile projects less the Federal overhead. The American people have the ingenuity and ability to finance these necessary and obviously beneficial programs without being subjected to this unnecessary overhead expense.

Senator HUMPHREY introduced S. 1087, a bill to establish a program of scholarship aid to students in higher education and to provide facilities and assistance to institutions of higher education. It would establish a National Council on Student Aid and authorizes such sums as may be necessary for administering the awarding of certificates of scholarship. The scholarship stipends are not to exceed $1,500 for any academic year, and the duration of any student's education shall not exceed 4 academic years. The awards shall be made without regard to sex, creed, race, color, national origin, or residence.

The President's program was introduced by Senator MORTON and seven cosponsors as S. 1016. It authorizes a 5-year program of assistance to school districts in meeting the debt service on loans for construction of urgently needed elementary or secondary public school facilities. The Secretary of Health, Education, and Welfare requested this legislation. Recognizing that our schools are presently housing almost 2 million students in excess of their capacity and another 2 million students are housed in inadequate or obsolescent buildings, he requested this program so that public schools—both elementary and secondary—could finance up to $3 billion worth of construction during the next 5 years.

If enacted, the maximum annual Federal payments would be about $85 million. According to the Department of Health, Education, and Welfare, the Federal Government would "annually advance half of the funds required by needy school districts to pay the principle and interest charges on bonds issued by the districts to finance school construction projects." The administration's program also indicated specifically that the Federal authorities would "exercise no

direction, supervision or control over the personnel, curriculum or program of instruction of any school or school system."

A second proposal would make it possible over the same period for institutions of higher learning to accelerate the construction of $2 billion worth of facilities which will be needed in the years immediately ahead to provide for the ever-increasing numbers of youth reaching college age. The program was announced as a 5-year emergency measure.

No major legislation in this field was enacted by the Congress in this session.

Federal aid to airports

The bold, dynamic program heralded by the Democrat majority—if such it was—got underway with S. 1, Federal aid to airports.

This first bill pointed up significantly the differences in the philosophy of the administration and that of the Democrat-controlled 86th Congress. The bill, introduced by Senator A. S. MIKE MONRONEY, of Oklahoma, and others, called for a 5-year program to cost $565 million. In its astronomical dimensions it was quite in line with the concepts of the space age.

Ignored was the fact that President Eisenhower vetoed a similar bill last year after Congress adjourned and this year had recommended over the next 4 years to aid States and communities to develop airports—the amounts of $65 million for the first year, $55 million in 1961, $45 million in 1962, and $35 million in 1963, or a total of $200 million.

It was obvious—and he took this into consideration—that due to the immense strides made by the aviation industry, the ever-increasing use of planes for transportation, the Federal Government would have to give aid to the industry. This aid would be in the form of increased navigational aids, longer runways for jet and other large planes, traffic towers, and other facilities for passenger safety.

However, with the usual lavish disregard of the taxpayers' money, a bill was presented which included such luxury terminal facilities as cocktail lounges, bars, night clubs, theaters, private clubs, garages, hotel rooms, commercial offices, and other similar features. As attractive as some of these things might be, certainly by no stretch of the imagination can they be classed as essential to the safety of passengers or increased aid to navigation unless it was intended to provide radar between a cocktail lounge and a night club.

As originally passed by the Senate, S. 1 provided for a 4-year extension of the act with expenditures of $100 million a year, plus $65 million in discretionary funds or over twice as much as the President proposed. Also, there was included continued Federal participation in the construction of terminal facilities, except for parking lots and areas used for commercial enterprises not related to public aviation.

As passed by the House, S. 1 provided a 4-year extension at $63 million per year, with $65 million in discretionary funds for a total of $317 million or $117 million more than the President requested. However, it prohibited use of Federal funds for the construction of any airport building or parking lot. But, in both of these bills, the frills still remained.

Due to the resolve of those who were determined to aid in the needs of the ever-burgeoning aviation industry, but who were determined that the taxpayers' hard-earned money need not aid in the building of cocktail bars, hotels, and night clubs, a compromise bill was finally passed extending the time for making airport grants for 2 years—1960 and 1961.

Here again, for purely political reasons, the Democrat-controlled Congress refused the President's request for a 4-year extension on the cynical grounds that it is their hope that a change of administrations will take place and the way will be freely opened to go on the spending spree they intended to in the first place.

As it stands, the extension was made for 2 years in the same amounts of $63 million annually as was authorized previously. The administration had made it perfectly clear that the funds were to be used portal to portal, as it were, following the safety concept which begins when the doors of the airplanes close about the passengers, continuing until the doors are opened after the passengers reach their destinations.

Much to-do was made that the authorization was below the President's request and therefore a saving. What these pseudo-savers fail to mention is that the program as approved by this Democrat-controlled Congress is but for 2 years, whereas the President's request was for a 4-year program.

The Democrat leadership's false claim of savings was achieved by comparing:

A 4-year administration program of $200 million with a 2-year congressional program of $126 million. If we want to have an accurate comparison, we should compare:

A 2-year administration program of $120 million with a 2-year congressional program of $126 million. Or we could also compare:

A 4-year administration program of $200 million with a 4-year program projected to $252 million.

When the bill finally reached the President's desk in June, S. 1 might be termed the bell-cow of the budget-busting measures for it carried in its final version $6 million more than the President's budget called for over the 2-year period. I am aware of the Democrat boast that they claim to have saved $2 million under the President's request. But they fail to point out that this claimed savings is the difference between the $65 million the President recommended for the first year in grants instead of the $63 million voted. They are as silent as the grave about the second year (1961), when the President recommended a sum of $55 million, while the sum voted was $63 million for that period. It was signed into law despite this, since the act would have expired on July 1 with all Federal aid stopped at that time for much-needed grants for air safety.

Holding the line in its concept that the lives of American people are more important than an ornate club bar or night club, States and communities now can go ahead with real safety measures helpful to aviation transportation in this air-minded age.

Hawaii

The Republican platforms of 1952 and 1956 carried a strong, positive plank for Hawaiian statehood. For almost 7 years in a Democrat-controlled Congress, Republicans fought for admission of Hawaii to the Union. Now, at long last, after a long fight, it is a State—and a member of the Union only after ceaseless Republican efforts in Congress. The people of Hawaii had repeatedly expressed, in one form or another, their desire to join the Union, and through the constitution which they enacted in 1950, they showed conclusively their contempt for those connected with the Communist Party by stipulating that they may not hold any public office.

The Congress has also enacted legislation requested by the President to facilitate the transition of Alaska from its status as a territory to its new position as a self-governing, sovereign State. H.R. 7120 was signed into Public Law 86-70 on June 25, 1959. Similar measures will, of course, be taken with reference to Hawaii.

Republicans have fulfilled the mandate contained in the 1952 and 1956 Republican platforms to grant statehood to Alaska and Hawaii.

Highways

The Federal Government has undertaken a long-range Interstate Highway System based on the expected needs of traffic in 1975. The initial program provided for the creation of a trust fund to be expended on a matching fund basis in the Federal Highway Acts of 1956 and 1958. As it was enacted, the law provided that the program be financed principally by a tax levied on motor fuels.

In his budget message, the President recommended that this tax on automotive fuels be increased by 1½ cents per gallon, since taxes at the existing rate were not adequate to meet the needs of the program. The President and the Congress have believed that this program should be financed principally by highway users, who are its chief beneficiaries. It has always been recognized that a portion of the cost, particularly in the case of the Interstate System, is a proper charge of the Federal Government in connection with the national defense and the promotion of interstate commerce.

The legislation which the Congress sent to the President did not meet his demands, as it increased the rate only 1 cent per gallon instead of the 1½ cents which had been requested. The 1-cent increase should result in a revenue increase of approximately $330 million annually. If the President's request had been granted in full, the additional revenue would have totaled approximately $495 million. If the projected program is to be continued on a pay-as-you-go basis, the rate of highway construction must slow down somewhat, due to the failure of Congress to provide the full 1½-cent tax increase.

Housing issues

There is no divergence of opinion that adequate housing for all of our citizens is a worthy goal and that Federal assistance in certain instances is necessary to achieve that goal.

The questions arise as to where that assistance is to be given and in what manner—through loans, matching grants, or outright gifts.

It is in answer to those questions that the philosophy of the Republican and Democrat Parties part company.

One of the first important pieces of legislation to reach the floor of the Senate was S. 57, the so-called omnibus housing bill, which was sponsored by the Democrat majority. This inflationary measure at the beginning called for a budget-shattering authorization of $2,964,725,000, as compared with the administration's request which would have had an ultimate price tag of $1,660 million. The committee's recommendations would have involved expenditures of $235.8 million more than had been provided for in the President's budget for fiscal year 1960. This legislation was introduced during a period when the President's proposed budget provided a slim surplus of $70 million.

The administration felt that the general objectives of the housing program are excellent. But, the administration felt that more might be done through private enterprise, and that under no conditions should a public program be undertaken at the expense of creating a chaotic inflationary situation. The administration proposals were embodied in S. 65, introduced by Senators CAPEHART, BUSH, BENNETT, and BEALL; S. 612, introduced by Senators BENNETT and CAPEHART, and S. 1017, introduced by Senators MORTON, SALTONSTALL, PROUTY, YOUNG of North Dakota, SCOTT, JAVITS, BUSH, MUNDT, ALLOTT, CASE of New Jersey, and COOPER.

S. 57, as finally passed by the Congress, was reduced to $1.4 billion, clearing the Senate by a vote of 56 to 31. The President vetoed the bill, and his veto was later sustained by the Senate by a vote of 55 to 40.

There was not only a matter of cost above the President's budget which was involved in this bill. It contained some major innovations. In its departure from current law and practice, it would have meant new Federal intervention in the housing field.

It would not be amiss to say that perhaps the President would not have vetoed the bill on cost alone, but when Congress voted completely new programs of Federal loans, at subsidy prices, for such as college classrooms, the veto became inevitable.

The President stated in his veto message:

"For many months I have been looking forward to approving a sound and constructive housing bill. New homes are now being built at near record rates. I had hoped to receive from the Congress legislation that would further advance the cause of better housing for Americans within the limits of fiscal responsibility.

"To my disappointment, the Congress has instead presented me with a bill so excessive in the spending it proposes, and so defective in other respects, that it would do far more damage than good."

The President then called attention to the fact that the bill would tend to substitute Federal spending for private investment by requiring the Federal National Mortgage Association to buy mortgages under par under its special assistance program, regardless of the price these mortgages command in the open market. In addition, the bill also limited the fees FNMA may charge when purchasing mortgages.

The provisions of that bill, authorizing college housing and college classroom loans at subsidized interest rates, additional Federal purchases of cooperative housing mortgages, and a new program of short-term loans by the Federal Government on the security of mortgages, would also substitute public for private financing.

The President called attention to the program placing needless limitations on the FHA program and impairing its soundness. Instead of removing the wholly unnecessary limit on the amount of the mortgage insurance authority of the FHA, the bill would continue these programs on a hand-to-mouth basis. Also, through lower downpayments and longer maturities, the bill would introduce underwriting provisions of questionable soundness into a number of FHA's loan insurance programs.

The President pointed out, in his veto, that the bill contained provisions which were discriminatory and unfair, because the way the bill was written, a few large cities, by making early application, could tie up all the funds available under the urban renewal program. The administration was specifically prohibited from preventing this discrimination against the smaller cities which had not as yet entered the program and did not have planning staffs. Further, S. 57 would extend credits to cities retroactively by counting streets and other local improvements they already intended to construct as part of the cost of urban renewal—this inclusion to take in improvements made by cities up to 5 years before comemncement of the project. With local cash contributions averaging about 14 percent of the cost of acquiring and preparing a project site for development, S. 57 would have reduced these contributions ever further.

As is readily seen, the subsidies for these various projects would come out of the pockets of all taxpayers, regardless of any advantage their particular city or town might derive from the bill.

What would have been the effect on the budget?

It is difficult to estimate because of the lag between commitments to spend funds and the actual spending. Under the vetoed bill, most of the dollar amounts were commitments for future spending, with small effect on the 1960 budget.

The urban renewal grant program, for instance, involved a 6-year $2.1 billion commitment, accounting by far for the largest item in the bill.

College loans have a lag of about 28 months between legislative authorization and actual expenditures, according to HHFA estimates.

Those who believe in large spending programs—who believe the Government should intrude itself into the whole fabric of our national life regardless of the cost, present or future—decided, for political reasons, to attempt to override the President's veto of S. 57. Quite frankly, on the floor of the Senate, they stated that regardless of results, they would make the attempt for that reason. The attempt was made and failed.

Hurriedly, then, a new housing bill was concocted—still containing some of the features objected to by the President.

The political overtones were evident. Not only did this bill exceed the President's recommendations, but, by limiting the duration of the FHA mortgage insurance authority to October 1960, the spenders made sure that a housing bill would have to be enacted in 1960—an election year—which they hoped would give them an opportunity to include some of the vetoed measures.

Left in the bill was authorization for 37,000 new public housing units, despite the fact, as the President pointed out, there are over 100,000 previously authorized public housing units as yet unbuilt.

Also, despite the President's objections, the new bill contained the new $50 million loan program to help build college classrooms. No one doubts the necessity for more classrooms in colleges, but, by the wildest stretch of the imagination, they cannot be called housing and have no place in a housing program. Apropos of this program and the new $50 million program to help build homes for older people, the President, in his first veto message, had stated: "To the extent that these and other programs merely displace private financing they lead to Federal spending that is entirely unnecessary."

Left in the bill was the "backdoor" direct loan method of financing urban renewal which bypasses the regular appropriation process. This leads to more deficits, but since it does not show up on the books, it is ignored.

Heedless of the President's warnings, the House and Senate approved the new bill, which, although less costly than the original bill, still contained all the features which the President had found objectionable.

Despite the claims of the Democrat spenders that they had reduced the President's budget figures, the shorter spending periods for some of the measures would have made so-called savings artificial and short-lived.

The President fired back this second bill with a clear veto message, showing how Congress still failed to balance costs and benefits properly. Again a politically inspired move to override this veto failed, this time by a margin of 58 to 36.

So, a reluctant Democrat leadership—having failed twice to force through excessive spending housing bills—finally passed a moderate bill, which the President could accept.

This then, briefly, is the story of housing legislation, touching only the highlights. The picture is clear. Under the guise of helping the people in various aspects of the housing field, an attempt was made to thrust the Federal Government into subsidized housing of all types—some of it far afield from actual housing itself. All this would have been at the expense of the taxpayer, at the expense of deficit financing, at the expense of inflation.

It recalls the old political slogan—spend, spend, tax, tax, elect, elect.

But because of a determined and reasoned defense by the President—enforced by two vetoes—Congress was forced to come down to a more moderate bill, far more in keeping with the genuine housing needs of the people.

No better illustration of the effective leadership of the Eisenhower administration occurred during the 1st session of the 86th Congress.

Labor legislation

One of the most bitterly contested issues in the 1st session of the 86th Congress was labor union reform. The McClellan committee began hearings in February 1957 and uncovered wholesale evidence of crime, corruption, and collusion operating in the field of labor-management relations.

Shocked at these disclosures, this Republican administration called for prompt corrective legislation last year. A bill falling far short of the administration's recommendations was passed by the Senate. In the House of Representatives Speaker RAYBURN kept the bill on his desk for 40 days and prevented it from being adequately debated in committee. Finally on August 18, in the adjournment rush, an attempt was made to take up the measure under a suspension of rules—a device to limit debate and prevent floor amendment. It was defeated. The Democrat chairman of the House Education and Labor Committee, GRAHAM A. BARDEN, of North Carolina, declared it was "an insult to the House and no compliment to their intelligence" to expect passage under suspension.

So, for political purposes, labor reform was killed for 1958—a congressional election year.

In his January 28, 1959, labor message, President Eisenhower again urged prompt action by the 86th Congress. He said there was a need for effective legislation—

"To safeguard workers' funds in union treasuries against misuse of any kind whatsoever.

"To protect the rights and freedoms of individual union members, including the basic right to free and secret election of officers.

"To advance true and responsible collective bargaining.

"To protect the public and innocent third parties from unfair and coercive practices such as boycotting and blackmail picketing."

An administration bill (S. 748) was introduced by Senator BARRY GOLDWATER, a member of the McClellan committee and ranking Republican on the Senate Labor Committee. This bill would have adequately met the specific recommendations of the McClellan committee's first interim report.

The President's recommendations as contained in S. 748 were sound, balanced, and realistic. They were neither pro nor antiunion—nor were they pro or antiemployer. Most important, they called for needed amendments to the Taft-Hartley Act relating to secondary boycotts and blackmail picketing. Moreover, they called for elimination of the so-called "no man's land." (The "no man's land" is created by the inability of the National Labor Relations Board to adjudicate all labor-management disputes involving interstate commerce which properly lie within its jurisdiction—thus leaving thousands of small unions and employers without legal remedy since the Supreme Court has held that Federal labor legislation preempts State statutes.)

Unfortunately, the Democrat-controlled Senate Labor Committee, possibly with an eye on the 1960 elections, ignored the President's reasonable recommendations. Instead it reported out the pathetically weak Kennedy-Ervin bill—S. 1555. This measure was conspicuous not for what it accomplished but for the objectives it failed to achieve.

Its most obvious failures were the following:

It did not impose fiduciary obligations, which could be enforced by rank and file union members, on union officials.

It did not impose the effective sanctions of denial of tax immunity and access to the National Labor Relations Board, the National

Mediation Board, etc., on unions violating the bill's provisions.

It did not solve the "no man's land" problem by permitting the States to exercise jurisdiction in those classes of labor cases which the NLRB refused to entertain.

It did not limit organization and recognition picketing by unions which clearly do not represent a majority of the employees of the picketed employer.

It did not close the loopholes in the present law dealing with secondary boycotts.

When the Kennedy-Ervin measure reached the Senate floor, many attempts were made to strengthen it. Most of them were rejected by a solid Democrat bloc. The highlight of the debate was Senator JOHN L. MCCLELLAN's, Democrat, of Arkansas, introduction of his "bill of rights" amendment. This dramatic move took on added significance for two reasons: (1) MCCLELLAN is chairman of the Senate Labor Rackets Committee; and (2) his sponsorship of the "bill of rights" amendment indicated a sharp split between himself and Senator Kennedy—chief sponsor of S. 1555 and chairman of the Senate Labor Committee.

Briefly, the McClellan bill of rights amendment provided equal rights to each union member; identical voting rights and equal protection under a union's rules and regulations; freedom of speech and assembly without interference from or penalty by the union; freedom from arbitrary financial exactions with a stated limitation on initiation fees; protection of the right of a member to sue; procedural safeguards against arbitrary disciplinary action by the union; the right of candidates for office in a union to obtain its membership list; and enforcement provisions and penalties for violations.

The union democracy amendment was passed by a vote of 47 to 46. All but 2 of the 46 votes against this very necessary amendment were cast by Democrats in opposition to the party's chairman of the rackets committee—the most informed man in the Senate regarding labor reform.

The bill of rights provision was later modified to eliminate obvious loopholes and what some feared would be used as union-busting provisions. Also Federal bureaucracy was taken out of the amendment, leaving its enforcement to union members. Moreover, the modifying amendment removed the extremes raised by the McClellan amendment but clearly assured the rights of union members.

An amendment to plug Taft-Hartley loopholes respecting blackmail picketing and secondary boycotts was defeated by a vote of 24 to 67. All but two Senate Democrats voted against this vitally important amendment.

The same fate was dealt another McClellan amendment which would have eliminated the "no man's land" problem. It was rejected by a vote of 39 to 52. Of the 52 votes in opposition to the amendment, 43 were cast by Democrats.

On final passage, the Kennedy-Ervin bill—weak though it was—was endorsed by a 90 to 1 vote. Republicans voting for the bill were, in the main, convinced that even though the measure fell far short of the Nation's need, it was better than no bill at all.

In the House of Representatives, the labor reform issue was more involved but more easily resolved. In the first place, there were three bills—as well as the Senate-passed Kennedy-Ervin measure—which the House considered. One was a very mild bill (favored by the AFL-CIO) introduced by JOHN F. SHELLEY, Democrat, of California, which was quickly defeated; the second was the committee bill—a middle-of-the-road measure comparable to the Kennedy-Ervin bill—which had the backing of the Democrat leadership; and the third was the Landrum-Griffin bill. The latter was the strongest and met with the specific recommendations of the McClellan committee as well as the administration objections to the Kennedy-Ervin bill.

At first blush—what with unprecedented lobbying by some labor leaders and support of the leadership—it appeared that the middle-of-the-road committee bill would get final House endorsement.

President Eisenhower took the issue directly to the people.

In an August 6 nationwide radio-television address he called for the passage of a fair and effective law. Specifically, he said:

"I want only effective protection from gangsters and crooks for the people of America—for the men and women who labor with their hands, their minds, their energies, to make America a better place for themselves and for their children."

The President cited a typical example of blackmail picketing and declared emphatically: "I want that sort of thing stopped. So does America." Then he gave a typical example of secondary boycotting. Again he declared: "I want that sort of thing stopped. So does America." With respect to the "no man's land" problem, he said: "I want the no man's land abolished, because I believe that small unions and small businessmen have rights, just as everyone else."

Mr. Eisenhower then told the people which legislation the administration favored, which legislation was needed to curb abuses revealed by the McClellan committee.

"In the House of Representatives the Labor Committee bill is even less effective than the Senate bill. It, too, fails to deal with picketing and boycotting practices which I have described.

* * * * *

"Neither the Senate bill nor the House committee bill will really curb the abuses the American people want to see corrected.

* * * * *

"The administration bill is still before the Congress. There is also before the House a bipartisan bill jointly sponsored by two members of the House Labor Committee—Mr. LANDRUM, of Georgia, a Democrat, and Mr. GRIFFIN, of Michigan, a Republican. The Landrum-Griffin bill is a good start toward a real labor reform bill, containing many of the corrective provisions which I have urged."

The House August 14 passed the Landrum-Griffin bill by a vote of 303 to 125. While patterned after the Senate-passed Kennedy-Ervin bill, it was much stronger in that it outlawed most forms of organizational picketing, all secondary boycotts, all forms of hot-cargo agreements, and provided criminal penalties for union officials who violate members' rights. Moreover, under provisions of the Landrum-Griffin bill, a formula was worked out which resolved the no man's land problem.

The measure then went to conference where Senate and House conferees battled it out for 12 days. Senator KENNEDY, conference chairman and sponsor of the original Senate bill, promised August 17 to return to the Senate for instructions if the conferees could not reconcile the Senate version, which did not include the President's Taft-Hartley requests, with the House version which did.

Prolonged Senate debate was threatened when Senator KENNEDY August 28 introduced a resolution asking the Senate to instruct the conferees to insist on a Taft-Hartley compromise proposed by him. The same day, the minority leader introduced a resolution asking instructions to accept the House version. Debate was precluded by the final agreement of the conferees late September 2.

The final bill marked a signal victory for the administration. It was largely the House bill and contained at least 90 percent of the administration's recommendations. The conferees reached agreement after Senator KENNEDY dropped his demand for a provision to let building trades unions picket a joint construction site.

As finally passed, the measure provided a bill of rights for individual union members outlining voting privileges, and other activities within his union. It also gave him the right to file a Federal civil suit for relief if his rights were abused, and made it a crime, subject to fine and imprisonment, if violence or threats were used to interfere with rights guaranteed by the bill.

Annual financial reports by unions and some employers (who deal with labor relations consultants, "middlemen" etc.) are required. (These records must be kept intact for 5 years.) Penalties are provided for those who fail to carry out the requirements of this section.

Specific regulations concerning trusteeships are imposed which will eliminate the abuses some unions have been guilty of in placing local unions in a virtual state of suspended animation under the guise of trusteeships.

The measure also spelled out rules and regulations with respect to union elections giving the rank-and-file member much more freedom in electing his union officers.

Fiduciary obligations are imposed upon labor union officers. Criminal penalties are provided for those who steal, embezzle or otherwise misappropriate union funds entrusted to them. Extortion picketing is also outlawed.

With respect to the Taft-Hartley amendments requested by the President, the measure was very specific.

It permits State labor relations agencies and State courts to assume jurisdiction over labor disputes the NLRB declines to handle, but bars the NLRB from enlarging the categories of cases it declines to handle. This takes care of the "no man's land" problem.

The bill permits the President to designate an acting NLRB General Counsel if the office becomes vacant.

It makes it an unfair labor practice for a union to try to coerce or threaten an employer directly (but not to persuade or ask him) in order—

To get him to join a union or sign any illegal "hot cargo" contract.

To get him to stop doing business with another firm or handling its goods.

To get him to recognize a union if the NLRB had already certified another union as his workers' bargaining agent.

To force him to assign work to members of one union, rather than another, in a jurisdictional dispute between unions representing his employees.

To get any other employer to recognize a union not certified as the representative of his employees in an NLRB election. (Direct coercion of an employer by a union for these purposes was not previously covered by the secondary boycott prohibitions.)

Moreover, the bill as it went to the White House makes it an unfair practice for a union to induce supervisory workers, or any single worker, to refuse to handle goods, or to strike, for any of the purposes outlined above. It also specifies that union inducement of employees not to handle work "farmed out" to their employer by a struck firm is not a secondary boycott.

The bill makes it an unfair labor practice for a union and an employer to sign a so-called "hot cargo" contract under which the employer agrees not to do business with any other firm; nullifies any such existing contracts; exempts from this provision garment industry contracts barring a jobber from subcontracting work on a single garment to unorganized shops, and building industry contracts barring a firm from subcontracting work at its job site to an unorganized firm.

The conference-approved measure further bars organizational or recognition picketing by a union: if in the absence of an unfair

labor practice by an employer, the employer already recognized another union or there had been any NLRB certification election in the previous 12 months; or if the union had been picketing for 30 days and had not asked for an election. If the union claimed its picketing was purely informational, it could picket for longer than 30 days without seeking an election, provided the picketing did not cause the employees of the firm involved to stop working or prevent deliveries or pickup of goods.

The bill also brings under picketing and secondary boycott prohibitions of the bill and the Taft-Hartley Act several groups of workers not previously covered, including railroad, airline, farm, and local government workers.

The bill permits the NLRB to allow strikers fired during a strike and not entitled to reinstatement to vote in an NLRB representation election conducted within a year after the strike began.

It bars a union from picketing a retail store to advertise that the store is handling the goods of a firm the union was striking, but permits other forms of such advertising—handbills, for example—if they do not cause the store's employees to stop working or prevent pickups and deliveries.

Finally, the bill permits building trades firms and unions to sign union contracts in advance of a construction job, even if the union had not won an NLRB certification election or did not represent the majority of the existing or potential employees. Such contracts could require the employees to join the union within 7 days (except in States with laws barring the union shop), require the employer to hire through the union, or permit the union to set up experience and training qualifications for employees.

National defense and related matters

The big fact of life that we as a nation must face is the continuing cold war, coupled with the ever-present threat of hot war.

This explains the intense emphasis of the Congress and the administration on national security and mutual security, on foreign affairs, on scientific research and space exploration, on atomic energy, and all related matters.

To be unprepared to sustain the cold war struggle or to repel attack should it come is unthinkable.

It is a fact that dominates our policies as the administration and the Congress explore every avenue in the unceasing quest for durable peace.

President Eisenhower has repeatedly shown that he is devoting his life to the quest for peace.

While the Communist-dominated nations speak of a desire for friendship, their leaders have precipitated military strife in the tiny kingdom of Laos at a critical period when the leaders of communism and the free world are supposedly attempting to find a possible solution to the cold war.

In his state of the Union message to the Congress, the President said:

"Keeping the peace in today's world more than ever calls for the utmost in the Nation's resolution, wisdom, steadiness, and unremitting effort."

He went on to say:

"We cannot build peace through desire alone. Moreover, we have learned the bitter lesson that international agreements, historically considered by us as sacred, are regarded in Communist doctrine and in practice to be mere scraps of paper."

Defense expenditures dominate our budget: More than two-thirds of our Federal budget goes for defense and preparedness in case of future war and to pay for past wars.

For current preparedness, we face costs of $40 billion for our Armed Forces and $3 billion for mutual security; and for costs arising out of past wars, $5 billion for the Veterans' Administration and $8 billion for interest on the public debt. Yet, until the threat to our survival diminishes, we dare not let up in our efforts to stay strong against any potential enemy or to let our guard down.

Every American has the sincere hope that the world situation will resolve itself so that energies and resources of all mankind may be devoted to utilizing the magnificent scientific and technological achievements of this generation to provide higher living standards rather than concentrating so large a share of our energies on the defense of our precious liberties as well as those of our allies against aggression.

The question of our Nation's survival transcends partisan politics. Republicans and Democrats alike cooperated in this session of Congress to keep America strong, both militarily at home and in partnership with our free world allies.

Each year the Congress makes a further investment in military equipment and troops to strengthen our defense forces. This session of Congress approved $40.5 billion in new funds for the Army, Navy, Marine Corps, Air Force, and Department of Defense for pay, equipment, missiles, ships, aircraft, operations and maintenance, research and development, and military construction.

As is its constitutional prerogative, the Congress made some changes in the budget requests for the Armed Forces. Generally speaking, the changes made this year were in recognition that time and events had overtaken a budget that was prepared many months ago. The administration likewise moved with the times. At the urging of Congress, the administration revised its air defense plan involving the Bomarc and Nike-Hercules missiles. Congressional appropriation action reflected this changing emphasis, cutting back even a little further in those programs.

On the other hand, the Congress voted funds to step up our offensive ballistic missile programs and our efforts to defend against ballistic missiles fired at us by an enemy. Congress provided extra funds for general war preparedness. Congress also approved extra funds for limited war forces, especially for Army modernization of combat equipment. Antisubmarine warfare funds were increased.

Congress took care of the No. 1 priority of the Navy—a modern attack aircraft carrier—by providing $35 million for procurement of long leadtime components—mainly atomic reactors—for a new nuclear carrier to replace a conventional carrier of World War II vintage. The Senate had earlier voted the full cost of a nuclear carrier ($380 million), and the House had first omitted any funds for another carrier although the President's budget reqested $260 million for a conventional carrier. In this way, the Congress approved the President's recommendation for a replacement carrier with modern equipment and a flight deck sufficiently large to handle the Navy's very high speed aircraft.

Congress approved the military personnel strengths proposed in the budget for the Army, Navy, and Air Force, but added funds for more Marines, Army Reserves, and Army National Guard. In the case of the Marines, $43.1 million extra was added for an end strength of 200,000 on June 30, 1960, compared with the budget strength of 175,000. Both Houses approved additional funds for 300,000 Army Reserves and 400,000 Army National Guard, increases of 30,000 and 40,000 respectively over the budgeted strength. Congress made the higher personnel strength figure a mandatory floor in the case of the Army National Guard.

Congress also extended for 4 years the induction provisions of the draft act, the Reserve enlistment program (6-month trainees), the doctor and dentist draft act, special pay provisions for doctors, dentists, and veterinarians, and the Dependents Assistance Act.

Summing up, for military functions of the Defense Department, Congress provided funds totaling $39.2 billion ($19,961,000 less than the budget request), and, to help finance defense costs, $430 million in cash transfers from revolving funds $90 million more than the budget). For military construction, Congress approved $1,363,961,200, which was $199,238,800 less than the budget request. There was general agreement that the increases would further strengthen our forces and the reductions would not impair our forces and the reductions would not impair our defense posture.

Natural resources—public works

Since 1955 the President has recommended legislation to authorize the sale of revenue bonds by the Tennessee Valley Authority. On August 6, 1959, the President approved H.R. 3460, which authorized TVA to sell up to $750 million worth of long-term bonds to pay for future expansion of power facilities.

President Eisenhower was reluctant to sign the measure because it contained a provision which directed that TVA's annual power construction program be sent to the President, who, in turn, would pass it along to Congress for consideration. The President could recommend changes, but any changes Congress made would be by concurrent resolution, not subject to a Presidential veto. However, the Congress enacted legislation which repealed this provision and it was approved by the President on August 14, 1959 (Public Law 86–157).

The 1960 budget required expenditures of $1.1 billion for flood control, navigation, irrigation, and related activities of the Corps of Engineers and the Bureau of Reclamation. The President stated that "In view of this record program, no funds are provided in the 1960 budget for starting construction of new water resources projects."

Over this recommendation, the Democrat-controlled Congress passed a public works appropriation bill which included 67 unbudgeted projects estimated eventually to cost over $800 million. In vetoing the bill, H.R. 7509, the President said that "It ignores the necessity for an orderly development of America's water-resources within the Nation's fiscal ability." The bill totaled $80,071,549 more than administration requests.

A second bill was passed and sent to the President still containing the 67 unbudgeted projects. The legislation was again vetoed, but both Houses overrode the veto.

In order to help initiate a program to find new ways to use coal and cheaper methods of production, the Congress passed H.R. 6596, which established a Coal Research and Development Commission. The Commission would have the responsibility of carrying on research to develop new and more effective uses of coal, to expand existing uses, and reduce the costs of production and distribution.

For the last 2 years the administration has proposed major mining legislation, but the Congress has failed to take any decisive action on establishing a national long-range minerals policy. However, piecemeal remedies were proposed and the Senate Interior and Insular Affairs Committee ordered reported two such measures. House Concurrent Resolution 177, passed by the House on August 26, 1959, requests the President to examine existing programs for their effectiveness in stimulating depressed mining industries, to advise Congress on actions taken to this end, and to suggest necessary legislation. S. 1587 charges the Secretary of the Interior with carrying out a national mining policy and orders him to report to Congress annually on the state of the domestic mining industry and recommend legislation nec-

essary to implement the policy. Both bills declare it to be in the national interest for the Government to encourage development of domestic mineral resources, a sound mining industry, and research to promote efficient use of mineral resources.

Space programs

During the past year tremendous progress was made in the development of our knowledge of outer space. The administration has sought to show the world the many peaceful uses to which abilities in this field may be put. Last Christmas the President expressed his sentiments for peace and good will to the entire world from a satellite which transmitted his voice as it circled the globe. More recently, the United States successfully launched two monkeys into orbit, Able and Baker. They were returned to the earth's atmosphere unharmed. This is a major scientific breakthrough.

For the Nation's civilian space agency, Congress approved appropriations totaling half a billion dollars, $500,575,000 in exact figures.

This was $29,725,000 less than the budget request, despite strenuous efforts of the Senate to grant the full $530,300,000 requested for the National Aeronautics and Space Administration.

It was a 14-percent cut in the NASA budget request for supplemental 1959 funds and a 5-percent cut in the regular 1960 appropriations request. A 20-percent slash was made in supplemental 1959 funds asked for Project Mercury, the man-in-space program. Instead of $20,750,000 in research and development funds for manned space flight, the final supplemental amount allowed for 1959 was $16,675,000. Substantial funds for this project were approved for 1960, but if the man-in-space program is to go ahead as budgeted, funds will have to be taken from other space projects to make up the 1959 cut.

Authorizing legislation for the full amount of the budget requests for 1959 and for 1960 was approved by both Houses of Congress. But House delay on the actual appropriations resulted in a point of order that the authorization for 1959 supplemental funds had expired. Thus, research and development and construction and equipment funds requested for 1959 were stricken from the House bill.

As the appropriation bill passed the House, 1959 funds were cut 59 percent and 1960 funds, 9 percent. Considering the total request ($530,300,000) for the 2 years, the House cut overall was $68,225,000, or 13 percent.

The Senate, however, restored all the cuts and unanimously (79 to 0) granted the full amount of $530,300,000 asked for 1959 and 1960 to carry forward the Nation's important space projects and activities.

But the House conferees refused to restore more than $38,500,000 of the House reduction, leaving a $29,725,000 final reduction, which amounted to a 5.6-percent cut in the budget request.

The Senate backed in full the program presented by the head of the Nation's civilian space agency, T. Keith Glennan, who asserted:

"Any reduction in the NASA's tight budget will have a critical effect on the Nation's space program."

Mr. Glennan testified:

"Moreover, if the Congress slices an already lean NASA budget at a time when this Nation has barely begun its space effort, the world will conclude that the United States is having second thoughts about facing the Communist challenge in this field.

"Our present budget has no slack whatsoever.

"As further evidence of our tight belts, I would like to state that we do not have a single 'backup' vehicle for any of our scientific experiments. Each must be a one-shot affair, and if the booster malfunctions, we will simply have to lay the experiment aside."

Space projects that might be cut back or delayed by cuts in NASA appropriations include Project Mercury man-in-space flight; Project Rover nuclear propulsion program; work on the 1½-million-pound thrust, single-chamber engine needed to carry manned expeditions to the moon and back; the Vega rocket propulsion system to place more than 5,000 pounds in an earth orbit; the Centaur space vehicle to place more than 8,000 pounds in a 300 mile orbit and capable of soft-landing a 730 pound scientific payload on the moon; and our tracking and data acquisition network.

Nevertheless, the House conferees were adamant and insisted on allowing only $91,400,000 for salaries and expenses, a $3,030,000 cut; $16,675,000 for research and development, 1959, a $4,075,000 cut; $318,675,000 for research and development, 1960, a $14,395,000 cut; $21,825,000 for construction and equipment, 1959, a $2,425,000 cut; and $52 million for construction and equipment, 1960, a $5,800,000 cut. This made a total of $500,575,000 for NASA, a reduction of $29,725,000 in the Budget request.

Taxation

General revenue revision: The President has requested a general survey and revision of our tax structure. The Ways and Means Committee has indicated that such a study will begin in November 1959.

Corporate and excise taxes: The Congress has enacted legislation to provide a 1-year extension of the existing corporate tax rate and the excise taxes on alcohol, cigarettes, automobiles, and parts in accordance with the President's request. If this legislation had not been enacted, the corporate tax rate would have reverted to 47 percent as of July 1, 1959. The tax rate extension act also contained provisions to reduce the tax on personal transportation from 10 to 5 percent effective July 1, 1960. The act also provides for repeal of the tax on local telephone service effective July 1, 1960. In addition, Congress raised the gas tax by 1 cent a gallon, specifically to finance the Interstate Highway System.

Life insurance companies: The taxation of life insurance companies has long posed a difficult problem and special provisions of a temporary nature were enacted periodically. The first session of the 86th Congress enacted permanent legislation to provide an equitable formula to tax income of life insurance companies. It is based on a consideration of net investment income, underwriting profits, and capital gains. This legislation will increase the Federal tax yield by about $500 million.

State taxation of interstate commerce: The entire concept of State taxation of interstate commerce by the individual States was confused in February 1959, by two Supreme Court decisions which upheld "the constitutionality of State net income tax laws levying taxes on that portion of a foreign corporation's net income" earned within the taxing State. The implications of these rulings left the business community in a climate of uncertainty as to whether several States could tax the same transaction and as to whether a State could tax the profits on the sales made within its jurisdiction, even though the firm has no offices within the State.

As a stopgap measure, the Congress passed S. 2524 on September 3, 1959, which provided for limitations on any State imposing a tax on a foreign corporation engaged in interstate commerce. In addition, the measure provided for a congressional committee to study the problem for the purpose of recommending permanent legislation to the Congress.

Incentives for foreign investment: The President requested the development of a program designed to encourage greater participation by private enterprise in economic development abroad.

The administration's program was incorporated in H.R. 5, introduced by Representative Boggs. This legislation would provide for the creation of special American corporations called foreign business corporations. These corporations would receive special tax treatment in that their taxes would be deferred until such time as they are returned to parent domestic corporations or paid out in dividends to American stockholders. These corporations, although operating on foreign soil, would be considered to be domestic corporations. Such a program would provide incentive for private investment abroad. There has been no action upon this legislation although the House Ways and Means Committee has tentatively approved the bill.

Veterans

During this past session, several steps were taken to liberalize the benefits available to veterans. Foremost among these was a major change in pension payments which increased benefits for well over a million non-service-connected veterans and their dependents. This new pension payment plan which, in principle, was one of the President's 1959 legislative recommendations, set up pension payments on a sliding scale, geared to need, instead of the flat payments made previously.

In addition, widows and orphans of World War II and the Korean conflict were granted the same pension benefits as widows of World War I. This equality of eligibility feature is expected to provide, in the first year, pension payments to 206,000 World War II and Korean veterans' widows and orphans who previously could not establish eligibility.

Other measures benefiting veterans this session included: an additional amount of $100 million (over the $150 million already authorized) for direct home loans for veterans in rural areas where private mortgage money was scarce; a provision of $18 million in medical research; $32 million in hospital construction, which with balances from prior years will permit expenditures for hospital construction of $67 million; and an increase of $24 million in hospital care. Several lesser measures, although not of major significance but nevertheless of benefit to veterans, were also enacted, such as broadening the definition of the term "child"; providing medical care for veterans residing abroad with peactime service-incurred disabilities; and others.

Pending in the House Veterans' Affairs Committee at the end of the session was a measure, sometimes referred to as the GI bill for veterans of the cold war, to provide readjustment assistance for peacetime post-Korean veterans. This bill has passed the Senate July 21, 1959.

V. MISCELLANEOUS MATTERS

Rule 22

The first order of Senate business during this session of Congress involved changes in Senate rules relating to limitation of debate. Also, for the first time in its history, the Senate voted directly on the question of whether its rules were continuing.

By vote of 72 to 22, the Senate adopted a rule change providing that (1) a filibuster could be ended by vote of two-thirds of the Senators present and voting instead of by two-thirds of the entire Senate membership, (2) cloture was extended to motions to proceed to consider a change in the Senate rules, and (3) the Senate rules shall continue from one Congress to the next unless they are changed as provided in these rules.

The rule change thus made followed rejection by vote of 60 to 36 of a proposal that the Senate declare, in effect, that it was not bound by the rules of any previous Senate,

except to the extent to which it was willing, my a majority vote, to be bound.

The rule 22 amendment was effected against a backdrop of conflicting issues. On the one hand was the perennial issue of how to advance the cause of civil rights in the face of opposition by a determined minority of Senators. In this connection, the advancement of civil rights has long been a Republican objective and continues to be in the Republican tradition. This cause has more than once been thwarted by inability to secure the votes necessary to invoke limitation of debate, thereby bringing to an end a filibuster or a threat of one.

In 1957, however, a civil rights bill was enacted. It was the first such legislation to become law in over 80 years, and it had passed the Senate without a filibuster. Some sponsors of stronger civil rights legislation now sought through rule 22 changes to end the threat of filibuster against that objective.

On the other hand, there was the undoubted fact that rule 22, during the long history of the Senate, had protected the prerogatives of individual Senators and the rights of minority groups in the Senate against arbitrary action by a majority. In addition, there was the fact that the Senate never before had undertaken to write its rules at the beginning of a new Congress. The rules had always carried over from one Congress to the next. Thus, the working of a drastic rule change with respect to Senate rules, especially rule 22, could have even more extreme consequences in terms of the effect of that action on the Senate as an institution.

The size of the vote by which the new amendments to rule 22 were adopted (70 to 22) lent emphasis to the proposition that Senate rules could not be changed by drastic means. Moreover, rule 22 would continue to safeguard individual prerogatives and minority rights in the Senate, while at the same time it would insure a reasonable rule for providing an end to filibusters whose sole object is to prevent the Senate from reaching a vote on an issue.

Nominations

Major nominations: While, in general, major nominations of the President were confirmed, this rule was not without a notable exception. That exception was the nomination of Lewis L. Strauss to be Secretary of Commerce.

In our entire history only one other Cabinet nomination, that of Henry A. Wallace to be Secretary of Commerce, has taken considerable time. Between the date of its referral to committee and final approval, the total elapsed period was about 5 weeks.

Now let us see what happened in the case of the Strauss nomination. His recess appointment by President Eisenhower was announced on October 24, 1958. On November 13, 1958, he entered upon his duties as Secretary of Commerce. His nomination was sent to the Senate for confirmation on January 17, 1959, and it was immediately referred to the Senate Committee on Interstate and Foreign Commerce. The committee took no action whatever for 2 months, until March 17, when it held its first hearing. Thereafter, over the period between March 17 and May 14, there were 16 days of hearings, with a printed record of over 1,100 pages. The nomination was reported to the Senate by a divided vote on June 4. Debate commenced on June 5 and ended June 18, when the Senate rejected the nomination by vote of 49 to 46. From the time of submission of the nomination to the date of final action, 22 weeks had elapsed.

But foot-dragging and delay were only among the least unusual features concerning this nomination. It involved a man who had served with distinction in various outstanding capacities under five Presidents. His background and competence for the post were above reproach.

Despite this, the hearings, at times, were conducted more as a trial of an accused than as an inquiry into the fitness for Senate confirmation of a Presidential nominee. Witnesses were not limited to those who came voluntarily to testify against the nominee—some were sought out. There were charges by innuendo. The hearings were cluttered with irrelevant testimony. Minutiae of a record of over 40 years of distinguished public service of the nominee were carefully combed for whatever material prejudicial to him could be found. Red herrings like the Dixon-Yates case were carefully planted. It made no difference that there was no proof of the nominee's lack of honesty and that his participation in the Dixon-Yates case was insignificant. More important, apparently, was that this case had come to have political overtones.

It is somewhat ironic that, only a short time after Senate rejection of this nomination and after his opponents had condemned the nominee for his businessman's viewpoint that the Dixon-Yates contract was valid, the U.S. Court of Claims upheld the contract as legally valid, stating that there was no conflict of interest involved.

Opponents criticized the nominee for his part in the loss of security clearance by Dr. J. Robert Oppenheimer. It made no difference that Mr. Strauss was but 1 of 9 top-echelon Government officials who had had responsibility for making a decision and that seven had ruled against Oppenheimer.

Mr. Strauss was condemned for being too security conscious. And while, in the face of the international Communist conspiracy, opponents could not criticize his early advocacy of a program to develop the H-bomb, he was heaped with abuse for claiming too much credit for the part he had played.

In the end, personal and political antagonism to the nominee's personality, his views and opinions prevailed. Precedent was shattered and a Presidential appointment was rejected for the first time in our history on the basis of criteria that had never before been used.

Unbridled partisan political demagoguery was a characteristic not only of the Strauss nomination, however. A case in point was the nomination of Mrs. Clare Boothe Luce to be Ambassador to Brazil. The conduct of hearings on her nomination was such that, despite her proven competence, her usefulness for service in the office became too greatly impaired. Even though confirmed, she resigned immediately thereafter.

Politically motivated tactics such as these have not only denied to the Government the services of highly competent people, but have tended to discourage others from serving.

The judiciary and related offices: For almost 8 months of the session, the Democrat majority dragged its feet on the confirmation of Federal judges, district attorneys, and marshals. Delay in confirming judicial appointments was particularly bad because of overburdened court dockets, an overworked Federal bench, and the consequent long delays forced upon litigants. Justice too long delayed becomes injustice and weakens the people's confidence in government.

One nomination languished so long in the Senate Judiciary Committee that, to avoid personal difficulties and embarrassments, the nominee requested the President to withdraw his name. Other distinguished men had to wait for months while politics determined their careers.

It was not until the closing days of the session, and only after concessions were made to the Democrat leadership, that they consented to break the log jam.

Investigations

The power and authority of each branch of Congress to conduct investigations is one of the most effective of all instruments for assembling useful data and information on which to base legislation. Obviously, the data and facts to be assembled must and should be germane to a legislative purpose. This fact was emphasized by the Supreme Court in the case of *Watkins* v. *United States*, 354 U.S. 178 (1957), in which the Court commented on the constitutional limitations upon congressional investigations, as follows:

"We have no doubt that there is no congressional power to expose for the sake of exposure. * * * The theory of a committee inquiry is that the committee members are serving as the representatives of a parent assembly in collecting information for a legislative purpose. Their function is to act as the eyes and ears of the Congress in obtaining facts upon which the full legislature can act."

The Court also said:

"The power of the Congress to conduct investigations is inherent in the legislative process. That power is broad. It encompasses inquiries concerning the administration of existing laws as well as proposed or possibly needed statutes. It includes surveys of defects in our social, economic or political system for the purpose of enabling the Congress to remedy them. It comprehends probes into departments of the Federal Government to expose corruption, inefficiency or waste. But broad as is this power of inquiry, it is not unlimited. There is no general authority to expose the private affairs of individuals without justification in terms of the functions of the Congress."

Coupled with almost unlimited subpena power this investigative authority must be prudently and discriminately used if there is to be confidence in and real usefulness for the results.

The first session of the 86th Congress appears to have broken all records for investigations not only in terms of money but in terms of variety and number.

The money authorizations for investigations as nearly as they can be compiled at this time totaled $8,787,000. This total represents authorizations to select and standing committees of both the Senate and the House. In addition, two such authorizations were provisions for funds to joint committees. For example, the Joint Committee on Washington Metropolitan Problems received a total authorization of $55,000 for 1959.

The following is a tabulated breakdown of authorizations for investigations funds:

Investigations Funds, 86th Congress

SENATE COMMITTEES

Standing:	*Authorized*
Aeronautical and Space Sciences	$10,000
Agriculture and Forestry	25,000
Armed Services	200,000
Banking and Currency	180,000
District of Columbia	10,000
Finance	10,000
Foreign Relations	520,000
Government Operations	345,000
Interior and Insular Affairs	220,000
Interstate and Foreign Commerce	527,500
Judiciary	1,552,500
Labor and Public Welfare	130,000
Post Office and Civil Service	100,000
Public Works	135,000
Rules and Administration	85,000
Select and special:	
Small Business	120,000
Labor-Management	750,000
Water Resources	175,000
Unemployment Problems	100,000
Senate total	5,195,000

Investigations Funds, 86th Congress—Con.

HOUSE COMMITTEES

Standing:	*Authorized*
Agriculture	$50,000
Armed Services	150,000
Banking and Currency	105,000
District of Columbia	10,000
Education and Labor	160,000
Foreign Affairs	150,000
Government Operations	640,000
House Administration	20,000
Interior and Insular Affairs	60,000
Interstate and Foreign Commerce	475,000
Judiciary	200,000
Merchant Marine and Fisheries	75,000
Post Office and Civil Service	75,000
Public Works	125,000
Science and Astronautics	300,000
Un-American Activities	327,000
Veterans' Affairs	110,000
Ways and Means	300,000
Select and special: Small Business	260,000
House total	3,592,000
Grand totals	8,787,000

It should be noted that the grand total set forth in this tabulation of $8,787,000 represents authorizations for but the 1st session of the 86th Congress, and is already more than two-thirds of the $12,109,090.28 which was authorized during the entire 85th Congress.

The personnel involved in these investigations is indeed substantial. A large number of staff members were involved. Furthermore, many persons were serving on investigative committees who may have been obtained from Federal agencies either on a reimbursable or nonreimbursable basis.

For example, in the Senate alone, the total number of staff members involved in such investigations during the period January 1, 1959, through June 30, 1959, was 391. The following is a tabulation of the total number of such employees on Senate investigating committee staffs, by committee:

Armed Services Preparedness Subcommittee	23
Banking and Currency	7
Housing Subcommittee	8
Foreign Relations	7
Foreign Policy, Disarmament, Latin American and Canadian Relations Subcommittee	8
Disarmament Subcommittee	1
Government Operations:	
Subcommittee on Reorganizations and International Organizations	8
Permanent Investigations Subcommittee	13
Interior and Insular Affairs, two resolutions	25
Interstate and Foreign Commerce	31
Judiciary:	
Immigration and Naturalization Subcommittee	10
Administrative Practice and Procedure Subcommittee	6
Constitutional Amendments Subcommittee	2
Antitrust and Monopoly Subcommittee	47
Trading With the Enemy Act Subcommittee	8
Constitutional Rights Subcommittee	15
Refugees and Escapees Subcommittee	3
Patents, Trademarks and Copyrights Subcommittee	14
Internal Security Subcommittee	24
Juvenile Delinquency Subcommittee	13
Labor and Public Welfare	9
Problems of the Aged Subcommittee	8
Labor Subcommittee	7
Post Office and Civil Service	1
Investigation of Federal employee group life insurance program, the civil service system, and the postal service	6
Study of administration of the postal service and desirability of Federal health program	7
Public Works: Investigations Subcommittee	4
Rules and Administration: Privileges and Elections Subcommittee	8
Labor-Management (McClellan) Committee	53
Small Business Committee, two resolutions	15
Total	391

The cost of these investigations is not confined to Government personnel but necessarily includes the cost to the countless private individuals and organizations who must prepare testimony and make personal appearances. In many instances these appearances or hearings are mere duplications of previous investigations and the new testimony is no different from that previously given.

Notwithstanding the obvious fact of overwhelming Democrat control of Congress and, therefore, of the subjects under investigation by congressional committees, the administration stood up remarkably well under the scrutiny of such investigations. They failed notably to turn up corruption and scandal in Government under a Republican administration.

It may be of some interest to note the wide range of subjects of inquiry, however. The following is a list of such subjects, taken at random:

Problems of hungry children in the District of Columbia.
Effectiveness of the juvenile court systems.
Problems of independent logging operators and small sawmill owners.
Navy Department refusal to supply gun factory report to Representative RICHARD E. LANKFORD.
Lamb and meat grading.
Underseas warfare.
Distressed poultry areas.
Juvenile delinquency control.
Employee radiation hazards.
Importation of foreign excess property.
Present and future problems relating to management of the radio spectrum.
Oceanography and ocean research.
Psychochemicals.
Unsuccessful firing in certain missile programs.
"Monkey shot" outer space project.
Soviet Fair art exhibit.
Dual distribution practices of certain tire manufacturers.
Administered prices in the baking industry.
Antitrust laws and professional team sports.
The insurance industry.

VI. PRESIDENTIAL EXERCISE OF THE VETO

From time to time during the session, in speeches on the Senate floor and away from the Senate, there was much talk of the "veto pistol" and of government by veto. In fact, a wholesome respect for the President's veto power by the majority was a decided factor in its retreat from the positions which it first asserted on a number of bills. The dimensions of the original Democrat program were dictated by the alleged conviction of the majority that it had a mandate from the November elections for bold, dynamic, and almost unrestrained action in many fields.

The legislative power which the Constitution bestows upon the Congress and the President is a responsibility which must be fulfilled in accordance with the respective oaths of office. The Constitution specifically states that "Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it." This is not a negative power, as it is so often interpreted. The Constitution requires that the President shall sign it if he approves and does not limit this power except to state that if he does not approve, he shall return the measure to the House in which it originated.

Thus, the President has legislative power equivalent to the two Houses of Congress. This power is not a privilege, it is a responsibility which is bestowed upon the President. If the President did not indicate his disapproval of legislation which he did not favor, he would not be fulfilling his constitutional obligations.

It has been said that the Presidential legislative power is a negative one, because he cannot propose legislation in the sense that the House of Representatives or the Senate can propose legislation. This is not true. The President may, and in fact is required by the Constitution to make proposals. The Constitution charges the President with the responsibility to "give to the Congress information of the State of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient."

Over the years, it has become the practice of the President and his advisers in the executive branch of the Government to draft and submit legislation to the consideration of the Congress. Also, it has become a tradition that the ranking Member of the President's political party on the committee or subcommittee to which the bill will ultimately be referred will introduce the President's proposed legislation. For example, the President submitted to the Congress his proposal for labor legislation. It was introduced by Senator GOLDWATER, who is the ranking Republican member of the Senate Labor and Public Welfare Committee.

The President's determination to check inflation and to achieve a balanced budget through the use of his veto power was one of the most important instruments for energizing confidence both at home and abroad not only in a sound dollar but in our desire to preserve fiscal integrity. It was one of the truly effective forces in achieving a reduction in appropriations and a retreat from the "backdoor" approach to the national coffers.

The basic concept of the Republican Party is that by achieving a balanced budget and preserving the value of the dollar, confidence is generated, investment is stimulated, jobs are created, and the vitality of our free enterprise system is maintained.

The attitude of the country toward the President's courageous leadership was manifested by congressional acquiescence to more realistic spending. This sound Republican approach was supported by the great influx of written opinion which came to the desks of Members of the legislative branch over a period of many months.

This interest throughout the country, the President's determination, and the vigorous Republican support in the House and Senate was like a powerful alchemy which completely converted the alleged mandate to spend into a wholesome political passion to economize and proved by all odds to be the greatest force in achieving a balanced budget.

Another way of showing that Mr. Eisenhower did not abuse his responsibility in the exercise of the veto is to compare his action with that of his two immediate predecessors, Presidents Roosevelt and Truman. The following table sets forth this comparison:

President	Regular veto	Pocket veto	Total vetoes	Vetoes overridden
Roosevelt, F. D.	371	260	631	9
Truman	180	70	250	12
Eisenhower	61	86	147	1

In addition to the relatively few important vetoes of legislation during this session of Congress, there were several outstanding instances where the threat of a veto resulted in operation retreat by the Democrat-controlled Congress. One of these was S. 1, the Federal airport bill, which passed the Senate early in February. Only the day before the Senate had passed the housing bill which the President subsequently vetoed and which, if enacted into law, would have unbalanced the tight but balanced budget submitted in January by the President. The airport bill would have thrown the budget still further out of balance by providing annual expenditures at the rate of $100 million instead of authorization at a much lower rate which the President had requested. This legislation thereafter shuttled back and forth between the House and the Senate until June 17 when it passed the Congress and went to the White House, providing for a continuation of expenditures at the existing rate, to wit, $63 million per year.

Action on the TVA funding bill, H.R. 3560, was one of the most significant occurrences during this session. From the very outset the President made it abundantly clear that since TVA was an executive agency, he did not propose to diminish the authority of his office over all executive agencies, because he esteemed any such action as a disservice to the Executive Office itself and to those who would succeeed him in the years to come in these responsibilities. Accordingly, when House and Senate agreed to virtually bypass the President in the manner of authority and control over the power program of the Tennessee Valley Authority, it was generally felt that the President, in view of his pronounced views on the subject, would entertain the idea of vetoing such a measure.

What happened becomes one of the most significant chapters in legislative history. After endless conferences both branches of Congress finally agreed to take immediate action on an amendment to the bill which was then before the President for signature, to cure this defect in the bill. The Congress thereafter passed and the President approved S. 2471, which effected a cure of this defect. All this emphasizes the President's constitutional role in the legislative process, and was one of the most interesting legislative retreats in the history of Congress.

President Eisenhower, up to the time of the adjournment of the 1st session of the 86th Congress, had exercised his veto power on 147 occasions since his inauguration. His views were sustained by the Congress in all but one instance, the public works bill.

Had it not been so close to the end of the session and had it not been a public works measure in which congressional interest ran high, it is quite likely that this veto would not have been overridden. In that case, President Eisenhower's remarkable record of having all his vetoes sustained would have been something new in legislative history.

Even so, the record of only one veto lost in almost 7 years of Presidential tenure is a superb testimonial to the good sense and high national purpose on which President Eisenhower grounded his objections to legislation.

While we are speaking of records, we have another interesting fact to add to the history of vetoes.

In a single session, the President vetoed each of two bills twice: the housing bill and the public works bill. A preliminary check of presidential vetoes in the past fails to show any similar occurrence in our history.

It is necessary to go back more than a hundred years (117 years to be exact) even to find another instance in which a President vetoed only one bill on the same subject matter twice in the same session of Congress.

This took place in President Tyler's administration. During the second session of the 27th Congress in 1842, President Tyler vetoed two successive tariff bills.

Times were different then and Congress took care of only a small amount of the Nation's legislative business because President Tyler vetoed a total of only 10 bills.

So President Eisenhower's two double vetoes in the same session is something of a historical record.

In appraising this unique record, it is important to note that only during the first session of the 83d Congress did the President enjoy the opportunity of cooperating with a Congress controlled by Republican majorities in both Houses.

VII. MEASURES AWAITING ACTION NEXT SESSION

There are a number of the President's legislative requests which have been ignored by the Congress. A few of the more important are listed below:

Early in the session the President submitted a balanced budget. Although the upturn in the economy has resulted in increased revenue estimates for the coming year, the authorizations for increased spending by the Democrat Congress have resulted in a probable deficit in the budget for the forthcoming fiscal year.

The President's program specifically requested authority for the Executive to veto or reduce individual items in appropriation bills. The Congress has taken no action on this request.

Although price stability and the control of inflation is the most serious problem confronting the economy, the Congress has not amended the Employment Act of 1946 to make price stability an explicit goal of Federal economic policy as the President had requested.

The Congress also ignored the President's request that the provisions of the Fair Labor Standards Act be extended to cover approximately 2 million additional workers. Although hearings have been held, this proposal has not been acted upon.

The so-called Simpson-Keogh bill is an important bit of unfinished business. The bill would allow self-employed persons to set up voluntary retirement programs, within limits, on the same tax basis as employees who are now covered by employer-employee pension plans. Passed by the House, this bill received hearings in the Senate Finance Committee and will unquestionably be a major item of business before the Senate in the 2d session of the 86th Congress.

A bill to release the Treasury from its unrealistic 4¼ percent interest rate ceiling will demand attention very early in the next session. As long as the ceiling is held at 4¼ percent, the Treasury cannot sell long-term bonds. This forces the public debt into short-term bonds (where there is no ceiling) and stokes the fires of inflation. Not only is it inflationary, but the ceiling on long-term rates does not even prevent interest rates from rising. The full impact of rising interest rates is merely transferred out of the long-term money market to the short-term money market where the upward pressure is immediately placed on all other short-term rates, including consumer installment debt.

Legislation restoring interest rate flexibility will have urgent priority in the next session. President Eisenhower gave this action a "must" tag as late as August 25, 1959.

The Senate Rules Committee has before it a resolution which would, in effect, prohibit so-called backdoor financing. This resolution grew out of the successful challenge to backdoor financing procedures thrown up against the proposed 5-year Development Loan Fund proposal. The Rules Committee is studying this question and results of the study could turn into one of the important questions before the 2d session of the 86th Congress.

The President's area assistance program awaits action after having been frustrated for the fourth successive year by Democrat insistence on their own more costly measure. The Democrat bill extends the Federal Government's responsibility far beyond what it reasonably should be and commits the Federal Government to guarantee what it can never produce—namely, perpetual prosperity to each and every village and town regardless of changing economic conditions. But because the Democrats in Congress have insisted on this controversial approach, the President's self-help, locally oriented program remains to be enacted.

The House Ways and Means Committee has scheduled fall hearings on general tax reform. The Treasury Department has been cooperating with the committee in extensive studies backing up these hearings. If action could be kept free from politically inspired appeals to voter blocs, long-needed tax reforms to stimulate economic growth and progress could be an important possibility in the next session of Congress. Reduction of total tax revenues, however, can be considered only in the context of budget balance, and some start on paying off the burdensome public debt.

In 1958, the Congress enacted the Postal Policy Act of 1958 establishing for the first time on a statutory basis the principle that postal rates should be adequate to cover all costs of operating the postal establishment.

In 1959, the President recommended in his budget message an adjustment in the postal rates so as to increase the revenue of the Post Office Department by $350 million in order to bring about the objectives of that act.

In his message the President also indicated that there are certain public service costs which the Post Office should not be required to cover out of its postal revenues. In accordance with the President's message, the concept of public services as defined in the act requires these necessary but special costs to be charged against the general Treasury revenues. Therefore, he asked the Congress to correct this situation by amending the Postal Policy Act of 1958 to assure a more equitable sharing of postal operating costs between mail users and the general public. Such a program would result in adequate funds not only to meet the requirements of the Post Office Department, but also to carry on the research and capital programs which are already underway.

Congress failed to give the President the requested postal legislation. Failure to plug up the $350 million deficit in postal revenues played a major part in upsetting the balance in the President's budget.

The next session of Congress will also face the need for legislation in the following fields, discussed in detail above: agriculture, civil rights, education, and amendment of the Employment Act.

Other bills pending in committee as the first session closed included:

Alaska mineral leasing bill (H.R. 6940), passed by both Houses but vetoed in 1959.

Home rule for the District of Columbia, passed by the Senate on July 15, 1959, but blocked in the House District Committee.

The GI bill for post-Korean veterans, passed by the Senate on July 21, 1959, and pending in the House Veterans' Affairs Committee.

Aid to educational television, passed by the Senate on April 13, 1959, and referred to the House Interstate and Foreign Commerce Committee.

Bank mergers legislation, passed by the Senate on May 14, 1959, and referred to the House Banking and Currency Committee.

Air pollution control legislation, passed by the House on September 1, 1959.

VIII. FOREIGN AFFAIRS

Although the Constitution places the basic responsibility for the conduct of our foreign affairs upon the President, the responsibility falls upon the Congress to enact legislation to implement his foreign policy. They con-

tinue to determine the course of our national policies.

Many of the difficulties which have confronted the American economy, particularly American agriculture, stem from two world wars during a period of 45 years. Actually for the past 20 years, the American economy has been largely influenced by the overriding necessities of maintaining our defenses first against Fascist aggression during World War II, and, more recently, to preserve the balance of peace against Communist encroachments.

High defense expenditures, military stockpiling, atomic energy installations, research programs for missiles and advanced weapons have all contributed to the inflationary pressures, high taxes, and a huge Government debt. The wise conduct of foreign affairs during this troubled period will provide an opportunity for those concerned primarily with our domestic affairs to bring them into balance and equilibrium.

The Congress is to be commended for its strong bipartisan support of the Administration in the field of foreign affairs.

While there have been honest differences of opinion with reference to the most appropriate policy to follow in promoting our domestic economy, Republicans and Democrats alike have supported the basic objectives of American foreign policy as they have been enunciated by President Eisenhower.

The death of one of the world's greatest statesmen, the late John Foster Dulles, our former Secretary of State, was a severe blow to our quest for peace.

When Congress convened the Soviet threat to upset the existing status in West Berlin still hung over the Western Powers. The firm stand taken by President Eisenhower with obvious bipartisan approval in Congress averted a crisis and led to the Geneva meetings of Foreign Ministers.

At these meetings, firm insistence by the United States and our Western allies on their right of access to West Berlin under wartime agreements had the direct effect of persuading the Soviet Union to back away from its earlier threats to alter the status of West Berlin through unilateral action.

Mutual security

The program termed "of transcendent importance" to U.S. security by President Eisenhower, one of the great military leaders of all time, did not fare so well in the Democrat-controlled 86th Congress.

The President has called our expenditures for mutual security "fully as important to our national defense as expenditures for our own forces." He has stated his conviction that "for the safety of our families, the future of our children, and our continued existence as a nation, we cannot afford to slacken our support of the mutual security program."

The Democrat-controlled Congress reduced the President's request of $3.9 billion for mutual security, military, economic, and technical assistance to other countries.

In connection with the Development Loan Fund portion of the mutual security legislation, an attempt was made to invoke the "back door" approach to the Federal Treasury, bypassing the Congress and the whole appropriations process. The Democrat-controlled Senate Foreign Relations Committee proposed a 5-year loan program of $1 billion each year—an aggregate commitment of $5 billion—to be obtained directly from the Federal Treasury. For the 5-year period the Development Loan Fund would not have to come before the Congressional Appropriations Committees and justify its requests for funds to carry out its program. The representatives of the American taxpayers would have had no opportunity to check up on the activities of the Fund to insure proper expenditures.

The administration had requested $700 million for the Development Loan Fund for the single year 1960, the funds to be obtained through the customary appropriations process.

In the face of spirited opposition of Senate Republicans and the administration, Democrat sponsors of the back-door approach had to retreat. The Senate authorized appropriations for a 2-year period: $750 million for 1960 and $1,250 million for 1961, to be obtained in the usual manner through congressional committees. These amounts were later reduced in House-Senate conference to $700 million for 1960 and $1,100 million for 1961. Thus, the final version voted by the Congress approved the principle of appropriations rather than direct spending by the Fund out of the Treasury.

Some disappointment was felt by the administration when Congress failed to appropriate the full amount of funds requested for mutual security, but in the last analysis Congress has an equal responsibility with the President to use its judgment on the size of these appropriations.

Congress strengthened the hands of our allies by providing for the loan of two submarines to Italy, two submarines to Turkey, and two destroyers to the Republic of China.

Other measures

The Congress further strengthened American policy by the passage of a joint resolution designating the third week in July as Captive Nations Week so as to call to the attention of the world, and particularly to those people subjected to Communist imperialism, that "the people of the United States share with them their aspirations for the recovery of their freedom and independence."

In other areas Congress substantially supported the President's recommendations in matters of foreign policy. It increased the U.S. subscription to the capital stock of the International Bank for Reconstruction and Development (Bretton Woods Agreements) by $3,175 million, and the U.S. quota in the International Monetary Fund by $1,735 million.

The International Monetary Fund and the International Bank for Reconstruction and Development have played an important role in furthering our foreign policy as well as in the overall development of economic stability throughout the world.

The President, on February 12, 1959, asked the Congress to authorize the U.S. Governor of the International Monetary Fund to request and consent to an increase of 50 percent in the quota of the United States in the International Monetary Fund and authorize him to vote for an increase of 110 percent in the capital stock of the Bank, and, subject to such increase becoming effective, subscribe on behalf of the United States to 31,750 additional shares of stock in the Bank, amounting to a doubling of the U.S. subscription.

On March 19, 1959, the Senate proceeded to consider a measure (S. 1094) to implement the President's request. The President had requested that the authorization be made effective immediately. This request was based on the political and economic situation which confronted us. In a deliberate attempt to achieve political gain by unbalancing the 1960 budget, the Democrats amended this legislation to provide that the authorized funds should be included in the 1960 budget. In other words, they could not be spent until after July 1, 1959. There is no justification for such an amendment except that it provided a supposed political gain for the Democrat Party. The American people will not be fooled by such tactics. They recognize that if the 1960 budget is unbalanced, the blame lies completely with the Democratic Party in control of the legislative branch of the Government.

Congress also provided for U.S. participation in a new Inter-American Development Bank patterned after the Bretton Woods institutions with a subscription of $350 million to the capital stock of the Bank and a $100 million subscription to the fund.

In the field of international sports events, Congress authorized an appropriation of $500,000 in support of the third pan-American games to be held in Chicago, 1959; and extended an invitation to the International Olympic Committee to hold the 1964 Olympic games at Detroit, Mich.

A number of treaties of commerce and friendship and others covering consular rights, avoidance of double taxation, fishing rights, communication agreements, and commodity agreements such as sugar and wheat were approved by the Senate in the course of the session.

Most important are the International Wheat and Sugar Agreements. The International Wheat Agreement (Executive E, 86th Cong.) was an extension of a similar agreement which was first entered into in 1949. It provides for a subsidy of 70 cents on the export of wheat and is intended to stabilize world markets in this commodity. The Sugar Agreement (Executive D, 86th Cong.) has a similar basic purpose, namely, price stabilization but achieves these objectives in a different manner. The treaty assigns quotas to sugar exporting countries and provides that importing countries will limit their imports from countries which are not participating.

The Senate also approved a protocol to the Convention on Duties and Rights in the Event of Civil Strife.

As Congress adjourned, the United States rounded out its seventh year since the end of the Korean war in which no American boys were engaged in foreign wars.

IX. THE STATE OF THE NATION AS CONGRESS ADJOURNED

The 86th Congress was elected on November 4, 1958. At that time, the country was emerging from a recession.

President Eisenhower, in numerous statements during 1959, indicated that the policies he had advocated to promote sound recovery without either inflation or undue Government interference with the economy would once again produce new record levels of personal income and employment. The Republican position has been vindicated thoroughly. Most recent figures for the summer of 1959 show that personal disposable income will hit a record level; more people had jobs than ever before in history, and unemployment had receded to about 5 percent of the labor force.

As the recovery reaches vigorous boom proportions, the most important problem which has faced our country in the last 6 months has been the emerging threat of inflation. In his Economic Report to the Congress in January, the President said:

"Our objective must be to establish a firm foundation for extending economic growth with stable prices into the months and years ahead. This will not come about automatically. To attain our goal, we must safeguard and improve the institutions of our free competitive economy. These are basic to America's unassailable economic strength.

"If price increases were to accelerate, the continuing upward movement would sooner or later undermine the confidence on which our economic system depends and would eventually release drastic corrective forces."

It is essential that an inflationary spiral such as was seen during the administration of Harry S. Truman should not be repeated. During the period from 1945 to 1951, the Consumer Price Index rose 34.1 points, a 44.3-percent increase. During the period from March 1953 to June 1959, it rose only 10.9 points, a 9.6 percent increase.

In order to prevent renewed inflation, the President in his budget message presented a balanced budget. Throughout the session he made a vigorous defense of fiscal responsibility in issue after issue.

The strange approach of the Democrat-controlled Congress to issues affecting the Nation's economy was manifested by a spending program which was strongly reminiscent of the dark days of the depression.

Despite record levels of prosperity and mounting inflationary pressures, Democrats in Congress came up with one expensive piece of legislation after another. In the Senate they even pushed through a bill creating a Youth Conservation Corps, similar to the Civilian Conservation Corps of the dismal 1930's.

With prosperity all around them, it was difficult to see how the Democrat liberals could reach back more than 25 years for their theme. In 1933, there were 12 million unemployed, almost one out of every four members of the labor force. Today, there are less than 4 million unemployed, about one out of every 20 workers. There were 39 million people employed in 1933, but total employment is now 68 million—the highest in the Nation's history.

Despite all the signs of prosperity, the Democrats sought to push through depression-born, inflationary programs which would cost taxpayers billions and billions of dollars, increase the national debt and stoke the fires of inflation.

In contrast, the calm judgment of the Eisenhower administration and Republican leadership in Congress during the 1957–58 recession reaped dividends for the Nation as the first session of the 86th Congress ended. Instead of embarking on a crash program to counteract a recession already fading into history, the administration refused to panic and simply stepped up programs already in the works.

The effects of this adherence to fiscal sanity were dramatically evident in the first half of 1959.

. The major economic indexes—output, income, and employment—hit alltime highs.

The gross national product was at a record $484.5 billion in the second quarter of 1959—up $14.5 billion from the first quarter and up $53.5 billion from the recession low in the first quarter of 1958. Almost 85 percent of this advance was in real terms, since prices were relatively stable.

Compensation of employees also reached new record levels of $278.9 billion. On the other hand, corporate profits after taxes at the beginning of the year were at an annual rate of $23.8 billion, which is about the level attained in 1956 when gross national product in current dollars was only $443.6 billion or 91.6 percent of the current level. In spite of the dire predictions of the Democrats, the 1959 prosperity has been widely shared.

Employment rose all through the spring and summer of 1959 to a record 67.6 million jobs. Unemployment fell. More Americans were at work than at any time in the Nation's history.

Average weekly factory earnings reached $90.09, compared with $83.50 in July 1958. Factory workers' earnings increased over the year by 10 cents per hour and $6.59 per week—with the cost of living relatively stable.

The American free enterprise economy has demonstrated its ability—without artificial respiration—to once again reach unsurpassed levels which have advanced the living standards of Americans beyond those attained under any other form of government.

Republican policies in 1959 were based on the confidence in our free institutions which the record demonstrates they deserve.

We have a tremendous future before us. We stand now at the threshhold of a half-trillion-dollar economy.

We have the opportunity to bring to millions of American families the higher living standards, the greater security, the fuller measure of human dignity that are made possible by our expanding productive power and broad purchasing power.

The record of this session has vindicated Republican policies geared to the strength, not the weakness, of our great country.

The Late Honorable Frank C. Walker

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. McCORMACK. Mr. Speaker, the death on September 13 of the Honorable Frank C. Walker takes from our ranks a good man, a cultured gentleman, a fine husband and father, and a great American.

A close personal friend of the late Franklin D. Roosevelt, and of the former President, Harry S. Truman, Frank Walker served our country in a number of offices in an outstanding manner. He served as executive secretary of an executive council to coordinate the activities of the Government; later, he became Chairman of the National Emergency Council, which Council was established to coordinate the work of Government agencies dealing with the depressions of the early 1930's. He performed both tasks in an outstanding manner.

In 1940 he was appointed Postmaster General in which important Cabinet position he served until 1945. In this office Frank Walker also made a notable record.

A strong Democrat, his party elected him in 1943 as chairman of the Democratic National Committee, in which position he served with loyalty and distinction. He recognized that the Democratic Party is the only national political party. Frank Walker understood and appreciated the importance, tactically, of unity within the party. Like Thomas Jefferson, he felt that disagreement is no cause for separation of friends.

In 1946 Frank Walker was a delegate to the first meeting of the United Nations General Assembly.

Throughout his life, he was interested in civic and charitable activities, donating generously, and giving untiringly of his time. For example, in 1950 in a community effort to advance the economic life of Scranton, Pa., Mr. Walker headed a community campaign to attract new businesses and to build industrial plants in Scranton.

Mr. Walker served as national chairman of the Notre Dame Foundation, and as president of the university's board of lay trustees. In 1948, Notre Dame University awarded him its laetare medal, conferred annually to an outstanding layman of the Catholic Church.

Frank Walker was also a director of the Alfred E. Smith Memorial Foundation; also the Franklin Delano Roosevelt Memorial Foundation, and was treasurer of the Franklin Delano Roosevelt Library, Inc.

Frank Walker symbolized through life those fine ambitions that made him, as one of his friend once said, "One of God's noblemen."

His many friends will miss him very much.

Mrs. McCormack and I extend to Mrs. Walker and her son and daughter our deep sympathy in their bereavement.

Tax Foundation Review of Budgetary Actions in Congress

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relative to the Tax Foundation review of budgetary actions in Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HARRY F. BYRD, DEMOCRAT OF VIRGINIA, RELATIVE TO TAX FOUNDATION REVIEW OF BUDGETARY ACTIONS IN CONGRESS

When the President submitted his 1960 budget in January he requested new spending authority totaling $76.8 billion. Supplemental requests brought the total to $78.2 billion. I am advised that as compared with the total requests, new spending authority finally enacted at the end of the recent session of Congress totaled $77.4 billion, a reduction of $806 million.

These figures are revealed in a review by Tax Foundation, Inc.

The review strictly follows budget presentations and it covers spending authority—appropriations, authority to spend from debt receipts, etc.—enacted by the recent session of Congress to become available in fiscal year 1960.

It must be kept in mind that these are not expenditure estimates for fiscal year 1960. Expenditures in the current fiscal year will be made not only from these new spending authorizations but also from the unexpended balances remaining in other spending authority enacted in prior years. By the same token, some expenditures from the new 1960 authority will not be made until later years.

The Tax Foundation figures also reflect the failure of Congress to enact increased postal rates. The President's January requests contemplated $350 million in additional postal revenue from proposed increases in these rates to eliminate the estimated postal deficit. Appropriations to the Post Office Department allow for meeting the postal deficit in an indefinite amount.

The Tax Foundation review shows a reduction of $881 million under budget requests in appropriations, and an increase of $75 million over budget requests for authority to spend from debt receipts and through other backdoor financing.

Undoubtedly the effect of the four Presidential vetoes on money bills and threatened vetoes is reflected in the reduction.

The Tax Foundation is an independent research organization which I regard as the best in the field of government at all levels.

As a matter of routine, the Tax Foundation for years has been keeping a running box score on bills authorizing expenditures during their passage through the legislative procedure. This review, showing final action by Congress on spending legislation during the session just ended, is the last of a series

of three status reports published by the foundation this year.

The Tax Foundation's review follows:

"TAX FOUNDATION TABULATION SHOWING FINAL ACTION IN RECENT SESSION OF CONGRESS ON NEW SPENDING (OBLIGATIONAL) AUTHORITY FOR FISCAL YEAR 1960

"The tabulation of the Tax Foundation, Inc., includes all new spending (obligational) authority, under which obligations may be incurred without further action by Congress, for the fiscal year 1960. It embraces current and permanent appropriations from the general fund of the Treasury and so-called back-door spending authorizations, which include contract authority, under which contracts may be entered into but requiring later appropriations, and authority to expend from debt receipts, or in other words to draw upon the Treasury without going through the appropriation process. The amounts in the tabulation are those applicable to fiscal 1960, and do not include either supplemental fiscal 1959 authorizations at the recent session or those for fiscal 1961, or other future years.

"Many of the tables which are published are not comparable to official data of the Budget Bureau in that they relate only to appropriations and fail both to include other forms of new spending authority and to exclude appropriated postal receipts and appropriations for liquidation of prior contract authority, neither of which provides new authority for spending from the Treasury.

"The Tax Foundation tabulation does not include authorizations to appropriate, which may involve large spending programs but which place discretion in the Appropriations Committees with respect to actual appropriations.

"Total new spending authority for fiscal 1960, according to the Tax Foundation data, is about $77.4 billion. This is $806 million less than the total of amended budget requests but $607 million more than first estimated in January. An increase of $1.4 billion in the total of amended budget requests over the original January total is accounted for to the extent of about $1.4 billion by deferment to fiscal 1960 of proposals intended for action in the closing months of fiscal 1959. This shift, however, was offset by about $700 million of items in the original fiscal 1960 budget which were not actually submitted to Congress. New proposals and increases accounted for about $700 million in the total of amended budget requests.

"Supplemental 1959 authorizations enacted at the recent session totaled $7.4 billion, which with fiscal 1960 new spending authority made a total of $84.8 billion for the session. This was $1.1 billion less than the combined estimate in the January budget document, but $2.4 billion more than the session total of last year.

"The $77.4 billion total of new spending authority for fiscal 1960 is a substantial reduction from the total of $81.1 billion for fiscal 1959 but far greater than in any other year since the Korean war. Supplemental items in the next session will mean an increase in the fiscal 1960 total.

"The $77.4 billion for fiscal 1960 includes three general classes of new spending authority: (1) amounts arising from actions in appropriation bills, and which thus have been subject to annual review of spending programs by the Appropriations Committees; (2) "back door" financing, including contract authority, and authority to expend from either public or corporate debt receipts, the latter applying to authority for the Tennessee Valley Authority to use funds derived from the sale of revenue bonds; and (3) permanent authorizations of a definite or indefinite character, including appropriations, contract authority, and authority to expend from debt receipts.

"New spending authority in appropriation bills, including loan authorizations in the Department of Agriculture bill but excluding appropriated postal receipts and amounts for liquidation of contract authority, totals about $67.2 billion. This is about $881 million less than proposed in amended budget estimates.

"'Back door' financing accounts for about $1.4 billion, which is $75 million above budget requests. The excess over the budget would have been much greater except for the veto of two housing bills and threats of a veto of other legislation, including extension of the airport grant program. The comparisons in the tabulation relate only to amounts applicable to fiscal 1960.

"Permanent authorizations total about $8.8 billion. The figures in this classification are taken from the January budget. The amounts in indefinite authorizations, such as for interest on the public debt, are subject to revision.

"Fiscal 1960 new spending (obligational) authority

[In millions]

Bill, program, or grouping by type of new obligational authority	Amended budget estimates	Passed by House	Passed by Senate	Final Congress action	Final action versus estimates

[7] An additional $63,000,000 for fiscal 1961.
[8] Appropriation authorization.
[9] $1,413,000,000 above January estimate.
[10] $607,000,000 above January estimate.

Liberation of the Captive Peoples of Eastern Europe

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the brief resolution adopted by the Rockford branch of the Lithuanian American Council urging the President in his talks with Prime Minister Khrushchev to be firm in his support of liberation of the captive peoples of eastern Europe.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SEPTEMBER 6, 1959.

Hon. PAUL H. DOUGLAS,
Senator from Illinois,
U.S. Senate, Washington, D.C.

DEAR SIR: We submit the following resolution adopted by the Lithuanian American Council, Rockford Branch:

"Whereas, the present dictator of Soviet Union Nikita Khrushchev, who keeps under his heel many former independent nations, among them three Baltic States, comes this

month, as a guest of President Eisenhower, to this country; and

"Whereas, the fiasco of the rebent Conference of Foreign Ministers in Geneva, Switzerland, definitely showed that the Soviet Government has no intention to make any concessions to the West regarding Berlin and Germany and refuses to withdraw its ultimatum: Therefore be it

"Resolved, That this gathering of the Lithuanian American Council considers that the invitation of the Soviet dictator to this country will not lead to the elimination of essential differences between East and West, but it may harm the cause of freedom by creating an impression in the world opinion that the Government of the United States has forsaken the victims of Soviet imperialism; further be it

"Resolved, That this gathering requests the President of the United States to be firm in his talks with the Prime Minister of the Soviet Union, and to remind him that no just and lasting peace can be established in the world unless the Soviet Union restores sovereign rights and self-government to Lithuania, Latvia, and Estonia, and withdraws its armed forces from the so-called satellite countries.

LITHUANIAN AMERICAN COUNCIL,
JOSEPH BACEVICH, *Chairman.*
P. A. DELTUVA, *Secretary.*

Permanent World Trade Exposition in Brussels, Belgium

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by me on the World Trade Exposition in Brussels, Belgium.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHNSTON OF SOUTH CAROLINA

The success of the free world and our free enterprise system is and will continue to depend in the largest measure upon a prosperous world trade. International commerce depends upon freedom and good will. The validity of agreements freely entered into and the sanctity of private property are the cornerstones on which international trade is built. Our chambers of commerce, boards of trade, and the American Foreign Trade Council recognize the importance of these factors. They are continually stressed at their meetings as the basis for the success of world business.

I have learned with much pleasure that a friend of mine, Mr. Leon F. Bergere, realizing the importance of world trade, has taken the initiative in establishing a Permanent World Trade Exposition in Brussels, Belgium. The World Trade Center and a Universal Trade Center in Brussels will foster good will and international commerce. Here there will be on exhibit the many products of the varied industries of the world. Manufactured articles and raw materials will be on permanent display. With the increasingly large surplus of products of our agriculture, manufacturing plants, as well as other finished products and raw materials, a world trade center can become a most useful adjunct to increased world trade. Sellers and buyers may and will then meet at a common, centrally located market.

Facilities for international banking, transportation of all kinds, technical services, advice and information established at the World Trade Center, are bound to be of invaluable assistance not only to those engaged in international trade but also to tourists, visitors, and the government representatives of the nations participating in the exchange.

It is of particular interest to me that it is planned to establish at the exposition an exchange bureau where there will be assembled the methods and means of handling international and domestic mail and parcel post. We will be enabled at a central location to learn of the improvements in facilities, and the methods and means of personal and commercial communications. A central office where ideas and improvements from time to time may be exchanged between the participating nations will serve as a continuing medium of improvements. Our mail service, domestic and foreign, and trade relations generally are bound to be improved as a result of the establishment of the world trade center.

I congratulate Mr. Bergere upon his industry and foresight. I trust success will attend this worthwhile project.

"Today in Congress"

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DEVINE. Mr. Speaker, during this session of the 86th Congress whenever I wanted the complete story on what happened here on Capitol Hill during the day, I did what so many of my colleagues tell me they did: I turned on my radio that night and listened to the distinguished radio commentator, Joseph McCaffrey, and his nightly report on "Today in Congress."

Not only were Mr. McCaffrey's reports on the workings of Congress informative, they were lively and interesting as well. He drew on his vast knowledge of the workings of Congress gained from his 12 years' experience covering Capitol Hill to bring us an oral congressional record from which we could get a comprehensive picture of all the important happenings of the day on the floor, in committees, and elsewhere here on Capitol Hill. To me, one of the most outstanding features about Mr. McCaffrey's report was the way he spiced the headline-making events with coverage of the many vital and constructive efforts here on the Hill which are overlooked by other news programs because they are not of the sensational and headline-catching variety. He also gave time to the personalities, the human interests, and the humor of congressional affairs which made his program so well-rounded.

"Today in Congress," Mr. Speaker, was sponsored as a public service for the second straight year. I know I do not speak just for myself when I express my deep appreciation to this fine organization and to its member airlines for making it possible for Congress to have its own radio program, devoted exclusively to our activities and our work. It was a real aid to me in my effort to keep abreast of the fast-moving events breaking here on the Hill, as I know it was to the other Members of Congress as well as Government officials and others who are in positions which require them to keep in close contact with congressional developments.

To Luce, After Laos

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Joseph Alsop which appeared in the New York Herald Tribune of September 14, 1959:

TO LUCE, AFTER LAOS
(By Joseph Alsop)

DEAR HENRY LUCE: Although I rather doubt its being wholly welcome, I feel impelled to write you this letter after returning from a short but fairly intensive on-the-spot look at the trouble in Laos.

The idea of the letter originated in Hong Kong, on my way home, when I belatedly discovered that last-but-one issue of Time. The contrast was so remarkable, between your dismissal of the new Communist aggression in the Far East in a few patronizing paragraphs, and your ikon-portrait of President Eisenhower and close to six pages of paean about his European trip. Your implied order of priorities is cheerfully accepted by a large section of public opinion; and you are both the symbol and quite largely the creator of this public opinion.

Having been in Sam Neua and Vientiane when the President was in London and Paris, I cannot judge the solid results achieved by his trip. His purposes, certainly, were as high as his purposes always are. But after the closest, most prolonged study of your report on it, I can find no more evidence of solid political achievement than you would expect from any personal appearance tour designed to instill confidence and to spread good will.

In Laos, on the other hand, one saw a wholly new—even terrifyingly new—stage of a vast political process. It is a process that used to interest you in the past.

You surely recall your loud denunciations of President Truman and Secretary of State Dean Acheson for their failure to prevent the loss of China. What is happening now in Laos grows out of that failure and the peace President Eisenhower made in Korea, and the subsequent partition of Indochina. But even though Laos is small and obscure, the success of the Communist aggression there will still be a new stage in this process. It will resemble the stage when a spreading cancer ceases to be operable.

If you have any doubt about this, you only have to look at the map and the record. As a nation, Laos may be small, obscure, disordered, and primitive, but its geography is intensely significant. Like a long potential troublemaker's finger, it pokes south from the border of Communist China, past Communist North Vietnam on the east, into the middle of South Vietnam, Cambodia, and Thailand. All these three nations will be immediately imperiled by a Communist triumph in Laos.

Cambodia's Prince-Premier Sinanouk must now bitterly regret his recent visit to Saigon, to patch up his differences with the West's friend, President Ngo Dinh Diem of South Vietnam. By the same token, Indonesia's President Sukarno has now gone off on one of those sudden trips he always takes when he is in doubt about the way the wind is blowing. The outlook in Indonesia has been improving lately; but a disaster in Laos will greatly strengthen the Communists there, and in Malaya, Singapore, and Burma, too. In short, the fate of Laos is only too likely to determine the fate of all southeast Asia.

This might not be the result, if the record did not strongly reinforce the map. The record shows that the Eisenhower administration's influence was used to create the existing anti-Communist government in Laos. The record further shows that the Laos warned the American Government that their anti-Communist government and policy would provoke an attack from North Vietnam. The record finally shows that the President's accredited representatives replied by telling the unfortunate Lao they could have entire confidence in the support of the United States and the military protection of the Southeast Asia Treaty Organization.

In these circumstances, failure to safeguard Laos against the new Communist aggression will leave the United States with the reputation all over Asia that the old Hebrew prophet first gave to Pharaoh—we shall be regarded as a broken reed that pierces any hand that leans upon it.

The Communist arrogance and contempt for American power that is revealed by the new aggression in Laos has, of course, been predictable for some time. It is a natural result of our persistent neglect of the military power balance, which has long disquieted people like General Gavin—the people you therefore sneeringly accused of suffering from "sputniksyndrome."

But now the challenge is not just predictable. It confronts us squarely with just as much functional menace as the challenge in Korea that President Truman first invited by disarmament, and then responded to so admirably. Don't you think that in these circumstances the challenge deserves to be taken as seriously as a personal appearance tour, even a Presidential personal appearance tour?

And don't you think it may be time to do something drastic about the defense problem as well?

Sincerely,

JOSEPH ALSOP.

Statement of the Speaker

SPEECH
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

The SPEAKER. The Chair desires to make a very short statement.

I think you all deserve all of the holiday you are going to get. This is the 1st term of the 24th Congress in which I have served. I have never known a group of men and women assembled in this Chamber who I thought were more dedicated to the job they were trying to do here than the Members of the 86th Congress.

We have done, in my opinion, a tremendous and outstanding job. I think we have really worked to the limit of our ability and our strength to try to do the things that we thought were in the interest of all the people of the United States of America.

In broader fields, we have been almost unanimous in everything that had to do with our foreign affairs, hoping that our way of life and the leadership of the United States of America will prevail. We are and we must be the leaders of the world if there is going to be a free world and a place fit to live in to rear the boys and girls who will be the men and women in the numberless years, I trust, that this, the mightiest, the best, and the freest government ever devised by the wisdom of statesman, will live.

When the Constitution of the United States was struck off after 4 short months in Philadelphia in 1787, from May until September, they brought forth a document which a great English statesman, Gladstone, said was the greatest document every struck off at one time by the hand and brain of man.

We have had Congresses since then controlled by both parties and during all of that time the ancient faith has been lived up to. Today that document has been unchanged in its essentials and its fundamentals because it set up a representative form of government and no amendment that has been adopted to that Constitution from then up to now has changed it one particle.

I want to wish you all a well-deserved and a happy holiday until I see you again in January.

Khrushchev's Russia—8

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the final article of the series by correspondent Harrison E. Salisbury which has been appearing in the New York Times on the Soviet Union.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KHRUSHCHEV'S VISIT MAY MARK TURN IN RELATIONS

(By Harrison E. Salisbury)

Nikita S. Khrushchev arrives in the United States to start what is primarily a journey of exploration. He is, in a sense, a Communist Columbus seeking a new route to shorten the distance between East and West.

What Mr. Khrushchev is seeking specifically is a short-cut to a new pattern of relations between the United States and the Soviet Union.

The analogy between Mr. Khrushchev's venture and that of Columbus may extend even further. Columbus was looking for new trade routes. He found, instead, a new world. Mr. Khrushchev, too, may discover things he never expected.

It will be the first time, for instance, that Mr. Khrushchev has had a chance to evaluate for himself the strengths and weaknesses of the United States.

He will be seeing in action for the first time the American free enterprise system with its endless diversity, productivity and creativity. For the first time he will be able to weigh the reality of U.S. capitalism against the caricatures of the Marxist classics.

Nothing would be less realistic than to suppose that the impact of what Mr. Khrushchev sees in the United States would cause him to lose faith in the Communist doctrine.

But it would be equally unreasonable to suppose that Mr. Khrushchev's views, conclusions, and policies would not be modified in the light of American reality.

Mr. Khrushchev's career in the years since Stalin's death has been marked by experimentation and reevaluation on a grandiose scale. An example was his reassessment of Stalin at the Soviet Communist Party's 20th Congress. It is not his habit to cling to outworn concepts.

Mr. Khrushchev, of course, is not entirely a free agent. His policy must be forged under the internal pressures of the Soviet system and the compulsions that guide the relations of that system with the outer world.

Nor are all the factors in the situation new. Mr. Khrushchev, for instance, arrives in the United States with certain well-defined concepts about future relations between the two countries.

He has said on many occasions that what he would like is a two-power world, directed by the United States and the Soviet Union. He has talked in these terms with Adlai E. Stevenson, Senator Hubert Humphrey, W. Averell Harriman, and Vice President Richard M. Nixon. He undoubtedly will talk in similar terms with President Eisenhower.

If the Big Two agree, Mr. Khrushchev contends, the peace of the world can be assured. No one would challenge their combined strength.

Let us shake hands on such an agreement, says Mr. Khrushchev, and turn to peaceful competition. We will see which system—Communist or capitalist—can create the better way of life.

PATH NOT AN EASY ONE

Mr. Khrushchev's words are pleasant. The idea seems attractive. The objective of world peace is unimpeachable. But, as Mr. Khrushchev is well aware, the path to a two-power world is neither simple nor easy. For instance, what role are allies to play in the two-power world?

It is well to emphasize at this point that the United States has never indicated that the concept of a two-power world would be acceptable to it or that it is prepared to set up with the Soviet Union any share-and-share arrangement for managing world affairs.

The two-power idea did not spring full-blown from Mr. Khrushchev's brow. It is a concept he inherited from Stalin. The late dictator often advocated it in discussions with President Franklin D. Roosevelt.

Stalin's thought was that the Soviet Union and the United States would take a map and divide the world. Each country would assume responsibility for peace and order within its sphere. Neither would interfere in the other's zone. Fringe disputes or conflicts without geographic limit would be settled by mutual agreement of the Big Two.

STATUS QUO ACCEPTED

Mr. Khrushchev has not expressed his ideas with quite such bluntness. But they follow the same general pattern. Each big power would recognize the paramount interest of the other in certain regions.

This would mean recognition of the Communist status quo in Eastern Europe and in Asia. It would recognize the capitalist status quo in Western Europe and the Western Hemisphere.

The two big powers would take it upon themselves to suppress any disorders or threats to the peace by the little powers.

Such a system, of course, would cause the North Atlantic alliance to wither on the vine—long the No. 1 objective of Soviet foreign policy. At the same time it would kill the Soviet-Chinese alliance. It would relegate the North Atlantic powers and China to secondary roles in world affairs.

A Pax Russo-Americana would reign throughout the world.

Such vast questions as the fate of the emerging nationalist movements in Asia, the new states of the Middle East and the future of the dependent areas of Africa would be decided over the Soviet-American conference table. The United Nations would become a mere appendage to big-power decisions.

Just to list the consequences that would flow from such Soviet-American collaboration is to make it evident that the objections from the U.S. side would be virtually insurmountable. The United States could not be expected to embark upon a policy that would cause it to abandon its world responsibility of the United Nations.

THE IMMEDIATE ISSUES

Such a world could be attained only if the two powers were able first to resolve the whole category of immediate conflicts that now divides them—Germany and the Berlin question, disarmament, atomic control, and trade.

Such a world could be attained only if the two big powers spoke the same language; if they defined their terms in the same way; if they understood each other's concepts and objectives in the same fashion.

The initial step, in other words, would require the clearing away of the tangle of misconceptions, misunderstandings, falsifications, and outright lies that have become imbedded in the fabric of Soviet-American relations.

This is what President Eisenhower had in mind when he suggested that the exchange of visits of himself and Mr. Khrushchev would "melt the ice a little."

The source of much of this distortion lies in the propaganda apparatus of the Soviet Union—newspapers, magazines, and commentators who have over the years reported the news as a kind of a gloss on Karl Marx "Das Kapital" instead of attempting to provide a clear, objective report of contemporary history.

Mr. Khrushchev, like all Soviet leaders of his generation, has long viewed the United States through the eyes of Pravda, the Communist Party paper, or of official observers whose bias is identical with Pravda's. His trip is bound to be replete with surprises.

A Soviet official who was here recently said that propaganda and slanted reporting had badly distorted his picture of the United States. He felt that long-term effects of such reporting by correspondents and diplomats had produced serious consequences.

If the effects of slanted reporting have seriously affected the conceptions of high-ranking officials, the consequences have been even more marked as far as the Soviet public is concerned.

Soviet people have been dependent upon the strictly controlled Government press and radio for information about the outside world. The areas of ignorance which have been created are enormous.

The effects of concentrated propaganda, however, are not always necessarily to the liking of the propagandists. Many Russians, sated with the dull diet of slanted news and commentaries, have virtually ceased to read the Soviet press or listen to the radio. Others automatically reject Soviet statements, assuming them always to be falsified.

PRAVDA'S STYLE ASSAILED

"Everything in Moscow has changed—but Pravda," an astute young Soviet editor observed. A well-known Soviet writer said he had stopped writing for the daily press.

"They ask for an article," he said. "You write it in your own style, reporting a situation in your own words. But before publishing it the editor improves the article by a few changes. He improves it so that it reads just like every other article in the paper."

Perhaps, because Mr. Khrushchev has become aware of these defects, a conscious effort is underway to make Soviet newspapers more reliable mirrors of reality. Soviet reporters are now doing on-the-scene American-style reporting. How seldom Soviet reporters are accustomed to move out of their Moscow cubbyholes is indicated by the fact that for many of those who accompanied Vice President NIXON it was their first glimpse of Siberia.

The effort to break out of the cliché-world into reality is not without repercussions. For example, Aleksei I. Adzhubei, new editor of Izvestia, has begun to reprint articles from the foreign press about the Soviet Union. Critical passages are severely excised but even minor criticisms produce violent reactions among bureaucratic officials long accustomed to read only rosy prose.

One of Izvestia's reprints was a dispatch by Max Frankel of the New York Times, giving a positive picture of present-day Siberia. But Mr. Frankel noted that some Siberian hotels had no toilet paper.

For weeks, thereafter, Soviet officials complained to foreign correspondents about this reference. Whether or not Mr. Frankel's report was correct made no difference. The officials were offended that toilet paper had been mentioned at all.

When they were reminded that Mr. Khrushchev had made some very sharp remarks about the plumbing in Siberian hotels, they replied: "Yes, but he did not set that up as an index of Siberian culture."

Actually, Mr. Adzhubei has been a leader in bringing fresh and more realistic techniques into Soviet journalism. He insists that his reporters go out to the actual scene of events. He gives prominence to letters from his readers, especially those reporting life in terms of human interest.

Mr. Adzhubei edited the youth newspaper Komsomolskaya Pravda before taking over Izvestia last spring. He instilled in his staff a spirit of competition most unusual in Soviet journalism.

The tendency of Soviet officials to edit the picture of the world to fit a preconceived pattern is what gives to Mr. Khrushchev's journey to the United States its real exploratory character.

Not until he has completed his 13-day stay in the United States will Mr. Khrushchev himself be in a position to understand what it would mean to live in a two-power world shared by the Soviet Union and the United States.

FOR ENDING "COLD WAR"

Mr. Khrushchev wants to end the "cold war." Of that there can be no lingering doubt. He often talks of the good that will flow from bringing the arms race to an end. He notes the huge tax burden in the United States and the handicap that arms production places on his plans to improve the life of the Soviet people.

He makes no secret of his hope that better relations with the United States will enable him to devote more attention to domestic problems. He is well aware that the heritage of the years of Stalinist oppression is far from liquidated.

But he is also proceeding on the firm assumption that the Soviet economic and social system will prove itself more productive than that of the United States. He is a convinced if somewhat unorthodox Marxist.

But Mr. Khrushchev's evaluation of the productive vitality of the capitalist system is rooted in ancient pictures—his boyhood experience in the Donets Basin coal mines and in Marxian descriptions of mid-19th century England.

His trip to the United States will require him to rethink a number of basic assumptions regarding the comparative vitality of the two systems.

Already the relaxation and comparative freedom of interchange between the Soviet Union and the United States have had sharp repercussions within the Soviet Union.

The opening of the American National Exhibition in Moscow caused Mr. Khrushchev's subordinates to carry out a savage press campaign against the favorable impression of the United States conveyed by the show.

"The better you and the Russians get along, the worse your press is going to be in the Moscow papers," a foreigner who has lived many years in Moscow observed.

FUTURE OF THE SYSTEM

This man's reasoning was simple. Once the pressure is off, once the ordinary Russian no longer fears war or "capitalist encirclement," his demands will build up very rapidly. He will expect his life to become just like that in the United States.

The incentives that the Communist system has long employed have been rooted in external threats. With the threat removed and the public demanding a better life, what happens to the system?

These are the calculations that Mr. Khrushchev will be reviewing as he flies from the east coast to the west, as he observes the flow of cars on the highways, the bulging shelves of the supermarkets and the precision of the automated assembly lines.

This is the new world that Mr. Khrushchev, in his role as the Communist Columbus, will have to evaluate.

TO MEET RULING CLASSES

Mr. Khrushchev will meet for the first time the "ruling classes" that he has long believed control the real levers of power in the United States—the "60 families" whose wealth and influence, so he has supposed, dictate American policy.

It is an article of faith to a devout Communist like Mr. Khrushchev that the "ruling classes" of the United States will fight any relaxation with the Soviet Union to the bitter end.

When Mr. Khrushchev discovers that Wall Street bankers and leading industrialists have the same differences of opinion over policy as occur among the "laboring masses," he will be confronted with another set of reevaluations.

If Mr. Khrushchev possessed a doctrinaire mind there would be little hope that his journey of exploration might produce positive results.

A disillusioned Soviet diplomat not long ago said he saw no prospect of an end to the "cold war" until the Soviet Union moved its capital back to Leningrad from Moscow.

What he meant was that the traditional attitudes of Moscow—parochialism, suspicion, provincialism, hostility to foreigners, bureaucracy, and isolationism—provided an impenetrable barrier to any real meeting of minds between East and West.

Not until Soviet policy once again comes under the more sophisticated influence of the great city on the Neva, built by Peter the Great as Russia's window to the West, would it be possible to create an atmosphere of real confidence between East and West.

The Soviet diplomat may be right. But the new ideas and new impressions to which Mr. Khrushchev is exposed in his journey of exploration may stimulate his creative mind to new paths of thought.

It has long been evident that in two great areas of conflict between the United States and the Soviet Union, differences have been narrowing imperceptibly. Given a will toward agreement, the Soviet and United States positions on disarmament and atomic controls would prove more similar than is generally supposed.

The German question is more complex, although Mr. Khrushchev insists that no one—East or West—really wants German reunification. This leaves the Berlin question as the great enigma.

There are diplomats who contend that Mr. Khrushchev will never compromise on Berlin. But all things are relative.

ELASTICITY POSSIBLE

If Mr. Khrushchev could reduce the pace of the arms race, if he could free the Soviet economy from its arms burden to give the Russian people a more abundant life, if he could take the first steps toward laying the foundations of normal relations with the United States, he might find more elasticity in the Soviet negotiating position than the West has assumed.

Mr. Khrushchev and his principal aids are placing great emphasis on the desirability of large-scale trade between the United States and the Soviet Union. Mr. Khrushchev realizes that the most realistic possibility for bringing the Soviet living standard up to the United States level is to enlist the aid of the American industrial system.

Thus there are substantial compulsions in the direction of making the concessions that would lead to rapprochement between the United States and the Soviet Union.

There is another even more formidable compulsion. This is the looming shadow of China, her crushing population superiority, her rapid industrialization, her imminent emergence as a nuclear power.

Mr. Khrushchev may not find the America he expected when he lands today. But he may well discover to his surprise that the friendship of the United States, not to mention the cooperation and collaboration America offers to nations that are not antagonistic to her, is a prize well worth great efforts to obtain.

Sewage Treatment at Dulles International Airport

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BOW. Mr. Speaker, important contributions to the discussion concerning sewage treatment at Dulles International Airport were made in a letter to the editor of the Washington Evening Star by Harry Otis Wright, Jr., a civil engineer of nearby Fairfax County. Inasmuch as certain pertinent and sound arguments contained in the letter were deleted by the editors before publication, I include the full text as part of my remarks:

FAIRFAX, VA., *September 4, 1959.*
The EDITOR, WASHINGTON EVENING AND SUNDAY STAR NEWSPAPER,
Washington, D.C.

DEAR EDITOR: Your recent editorials on the Chantilly Airport sewage is predicated upon the premise that it is impossible to successfully treat sewage.

There is considerable governmental apparatus set up to control pollution of the streams in Virginia, also in nearby States.

The water control board in Virginia, headed by the present speaker of the house of delegates, has jurisdiction over all Virginia streams. This board is composed of five men from different parts of the State, all civic leaders in their areas. They have a paid staff of well-qualified technical people with special training in sanitation and water-pollution control. This staff works in conjunction with the State health department whose staff of engineers, scientists, biochemists, physicians, and others review and check all proposed designs for plants for the treatment of wastes. If and eventually when, the consulting engineer designer of a proposed plant has so designed it as to satisfy this staff that it is satisfactory, they then recommend approval to the water control board which then ballots on whether or not to approve the plant. The Surgeon General of the Public Health Service, under the Department of Health, Education, and Welfare is closely associated with the State health departments and has a staff of technically trained people to observe all phases of the State health departments programs. The Surgeon General has a particular interest in the Washington water supply. I wonder if you checked with Dr. Scheele, who at present occupies that position, before editorializing on the "Calamity to Washington," a sewage treatment plant at Chantilly Airport would be.

All of the cities up the Potomac River and its tributaries dump effluent from their sewage treatment plants into these waters; some very large cities like Cumberland. Many large towns dump raw sewage into this river; Strausburg is one.

All the cities and manufacturing centers along the Ohio River dump treated effluent and sometimes raw wastes into the river. These waters are treated and utilized by cities downstream.

Many of the cities in Europe dump effluent into streams and the water is reused by cities downstream.

Richmond, Va., uses water for its water supply that has been used by Lynchburg, Charlottesville, and other towns.

This country is growing fast and it is no longer possible to prevent the spread of suburbia upstream from existing communities on the pretense that it will pollute their water supply. We simply have to realize that water has to be used over and over again however unesthetic it may seem. The effluent water from the proposed Dulles International Airport treatment plant will be of a better quality than that in Broad Run into which it is proposed to flow. Broad Run and its tributaries meanders through rural and agricultural terrain on its way to the Potomac River. It carries pollution from barnyard wastes, outhouses, septic tanks, slaughter houses, also fertilizer from pastures and planted fields. There is little doubt that some unesthetic cows may even further pollute the stream while standing in it and drinking the water.

The change in taste that is supposed to occur is alleged from nitrates and algae; such conditions require still tranquil bodies of water. The river is too turbulent and turbid for algae to live hardly at all, much less in quantities large enough to affect taste, and more nitrates will result from runoff over fertilized fields than will remain in the sewage plant effluent. If the sewage treatment plant should break down there are provisions that limit the amount of pollutant discharged; this is done by ponding, aquatic life and aeration. The science of wastes treatment has come a long ways in the last 30 years.

Sincerely,
HARRY OTIS WRIGHT, Jr., P.E.

Letter to Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. McGEE. Mr. President, I should like to call to the attention of the Members of the Senate a very fine letter addressed to Premier Khrushchev by Curt Whaley, publisher of the Powell (Wyo.) Tribune. In his letter Mr. Whaley calls to Mr. Khrushchev's attention the fact that it is the voters who make the long-term decisions in our form of government. He further calls upon Mr. Khrushchev to renounce the Soviet policy of internal interference with the governments of other nations if he seeks to inspire the confidence and respect of the American people. I commend this letter to my colleagues, and ask unanimous consent that it be printed in full at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTER TO MR. KHRUSHCHEV

POWELL, WYO., *September 11, 1959.*
Mr. NIKITA KHRUSHCHEV,
Soviet Premier,
Blair House,
Washington, D.C.

DEAR MR. KHRUSHCHEV: This editorial-letter is writen for the purpose of informing you the voters of United States make the long-term decisions for our country.

The citizens of this country must be considered when our President and Congress make decisions—for our Nation is a democracy. The voter of Main Street, each urban settlement, ranch and farm has the power to select our President and Congressman. Here decisions are not made by one man or group of men. The ordinary citizen has a voice in putting men in positions of power.

We welcome you to the United States of America because we believe you should know the power of the ordinary citizen in our country—his rights and privileges under our Constitution.

It is our hope—while you are visiting us—that you will prove to yourself this is so. During your visit, it is our hope you will visit the plant of a newspaper. In the United States you will find thousands of small and large newspapers. No one—I repeat—no one tells a newspaper publisher what he must print or what to write. Readers have freedom to express their criticisms and opinions in these newspapers.

Citizens in this Nation, when aroused to anger over a national or international issue, often write—or travel to Washington to see their Congressmen. Citizens are treated with respect and courtesy by Government officials in United States because of our democratic form of government. Persons in power in our Government must respect the rights of individuals, as well as their opinions, else they will not be returned to power by the voting citizenry.

We would remind you the way to deal with the United States of America is not only through the top man, our President, who is elected to represent us, but through our delegate to the United Nations, our Ambassador to the Soviet Union, our Senators and Representatives in Congress.

In other words, Mr. Khrushchev, you must sell your ideas to the citizens of this Na-

tion—the millions of voters in the United States. We are the rulers of our country. Mr. Eisenhower does not tell us what to think—what we must do, or what I must write.

It is not easy to influence the thinking of people where a free press exists. They have minds of their own and make decisions.

It is our belief that the peoples of every nation should have this right—they should not be held in captivity without the right of freedom of religion, speech, voting franchise, and freedom from want. Why cannot the Germans decide for themselves how they want to live—the Poles, Czechs, Slavs, Hungarians, Latvians—and others?

If you really want peaceful coexistence among the peoples of the world, you will have to renounce your policies of interference in the form of government desired by citizens of these nations. Our citizens are informed of the promises broken by you and your predecessors in power. You must earn our respect and confidence, if you want our trust—our lasting friendship.

Respectfully yours,

CURTIS WHALEY,
Publisher, Powell Tribune.

The Lubbock Plan—Project Alert

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JAVITS. Mr. President, the people of Lubbock, Tex., recently formed a citizens' committee for the purpose of conducting a campaign for the revitalization of the American national character and repudiation of international communism. I ask unanimous consent to have printed in the Appendix of the RECORD appropriate excerpts from the report of this project issued in August 1959.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

INTRODUCTION

In December 1958, the Chief of Naval Operations invited certain subordinate commanders in the Navy to consider and recommend ways and means whereby the Navy could contribute more effectively to the prosecution of the cold war.

Perhaps this term our phrase-makers have coined—the cold war—is unfortunate in that it connotes merely a nuisance rather than a threat. But nonetheless we are at war. We have been at war for over 30 years, a deadly inexorable conflict between the American concept—the freedom and dignity of mankind—and the slavery of world communism.

This cold war is here to stay. It is not a war with Russia as a country or with China as a country. It is a war against the doctrine of international communism which seeks to bring everything and everyone in this world under its complete domination.

But while our Communist enemies relentlessly pursue their course of cold war offensive, we here in America and others in the free nations of the world tend to look upon the cold war as a form of hopeful peace, which it is not. We have failed therefore to muster our full strength to fight and to protect ourselves. Were this Nation to become involved in a shooting war tomorrow morning, all Americans would band together with a determination to win it and win it quickly. All of our resources, regardless of expense and regardless of personal sacrifice, would be thrown into the battle.

Our way of life is threatened in this cold war just as certainly as it would be in a hot war. Yet we have failed to recognize that a supreme national effort is required if we are to survive as a nation.

The Communists are proceeding according to plan—a plan first expounded by Lenin years ago when he said, "First we will take Eastern Europe, then the masses of Asia, then we will encircle the United States which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

And fall we may, for unwittingly all too many Americans serve the cause of their own decline and disaster. Too many Americans, by pursuing selfish interests, sacrifice the common good. Too many otherwise patriotic citizens and misguided idealists weaken the moral fiber of liberty by failing to recognize their responsibility for its preservation. Our forefathers gave us liberty and freedom. It remains for us to be worthy of them.

A glance at any daily newspaper is enough to confirm our unworthiness. Traffic violations, drunkenness, drug addiction, crimes of senseless savagery, vandalism, juvenile delinquency, a sneering contempt for law and order—all these and many more are abundant proof of the downward path we are following.

Now this gloomy picture is distressing enough to me as an American citizen. It is even more distressing to me as a member of our military service, for it forebodes a collapse of the personal integrity and discipline which is the backbone of a successful and victorious military organization.

I believe that this downward path, this climate of complacency and apathy, of cynicism and lowered moral standards, of materialism, irreligion and lack of faith in our society aids and abets the Communist cause. The evil of communism is succeeding because we are doing little or nothing about it.

The wise military commander carefully analyzes all facets of the situation before committing his forces to action. So should we as Americans take stock nationally as we enter into a stronger campaign in the cold war. The American people must recognize the threat that we face from international communism. We must understand that the continuation of their cold war tactics can win for the Communists their ultimate goal of complete world domination unless we face up to the challenge and willingly undertake a national effort of tremendous proportions. Let us assert once again those qualities which have made this Nation great—honor, industry, integrity, courage, and an abiding faith in God.

What is needed, then, is a national program of reeducation in these virtues. We should undertake at the same time a national program to reach the American people more about communism—its objectives and its methods of operation. We should, in other words, gird our loins for a long battle, with full knowledge of the threat that we face and with full appreciation of the heritage we would preserve.

Throughout this Nation there are thousands of organizations and individuals who are seeking to attain these objectives within their own spheres of influence. Their efforts have accomplished much, but much more remains to be done. What is lacking is a concerted, coordinated effort to bring the facts to the attention of all Americans, not for just a season or a year, but over the long term, until this increased awareness and increased national effort brings us victory in the cold war being waged against us.

Before such a project could be undertaken on a national level, however, it seemed necessary to demonstrate that it would work on a community level. Could a community plan and carry out effectively a program of the required magnitude? The citizens of Lubbock, Tex., have answered that question resoundingly in the affirmative by their vigorous execution of Project Alert.

Lubbock is a city admirably suited for such a pilot program. It has excellent newspapers, radio and television stations, and two fine institutions of higher learning. Its many churches attest to the fact that this is a community under God, one that may well be expected to take the lead in the battle against godless communism. Above all, its citizens are proud and independent Americans, eager to serve their community and their Nation.

I am, of course, pleased that members of the Naval and Marine Corps Reserve and the Advisory Council on Naval Affairs played a part in Project Alert, but since the importance of the program transcends service ties, I am particularly gratified that the actual direction came from the mayor of Lubbock and his committee of representative citizens from all walks of life.

This booklet is a report of the achievements of the Lubbock plan. It is also a guide for similar action by other communities. By making this report possible, Lubbock shows the way toward a reaffirmation of our national character—a rebirth of our national virtue—and toward ultimate victory in the cold war.

W. G. SCHINDLER.

NEW ORLEANS, LA., *August 1959.*

PHASE 3: THE FOLLOWUP

The mayor's advisory committee realized early in their planning that the 30-day period allocated for the first phase of the campaign could serve only as a point of departure. They knew that the project must continue if it were to achieve even a fraction of its potential.

That this realization was shared by the community was evidenced by the responses to a postcampaign public opinion survey conducted by the Naval Reservists at the request of the mayor's committee. The survey posed these questions:

1. Did you or any organization to which you belong hear any lectures given by speakers for Project Alert?
2. If so would you consider yourself better informed? In what way?
3. Do you believe such a program should be continued in order to reach more people?
4. Have you any suggestions or criticisms to make regarding Project Alert?

An overwhelming majority of those interviewed had heard of Project Alert and were generally familiar with its objectives. Without exception, the interviewees recommended that the program be continued. Of those who had heard Project Alert speakers, all felt that they were better informed to some degree. Perhaps most important of all, everyone interviewed indicated that his interest in learning more about the problem and in contributing to its solution had been aroused.

Here is a random sampling of comments reported by the interviewers:

"It is my understanding that this will be a continuing program and I firmly believe that it should be continued. All Lubbock organizations should have the chance to hear the speakers present the information that has been prepared."

"It is my personal opinion that something like this should have been started a long time ago and I believe that we will fail to reach as many people as possible if the program is allowed to stop at this point."

"It is my opinion that the program has led to more people being informed about the

menace of communism and has caused more people to take stock of themselves and to ask themselves very serious questions about their own retardation of our moral potentialities."

"I believe that a weekly program should be set up on both radio and television to elaborate upon the information given in the speeches. In this way, perhaps people who are not in organizations or in churches may be reached."

"I have been amazed at the revelations that have come from Project Alert. I only hope that more is to come and that more people may be reached."

"Project Alert has done more to bring about a spirit of cooperation among our citizens than any other one thing we have undertaken. It has been good for all of us."

"At first I wondered about the merit of Project Alert. I now realize its importance to everyone in the United States."

Further evidence of growing public interest in the campaign came from the Lubbock city librarian who reported a very noticeable increase in activity in books touching on the theme of Project Alert.

The mandate was clear. The citizens were interested and they wanted more. Quickly, the mayor's committee decided that they would get more. Lubbock plans now to continue Project Alert indefinitely.

The basic organization will be headed by a small group taken from the original advisory committee, the parent-teachers association, the ministerial alliance, and the administrative heads of local educational institutions, including the public schools.

Discussion groups have been formed throughout the city. A materials subcommittee is still functioning; the speakers bureau is now set up on a permanent basis; new radio, television, and newspaper schedules will be prepared; a local luncheon club has been asked to take over the duties of the speakers placement committee and additional short subjects will be shown in local theaters. Other nationally known speakers, the first already scheduled, will come to Lubbock. Project Alert has entered into a state of permanency.

The advisory committee was not content, however, to report only the successful side of the story. All persons associated with the campaign were asked to review it discerningly and to analyze errors of omission and commission. From this review, the advisory committee has prepared a series of recommendations, not only for its own future use, but for consideration by other communities contemplating a similar program.

Lubbock's recommendations are:

1. Sanction and sponsorship for the project must come from the highest possible level—the mayor, the city council, the chamber of commerce, or other highly placed and respected organizations or individuals.

2. As in any organization, control of leadership must be assigned and the resulting responsibility must be accepted by one or not more than two individuals. In Lubbock, one individual had the primary responsibility for carrying out the basic organization of the project and supplementing it with changes dictated by events. An assistant to the chairman was responsible for getting people to meetings of the various committees and also acted as coordinator for all committees appointed by the advisory committee. Without one or two individuals who are willing to spend some 3 or 4 hours a day in the initial stages of planning, a program of this type cannot expect to get underway.

3. It cannot be emphasized too strongly that meetings and the comments therein should not be allowed to get away from the control of the presiding officer. At any public meeting, it is very likely that there will be special interest groups who have no thought other than to raise their own personal prejudice against other individuals or organizations. If such a thing is allowed to dominate a meeting, the effect can be disruptive to the community effort. It should be stressed continually that all members of the committee and, indeed, all citizens of the community are working on a purely educational and informational program.

4. Greater time should be allowed from the initial planning stage to the first scheduled talk by local speakers. From the experience gained, it is suggested that at least 3 months of planning be done prior to any announcement of the formation of a committee. This work of planning and basic organization may be done by two or three or more individuals, either in ACONA or in a similar citizens' group. Such basic planning down to the last detail will insure that the program is ready and that community interest is present or can be aroused.

5. This greater leadtime is also important in arranging for speakers. Many organizations require a great deal of advance notice to arrange their programs to accomomdate a series of talks.

6. In addition to the series of talks, it is desirable to have prepared one or more 20-minute talks, synthesizing the entire program. The use of visual aids with these talks would be helpful and could also be used on television presentations.

7. Outside speakers are valuable not only for their message, but also for their publicity potential, but they are by no means necessary for success. Each community has within its boundaries the men, women, and materials to devise and execute a worthy program.

8. Great emphasis should be placed on getting the theme of the project before young people. One Project Alert worker summed up this objective when he said, "Let's get the story before the schools, where tomorrow is being made." To this end, the Lubbock organization might be modified to include a separate subcommittee for youth groups.

It is difficult to measure the success of a program like Project Alert. The effectiveness of an advertising campaign can be rated in terms of increased sales; a political campaign can be judged by the number of votes cast. A month-long pilot program, however, dealing with public attitudes and opinions, cannot be subjected to any specific yardstick to determine its results. It can be measured only in terms of the effort expended and the audience reached.

This, then, is the story of Project Alert in Lubbock, Tex. It is a story of much hard work, of dedicated leadership, of concerted effort, and of communitywide cooperation. It proves one thing: The job can be done.

Mexican Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, nearly 150 years ago today, on September 16, 1810, the Mexican people first demanded their freedom from the oppressive rule of the Spanish viceroys.

On that day Father Miguel Hidalgo y Costilla, a member of the lower clergy who had been profoundly influenced by the doctrines of liberty, equality, and fraternity of the French Revolution, gave the shout—"el grito"—of revolt and independence in the city of Dolores in northern Mexico. Hidalgo and his followers won several victories against the Spanish Royalists, but in 1811 they were finally defeated and their leaders were executed. Nevertheless, the banner of independence was not allowed to fall and the struggle continued for 10 long years until the last viceroy was crushed and Mexico became independent in 1821.

Since that date the path of an independent Mexico has not been smooth. Between 1821 and 1876, for example, Mexico had two regencies, two Emperors, several dictators, and enough Presidents to make no fewer than 74 governments. From 1876 until 1911, except for a short interval of 4 years, the country was under the dictatorship of Porfirio Diaz. Diaz was overthrown by the revolution of 1910 but the troubles of Mexico continued. The country was beset by civil wars, attempted revolutions, and political oppression. It was not until the Presidency of Lájara Cardenas, who was elected in 1934, that some measure of peace and stability came to Mexico. This atmosphere of peace was soon broken by World War II. On the other hand, however, the war brought a strengthening of Mexican-United States relations and in general left Mexico materially stronger.

We in the United States owe a great deal to our southern neighbors. The whole concept of the Western cowboy, his trade, his horse, his clothes, and his techniques are part of the rich heritage that Mexicans have contributed to our way of life. Originally, the first Americans who settled in Texas in the 1820's thought of themselves as farmers. It was their Mexican neighbors, whose herds had roamed the ranges since the early 1700's, who introduced them to the lariat, the branding iron, and the roundup of the longhorns. Soon it became an insult to refer to a Texan as a farmer. He was a "vaquero," or its English translation, cowboy. California, Colorado, New Mexico, and Nevada all bear the lyrical names that the Mexicans, who had lived in the borderlands since 1598, first wrote on their maps, as do innumerable rivers, mountains, cities, and towns from Texas to the Pacific Ocean. It was these Mexicans who eased the way for the immigrants pouring into the Southwest by freely sharing with them the immense fund of experience they had accumulated. In more recent years the Mexican-Americans have not diminished their contribution to our country; 375,000 men of Mexican origin served in the Armed Forces and because so many of them deliberately sought the most dangerous assignments they suffered casualties far out of proportion to their numbers. The Mexican-Americans also won a phenomenal number of awards for gallantry in action. For example, of the 26 Texans who received the Congressional Medal of Honor, 5 were of Mexican descent.

Unfortunately, though the Mexican-Americans contributed richly to the rapid development of the Southwest, few of them benefited from the vast changes that followed annexation. They were children of a simple folk culture speaking what was now a foreign language; strangers in a land they one had shared

with the Indians. Thus, while the living standard of other Americans rose, that of the Mexicans fell appallingly. Yet, to so many Mexicans south of the border, their northern neighbors seemed so rich that they began to head north in search of jobs—which usually lasted only for the length of the harvest. Thus, was born the problem of the migratory farm worker, or bracero, of whom over half a million enter this country each year.

Much has been done to improve the status of the migratory worker, and in fact all the Mexican-Americans. But it still not enough. On this, the anniversary of Mexican Independence Day, it is fitting that we once again rededicate ourselves to helping those Mexicans less fortunate than ourselves to whom we owe so much and make it possible for them to share in our great fortune as citizens of this great Nation.

American Tides To Be Turned

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Ernest K. Lindley article from the August 31, 1959, issue of Newsweek:

THE UGLY CULT
(By Ernest K. Lindley)

Against the ominous backdrop of the Communist aggression against Laos, I should like to point to some of the mistakes we are making, or seem to be slipping toward, in the struggle for Asia. By "we" I mean not just our Government, or parts of it, but unofficial Americans. And I am not concerned here with past mistakes. The favorable tide I found on my recent survey of 17 Asian nations and colonies exists in spite of them. My concern is about current and possible future mistakes that might reverse this tide:

1. The worst general mistake is to pay attention to such a preposterous book as "The Ugly American," a grotesque cartoon of a few misfits and errors of the past. Some of its suggestions for improving American operations in Asia are out of date—already having been put into effect. Some are ridiculous. At the same time, it ignores some of the things Asians most need from us. As a result, anyone who takes this book seriously is misinformed about the present situation and badly advised as to the future. (For an informed American's critique, see the article by Thomas W. Wilson, Jr., in Harper's for June.)

Few free Asians I saw on this trip had read this book. They were too intelligent to take it seriously, although some remarked that it furnished propaganda for our common enemies and one noted that it was insulting to Asians. The distinguished Thai editor, Kukrit Pramoj, has written an urbane reply (with implied reference also to Graham Greene's "The Quiet American"). He calls it "The Loud and Beautiful American." Due to appear in the September issue of Pacifica, it deserves an audience throughout America.

It is the effect of "The Ugly American" on Americans, including some of Congress and certain sections of the press, which disturbs a U.S. observer just returned from Asia. One shudders to think how many more people, here and throughout the world, may be misled by the movie version.

2. Sensational journalism in "The Ugly American" vein. A recent series of largely unverified charges concluded that our aid program in South Vietnam is a "fiasco." Even if every charge were true—which is not the case—the net effect was a wrong impression of the situation and what has been achieved. Vietnam has made more striking progress in more ways than any other of the 17 Asian nations and colonies I revisited on my recent tour. Overall, the American aid program there has been a great success. These articles were an affront to an ally who has accomplished wonders but is still battling the Communists. They made propaganda for the enemy. And the Communists are also making propaganda use of the resultant congressional inquiries. Saying that they prove we regard our Asian allies as colonies, not as independent nations.

3. Congressional rehashes of bad situations that had already been cleaned up. Prime example: Laos. (See my column, p. 34, Newsweek, June 1.) This inquiry directed attention to an obsolete past at the very time that a new, clean, courageous government was braving the gathering storm that has now broken.

4. Cuts in military aid. It is folly to reduce the military forces of the frontline free nations of Asia. Laos is a stark warning. We may have overarmed one ally—Pakistan—although I don't think so. The solution is a settlement between India and Pakistan, followed by a joint defense of the subcontinent, as advocated by President Ayub Khan of Pakistan.

5. The failure to put our development loans on a 5-year basis, so that Asian development programs can be more systematically planned.

6. Too much redtape. It slows and hampers our aid programs. Congress should try to reduce it.

These are the serious mistakes, a prescription for defeat. Of course, we should always be on guard against corruption and waste—although it's unreasonable to expect Western standards of all the new Asian governments. But we can't win the struggle for Asia—and the world—by beating the heads of our friends and the many competent, experienced, dedicated Americans who represent us overseas. Let us rid ourselves of this ugly cult, this masochistic defamation of American intelligence and character and of the Asian leaders and peoples who stand with us in the struggle for freedom.

A Splendid Portent: The Town Affiliation of Napa, Calif., With Como, Italy

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CLEM MILLER. Mr. Speaker, under leave to extend my remarks I should like to call attention to a significant event of international good will.

The town of Napa, Calif., has officially established a sister-city program with Como, Italy. This is a matter of great pride to me. Napa, situated in a most beautiful valley of the same name, is filled with warm and friendly people, many of them having their origins in Italy. This valley produces the finest wine grapes, equal to any the world over. The sight of the ordered rows along the valley floor, contrasting with the wild growth and stone outcroppings of the ringing hills, affords a beauty scarcely to be matched elsewhere in the United States. It is fitting that Napa should join hands with the city of Como. My memory of it as one of the loveliest in Italy, make it a fitting partner for Napa in California, with similar topographical contrasts. Como, situated on a beautiful lake near the Swiss border, is primarily a tourist center, surrounded by small, well-kept farms, formal villas, while the incredible beauty of the Alps looms above. The industry of Napa is steel fabricating, cement products, gloves, clothing and fine leather, corresponding to Como's auto fabricating and quality silk industries.

The relationship between the cities will grow strong with the years. The characteristics they share—of beauty, of warmth, and friendliness, of small tradesmen, of industry, of tourism, of small but flourishing agriculture, of keen cultural interests, will knit the communities together.

The idea for town affiliation arose out of the people-to-people program of 1956. This was launched by President Eisenhower in September of that year, as a means of building new roads for national understanding. At the White House conference the President said:

If our American ideology is eventually to win out in the great struggle being waged between opposing ways of life, it must have the active support of thousands of independent private groups and institutions and millions of individual Americans acting through person-to-person communication in foreign lands.

Such fine sentiments mean little without implementation. Some 70 cities are presently participating in the program. Napa now takes its place as one of these. The impetus was supplied by its mayor, Joe Greco. From the outset he has seen the tremendous possibilities of friendship with a city of another land. He himself is of Italian ancestry as is his wife. Once imbued with the idea, it was to his credit, more than any other, that the project reached fruition. He wrote to the mayor of Como, Lino Gelpi. Napa's sheriff, John Claussen, an amateur radio operator, offered his services to communicate with friends in the Como area.

Finally, Mayor Greco flew to Italy to formalize the relationship. Let him tell it in his own words:

It was necessary for us to take a taxicab from the airport in Milano to the hotel in Como, Italy, where we were royally received by the mayor of that city, Avvocato (attorney) Lino Gelpi. I presented to him a case of six bottles of our Napa Valley wines and a gold key to the city of Napa, inviting him to visit with us some time in the very near future.

The reception in Como will be something that will live in my memory for a good many years to come. Mayor Gelpi will long be remembered for his generosity. We had at our disposal his official car and driver. We were entertained at the best places. Cavilier Carlo Piatta and Chief of Police Hugo Bianchi drove us on a sightseeing tour around Lake Como, the funicular (railroad) and all of

the museums. They really showed us and gave us a fine tour of all of the places of interest.

One of the very important and amusing things was a tour of the Tempio Voltiano, on August 7. The place was in charge of a Mr. Antonio Besano who acted as a caretaker and the person to escort you through this very famous memorial. When he heard that I was from Napa, Calif., and the Napa Valley, he asked me if I knew Mr. Pringle who came from the Napa Valley where he is an official of the Schramsberg winery. He told me that he has enjoyed a friendship of many years with Mr. Pringle. Each person who helped entertain us received a pair of our Napa Glove Co. gloves. We then traveled to Milano where we stopped at the Grand Continental Hotel.

From Como, Mayor Greco toured over Italy, meeting mayors and city officials. Everywhere he met with the same warm, outgoing reception that he had met in Como. There was the gracious exchange of gifts, the symbols of our industry in Napa, fine wines and well-made gloves. In this manner, he visited Milan, Turin, Rome, Naples, and Salerno. He met relatives whose existence he was not even aware of previously. Late in August, this ambassador of good will returned to his native land.

Even then, his mission was not yet completed. He talked personally with His Excellency Signor Manlio Brosio, Ambassador of Italy, who congratulated him on the trip as a "wonderful gesture of good will," expressing the hope that it might be emulated by others.

The city of Como, Italy, seeking a champion here, asked Perry Como, the world-renowned singer, to act as honorary mayor of the city whose name he bears. Mr. Como graciously accepted the office. In honor of the event, Mayor Greco designed and had struck a medal for presentation to Mr. Como.

Plans are already underway to demonstrate the city-to-city affiliation in practical terms. The city of Napa wishes to demonstrate to Como, Italy, how American ideals are reflected in our way of life. It will give our people of the Napa Valley a way of combating Iron Curtain propaganda. Mayor Greco, the city council, and members of the board of supervisors will join in urging participation by the people of Napa Valley. Citizens will write letters to pen-pal friends in Como. Sheriff Joe Claussen and others will establish radio contact. An idea to exchange children's school art will be encouraged. Exchanges of tourists and notables will be arranged. Support will be enlisted on the widest possible base, from the chamber of commerce, Kiwanis, Rotary, Lion's clubs, from organized labor, industry, and schools.

At the national level, a volunteer, nongovernmental committee, headed by Mr. Mark Bortman of Boston, stands ready to give professional assistance. All of this gives point and purpose to the statement of Senator CLAIR ENGLE: "The people-to-people program carried out through the sister city mechanism is the most dynamic development in the field of U.S. foreign relations since World War II." The city of Napa, together with its dynamic mayor, Joe Greco, together with Como and Mayor Gelpi, will do their parts to make this promise an actuality.

To me this is a most hopeful, encouraging portent. My warmest salutations go to all who give this splendid project a helping hand.

Another Worthy Program of American Industry

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, the complexities involved in the fulfillment of today's legislative requirements mandate a better informed and more aware populace. I was pleased to receive a letter from Ernest A. Tupper, manager of the Government Relations Department of the American Can Co., dated September 11, 1959, with which Mr. Tupper enclosed a copy of a message to all of the company's employees urging that they take an active interest in the party of their choice. I trust that other segments of industry will follow this fine example.

The letter follows:

AMERICAN CAN CO.,
Washington, D.C., September 11, 1959.
The Honorable ABRAHAM J. MULTER,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MULTER: The attached message from Mr. William C. Stolk, president of our company, will reach our 50,000 employees shortly, and will, I believe, be of considerable interest to you. It is another example of the sincere efforts our company, and other business organizations, are making to stimulate more and more people to work for good government through the political party of their personal and individual choice.

In Mr. Stolk's letter he urges all employees to begin now—instead of waiting until campaign time—to become an active worker in a political party. He urges employees of our company to go to party meetings, to volunteer for party organization work, to pay party organization dues, and to contribute to the cost of nominating and electing people who will stand for the principles in which they believe.

Our management is firmly convinced that efforts designed to reawaken people to the responsibilities of citizenship—efforts supplemented by programs designed to add to their political education and their understanding of basic issues, should contribute toward making our country a better country, and make the task of the elected official easier, more satisfying, and more rewarding.

I trust you approve of this kind of corporate activity and that you welcome our efforts.

Cordially yours,

ERNEST A. TUPPER.

TO ALL AMERICAN CAN PEOPLE, A MESSAGE ABOUT POLITICS

This message, I hope, will stir every American Can employee to become an active worker in party politics—and to begin now instead of waiting until major political campaigns are at climax. I am convinced, and would like to convince you, that the need is urgent for each one of us to work vigorously and continuously in party politics of our own choice, on our own time and at our own expense.

Government is like private business in one respect. The value we receive from it is in proportion to the effort we put into it.

In previous statements—including my Chicago public affairs speech reported in the July 9 Canco News Letter—I have urged all American Can people, and everyone else who has time and money invested in American business, to lead out and speak out on public issues, first deciding for ourselves what is right in public affairs, and then doing our best to sell other people on the merit and sense of our convictions.

If we are going to succeed in translating our personal convictions into the performance of good government, we have to do more than just talk about them. We have to join with others sharing our convictions, in the concrete task of selecting and electing public officials dedicated and committed to the same objectives.

There is only one way to do this: Choose the political party which, in its known aims, comes closest to being for the kind of government you are for. Go to its meetings, in your own home precinct and elsewhere. At your party's meetings, promote and support the positions and goals you know are in the direction of good government. Be active in selecting candidates (or delegates to conventions) who will work for those goals. Volunteer for party organization work. Pay your party organization dues; and contribute money to help pay the costs of campaigning to elect your candidates.

In forthcoming issues of Canco publications, our government relations department will explain political party organization at all levels; and will describe how you can arrange for your personal political contributions to flow in support of the causes and candidates which you, as a citizen, believe in and want to support.

The summary of my message can be repeated from the closing part of my previously reported Chicago speech: "The payoff * * * will come only if and when knowledgeable people actually support the cause of good government with their own personal effort. * * * A vastly increased number of people must be encouraged, stimulated and urged to work in their own precincts and wards for good government, through the party of their individual and personal choice. * * * The decision to work or not work to promote the cause of good government must, of course, be left to the individual's personal conscience."

Sincerely yours,

WILLIAM C. STOLK,
President.

Steve Parker: Show Business Ambassador of Good Will

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HOLT. Mr. Speaker, members of show business, as you know, have long been good-will ambassadors for the United States. One such good-will ambassador is producer Steve Parker who has personally done a great deal to improve our relations with Japan.

Mr. Parker, who is married to actress Shirley MacLaine, resides at 4061 Royal Oaks Place, Encino.

A token of the appreciation of Mr. Parker's efforts on the part of the Japanese nation was the recent award which was presented to him by the Japanese Consul in Los Angeles designating him "Man of the Year."

More recently, Mr. Parker rounded up the leading entertainers in Japan and brought them to the United States to be featured at the New Frontier Hotel in Las Vegas in his "Holiday in Japan" production. Critics have hailed this show as a worthy representation of the Japanese culture, one which will help many Americans understand that Oriental nation.

It was for bringing this production to America that Mr. Parker received the Japanese Government's "Man of the Year" award.

During the past 4 years, Mr. Parker has also helped create Japanese understanding of America and of American business methods. While conducting his own entertainment enterprises in Japan, Mr. Parker has always been so courteous that he has created infinite good will for America and has even been commended for this by our Ambassador to Japan, Mr. Douglas MacArthur II.

He has further added to this country's respect abroad by instructing Japanese film makers in American motion-picture technical know-how.

One documentary film, entitled "Onsen," which he made in and about Japan was awarded first prize at the Southeast Asia Film Festival, thereby bringing further prestige to America in the Orient.

Another of his films about Japan, "Geisha," won first prize at the World Film Festival in Brussels, Belgium.

Mr. Parker has been extremely active in promoting Japanese charities, as have been he and Mrs. Parker in promoting national and local charities in the southern California area.

Marquardt Contributes to San Fernando Valley Growth

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HOLT. Mr. Speaker, once replete with orange trees, walnut groves, and farmland, the topography of California's San Fernando Valley has progressively changed within the past two decades to a major industrial and residential complex.

Today, more than 850,000 people reside in the valley area; more than 20,000 large and small businesses flourish. Contributing to the vital national defense effort and to the economic and sociological welfare of the valley community are a number of major industries engaged in research, development, and production of aircraft, missiles, rocketry, nucleonics, and electronics.

The valley's growth spiral is no mere coincidence but representative of a cycle which found its beginnings during the 1940's when the first groups of far-sighted industrialists gambled on the potential of the area. As farm turned to factory and residences replaced orchards and groves, more industry and more people were attracted to the San Fernando Valley. This influx has generated an unprecedented community development program for new homes, schools, churches, shopping areas, hospitals, roads and streets, utilities, and recreational facilities.

Typical of the pioneer firms which established headquarters in the valley is the Marquardt Corp. at Van Nuys. The company, during its 15-year history, has achieved particular recognition as the developer and producer of the first operational supersonic ramjet engine, the cruise propulsion system for the Bomarc area defense missile.

Last month, the Los Angeles Chamber of Commerce, joined by more than 300 civic and business leaders, sponsored a salute to Marquardt testimonial luncheon in honor of the company's achievements and contributions to the community during the past decade and a half.

Marquardt had a most beginning as the result of studies advanced in the field of ramjet propulsion by the company's president and founder, Roy E. Marquardt. His research perceived the feasibility of utilizing waste heat to recover thrust at high speeds—a fundamental of the ramjet propulsion theory. The studies resulted in a Navy ramjet research contract under sponsorship of the University of Southern California, where Mr. Marquardt then served as director of aeronautical research. The company was formed in Los Angeles in 1944 to develop, manufacture, and test these first ramjet engines. These early projects established operational feasibility and contributed to new state-of-the-art design, manufacturing, and test techniques to support the propulsion studies. The initial ramjet work also fostered pneumatic control design and development—at first, as directly applicable to ramjet control, and later, more broadly in the supersonic inlet control field.

By 1948 the need became apparent for new facilities conducive to Marquardt's rapidly expanding operations. The San Fernando Valley offered an ideal site for physical expansion, particularly in the category of highly specialized advanced testing facilities. The valley, then boasting a population of approximately 250,000, provided a potential labor pool from which industry could draw qualified professional and semiprofessional personnel. When Marquardt leased the old Timm Aircraft plant at Van Nuys, the company was comprised of 170 employees, with approximately $50,000 in capital equipment and facilities.

Reflecting the growth of the valley, Marquardt has since expanded and diversified, and today, the company represents an enterprise which is national, and in some instances, international scope. In addition to its power systems group—propulsion, controls, and accessories, and test divisions—and ASTRO division at Van Nuys, the company operates a ramjet engine production plant at Ogden, Utah. Last year, Marquardt embarked upon a diversification program through the acquisition of its Pomona division and a subsidiary, Cooper Development Corp. in Monrovia, thus broadening its capabilities in the development of engine and missile systems, weapons support equipment, and research rocketry. In addition, the company has offices in Washington, D.C., Dayton, Ohio, and Orlando, Fla. Field service representation is also maintained at SAC bases throughout the United States, and in Canada, England, and West Germany.

Since establishing itself at Van Nuys, Marquardt has increased its personnel by 3,500 percent, two-thirds of whom are valley employees. The company's facility appreciation approaches $9 million in property, plant, and equipment—(exclusive of Government-furnished equipment and facilities)—an 18-fold increase over the original Van Nuys facility. An established valley landmark is the $15 million Air Force-Marquardt Jet Laboratory. This facility, which is capable of testing altitudes approaching 200,000 feet and mach numbers of 7 and beyond, makes possible the development of an entirely new generation of supersonic propulsion systems.

The future of ramjet propulsion continues to hold promise for advanced military applications as well as commercial uses. The Bomarc program and other weapon system concepts offer great potential for ramjet-powered antimissile applications. Advanced versions of the ramjet, combining it with rocket power, make ramjets feasible for space operation. Commercially, ramjet-powered transports are envisioned flying coast-to-coast in 1 hour by 1970.

By year-end 1959, Marquardt will have expanded its capabilities in the nuclear propulsion field with the addition of a nuclear systems division at Van Nuys. Anticipating its higher sales and earnings record in its history, the company, in its interim financial statement for the first 28 weeks of 1959, reported sales of $34 million and earnings of $860,000, up 34 percent and 50 percent respectively for the same period in 1958. Its current backlog is approximately $72 million, and the company is projecting a 70 percent increase in earnings over 1958 by the end of the year.

Representing an annual payroll of more than $23 million in the valley community alone, Marquardt paychecks are funneled through the usual channels of local commerce. Its combined payroll, including Pomona, Monrovia, and Ogden, Utah, provides more than $38 million invested in its respective communities.

The Marquardt Corp. is also representative of valley industry's sociological force, contributing its corporate and individual support to community welfare. In addition to its corporate sponsorship of youth groups and charities, the company encourages generous donations to worthy causes through its employee Give Once Club, a payroll deduction plan boasting participation of 85 percent of its employees.

Such firms as the Marquardt Corp., in anticipating the advantages offered by the valley locale, have prospered and have set a pattern for continued industrial expansion. During the 1958–59 period, four major industries in the valley expended $26 million in plant expansion and improvements and at least seven

sizeable industrial firms are in the process of establishing valley plants or have announced plans to expand existing facilities.

So-Called Civil Rights Legislation

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. ROBERTS. Mr. Speaker, I am sure no Member of this House will register surprise when I reveal that I am unequivocally opposed to the approval of any appropriation for the extension of the Civil Rights Commission.

Members know that I have consistently raised a protesting voice against any move which would stir up, either calculatingly or inadvertently, unrest in what would otherwise be harmonious relations between two or more races.

The people of Alabama and the Fourth Congressional District, which I very proudly serve, know of my position on this matter, for when I offered myself to the people of this district to serve them as their Congressman in 1950, I expressed my opposition to any breakdown in the racial segregation which a majority of all our people sincerely want.

Some of you will recall that I appeared before the committee last year, as I had before, in an attempt to prevent the enactment of the so-called civil rights measures which were dreamed up by certain professional ultraliberals to placate certain pressure groups.

I was in this Chamber at about this time 2 years ago urging that the unprecedented civil rights legislation then before us be rejected to protect the rights of the people, to preserve the rights of the States in conducting their own affairs, and to protect the use of the taxpayers' hard-earned money.

The Civil Rights Commission, which is under discussion again now, was authorized in that bill. Proponents were arguing for an oh-so-simple, trial period of only 2 years for this Commission. I asked then whether anyone honestly thought that the minority pressure groups who spawned such a powerful tool would allow it to perish once it was created.

Of course, I knew the answer before I asked, but if anyone had doubts they are now allayed. We are now faced with a proposal to extend this Commission for another 2-year period.

And for what? Newspaper reports have it that all of the members of the Commission but one—the newest member, a Negro—are ready to throw in the towel and will not accept another term if offered it.

The Chairman of this Commission has stated that many of the questions referred to it simply have no right answers. There evidently is confusion and discouragement concerning the function of this Commission.

I think the so-called report of the Civil Rights Commission which was recently submitted to us is the most incriminating evidence of all against this body.

This report is nothing more than a lengthy and costly attempt to justify the questionable action of the 85th Congress in creating such a commission. The document purporting to be a report rambles along through more than 600 prejudiced pages, and in the last analysis it is best described by one of the Commissioners who himself said it was an argument advocating preconceived ideas.

The Civil Rights Commission, armed with malicious intent, went out to find alleged irregularities whether they existed or not. In the process, it was itself a tool to stir up racial unrest and to set back harmonious race relations.

In my own State of Alabama, we saw the arrogant meddling of the Civil Rights Commission. It swooped down upon us, intimidating our officials and harassing our citizens in an attempt to find some grain of trouble upon which it could pounce.

I think Members need to reflect soberly and sincerely before they rush headstrong into following the lead of the civil rights bill of 1957; because one is sorely mistaken if he believes he is furthering the cause of racial advancement through the enactment of legislation such as this.

Congress, in enacting the bill setting up this Commission and the special division in the Justice Department, fanned the coals of mistrust and conflict which have smoldered since the Supreme Court 5 years ago betrayed the constitutional concept of government and sought to effect sociological changes through usurpation of power.

The action of the 85th Congress on this bill was the result of gain-seeking radicals attempting to implement this abuse of public trust through legislating a people's moral behavior. People do not change fundamental beliefs by force, and the Supreme Court and the Congress should realize this.

The Civil Rights Commission, by trying to project the Federal Government into such areas as elections, not only is treading on shaky legal grounds, it is helping to bring to a head the racial conflict which has been fostered through the past decade.

The emotional side—effects which accompanying this matter are splitting this Nation, leaving in its wake discord and strife.

The South has made tremendous progress since Reconstruction Days with the problem of accommodating a large minority group, distinct in race and culture, with a different origin and with different customs and practices. Our area was able to do what no other nation or section of a nation has ever been able to accomplish satisfactorily. It devised a system wherein two races of mankind could live peacefully with mutual respect. It is a system of separate-but-equal opportunities and facilities, allowing each race to work out its own destiny within its own people, allowing at the same time each race to preserve its own racial integrity. The Negro has benefited greatly from this mutually agreeable system; his race has made more progress in this country and made it faster than any other race of people in this history of man.

Pressure groups and politicians living outside the South have failed to understand our bicultural society and have fallen victim to plots and plans which seem to advance a minority group but which actually destroy the only society which protects this group.

An association of Southern Negroes recently reported to President Eisenhower:

> Racial hate and racial prejudice that was dead is now reconstructed. Threat of forced integration has created fear and hate in many of our white friends.

Extension of the Civil Rights Commission can only aggravate this situation. The Commission has served no good purpose. It has provided no new rights and granted no new privilege. It has only agitated trouble.

For the good of all concerned, this Commission should be allowed to die.

The provision authorizing its extension should be stricken from the mutual security appropriations bill, where it certainly has no right to be.

I have always tried to support adequate aid to our friends and allies. It has been my belief, and it still is, that it is infinitely better to send money and technical assistance to foreign lands than it is to send our boys in uniform.

However, if the appropriation for extension of the Civil Rights Commission is not removed from this bill, I will have no alternative but to vote against it.

At this point, I wish to insert an editorial which appeared in yesterday's Anniston Star in Anniston, Ala.:

[From the Anniston Star, Sept. 13, 1959]

CARPETBAG RULE THREATENED AGAIN

Nobody in this part of the country expected to receive a fair and sympathetic report from the U.S. Civil Rights Commission that was appointed by the President several months ago to make a study of the voting rights extended to the people of the country, which meant primarily the Southern States.

The Commission was composed in the main, of college presidents and other theorists who seldom leave their cloistered halls to get out into the midstream of life as it is being lived in the United States today.

Had the situation been otherwise, had they read the newspapers as they have related one orgy of racial crime after another in the large cities of the United States, they might have reported otherwise. For no person in his right mind would want to put the ballot into the hands of those who are making a mockery of the law and of common decency.

Admittedly, the South for many years has thrown up certain safeguards against the indiscriminate exercise of the franchise. Until the last few years, most Southern States imposed a poll tax and a literacy test, together with other restrictions that applied to voting by all citizens, white or colored.

But as education has advanced on the part of both races, thereby making it possible for more of the citizenry to cast an honest and intelligent vote, the poll tax has been abolished or reduced so as to enfranchise a larger segment of the citizenry.

Great progress was being made along that line, and we probably never would have had any outside interference against our civil rights as guaranteed under the Constitution of the United States had the Eisenhower political managers not put the Supreme Court of the United States on the bargain counter.

At the Chicago Convention of the Republican Party in 1956 when it seemed that Bob Taft might win the nomination for the Presidency, Ike's campaign managers promised to give the first vacancy on the Supreme Court to Governor Warren of California, if he would deliver that State's votes to General Eisenhower.

Warren delivered the goods, as it were, and as ill fate would have it, the first vacancy happened to be created with the death of Chief Justice Fred Vinson. And knowing that he was by no means qualified for that great responsibility, an effort then was made to get the California Governor to accept a lesser appointment.

But Eisenhower's emissaries strove to no avail. And it was because of that appointment of a legally incompetent man to exercise the vast power of Chief Justice that we here in the South are once more threatened with carpetbag rule and all the evils that accompanied reconstruction in this great area.

We already have seen Federal troops occupy and surround schoolhouses in Little Rock, Ark., prodding men, women, boys, and girls with the bayonets of their rifles in an effort to set up an educational system under martial law. And now we are threatened with the loss of our civil rights under the sentence of Ike's smelling committee.

Not only have we here in the South already seen the Constitution of the United States prostituted to pay a gambler's debt, as it were, but now as a consequence of Eisenhower's election and the appointment of a political theorist as Chief Justice, we are about to lose our whole Bill of Rights.

If the alleged abuses in the exercise of the ballot to which Ike's commission complains had been staged in any other setting than that of the South, we would have heard no more about it after their visit to this part of the country.

But if they are so exercised over the purity of the ballot and the inalienable rights of the people to vote, why doesn't the Eisenhower commission urge the granting of the franchise to the people of the District of Columbia?

We know the answer to that question as well as the commission knows it and as well as it is known by some hypocrites in the Congress. It is because if all the people were allowed to vote, as is threatened in the South, the Capital City of our Nation probably would have an ignorant and criminal Negro for its mayor.

That is unthinkable to a responsible majority of the Members of the House and Senate, as well as to the civil populace of Washington, who already are suffering losses through the impairment of property values resulting from the great influx of Negroes to the District since the second emancipation proclamation was laid down by Warren et al.

But the District of Columbia is by no means the only part of the United States that has suffered as a result of the attempt to integrate all the people of the country into one conglomerate whole.

New York, San Francisco, Chicago, Milwaukee, St. Paul and Minneapolis, Philadelphia, Kansas City, St. Louis, Detroit, and other of our larger cities in the North and West, are undergoing a saturnalia of sexual and other crimes that is without precedent in the entire history of this country.

In the opinion of this paper, therefore, it is far more important to invoke the majesty of the law in these large centers of population than it is to make a national issue out of the loss of some registration papers in a little community near Tuskegee Institute, to which the Alabama Legislature has just voted another large appropriation as an evidence of friendly racial relationships.

In spite of the memories of Reconstruction and carpetbag rule, in spite of an amendment to the Federal Constitution at the point of bayonets in order to punish the South, more of our sons on a per capita basis have volunteered to defend the Union in two world wars than any other region.

It would seem, therefore, that the U.S. Government could find something more constructive and of greater moment to worry about in this crucial period of history than to dig up the dry bones of yesteryear's tragedy to flaunt in the face of honorable citizens of our common country.

Résumé of Activities of the House Committee on the District of Columbia, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. McMILLAN. Mr. Speaker, I take great pleasure in presenting to the House a complete résumé of all action taken by the Committee on the District of Columbia during the 1st session of the 86th Congress.

I consider the House District Committee one of the ablest and most outstanding committees in the Congress. During the past few Congresses, we have had as members of the committee five chairmen of other ranking committees in the House, and this year we have chairmen of two other ranking House committees as members of the District Committee.

I have experienced no difficulty in securing a quorum at all times even though every member of the District Committee is also a member of another major committee. The members of the House District Committee seem to be interested in the problems confronting the Nation's Capital, realizing that Washington was set aside as a Federal city, and are eager to devote much of their valuable time to making laws for the District of Columbia as a part of their congressional duties.

We are all interested in keeping Washington the most beautiful city in the world, and we make every effort to give the Police Department the assistance necessary to keep this a safe city for visitors to the Nation's Capital. Every person in the United States has a personal and financial interest in the city of Washington, in which millions and millions of dollars of taxpayers' money are spent annually for the purpose of housing Federal Departments, the Nation's Capital, and the White House. We have been successful in having several Federal buildings approved for the District of Columbia costing hundreds of millions of dollars while very few Members have been able to secure congressional approval of a single Federal building or any funds whatsoever for their individual towns or districts. Therefore, we feel that the people residing in the District of Columbia have the best of representation in the Congress.

I personally feel that the executive department of the Commission form of government here in the District of Columbia should work more closely with the Congress as I am certain we could accomplish more for the Nation's Capital if we were better informed regarding the background of all the employees who are administering and enforcing the laws we pass.

I want to take this opportunity also to thank Senator ALAN BIBLE and the other members of the Senate District Committee for their excellent cooperation in solving our mutual problems in connection with the affairs of the District of Columbia, and I am certain that during the 2d session of the 86th Congress we shall be able to pass all the legislation necessary to operate the Commission form of government successfully in the District of Columbia.

We are proud of the record made by the Committee on the District of Columbia in the 1st session of the 86th Congress during which we have secured House passage of 24 House bills and 11 Senate acts. I am pleased to present the following detailed account of the actions of our committee during this session:

DISTRICT BILLS, ACTS, AND RESOLUTIONS IN CONNECTION WITH WHICH THE HOUSE DISTRICT COMMITTEE HAS TAKEN ACTION DURING THE 1ST SESSION OF THE 86TH CONGRESS

H.R. 20, premarital examination of applicants for marriage licenses, provide for.

H.R. 76, small claims and conciliation branch of Municipal Court, amend act to increase jurisdiction to $100.

House Joint Resolution 297, Heliport, Commissioners authorized to make study concerning establishment, construction, and operation of.

H.R. 306, oldest inhabitants in the District of Columbia, conveyance of certain real property to.

H.R. 345, ophthalmic products, prohibit advertisement of retail sales price of.

House Concurrent Resolution 388, memorials to great statesmen of the United States in District of Columbia should be living memorials, provide for.

H.R. 580, law, practice of, amend act.

H.R. 835, attachment, and garnishment, amend law by modifying provisions for.

H.R. 836, attachment, and garnishment, amend law by modifying provisions for.

H.R. 874, banking system, dual, provide for in District of Columbia.

H.R. 875, dangerous weapons act, amend, creating a presumption in connection with the possession of.

H.R. 1378, Unemployment Compensation Act, amend.

H.R. 1379, home rule, provide for in District of Columbia.

H.R. 1380, Unemployment Compensation Act, amend.

H.R. 1647, Association of Childhood Education International, exempt certain real and personal property from property tax in District of Columbia.

H.R. 1844, Life Insurance Act, District of Columbia, amend.

H.R. 2317, licensing and bonding of collection agencies, provide for.

H.R. 2318, closing-out sale, provide for regulation of.

H.R. 2321, home rule, provide for elected commission form of government.

H.R. 2322, mileage tax, exempt certain common carriers of passengers from.

H.R. 2329, wages, exempt from attachment and garnishment in the District of Columbia.

H.R. 2511, penalties for willful concealment of goods on premises of stores, provide for.

H.R. 2518, evidence, provide for admission of in courts of District of Columbia.

H.R. 2519, responsibility for criminal conduct, provide for.

H.R. 2522, retirement of judges of municipal court, municipal court of appeals and juvenile court, amend.

H.R. 2530, widows, widowers, minor children, amend act granting right of possession of property.

H.R. 2749, Policemen and Firemen's Retirement and Disability Act, amend to make benefits apply to widows, orphans.

H.R. 2750, Policemen and Firemen's Retirement and Disability Act, applicable to retired former members of Police and Fire Departments.

H.R. 2755, penalties, establish certain increases for habitual criminals.

H.R. 2756, admissibility of confessions in criminal prosecutions, provide for.

H.R. 3004, evidence, rules to follow in insanity cases.

H.R. 3030, retirement compensation, Director, Metropolitan Police Force Band, provide for.

H.R. 3298, taxes, income, charitable contributions, deductible even though activities not carried on in District.

H.R. 3494, clergymen, communications made to them shall be considered privileged.

H.R. 3656, Unemployment Compensation Act, amend.

H.R. 3663, schoolchildren, purchase bus tickets from commissioners at reduced prices.

H.R. 3664, schoolchildren, amend act relating to fares.

H.R. 3735, Policemen and Firemen's Retirement and Disability Act, applicable to retired former members of Police and Fire Departments, their widows, widowers and children.

H.R. 3855, public adjusters, provide for licensing of.

H.R. 4005, physical therapy, regulate practice of by registered physical therapists.

H.R. 4071, Business corporation act, amend.

H.R. 4072, regulation of the practice of dentistry, amend act.

H.R. 4073, placement of children in family homes, amend act.

H.R. 4109, chiropractic—provide for issuance of a license to Anderson Brown.

H.R. 4192, ministers, certain communications considered privileged.

H.R. 4282, Sisters of the Visitation, of Georgetown, supplement and modify act relating to corporate powers.

H.R. 4283, Income and Franchise Tax Act, 1947, exempt certain officers of executive branch from payment of.

H.R. 4286, school census, amend act providing for taking of.

H.R. 4400, home rule, provide for in District of Columbia.

H.R. 4454, trustees, certain corporations, eliminate restriction on number of.

H.R. 4492, Policemen and Firemen's Retirement and Disability Act, applicable to retired former members of Police and Fire Departments, their widows, widowers, and children.

H.R. 4585, garnishments, amend law by modifying provisions for.

H.R. 4630, H.R. 4631, H.R. 4632, H.R. 4633, H.R. 4634, H.R. 4635, H.R. 4636, H.R. 4637, H.R. 4638, H.R. 4639, H.R. 4640, H.R. 4641, H.R. 4642, H.R. 4643, H.R. 4683, H.R. 4694, H.R. 4715, H.R. 4726, H.R. 4754, home rule, provide for in District of Columbia.

H.R. 4810, sales tax, exempt sales of food for human consumption.

H.R. 4820, home rule, provide for in District of Columbia.

H.R. 4853, indecent publications, amend act relating thereto.

H.R. 5210, A.B.C. Act, amend, permit Board to use discretion in requirement relating to the serving of beer at public tables.

H.R. 5244, domestic relations branch of municipal court, extend jurisdiction to cover the adjudication of the interests of husband and wife of personal and real property.

H.R. 5490, licensing of persons engaged in budget planning services, provide for.

H.R 5534, George Mason Memorial, name of 14th Street Bridge.

H.R. 5549, garnishments, amend law by modifying provisions for.

H.R. 5633, medical expenses, amend Income and Franchise Tax Act relative to deductions of.

H.R. 5677, home rule, provide for in District of Columbia.

H.R. 5889, indigents in judicial proceedings in the District of Columbia, provide for representation.

H.R. 6123, indecent publications, amend law relating thereto.

H.R. 6163, creation of Office of Administrator for Legal Assignments, provide for.

H.R. 6272, license, pharmacy, provide for issuance to Diodato Villamena.

H.R. 6301, tax refund to retail dealers on motor-vehicle fuels lost due to evaporation and shrinkage.

H.R. 6302, National Guard, amend act with respect to the compensation of certain civilian employees of.

H.R. 6378, American Society of International Law, use certain real estate in District of Columbia as natianal headquarters.

H.R. 6454, American War Mothers, Inc., exempt certain property from taxation.

H.R. 6585, Teachers' Salary Act of 1955, amend, grant additional compensation to coaches.

H.R. 6662, Hospital Center Act, amend, extend time during which appropriations may be made.

H.R. 6668, corporations act as trustees under deeds of trust, amend Business Corporation Act to permit.

H.R. 6738, fire prevention and safety laws applicable to schools in District of Columbia, strengthen.

H.R. 6772, annuities payable to certain annuitants from teachers' retirement and annuity found, increase.

H.R. 6773, Real Estate Commission, empowered to suspend or revoke licenses for certain activities by licensees.

H.R. 6820, tax refund to retail dealers on motor-vehicle fuels lost due to evaporation and shrinkage.

H.R. 6821, law, practice of, prohibit certain persons from engaging in.

H.R. 6893, Stadium Act, amend with respect to motor-vehicle parking area.

H.R. 6929, illustrations in District of Columbia annual report, allow use of.

H.R. 7074, Veterans of Foreign Wars, transfer tax exemption from building formerly owned by them to property now owned.

H.R. 7124, tuition, payment of by certain persons who attend public schools in District of Columbia.

H.R. 7145, mortgage loans by insurance companies, permit loans up to 75 percent of property value.

H.R. 7375, A.B.C. act amend, require retailers and wholesalers to file with A.B.C. Board minimum price of alcoholic beverages.

H.R. 7429, guardian, minor child, actions relating to.

H.R. 7458, bags, plastic, prohibit sale and distribution of.

H.R. 7493, taxicabs, installation of meters in, repeal section 8 of Appropriations Act, 1960.

H.R. 7507, tax, income and franchise, amend act with respect to deductions for charitable contributions.

H.R. 7639, license to practice dentistry, permit Hans Musaeus to take examination.

H.R. 7653, dogs, reguired to be kept on leash when they are in streets or other public places.

H.R.7683, Veterans of Foreign Wars, transfer tax exemption from building formerly owned by them to property now owned.

H.R. 7714, television service contractors, dealers, technicians, provide for regulation and licensing of.

H.R. 7907, St. Ann's Infant Asylum, amend act of incorporation.

H.R. 7989, Cultural Center, national, provide for deposit in special fund in the Treasury of the United States 1 mill out of every $1 for the advancement of.

H.R. 7996, National Woman's Party, Inc., exempt certain property from taxation.

H.R. 8081, home rule, provide for in District of Columbia.

H.R. 8143, Cultural Center, National, provide for deposit in special fund in the Treasury of the United States 1 mill out of every $1 for the advancement of.

H.R. 8204, suits against employees of District of Columbia government arising out of their operation of vehicles in scope of employment, defense of.

H.R. 8223, Cultural Center, National, provide for deposit in special fund in the Treasury of the United States 1 mill out of every $1 for the advancement of.

H.R. 8225, paregoric, amend Uniform Narcotic Drug Act to permit dispensing of by oral as well as written prescription.

H.R. 8285, salary increase, teachers, school officers, board of education employees.

H.R. 8320, District of Columbia Teachers College, authorize conferring of M.A. degree to certain students.

H.R. 8326, salary increase, teachers, school officers, Board of Education employees.

H.R. 8357, pensions, trusts, exempt from laws relating to perpetuities, restraints on alienation, and accumulation of income.

H.R. 8391, Junior College Division within District of Columbia Teachers College, authorize.

H.R. 8392, Stadium Act of 1957, amend.

H.R. 8415, Nonsovereign State, provide for admission of District of Columbia into Union as a.

H.R. 8493, Space Cadet Corps, incorporate.

H.R. 8527, pensions, trusts, exempt from laws relating to perpetuities, restraints on alienation, and accumulation of income.

H.R. 8693, Domestic Relations Branch, Municipal Court, extend jurisdiction to cover adjudication of the interests of husband and wife of real and personal property.

H.R. 8696, Police and Firemen's Salary Act of 1958, amend to remove certain inequities.

H.R. 8697, Redevelopment Act of 1945, amend with respect to the requirements for adoption of a redevelopment plan for a project area.

H.R. 8709, trading stamps, permit use of in District of Columbia.

H.R. 8734, age, prohibit unjust discrimination in employment because of.

H.R. 8768, A.B.C. Act, amend, require retailers and wholesalers to file with A.B.C. Board minimum price of alcoholic beverages.

Senate Joint Resolution 52, heliport, Commissioners authorized to make study concerning establishment, construction, and operation of.

S. 643, assessment for public improvements, to permit District of Columbia officials to use registered and certified mail in notifying property owners of.

S. 644, census, school, to amend the act regarding.

S. 645, dangerous buildings, to amend act regarding removal of.

S. 660, Business Corporation Act, to amend.

S. 685, Association for Childhood Education International, exempt certain real and personal property from property tax in District of Columbia.

S. 715, indecent publications, amend law relating to.

S. 745, condemned buildings, to conform the method of collecting assessments on.

S. 746, children, regulate placement of in family homes, amend act.
S. 866, illustrations in District of Columbia annual reports, to allow the use of.
S. 949, ladies of the Grand Army of the Republic, provide for incorporation of.
S. 1159, Alley Dwelling Act, to amend to facilitate the acquisition of real property.
S. 1315, Blue Star Mothers of America, Inc., provide for incorporation of.
S. 1370, Redevelopment Act of 1945, to amend section 13 of.
S. 1371, birth certificates, transcripts of, to authorize Commissioners to fix and collect fees for in an amount which will reimburse the District for the cost of issuance.
S. 1372, Domestic Relations Branch, Municipal Court, extend jurisdiction to cover adjudication of the interests of husband and wife in real and personal property.
S. 1456, appointment of two additional juvenile court judges, provide for.
S. 1681, home rule, provide for in District of Columbia.
S. 1921, United Spanish War Veterans, Inc., exempt certain property from taxation.
S. 1966, insurance adjusters, public, provide for licensing of.
S. 2035, guardian, minor child, actions relating thereto.
S. 2445, District of Columbia Teachers College, authorize conferring of master of arts degrees to certain students.

BILLS AND ACTS WHICH HAVE PASSED HOUSE DURING 1ST SESSION OF 86TH CONGRESS

H.R. 303, Oldest Inhabitants in the District of Columbia, conveyance of certain real property to.
H.R. 836, attachment and garnishment, amend law by modifying provisions for.
H.R. 1844, Life Insurance Act, District of Columbia, amend.
H.R. 2317, licensing and bonding of collection agencies, provide for.
H.R. 2318, closing out sale, provide for regulation of.
H.R. 2322, mileage tax, exempt certain common carriers of passengers from.
H.R. 3030, retirement compensation, Director, Metropolitan Police Force Band, provide for.
H.R. 3735, Policemen and Firemen's Retirement and Disability Act, applicable to retired former members of police and fire departments, their widows, widowers, and children.
H.R. 4072, regulation of the practice of dentistry, amend act.
H.R. 4192, ministers, certain communications considered privileged.
H.R. 4282, Sisters of the Visitation of Georgetown, supplement and modify act relating to corporate powers.
H.R. 4283, Income and Franchise Tax Act, 1947, exempt certain officers of executive branch from payment of.
H.R. 4454, trustees, certain corporations, eliminate restriction on number of.
H.R. 5534, George Mason Memorial, name of 14th Street Bridge.
H.R. 6123, indecent publications, amend law relating thereto.
H.R. 6378, American Society of International Law, use certain real estate in District of Columbia as national headquarters.
H.R. 6585, Teachers' Salary Act of 1955, amend, grant additional compensation to coaches.
H.R. 6662, Hospital Center Act, amend, extend time during which appropriations may be made.
H.R. 7145, life insurance, amend act to regulate, permit insurance companies to allow mortgage loans up to 75 percent of property value.
H.R. 7683, Veterans of Foreign Wars, transfer tax exemption from building formerly owned by them to property now owned.
H.R. 7907, St. Ann's Infant Asylum, amend act of incorporation.
H.R. 8225, Uniform Narcotic Drug Act, amend, permit paregoric to be dispensed by oral as well as written prescription.
H.R. 8392, Stadium Act of 1957, amend.
H.R. 8527, trusts, pensions, exempt from laws relating to perpetuities, restraints on alienation, and accumulation of income.
S. 643, assessment for public improvements, to permit District of Columbia officials to use registered and certified mail in notifying property owners of.
S. 660, Business Corporation Act, to amend.
S. 685, Association for Childhood Education International, exempt certain real and personal property from property tax in District of Columbia.
S. 746, children, regulate placement of in family homes, amend act.
S. 866, illustrations in District of Columbia annual reports, to allow the use of.
S. 949, Ladies of the Grand Army of the Republic, provide for incorporation of.
S. 1371, birth certificates, transcripts of, to authorize Commissioners to fix and collect fees for in an amount which will reimburse the District for the cost of their issuance.
S. 1372, domestic relations branch, municipal court, extend jurisdiction to cover adjudication of the interests of husband and wife in real and personal property.
S. 1921, United Spanish War Veterans, Inc., exempt certain property from taxation.
S. 2035, guardian, minor child, actions relating thereto.
S. 2445, District of Columbia Teachers College, authorize conferring of master of arts degrees to certain students.

DISTRICT BILLS AND ACTS WHICH PASSED BOTH HOUSE AND SENATE DURING THE 1ST SESSION OF THE 86TH CONGRESS AND WERE SENT TO THE PRESIDENT FOR HIS SIGNATURE

H.R. 303, Oldest Inhabitants in the District of Columbia, conveyance of certain real property to (Public Law 86–216).
H.R. 836, attachment and garnishment, amend law by modifying provisions for (Public Law 86–130).
H.R. 2317, licensing and bonding of collection agencies, provide for (Public Law 86–217).
H.R. 2318, closing out sale, provide for regulation of (Public Law 86–219).
H.R. 3030, retirement compensation, Director, Metropolitan Police Force Band, provide for.
H.R. 3735, Policemen and Firemen's Retirement and Disability Act, applicable to retired former members of police and fire departments, their widows, widowers, and children.
H.R. 4072, regulation of the practice of dentistry, amend act (Public Law 86–93).
H.R. 4282, Sisters of the Visitation, of Georgetown, supplement and modify act relating to corporate powers (Public Law 86–32).
H.R. 4454, trustees, certain corporations, eliminate restriction on number of (Public Law 86–83).
H.R. 5534, George Mason Memorial, name of 14th Street Bridge (Public Law 86–86).
H.R. 6378, American Society of International Law, use certain real estate in District of Columbia as national headquarters (Public Law 86–208).
H.R. 6662, Hospital Center Act, amend, extend time during which appropriations may be made (Public Law 86–85).
H.R. 7145, mortgage loans by insurance companies, permit loans up to 75 percent of property value.
H.R. 7683, Veterans of Foreign Wars, transfer tax exemption from building formerly owned by them to property now owned.
H.R. 7907, St. Ann's Infant Asylum, amend act of incorporatoin (Public Law 86–202).
H.R. 8225, paregoric, amend Uniform Narcotic Drug Act to permit dispensing of by oral as well as written prescription (Public Law 86–206).
H.R. 8392, Stadium Act of 1947, amend.
H.R. 8527, pensions, trusts, exempt from laws relating to perpetuities, restraints on alienation, and accumulation of income (Public Law 86–201).
S. 643, assessment for public improvements, to permit District of Columbia officials to use registered and certified mail in notifying property owners of (Public Law 86–46).
S. 660, Business Corporation Act, to amend (Public Law 86–106).
S. 685, Association for Childhood Education International, exempt certain real and personal property from property tax in District of Columbia (Private Law 86–156).
S. 746, children, regulate placement of in family homes, amend act (Public Law 86–177).
S. 866, illustrations in District of Columbia annual reports, to allow the use of (Public Law 86–101).
S. 949, Ladies of the Grand Army of the Republic, provide for incorporation of (Public Law 86–47).
S. 1371, birth certificates, transcripts of, to authorize Commissioners to fix and collect fees for in an amount which will reimburse the District for the cost of issuance (Public Law 86–178).
S. 1372, Domestic Relations Branch, Municipal Court, extend jurisdiction to cover adjudication of the interests of husband and wife in real and personal property (Public Law 86–241).
S. 1921, United Spanish War Veterans, Inc., exempt certain property from taxation (Private Law 96–161).
S. 2035, guardian, minor child, actions relating thereto (Public Law 86–268).
S. 2445, District of Columbia Teachers College, authorize conferring of M.A. degrees to certain students.

DISTRICT BILLS WHICH PASSED THE HOUSE DURING THE 1ST SESSION OF THE 86TH CONGRESS AND ARE PENDING BEFORE THE SENATE

H.R. 1884, Life Insurance Act, District of Columbia, amend.
H.R. 2322, mileage tax, exempt certain common carriers of passengers from.
H.R. 6123, indecent publications, amend law relating thereto.
H.R. 6585, Teachers' Salary Act of 1955, amend, grant additional compensation to coaches.

DISTRICT BILLS WHICH PASSED THE HOUSE DURING THE 1ST SESSION OF THE 86TH CONGRESS, WERE AMENDED AND PASSED BY THE SENATE, AND WHICH WILL PROBABLY BE SENT TO CONFERENCE FOR ACTION

H.R. 4192, ministers, certain communications considered privileged.
H.R. 4283, Income and Franchise Tax Act, 1947, exempt certain officers of executive branch from payment of.
H.R. 6123, indecent publications, to amend law relating thereto.[1]
S. 715, indecent publications, to amend law relating thereto.[1]

[1] These two bills, one passed by the House and the other by the Senate, contain differences which will probably be resolved in conference.

New Aid Against Forest Fires

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CASE of South Dakota. Mr. President, the effectiveness of a new firefighting tool was well demonstrated

recently when a forest fire raged out of control around the city of Deadwood, S. Dak.

That tool is bentonite, a white clay which is powdered, mixed with water, and dumped on forest fires from low-flying aircraft to smother crown fires.

More than half of the world's production of bentonite comes from plants located at Belle Fourche, S. Dak.

It is possible that the historic city of Deadwood would be nothing but ashes today were it not for the prompt and effective use of this firefighting agent by the courageous men who fought back the flames.

United Press International, reporting on the use of bentonite in the fire, called it "a miracle worker." It credited Paul Bechtner, Chicago, general manager of the American Colloid Co., with first hitting upon the idea.

Under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I ask that this article by United Press International be reprinted.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls (S. Dak.) Argus-Leader, Sept. 13, 1959]

CLAY MIXTURE EFFECTIVE AGAINST DEADWOOD FIRE

BELLE FOURCHE, S. DAK.—Bentonite, the clay of a thousand uses, is proving itself in a dramatic new job in South Dakota.

The white, extremely water absorbent clay, has turned out to be a miracle worker in fighting forest fire.

Put to its first major test in combating the raging fire in the Deadwood vicinity last week, the bentonite slurry dumped from planes is drawing high praise from the smoke-begrimed linemen to the top Forest Service official who has seen it in action.

In fighting fires the bentonite, shipped from a plant here in powder form, is mixed with water to form a slurry and pumped into planes such as B-24's and Navy TBM patrol bombers.

The pilot zooms in low over his target, releases his tank of slurry—and the crown fire is out.

Those who have watched the magic slurry work say it is just like snuffing a candle. All that remains is the ground fire at the base of the trees and a puff of white smoke.

Workers say a cold wave follows the plane, a sharp relief to the workers and a fire deterrent.

Fighting fire with bentonite is the brain child of Paul Bechtner, Chicago, general manager of the American Colloid Co.

The idea was first tried in a Black Hills demonstration several weeks ago.

Forest Service officials were so impressed that further demonstrations were made at Missoula, Mont., and Boise, Idaho.

But it was in the Deadwood fire that the slurry appeared to have proved to be the newest weapon to combat fires in forests.

Details of the development were outlined here by Joe Hofer, office manager for American Colloid's Belle Fourche plant, which has been doing the basic work on the idea.

Hofer said in combating fires, efforts are made to cool the blaze and snuff it out. Bentonite slurry has the capacity to both cool and to smother.

He said a demonstration of the slurry had been scheduled at Custer Tuesday, but when the Deadwood fire broke out, all hands turned to combating the blaze.

At first only two planes were used. Then the slurry proved so effective that two more were brought in. By noon Thursday, over 50,000 gallons of slurry had been dumped on the Deadwood fire and four planes were in action.

Firefighters have credited the slurry with preventing the Deadwood blaze from breaking out of control on the hill behind St. Joseph's Hospital at Deadwood Wednesday afternoon.

Thus far, Hofer said 1,116 bags of bentonite—55 tons—have been shipped to the mixing headquarters at the Spearfish airport.

Hofer said Forest Service officials who have seen the slurry work say "benonite is the weapon to use."

In battling the Deadwood fire, the first load was dyed so the pilot could see how his load was dumped. After that, however, there just wasn't time to bother with dying the slurry.

Claude Acord, American Colloid plant superintendent here, and Dick Pridgeon, assistant superintendent, supervised the mixing and loading operations.

The local plant had to construct a special pump to transfer the slurry from mixing tanks to the plane. The pump was taken to Missoula, Mont., for a demonstration and Forest Service officials here were so impressed they wouldn't let the pump be returned.

So the plant here constructed a new pump, luckily finishing it just in time to help fight the Deadwood fire.

Hofer said several demonstrations are scheduled in Chicago, West Virginia, and other spots.

However, he said before they are conducted, the local crews will take a rest and construct more equipment.

Bentonite is a colloidal clay that swells 13 times its dry weight when it becomes wet.

It is used in many ways by industry, including the manufacture of face powder, gunpowder, and steel. It is used to seal dams and is an important component of the "drillers mud" used in oil-well drilling.

Boneonite is mined in open pit mines along the Belle Fourche River and in Wyoming and Canada. It lies in beds several feet thick, at the surface of the ground or with as much as 20 feet of dirt overburden.

Processing consists of drying it in huge kilns, grinding it to a powder, and packaging.

More than half of the world's production of bentonite has come from plants located in and near Belle Fourche for the past 25 years. There are now four plants headquartering at Belle Fourche.

Failure of Congress To Provide Needed Changes in Existing Farm Laws

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. WILSON. Mr. Speaker, as we approach the close of the 1st session of the 86th Congress, I wish to take this opportunity to make a frank and honest appraisal of the failure of Congress to provide needed changes in existing, obsolete farm laws which virtually everyone agrees are not really beneficial to farmers or agriculture generally.

Throughout history agriculture has often been faced with problems of shortages or surpluses. At the present time we are blessed with a God-given agricultural abundance brought about by a combination of generally good growing conditions and most important—the efficiency, creativeness, and hard work of farmers and ranchers.

The surpluses of some crops, particularly wheat, which have been created in most instances through unwise, unneeded, and unrealistic production incentive programs present serious problems, should have had remedial attention by this Congress. A stable, sound, expanding, and prosperous agriculture demands that Congress realistically face this pressing domestic problem. But the Democrat-controlled Congress has failed to act despite the presentation of reasonable, realistic, and beneficial proposals from this administration which had bipartisan support.

It is most unfortunate that this Congress has failed to accept and discharge its responsibilities on fundamental farm legislation.

The failure to honestly and courageously legislate to improve the farm surplus situation may be partially attributed to the surplus of another element. I refer to the surplus of demagoguery about agriculture during this session that has prevented attempts at statesmanship and placed roadblocks in the path of needed and beneficial legislative changes.

It almost appears sometimes that there are some public figures who would prefer to perpetuate certain farm problems so that they can exploit them for political purposes rather than dealing with them decisively and constructively in an attempt to find a real solution.

I know it is most disillusioning to many Members of the Congress to witness the efforts by some of our colleagues to shift responsibility for the failure to enact needed farm laws. Lest anyone forget, under our constitutional form of government it is still the Congress that passes the laws, and it is intellectually dishonest to infer that the executive branch is to be blamed because new laws were not passed.

There has been an overpowering surplus of demagoguery in recent months by some public figures who repeatedly emphasize in speeches and statements the need for changes in the farm programs. These same speeches and statements usually also attack and minimize the recommendations submitted by the President in his agricultural message last January and followed with testimony by the Secretary of Agriculture and the actual submission of draft legislation.

It almost appears some persons reason that the more they attack, the less they are obliged to offer constructive suggestions. Carried to extremes it would almost seem some have concluded that if they attack the administration enough they can completely divert attention from their failure to offer anything constructive.

Yes, there has been a great surplus of attacking and criticizing from some Members of Congress and a great shortage of constructive suggestions.

I am convinced that the American people will not be fooled by such demagoguery and unethical political tactics. The people of this Nation will remember that the House of Representatives in the 1st session of the 86th Congress was controlled almost 2 to 1 by the Democrats.

The proportion in the Senate is almost the same. It does not make much logic for Democrats to attack the administration for shortcomings in farm legislation when the Congress is so overwhelmingly controlled by their party.

In the House Committee on Agriculture there are 22 Democrats and 12 Republicans. With this kind of proportion there has been a feeling of futility on the part of the minority.

Let me cite some examples: In the case of poultry and eggs there were severe attacks upon the Department and the administration. But those who shouted the loudest for some kind of action were most bankrupt of ideas when it came to suggesting or passing any legislation. In contrast, the Department has proceeded with poultry and egg promotion programs cooperating with farm groups and the poultry and egg industry. The Department has also initiated buying programs, and we are making progress with a difficult situation.

All of us want poultry and egg farmers to receive a fair return for their labors, but the demagogic attacks and unfounded charges by some public figures have certainly done nothing to improve the situation.

The Congress is controlled 2 to 1 by the Democrats. If they have some magical plan for poultry and eggs, why do they not pass it. The fact of the matter is they know that everything is being done that can feasibly be done, but many are not fair enough to admit it and would rather inflame public opinion by critical statements.

Certainly we are not going to repeat the egg fiasco of 1950 when the Government purchased eggs and stored them in caves in Kansas until they rotted and were destroyed at great expense and great damage to the poultry and egg industry.

The hog situation is similar. Historically, we have ups and downs on the hog price charts. I know it is the objective of most Members of Congress to lessen the intensity of drops in hog prices, but the worst thing for the hog industry is a lot of reckless statements. The next worst thing would be the passage of some of the cockeyed proposals that would get the Government in the hog business at the time we are trying to get less Government intervention in other so-called basic crops where we have had such a sad experience. Some of the wild production payment schemes for hogs that have been discussed would cost hog producers and other taxpayers considerable outlays of money and would seriously weaken the entire hog industry which is today basically sound.

The case of tobacco and wheat is especially graphic in evidencing the failure of Congress to pass realistic corrective legislation. After weeks of trials and procrastination Congress finally sent the President legislation for wheat and tobacco that would have continued obsolete farm laws which have created the very difficulties we are now trying to straighten out.

Nearly everyone admits that existing farm laws are not adequate for a modern dynamic agriculture. Yet the Democrat-controlled Congress passed a farm bill that would have rigidly pegged prices at a time when we are striving to compete and expand markets. Winston-Salem, N.C., a few years ago was the largest tobacco market in the world, but today it is in southern Rhodesia, Africa. Cotton is another vivid example of what happens. This country has lost two-thirds of its world cotton market because of unrealistic inflexible pricing.

And yet with these facts, Congress has the nerve to insult the intelligence of the American people and pass farm legislation that would give us more of the same. Two wrongs do not make a right. In fact a continuation of the old outmoded laws would have further compounded our perplexing farm surplus problems and fortunately the President vetoed both measures for wheat and tobacco.

The vetoed wheat bill also would have made a compulsory cut of 25 percent in acreage for each wheat farm. Now this may not be a serious problem in some of the inefficient wheat raising areas where a few years ago they were producing virtually no wheat at all. These small 15-acre plots are mostly in areas where the farmer could take the cut in acreage and divert those acres into some other alternative crop almost equally as good.

But the traditional wheat-growing farmers of this country could not live with the 25-percent cut in acreage. It is unfair to them and devastatingly damaging to our Nation's agriculture that is dynamic and must be allowed to expand and prosper along with the rest of the expanding and prospering economy.

It is inconceivable that Congress would attempt to saddle the American farmer with repetition of programs that have such a proven bad record. I cannot imagine a single Member of Congress going to the precincts and telling his constituents, whether they be farmers or other taxpayers, in the towns and cities that he voted for the continuance of a program that has been proven so unworkable. This Congress had an opportunity to support and pass the Belcher amendment on wheat which was conceived on a bipartisan basis. The Belcher amendment was supported by the administration and offered a reasonable realistic compromise by providing more freedom to plant and a minimum price support providing adequate protection without the restriction and unfeasible incentives of existing programs that have done irreparable damage to the wheat industry and the traditional wheat farmer.

The responsibility for lack of statesmanship in agricultural legislation must objectively be laid at the feet of the Democrat controlled 86th Congress. This is a matter of great concern, not only to farmers but our entire population. We hear the statement that when farm income drops so do the sales of steel companies and the farm machinery manufacturers. This is so true, but here again what are the facts?

In recent weeks several of the farm machinery companies have reported the best years in their history. Steel sales were an all-time high until the recent strike and much of this was purchased directly or indirectly by farmers and ranchers.

Certainly there are serious problems facing individual farmers and ranchers with their operations. The cost price squeeze and related problems are everyday examples of this and certainly the Department of Agriculture and the Congress are striving to correct these in every feasible way. Let me cite some basic statistics which prove that agriculture is fundamentally strong:

First. Although the cost-price squeeze still exists as a basic problem, spiraling inflation has been almost halted. During the period from 1940 to 1952, the index of prices paid by farmers, including interest, taxes and wage rates, increased more than 100 percent. From January 1953 to August 1959, this index rose only 5 percent.

Second. Farm assets are at an alltime high—$203 billion as of January 1, 1959.

Third. Farmers have only $11 in debts for each $100 of assets. In 1940, the ratio was $19 for each $100.

Fourth. Owner equities rose 8 percent last year to a peak on January 1, 1959, of $197.8 billion.

Fifth. Farm ownership is also at a record high. Two out of every three farms are free of mortgage debt.

Sixth. The family farm continues to dominate agriculture. Ninety-six percent of our farms and ranches are family operations, about the same percentage as 30 years ago.

Seventh. Farm exports in the past 3 years have averaged over $4 billion annually—higher than any other 3-year period in the Nation's history.

Eighth. Big exports are benefiting the American people in two major ways: They strengthen farm prices and incomes and, by meeting urgent requirements of needy people abroad, they promote the interests of world peace.

Ninth. The inventory value of livestock on farms for January 1, 1959, was $18.1 billion—higher by 29 percent than a year ago.

Tenth. The level of living on farms is the highest in history, based on the percentage of farms with electricity, telephones, automobiles, and the purchasing power of the average value of farm products sold or traded.

These 10 points are evidence that agriculture is not in the hardship plight that some demagogs would have us believe. We are making progress and we will make further progress if there is less demagoguery that undermines confidence in agriculture and related industries. We will make additional progress if reasonable, realistic, and beneficial farm legislation is enacted early next year.

Without the needed legislative changes, the Department of Agriculture is continuing to do the best possible job with the means available.

Secretary Benson is a dedicated man and a fighter for the best interests of farmers. He has been a farmer most of his life. He has worked as a county agent and a representative of farm groups in many capacities.

No man or no group has a monopoly on all good ideas for the benefit of agriculture. But, certainly, Secretary Benson who has given his life to agriculture is a proven authority, especially in comparison to some of the self-appointed farm experts whose credentials and experience are very much lacking.

Mr. Speaker, under leave to extend my remarks, I include the following report:

REPORT OF DEPARTMENT OF AGRICULTURE SUBMITTED BY EZRA TAFT BENSON, SECRETARY

FOREIGN AGRICULTURE SERVICE

This administration is proud of the part it has played in making U.S. agricultural commodities available to other countries of the world.

In the past 3 years, agricultural experts have been higher than in any other similar period in American history, averaging over $4 billion annually. Currently yearly production from 40 million acres of U.S. cropland is moving overseas. That represents an area equal to the harvested acreage of the eight Rocky Mountain and the three Pacific Coast States.

These exports have strentghened prices and incomes of our farmers. Exports, though essential to every segment of the agricultural economy, have been especially important to wheat, feed grain, and rice producers; cotton and tobacco farmers; fruit growers; poultrymen; and producers of oilseeds.

At the same time, our shipments of food and fiber have strentghened American foreign policy. As we know, communism flourishes in a climate of want and hunger. Therefore, in meeting urgent human needs in the underdeveloped countries of the world, we are making our abundance—as Persident Eisenhower has requested—serve the cause of world peace.

The highly favorable farm export situation that prevails in this country today did not, in any sense, 'just happen." It is the direct result of a carefully conceived plan of operation put into effect by this administration when it came into office in 1953.

Export statistics show that work was needed—and that work was done. From a low point of $2.8 billion in the fiscal year 1952–53, our farm product exports were built up steadily. In 1956–57, oversea shipments amounted to over $4.7 billion—an all-time high record. Export volume has strayed high to date, averaging over $4.1 billion in the past 3 years.

In setting up a program to enlarge foreign markets, the administration has built soundly.

One of its first steps was to abolish the old Office of Foreign Agricultural Relations, which had functioned largely as a study and research agency, and replace it with a Foreign Agricultural Service. The new FAS was given a major specific responsibility—to expand export of U.S. farm products. All its other activities have been correlated with that overall objective.

A phase of the reorganization was reestablishing the agricultural attachés as a part of the Department of Agriculture. Today, attachés represent the interests of American agriculture in 51 different posts throughout the world. As employees of the Department of Agriculture, rotating between service in the United States and at foreign posts, attachés' activities abroad are closely coordinated with overall U.S. farm policy.

The administration recognized early that market expansion for U.S. farm products in many countries is being held up by high tariffs, embargoes, quotas, restrictions, and similar barriers to trade. Accordingly, it has been administration policy to press continuously for trade liberalization. The pressure is applied through the diplomatic service (including participation by the agriculture attachés), American participation in periodic meetings under the General Agreement on Tariffs and Trade, and activities of the International Monetary Fund. Much work remains to be done, but a number of countries have already lowered their barriers to American farm products.

The administration also recognized that farmers, transportation agencies, exporters, importers, and many other groups require accurate, timely information on foreign agricultural developments. To meet this need, the Foreign Agricultural Service has strengthened its reporting on a great many factors of foreign trade—foreign production, prices, policies, trade barriers, competition, and marketing oportunities.

A broad program of market promotion was launched by the Foreign Agricultural Service several years ago to acquaint foreign consumers with the high quality and wide variety of American farm products. In Switzerland, for example, promotion has pushed exports of poultry meat from virtually nothing in 1954 to an estimated 16 million pounds in 1959. In most of the countries where American cotton is being promoted, per capita consumption has risen significantly. In Japan, where a big effort has been made to promote wheat as a food, imports of U.S. wheat rose from an average of 38 million bushels in the 5 years 1950–54 to 51 million bushels in the 1957–58 marketing year. There are many other instances of successful promotion efforts, including participation in food trade fairs around the world. Much of this promotion work is carried on with the enthusiastic cooperation of U.S. farm and trade groups.

The administration has followed a fixed policy of emphasizing export sales for dollars. Largely because of the administration's efforts to keep prices of its commodities competitive in world markets, dollar sales in recent years have been substantial, accounting for 63 percent of the total exports. Dollar sales, of course, represent the traditional, the permanent way of transacting business in this country. Dollar sales of Government-owned commodities also promote the biggest return flow of cash to the U.S. Treasury.

However, some foreign countries lack dollar exchange. Recognizing this practical obstacle to trade, the administration supported enactment of Public Law 480—the Agricultural Trade Development and Assistance Act of 1954—which authorizes sales for foreign currencies. Foreign currency sales have turned out to be an unusual but effective means of utilizing surpluses, accounting for over a fourth of U.S. exports on a value basis since 1954. In the fiscal year 1959 more than half of the U.S. wheat exported—about 230 million bushels—was sold for foreign currencies. Also moving out of the country under the foreign currency authorization were two-thirds of our exports of edible oils, a fourth of our rice shipments, and a fifth of our cotton exports.

This administration has made good use of barter wherever feasible—exchanging surplus farm products for easily stored and urgently needed critical and strategic materials obtainable only in foreign countries. More than 60 million people in about 85 countries are receiving U.S. food through voluntary relief agencies carrying on foreign assistance programs. Other millions of needy people abroad have been assisted by grants of food and fiber to ease the effects of drought and other emergency conditions. This sharing of our abundance is doing much to create good will for the United States in areas where Communist regimes are trying hard to win the allegiance and the minds of men.

Despite this good record, President Dwight D. Eisenhower last January called for the surplus-producing nations of the world to explore anew additional means of using surplus food in the interests of world peace. Following the President's food-for-peace proposal, meetings were held with representatives of the exporting nations—Argentina, Australia, Canada, France—and the Food and Agriculture Organization (FAO). In an atmosphere of friendly cooperation, possibilities and problems were explored. Possibilities showing particular promise include:

Establishment of reserves to meet emergencies.

Increased donations for school lunch, institutional, and refugee feeding.

Refugee resettlement.

Projects for community self-help.

Several Government agencies are cooperating in food-for-peace planning.

Through cooperation with the other surplus-producing countries will come sound building. And sound building of food-for-peace progams is, in the administration's view, more important than speed—important as speed is.

In the months that lie ahead, the administration will continue to work for high-level exports of farm commodities. In this effort, the administration is sure in the knowledge that it is working not only in the interests of farmers, and the industries related to agriculture, but also in the interests of all the people. High-level exports will continue to strengthen farm prices and incomes for the agricultural segment of the economy—they will continue to promote peace. Despite the problems involved, our agricultural abundance is a valuable national asset. Wisely used, this asset can and will make a substantial contribution to the solution of the great problems of our time arising from hunger, insecurity, and fear of war.

COMMODITY STABILIZATION SERVICE

Dairy prospects brighter

The best balance in years between milk production and consumption of dairy products is being achieved in 1959. A greater volume of dairy products is flowing into consumer use through commercial channels. Government purchases so far this marketing year are down 25 percent from 1958. They are the lowest for the period since 1953 when heavy buying began. Continued extensive movement of Government supplies into many diverse channels of use has pulled the total dairy price-support inventory to its lowest level in 6 years. The market is now in a position to function virtually free of an overhang of Government stocks.

Sound price-support actions, within legislative authorizations, are contributing to this improved stability for dairy producers. Milk production has remained at a relatively stable level for the past 2 or 3 years. Increased consumption is eating into the milk surplus.

Corn program improved

During the past year, a basic change has been made in the corn program to bring about long-needed improvements. The old unworkable system of acreage allotments has been discontinued, and farmers are now at liberty to make their own decisions on corn planting. The level of price support is no longer dependent entirely on the outmoded parity standard but is based primarily on the price level of recent years. This new program was placed in effect following a favorable vote of more than 70 percent of corn farmers voting in a referendum in November 1958.

Better cotton program

The past year has marked the beginning of a move toward eased production controls and more realistic price supports for cotton. A definite halt has been called in the type of program which, through the years, has led to the loss of cotton export markets and the takeover of part of the domestic market by synthetic fibers.

New legislation enacted in 1958 made it possible for upland cotton farmers to make a choice in 1959 between complying with their "regular" farm acreage allotment, or planting a 40-percent larger allotment at a 15-point lower level of support. About 69,000 farm operators chose the greater freedom to produce, and increased their allotments by more than a million acres.

Further progress is assured for the years ahead. After 1960, the legal minimum for regular upland cotton price support will be lower than the old 75 percent of parity. This can serve to make cotton more competitive with synthetic fibers.

Continued improvement in wool

Continued progress is being made in expanding U.S. wool production, which in 1959 is reaching toward the highest level in 12 years. Each year more sheep are on U.S. farms and ranches, giving promise of future increases in production of strategic material which had dropped drastically during the 1940's and early 1950's.

The wool incentive program which began in 1955 is restoring sheep producers' confidence in the future of their industry. The payment program to encourage additional production is self-financing through use of duties collected on imports of wool and wool manufactures.

Grain storage adequate

Record-breaking grain crops and supplies are being adequately stored this year, in contrast to some former times when such smaller supplies created serious storage problems. Close cooperation among farmers, commercial warehousemen, and the U.S. Department of Agriculture during the past few years developed a coodinated attack in this vital area. Commercial warehousemen, with the Department's guidance in pinpointing areas of probable storage shortage, have greatly increased commercial capacities. The commercial space for grains and related commodities is now estimated at more than 4 billion bushels, nearly twice what it was in 1951. Farmers have also increased their capacity, with help from special Government loans to build new storage or improve existing facilities. As a result of this planned expansion, the Commodity Credit Corporation was able again this year to avoid buying any additional storage bins or facilities of its own.

Big surplus movement

During the past 6 years, surplus agricultural commodities with a cost value of more than $16.5 billion have been moved out of the Commodity Credit Corporation inventory and into useful consumption through the Department of Agriculture's coordinated disposal programs. Wheat, cotton, corn, and other feed grains, and dairy products accounted for nearly $13 billion of the total. This tremendous operation helped to hold down the size and cost of the Government's surplus stocks, at the same time making the commodities available for current use both at home and abroad. While sales for cash accounted for more than half of all inventory disposal, special programs, such as those authorized by Public Law 480, were utilized effectively.

Exports drawn from commercial stocks

Payment-in-kind export programs, under which commodities for shipment are drawn from commercial stocks instead of from Commodity Credit Corporation inventories, have been broadened and made more effective during the past year. Under these programs, export demand is brought to bear directly on commercial markets, to the advantage of both industry and farm producers. Only the commodities used to make in-kind export subsidy payments come from Government stocks. By strengthening commercial market prices, these programs cut down on the flow of surplus commodities to CCC under the price-support program.

The shift to the payment-in-kind export program was begun with wheat in the fall of 1956. It has since been extended to corn, oats, barley, rye, grain sorghums, rice, and cotton.

THE CONSERVATION RESERVE

During this year, 250,000 farmers will receive more than $350 million for participation in the conservation reserve program of the soil bank. In return for these payments, they will hold nearly 23 million acres of cropland out of production during the 1959 crop season. If they had not been held in the reserve, these acres would have added to the already large surpluses of many agricultural commodities.

The conservation reserve contracts are for 3, 5, or 10 years. The contracts require a reduction in the total acreage of crops on the farm, and in addition call for the land to be devoted to conservation uses. Over 20 million acres of the reserve this year are in grass. Nearly 2 million acres are growing a stand of forest trees, with about 1 billion trees planted by the close of the 1959 season. Plantings of clover to benefit wildlife are being established on nearly a quarter of a million acres.

The 23 million acres in the conservation reserve are not producing surplus crops; they are not contributing to dust storms; they are not adding to the load of silt carried down stream by our rivers. They are helping to conserve our national resources.

RURAL DEVELOPMENT PROGRAM

The Eisenhower administration has initiated the first real program to deal with the needs of the small low income farmer. The rural development program was devised and is operating successfully in providing help to those farmers and rural communities who really need it. This is in contrast to the effect of some of the other farm programs that have helped those who need it the least.

The rural development program, now going forward in some 200 counties in 30 States, enlists private and public cooperation to raise levels of living in areas with many underemployed rural people.

Rural development committees have been organized in each of these States. State and local leaders are working toward a better balance between agriculture, industry, and other sources of income in these counties. Six Federal departments are supporting the work of State agencies, private citizens, and organizations. The program involves research, education, and community action.

Experience gained in the original program areas by participating groups has now permitted a widening of the program beyond the pilot stage in many States. To keep pace with these developments, Federal departments and agencies are redirecting many of their regular activities to serve more effectively the needs of rural people with seriously low incomes.

A major achievement is increasing national awareness of the harmful impact on the Nation's economic and social life of underemployment among rural people, the basic cause of low incomes on small farms and in rural towns.

In 1959 most rural development counties showed an increase in the number of off-farm job opportunities. Industry expansion continued. Several areas built new market and processing facilities. Farmers' marketing cooperatives were formed in some areas. Reorientation of agricultural production on small farms continued, with vegetable, livestock, and poultry enterprises increasing in numbers and output. Vocational training and vocational guidance received added attention.

The Department of Agriculture during the year continued to contribute special funds to the rural development program through allocations to the States by the Federal Extension Service, and additional expenditures for conservation work in demonstration counties and for research in cooperation with State experiment stations.

A major national workshop was held at Jackson's Mill, W. Va., in May 1959. This meeting brought together representatives of 34 States and all Federal Government agencies concerned in the program. Highlights of the meeting included addresses by Secretary of Agriculture Ezra Taft Benson; Dr. Karl Brandt, member of the Council of Economic Advisers; Under Secretary True D. Morse; and prominent State, agricultural, and economic development leaders. There was also intensive discussions among those attending the meeting of economic and social needs in underdeveloped rural areas and methods of strengthening rural development programs. The educational importance of this meeting cannot be exaggerated.

AGRICULTURAL MARKETING SERVICE

More than 12 billion pounds of surplus foods have been donated to school lunch programs, charitable institutions, and needy persons at home and abroad since 1953 under food distribution programs of the Agricultural Marketing Service. These foods have been supplied to more than 80 million people in this country and around the world.

Under the national school-lunch program, slightly more than 12 million children ate more than 2 billion nutritious lunches in 60,800 schools during the 1958–59 school year. In addition to Federal assistance in the form of surplus foods and appropriated funds, these schools purchased locally foods valued at about $515 million, a considerable market for farm products.

The special milk program, inaugurated in 1954, has resulted in a tremendous increase in milk consumption in schools, child-care institutions, and summer camps. In the 1959 fiscal year, over 2 billion half pints of milk were served to children in 78,300 schools and 1,100 institutions under the program.

Voluntary use of USDA inspection services for fresh and processed fruits and vegetables expanded continuously, and hit a record high level during the 1958–59 season.

Cotton classing for farmers under the Smith-Doxey Act increased from 63 percent of total United States ginnings in the 1952–53 season to 93 percent in the 1958–59 season—the highest percentage on record.

As a service to growers, all tobacco sold at auction is federally inspected and graded prior to sale. Since 1953, this service has been extended to nine new tobacco auction markets.

New Federal standards have been developed for many farm products in the last 5 years to bring to more than 360 the number of products on which quality standards are now available.

Crop and livestock reports issued by the Department give the public vital information on the Nation's agriculture. The reports are on acreage, yield, and production of crops; numbers, production, and slaughter of livestock and poultry; stocks of commodities on and off farms; prices paid and received by farmers; and farm employment and wage rates.

Intensive research aimed at improving agricultural estimating and forecasting has been conducted by the Department the past 6 years. New services have been added covering cattle on feed, potato utilization, and citrus production, and the indexes of prices paid and received by farmers were revised for the first time since 1950. The changes made in the overall program are paying off in more timely, accurate, and comprehensive crop and livestock reports.

The Federal milk marketing order program, which stabilizes marketing conditions and assures farmers of minimum prices for their

milk, has been developed extensively since 1953. The program now includes 76 orders which regulate the handling of about 40 billion pounds of milk, as compared with 49 orders regulating handling of 26 billion pounds of milk in 1953. Nearly 189 thousand dairy farmers are now selling their milk in Federal milk marketing order areas.

Administration of the Packers and Stockyards Act has been strengthened during the past 6 years. An amendment passed by Congress in 1958 extends the jurisdiction of the USDA to all livestock transactions in interstate commerce. The program has been expanded to 1,528 posted markets, compared with 300 in 1953.

Poultry inspection, a major consumer protection service previously on a voluntary basis, was made mandatory for all poultry and poultry products moving in interstate or foreign commerce by the Poultry Products Inspection Act, effective January 1, 1959. As a result, the volume of poultry inspected during fiscal 1958 totaled nearly 3.5 billion pounds, and approximately 480 poultry processing plants were operating under inspection, compared with 254 in 1953.

Grading of farm products has increased considerably since 1953. Nearly 2 billion pounds of poultry were graded in fiscal 1959, as compared with slightly more than one-half billion pounds in 1953. Shell egg grading rose from 10 percent to 20 percent of eggs sold off farms. Inspection and grading of dairy products increased from about 1.6 billion pounds to approximately 2.8 billion pounds, and Federal grading of carcass beef increased from 21.6 percent of total production in 1950 to about 51 percent in fiscal 1959.

New emphasis and focus has been given to marketing research in the Department of Agriculture since 1953 when it was centralized in the Agricultural Marketing Service. This work is giving positive push to expanding marketing for farm products and improving marketing efficiency.

Savings in marketing costs resulting from this work are benefiting the American public by many millions of dollars each year, far outweighing its cost.

Mechanized grain aeration and fumigation in grain storage, developed through this research, is already saving more than $3 million each year in storage costs and the total is mounting year by year.

Improvements in handling of fruits and vegetables are saving over $5 million per year in marketing costs.

Research which has already led to establishment of new terminal markets in Philadelphia, Pa.; Atlanta, Ga., and numerous other cities in the last few years is cutting marketing costs for farm products by millions of dollars per year.

And these are but a few outstanding examples of similar savings spread across the fields of transportation, storage, processing, handling, and merchandising of farm products.

As part of the drive to streamline agricultural marketing, greatly increased attention has been given research to expand new and existing market outlets. This work represents a frontal attack on agriculture's need to gain markets, some of which it has been "researched" out of by nonagricultural industries. The market development work of the Agricultural Marketing Service, since 1953, has brought to light much information of value to farmers and marketers of farm products, including vital information on consumer preferences, consumer reactions to newly developed products, consumer wants, and market reactions to tests of merchandising and promotion techniques.

FOREST SERVICE

During the last year, the Forest Service has made substantial progress in its three major fields of responsibility—the administration and management of the national forests; cooperation with the States and private forest landowners; and forest and range research.

In March 1959, Secretary Benson submitted to Congress a program for the national forests. This program was proposed to increase facilities of the national forests and to help meet the resource and recreational needs of a growing population and expanding economy. The Forest Service, at the Secretary's request, had launched Operation Outdoors in 1957 to build up recreation facilities. It has now inaugurated the broader program for the national forests, including both long-range conservation objectives and interim action proposals concerned with needs of the next 10–15 years.

Cash income from the national forests rose to $124 million for fiscal year 1959, the highest in history. In October 1958 the billionth dollar of national forest receipts from timber sales, grazing permits and other uses, was deposited in the U.S. Treasury. While the first billion dollars was received over a more than 50-year period, the next billion in income from these public lands will come in during the next 10 years or less if current trends continue.

National forest timber cut in fiscal year 1959 jumped 1.9 billion board feet to a new high of slightly more than 8½ billion board feet of timber with a value of almost $114 million. This compares with a cut of 6.4 billion feet in fiscal year 1958 and the previous high of 7 billion feet in fiscal year 1957.

More than 113,000 acres of national forest rangeland were rehabilitated during 1958 by reseeding and by the control of undesirable plants. The number of trained range management personnel on the national forests was increased.

A study has been launched of resources available for outdoor recreation on lands managed by the Forest Service. This study will supply information useful in meeting future recreational demands on the national forests. The information will also be available to the National Outdoor Recreational Resources Review Commission, established by Congress in 1958.

A recently completed 3-year project on a part of the San Isabel National Forest in Colorado has slowed surface runoff to the point where it no longer carries silt. Castlerock Creek, once subject to flash floods and quick dry-up, is now a year-long live stream supporting fish life.

During fiscal year 1958, more than 1½ billion trees were planted on America's forest lands. Of that impressive total 86 percent was on lands in private ownership. In calendar 1958, farmers planted trees and shrubs on 397,000 acres under conservation reserve (soil bank) contracts.

The fire control record set in 1957 for all forest lands, public and private, was improved upon in 1958, due largely to successful research in firefighting methods and equipment and to the continuing successful Smokey Bear cooperative forest fire prevention campaign. The increased use of smokejumpers, helicopters, and aerial spraying of chemicals has been of substantial aid in reducing fire damage during the past year.

During 1958 the Forest Service, in cooperation with the State foresters, conducted 25 meetings across the country in an effort to find ways of improving the 4½ million small forest ownerships which are a key to the Nation's future wood supplies. In general these lands are producing only a small part of their potential.

An important Forest Service landmark of the year 1958 was the publication of the final report on the Nation's timber situation, "Timber Resources for America's Future." This report, the most comprehensive ever made on the subject of the Nation's timber, emphasizes the need to step up wood products production by 83 percent to meet expected population increases and resulting demands by the year 2000.

Research in forest genetics has proved that some forest trees possess an inherent resistance to certain insects and diseases, and hybrids having this important quality are now being raised for large-scale planting on national forests. Results of recent experiments to improve forest tree nursery techniques not only insure better seedings, but permit substantial economies in commercial production of planting stock as well. From studies in watershed management scientists have discovered ways of manipulating forest cover on critical watersheds to increase water yields. Other research has made significant and valuable contributions to knowledge in the fields of forest fire suppresion, forest products utilization and marketing, insect and disease control, and in the improvement of forest range for game and livestock.

SOIL CONSERVATION SERVICE

The Soil Conservation Service continued to provide technical assistance to farmers and ranchers throughout the country in applying effective conservation programs to the land. Assistance was furnished to an expanding number of small watershed projects, to an increasing number of soil conservation districts, to the agricultural conservation program, and to others in moving ahead with the soil and water conservation job.

During the 1959 fiscal year most of the field work in the Department's national soil and water conservation needs inventory was completed. The first nationwide compilation of its kind, the needs inventory is scheduled to be completed in 1960.

Improvements also were achieved in making and coordinating snow surveys for water forecasting in the Western States, and in the national cooperative soil survey in which the rate of soil mapping was stepped up approximately 18 percent over a year earlier. Soil scientists and range conservationists in fiscal 1959 made soil and range surveys on nearly 49 million acres, an increase of 8 million acres over 1958.

The SCS provided technical assistance to 2,791 soil conservation districts in fiscal year 1958, 40 more than in 1957. Service technicians assigned to districts worked with more than a million district cooperators in applying conservation programs and helped 91,335 develop new basic conservation plans.

Almost 95 percent of the Nation's farms and ranches and 90 percent of the farmland now are in soil conservation districts. By June 30, 1958, they had 1,794,411 cooperators operating about 540 million acres, or about 46 percent of the Nation's farmland.

As of August 1, 1959, the SCS was assisting 469 local organizations in preparing project plans under the Watershed Protection and Flood Prevention Act (Public Law 566), 103 more than a year earlier; of the total, installation of works of improvement, 59 more than a year earlier.

As of August 1, 1959, 2,961 farmers and ranchers had signed contracts under the Great Plains conservation program (Public Law 1021) which was launched in August 1957. The contracts signed covered more than 8 million acres for which the farmers had prepared complete conservation plans. During the 1959 fiscal year the Secretary of Agriculture designated 11 additional counties as eligible to participate in the program, bringing the total to 332. In July 1959, an additional eight were designated as eligible. The contracts call for 30 percent of the total cropland involved to be returned to permanent vegetation, mostly grass.

COOPERATIVE EXTENSION SERVICE

The work of the Cooperative Extension Service of the Department, working with the State land-grant colleges and universities, has been intensified to further meet the total

farm and home management and adjustment needs of farm families. The Service also has increased assistance to communities in planning their own self-help adjustment programs, as typified by the rural development program, and has rendered greater assistance in the marketing of farm products and in helping more people better understand public affairs affecting them.

The result has been more specialized and intensified service in line with changing needs and, at the same time, more families assisted. The number of farm families assisted with improving efficiency has increased since 1953, despite a declining farm population. The 12½ million farm and nonfarm families assisted represents an overall increase of 50 percent.

More than 11,000 of the 70,000 farm families given such assistance in 1958 reached the point where they could carry out their own plans without further special assistance. This freed extension agents to extend this more intensive educational assistance to families in other communities.

Though the major extension effort is still devoted to assisting the nearly 4 million farm families with their production efficiency, and management problems, an increasing percent of extension time is being devoted to assistance with marketing, public affairs and community development problems.

The number of overall county advisory committees and councils with which extension agents are working increased from 3,874 in 1953 to 4,395 in 1958. The 1½ million local leaders, helping spread extension recommendations in their communities, is an increase of 20 percent over 1953.

Most suburban, small town, and city people are calling on extension agents for help, particularly, in connection with family living and consumer food buying. The number of homemakers assisted in nutrition or family feeding problems has increased 55 percent since 1953, and the number assisted with clothing problems 53 percent.

The 2¼ million boys and girls in 4–H Club work is nearly 10 percent more than in 1953. Major progress has been made in giving club members more training and project experience in management, basic science, and careers beyond farming available to them.

RESEARCH

Important developments in research and regulatory activities that have made agricultural headlines in recent years cover many fields. Examples include:

1. Establishment of pioneering research in numerous categories directed toward the discovery of basic natural laws and new facts and principles. At this time 15 such labaratories have been established.

2. New research facilities to insure future progress for agriculture have been established. The Plum Island Animal Disease Laboratory for research on foot-and-mouth disease and other foreign diseases of animals was dedicated in 1956. The National Seed Storage Laboratory, Fort Collins, Colo.; the Fruit, Vegetable, Soil, and Water Laboratory in Weslaco, Tex.; and the Fruit and Vegetable Products Laboratory, Winter Haven, Fla., were dedicated in 1958.

Five new laboratories are going into operation this year: The Soil Sedimentation Laboratory, Oxford, Miss.; the Soil and Water Laboratory, Watkinsville, Ga.; the North Central Conservation Field Laboratory, Morris, Minn.; the Water Conservation Laboratory, Tempe, Ariz.; and the Laboratory for Wool Research, Albany, Calif. The National Animal Disease Laboratory at Ames, Iowa, is scheduled for completion late in 1960. And contracts will be let during the present fiscal year for: the Crops Research Laboratory at Logan, Utah; the Boll Weevil Laboratory, State College, Miss.; and new entomology laboratories at Tifton, Ga.; and Brookings, S. Dak.

3. Successful completion of the program to help stamp out foot-and-mouth disease in Mexico. This protects our own livestock producers from the dangers of a source of infection close at hand.

4. Cooperation with Florida in eradication of the Mediterranean fruitfly in less than 2 years after it was discovered in Florida and spread to 28 counties.

5. An expanded program looking toward eventual eradication of brucellosis. At the end of summer (1959) 20 States and Puerto Rico had achieved the status of modified certified brucellosis-free—a sevenfold increase over the number when the program started in 1954.

6. Release of the first isomgerm varieties of sugar beets removing the final obstacle to the mechanization of the crop.

7. Greatly expanded efforts to build farm markets through utilization research and development—work designed to aid processors in producing convenience foods, ease-of-care fabrics, and in turning farm surpluses to new industrial materials. Funds for this work have been almost doubled since 1953. Additional work initiated under Public Law 480 permits USDA to pay for cooperative research in scientific institutions abroad with foreign currencies from the sale of U.S. farm products.

FARMER COOPERATIVE SERVICE

Farmer Cooperative Service has continued to effectively carry on its research, educational, and advisory service work with farmer cooperatives in order to help farmers make better use of these mechanisms for improving their bargaining position and economic status.

This has meant intensifying its efforts to help these farm businesses adjust their operations to the many economic changes influencing agriculture.
